7183. (*Chairman.*) If we can get to-day's evidence in type in time for the Admiralty to see it and send a representative here next Thursday, we should take him; and then, I think, when you have seen his evidence, and when, moreover, the Rosebery award with the case has been in the hands of the Commission, they will probably ask you to come again?—Very good.

The witness withdrew.

Adjourned till Thursday next at 11 a.m.

(For the 15th and 16th Days' Evidence, *see* page 234 *et seq.*)

At the India Office.

SEVENTEENTH DAY.

Wednesday, 6th May 1896.

PRESENT.

The LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, BART., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Vice-Admiral W. A. KENNEDY, R.N., and Mr. WILLIAMS CUMING of the Admiralty called in and examined. *Vice-Admiral W. A. Kennedy, R.N., and Mr. W. Cuming.* 6 May 1896.

8218. (*Chairman.*) Admiral Kennedy, what post do you hold now?—(*Admiral Kennedy.*) I am on half pay as a Vice-Admiral.

8219. You have lately been in command in India, have you not?—In command of the East India Station for three years from January 1892 till April 1895.

8220. That is the station which is called the East Indian and Ceylon, is it not?—The East India Station. It comprises Ceylon and of course much besides, but it is called the East India Station.

8221. Does that squadron visit Australia, for instance?—No, not Australia.

8222. It takes Zanzibar?—No, Zanzibar now belongs to the Cape Station; but it includes all Burma and the Andaman Islands, and Ceylon, Mauritius, Madagascar, and Aden.

8223. And does it go so far as Singapore?—No.

8224. (*Sir James Peile.*) And the Persian Gulf?—And the Persian Gulf.

8225. (*Chairman.*) Mr. Cuming, what position do you hold at the Admiralty?—(*Mr. Cuming.*) I am in charge of the branch in the Department of the Accountant-General of the Navy, which deals with all financial questions. Practically I have had charge of the correspondence relating to this question for more than seven years.

8226. Admiral Kennedy, you are aware that this Commission have to report as to the apportionment of charges between this country and India?—(*Admiral Kennedy.*) Yes.

8227. The changes which have taken place in the contribution by India towards the Naval force maintained for the protection of India come consequently before them. The Commission desire to learn the views of the Admiralty as to that contribution?—Yes.

8228. You have seen the evidence of Captain Hext, the Director of the Indian Marine?—I have.

8229. During the time that you were commanding in India, were you in relations with Captain Hext?—I wish to take this opportunity, my Lord, to acknowledge the loyal support and hearty co-operation I have at all times received from Captain Hext during the time of my command in the East Indies. He was always most ready to assist me in every way; our ships were docked without delay and the repairs were well and smartly executed. For the three years we were together we worked with perfect accord and harmony, without a single hitch.

8230. Indian naval service may be divided into two heads:—1. Naval protection afforded by vessels of Her Majesty's Navy kept in Indian waters. 2. Local marine services performed by vessels belonging to the Indian Government. How would you define the duties

Vice-Admiral W. A. Kennedy, R.N., and Mr. W. Cuming.

6 May 1896.

the Admiralty discharge for India?—Generally speaking, the duties for which armed vessels are required, *e.g.*, general defence (including trade), suppression of piracy and slave trade in the Persian Gulf and on the Indian coasts, &c. Police duties in Indian waters requiring armed vessels, &c.

8231. In that definition you include the protection of trade. Do the Admiralty consider that that duty was transferred to them at the time when the Indian Navy was abolished, or would they consider that the Indian Navy, when it existed, was not under the obligation of protecting trade?—At the time of the Indian Navy they did their own protection.

8232. Yes?—But undoubtedly the Admiralty accepted all obligations.

8233. What I meant to ask was this; the Admiralty had, before the abolition of the Indian Navy, a force on the Indian Ocean?—Yes.

8234. I gather from the correspondence that has passed, that that force was small?—It was.

8235. At all events, the force which could be detached from the Eastern fleet for service in India consisted, I think, of three vessels with a tonnage of something like 3,000 tons. At that time, therefore, the Admiralty could hardly be said, with such force, to have had the full responsibility for protecting the trade of India?—No.

8236. India, having a navy of her own, would be expected, at all events, to protect her own trade on her own coasts and within a reasonable distance from her coasts?—She did so undoubtedly. (*Mr. Cuming.*) May I read a short paragraph from the letter of Sir Charles Wood to the Admiralty, which deals with that point:—"He is of opinion, therefore, that as regards India, the "general defence, the protection to trade generally, "and the measures for putting down the slave trade "on the eastern coast of Africa, which have hitherto "been performed partly by Her Majesty's Navy and "partly by the Indian Navy, should be undertaken "altogether by Her Majesty's Navy. Sir Charles "Wood is the more inclined to this view from the "change which has taken place of late years in the "character of the slave trade from the eastern coast of "Africa, and from the more frequent pressure of "vessels of the French Navy both there and in the Red "Sea. A French frigate has recently visited the Port "of Muscat, at the entrance of the Persian Gulf, and "Sir Charles Wood is of opinion that it is very "desirable that vessels of Her Majesty's Navy should "be more frequently seen in those waters. He also "would wish to know if the Lords of the Admiralty "would be prepared to undertake the duty in the "Persian Gulf. The vessels employed in this part of "the Indian seas will have the ready means of repair "at the dockyard at Bombay, and the Government of "Bombay will be ready to furnish any assistance which "may be necessary in order to enable Her Majesty's "ships effectually to perform their duty. Sir Charles "Wood understands that the Lords Commissioners of "the Admiralty have already appointed an officer, with "the rank of commodore, to take under his orders all "the ships and vessels employed in the Indian seas. "Sir Charles Wood is of opinion that this is an "arrangement most advantageous to Her Majesty's "service, and that such officer should be instructed to "communicate freely and constantly with the Govern-"ments of India and of Bombay, and to meet, as far as "in his power, any demands for naval assistance which "those Governments may find it necessary to make. "The transport of troops and stores will be provided "for by vessels either belonging to or hired by the "Government of India; and the means of local defence, "by floating batteries or otherwise, may be provided "in the same way. Before taking any step, however, "Sir Charles Wood is desirous of learning whether the "Lords Commissioners of the Admiralty will be pre-"pared to undertake the performance of the duties "which, in his opinion, ought to be assigned to Her "Majesty's Navy." That is a letter dated the 20th October, 1862.

8237. And written by the Secretary of State for India?—Yes.

8238. And the Admiralty would accept that definition?—Yes. (*Admiral Kennedy.*) Certainly.

8239. Is there any Admiralty minute or memorandum which defines those duties?—The Standing Orders of the station for the Commander-in-chief assign the duties very clearly. We did not bring a copy of the Standing Orders with us.

8240. Would the paragraph of the Standing Orders which refers to these duties be short and easily put in?—Yes.

8241. Would you mind putting it in your answer?—I should think there would be no objection at all to it. (*Mr. Cuming.*) I do not think so. They are under revision. They have been partly revised since the last arrangement was made too, and they still have to be revised, but they practically embody the instructions to the Commander-in-chief that he is to carry out all requests from the Indian Government.

8242. You see we have on the one side that paragraph which you, Mr. Cuming, have just read, which defines very intelligibly the duties that belonged to the old Indian Navy. As against it, if we have the Admiralty definition of the duties that they consider they perform for India, I think we shall have the two sides of the question?—Of course the Standing Orders since 1862 have been constantly revised. They were revised when the arrangement was made in 1869. (*Admiral Kennedy.*) There is only one article in the Standing Orders which really defines the duties. It defines the duties generally, namely, the protection of the coasts of India and the suppression of the slave trade and piracy, and general compliance with the wishes of the Viceroy of India, assisting him in every way.

8243. You mentioned the suppression of piracy. The Indian Government have a local marine which, I think, is charged with the suppression of piracy along the coasts, is it not?—The Indian Marine Act does mention the suppression of piracy, but the Indian Marine vessels do nothing towards the suppression of piracy, not being armed.

8244. (*Sir Andrew Scoble.*) Is there any piracy on the coast of India now-a-days?—Very little.

8245. Then there is nothing to suppress in that part?—In the Persian Gulf?

8246. I am speaking of the coast of India?—I never heard of any on the coast of India; only in the Persian Gulf.

8247. (*Chairman.*) I gather that the services the Admiralty render to India may be divided again into two heads. 1. The services performed by vessels of Her Majesty's Navy, in respect of which India makes a contribution of 100,000*l.* a year, and 2. In respect of vessels in reserve, for which a contribution of 60,000*l.* is made (in round figures)?—Yes. The actual amount, as regards No. 2, 59,600*l.*, is paid for the maintenance of what is known as the Indian coast defence flotilla.

8248. How many vessels do the Admiralty keep in Indian waters under head 1, as already described, and in respect of how many of them does the Indian Government contribute the 100,000*l.*?—Four.

8249-50. Does the Admiralty keep more than four?—There are eight altogether in the squadron, four of which are always in Indian waters.

8251. And four of which are maintained by India?—In respect of four of which India contributes 100,000*l.* a year.

8252. You hold that that does not cover the whole cost of Indian defence?—Oh no.

8253. And, therefore, it may be said that the Admiralty keep eight Imperial vessels on the coast of India, towards four of which India makes a contribution?—Makes a contribution, yes.

8254. (*Sir Andrew Scoble.*) Have you any idea what is the annual cost of those four vessels?—Well, it would be very difficult to answer that question straight away, but I think it was estimated at 117,000*l.*?—(*Mr. Cuming.*) It was estimated at 117,000*l.* plus 4,000*l* a year which India is supposed to expend on repairs of the "Sphinx" in India, making 121,000*l.* altogether. (*Admiral Kennedy.*) Making 121,000*l.* altogether. Of course the estimated repairs of all the ships are an average, because the repairs would vary very much in different years.

8255. (*Chairman.*) That does not cover, in the Admiralty view, the whole charge, because I notice, in some of the correspondence which has passed, that the Admiralty called attention to the fact that the contribution calculated upon the footing of 117,000*l.* amounts to about 17*l.* a ton for effective service, and 3*l.* for non-effective, say, about 20*l.* a ton; but I also see that the Admiralty state that they consider

that, all round, the Navy costs the taxpayer about 38*l.* a ton?—38*l.* a ton? I was not aware of that. (*Mr. Cuming.*) That was a calculation that was made by the Treasury, not by the Admiralty; but it is a fair calculation; because, if you take roughly the whole of the Navy Estimates, and spread them over the whole of the Navy, 117,000*l.* would not by any means represent the cost. Neither administrative expenses nor other indirect charges are included in that 117,000*l.*

8256–57. At all events that calculation would represent roughly the Admiralty view as to the facts of the case?—What we should call direct charges. But it does not include anything for contingencies or for the coal that is used by the ships, except where they are requisitioned by the Indian Government, and in the case of the "Sphinx," in which the Indian Government pays all the coal.

8258. You may say, generally, that that contribution, in the view of the Admiralty, does not cover the whole of the cost of the vessels which the Admiralty maintains in those waters?—(*Admiral Kennedy.*) No, it certainly does not. I am not prepared to say what the whole cost of those vessels is. The Admiralty has been prepared to accept the contribution as covering the cost.

8259. Yes; but the point has been suggested by questions that have been put to you as to the difference between the contribution made and the Admiralty view of the total charge of those vessels?—Yes.

8260. Will you tell us in what manner the charge is computed?—Interest on first cost at 3 per cent., average annual payment towards replacement, annual estimated average cost of repairs and stores, pay, victuals, medicines, liability for retired pay, pensions and half-pay, and average cost of triennial reliefs.

8261. There is one item in the calculation on which the contribution is based, of 4,000*l.* for the "Sphinx"?—For the "Sphinx."

8262. But that is paid direct by India?—That is paid direct by India.

8263. Why was that particular arrangement made with regard to the "Sphinx"?—Because the "Sphinx" is employed solely for the Persian Gulf; nowhere else. (*Mr. Cuming.*) It always has existed in the case of the "Sphinx."

8264. Is there any reason why that difference should be made?—I imagine it is more particularly an Indian ship. It was built specially for the Persian Gulf service, and it was considered a matter of convenience of account. (*Admiral Kennedy.*) You see, the Admiral, although he has control of the "Sphinx" entirely, has no use for her for any other purpose; she is always up the Gulf.

8265. Then what heads of charge, if any, would you say are excluded from this computation?—Pilotage and contingent expenses, besides indirect charges.

8266. Including administration I suppose?—(*Mr. Cuming.*) No indirect charges are included in it at all. (*Admiral Kennedy.*) For those the Admiralty make no charge.

8267. Do you consider that the necessities of the present time require that India should have the support of a larger fleet than between 1832 and 1867?—Certainly.

8268. It has been stated that after the Mutiny the Admiralty agreed to take over the duties of the Indian Marine free of cost; have you anything to say upon that point?—I think the Admiralty would agree that at the time that they took over these duties, they made no specific claim to be paid for them until 1869, but they would say that that was on account of the embarrassment, financial and otherwise, of India after the Mutiny, and that, as stated by Lord Rosebery in his award, there was at most a temporary waiver of the claim of the Imperial Government.

8269. And you would, of course, coincide in the view that Lord Rosebery took on that point?—I cannot help coinciding in it, because he claims that it is an Imperial question, what is defined by Indian purposes; I do not see how you can separate the two.

8270. Would you say that the Indian Government, looking at what it is asked to pay now—that is, the 100,000*l.* a year—and looking also at the increased cost of ships which the Navy is obliged to incur since the time of the abolition of the Indian Navy, is a gainer or a loser by the transfer? Of course I am speaking financially?—I should think a gainer on account of the enormous difference in the price of ships at the present time.

8271–2. You consider that the Navy protects the whole of the Indian coast now?—It does.

8273. What were the reasons which led the Indian Government and the Admiralty, in 1862, to wish for the transfer of the duties from the Indian to the Imperial Navy?—Apparently because the work could be more advantageously performed by the Navy, and because for reasons of policy it was advisable that Her Majesty's vessels should be more in Indian waters.

8274. Then I suppose one main reason for that policy was consolidation of authority?—Undoubtedly.

8275. If the Admiralty was charged with the whole defence of the Indian coast, there was only one authority, and not a divided authority?—Yes. With regard to that question you asked me about the protection of the Indian coasts. I mean that indirectly, of course, the Navy protects the coasts of India, but I do not mean to say that the ships stationed there are dotted round that coast; they cannot be, but they protect the coasts because they are always on the spot, and they are ready to attack any enemy that might approach that coast; and the fact of their presence is sufficient to debar an enemy from visiting it.

8276. But that is really only the same consideration as applies to the defence afforded by the Navy to the coasts of the Empire, and trade throughout the world?—Just so.

8277. The naval officer in command has so many ships with him which he employs according to his discretion?—Yes.

8278. For the prevention of harm either to the coasts or to the trade?—Yes.

8279. Therefore the defence of India may be described exactly in the same terms as you would describe the defence of England, may it not?—Yes. We do not profess to defend the ports of India, for instance, in particular; they defend themselves.

8280. I suppose India has its own torpedo arrangements and other arrangements for defence?—Bombay has the defence flotilla and batteries, and is really quite independent; Calcutta pretty well so; Kurachi partly so.

8281. When you mention the defence vessels, do they form part of that reserve force in respect of which the 59,000*l.* is paid?—Yes; it is a floating force, really.

8282. Then those special defences are, to that extent, under the responsibility of the Admiral?—Yes, the admiral has the control of those ships entirely.

8283. And the Admiralty pays for them, subject to this contribution of 59,000*l.* from the Indian Government?—Yes, and officers and mans them. India paid the first cost of the ships and the armament.

8284. At the time of the abolition of the Indian Navy, which, I think, actually took place in 1863, no mention was made of a subsidy, and for some seven or eight years the Indian Government saved the whole charge of her own navy, such charge being transferred to the British taxpayer. Do the Admiralty records show the reasons for this forbearance on the part of the Imperial Government?—No. No doubt the reason was, that the executive part of the question pressed urgently for settlement, and that the financial disturbance caused by the Mutiny made it an inopportune time for dealing with the financial portion.

8285. And on that account the Admiralty would hold that it was only a temporary forbearance in consideration of the financial difficulties into which the Mutiny had plunged India?—Yes.

8286. Are you aware of any discussion between the Home and Indian Governments at the time Sir Charles Wood stated in his despatch to India, "the Admiralty "will take it over free of cost"?—No. Apparently the question of payment was first discussed between the Admiralty and the India Office in 1869, with the result that a payment by India of 70,000*l.* was agreed on.

8287. That is the first time you find in the Admiralty records the question of payment mooted?—That is the first time.

8288. And so the first arrangement under which a contribution was made by India took place in 1869. Would you tell us the nature of that arrangement?—There was a capitation rate of 70*l.* on 1,000 men

Vice-Admiral W. A. Kennedy, R.N., and Mr. W. Cuming.

6 May 1896.

representing the crews of six ships, that is 70,000*l.* a year.

8289. Was that basis of 70*l.* a man then held by the Admiralty to be a complete and full representation of the cost to the Navy?—No; no calculation of the total cost of these ships appears to have been made.

8290. Then this was more or less a rough and ready way of arriving at a sum that might represent the direct cost of the ships?—Yes, and it was not considered to be sufficient though accepted for some time.

8291. Had it become a matter of record in the Admiralty, as a convenient method of calculating the cost, that 70*l.* represents the cost of a seaman?—No, I should think it is obsolete entirely.

8292. But at that time?—At that time they appear to have considered it was sufficient. (*Mr. Cuming.*) I do not think there was much consideration given to it. It was a sort of rule-of-thumb method of arriving at something, which India should pay, when Mr. Childers was First Lord of the Admiralty, and the letter which was written to India was as follows; the paragraph is very short:—"The exact method of computing this charge "will be open to consideration, but it might be most "easily arrived at by a capitation rate. The number "of men to be provided for by India would be about "1,000, to be employed in six vessels, three of which "would be gun vessels detached for service in the "Persian Gulf, and, at the rate of 70*l* per annum for "each man's pay, provisions, &c., the charge would be "70,000*l.* per annum."

8293. It was only supposed to be pay and victuals?—Only pay and victuals.

8294. Because about the same time, if I remember right, there was a calculation made by General Peel in regard to the Army which for a long time was accepted in ordinary statements made by military authorities, that each soldier cost 100*l.* a year, but, if I remember aright that was arrived at by dividing the total army estimates by the number of men, which is a very rough method of calculation?—(*Admiral Kennedy.*) A very expensive soldier, I should think.

8295. (*Mr. Courtney.*) That included all the charge for the Army, not the keep of the soldier alone, all ammunition, every organisation of administration?—Yes.

8296. (*Sir Ralph Knox.*) It included the cost of the militia and the volunteers, all the forces?—Yes; it was an absurd calculation too. (*Mr. Cuming.*) I have no doubt that 70*l.* represented approximately the actual pay and victuals of the men.

8297. (*Chairman.*) And clothing I suppose?—It was to some extent a more advantageous arrangement for the Imperial Government than appeared, because as a matter of fact, the number of 1,000 was never kept in the six ships, and was never insisted upon, so that there was a considerable margin which paid other expenses.

8298. (*Sir Ralph Knox.*) But what you really did was to take out certain expenses and thus make up a certain sum, and divide that by 1,000, and that gave you the capitation grant of 70*l.*?—I think probably they took the actual cost of victualling and the actual wages of a certain number of men and averaged them. Of course the victualling would be the same for every man, the wages would differ according to the man's rating.

8299. But you think you built it up by calculating the cost of victualling and personal charges for each man, and it came to 70*l.*?—I think so.

8300. (*Mr. Courtney*). Do you know what would be the result of a calculation of this kind, if you took the total tonnage in commission, or alternatively the total number of men who were in ships in commission, and divided the total naval estimates by the tonnage or by the men. What would be the rate per ton?—I could not say what the rate per ton would be, but the charge to India on such a basis as that would be infinitely higher than that which the Admiralty has made, because the charge which they make now to India excludes everything in the nature of establishments, administration and indirect charges.

8301. But you do not know what it would come out at per man?—No, you would have to allow a different rate for each ship. It could only be an arbitrary calculation at best. (*Admiral Kennedy.*) You mean to divide the sum total in the estimates by the number of ships?

8302. By the number of men who are in ships in commission?—Oh, not by the total number of ships.

8303. Well, there are two methods; you can proceed on either alternative?—You can get a rough estimate of what each ship cost. One ship might cost 1,000,000*l.*

8304. You must take it at per ton if you go by the ship, or per man?—Per man. (*Mr. Cuming.*) And some ships have more men in proportion than others, but certainly it would come out a very much larger sum, probably three or four times as much as the charge made against the Indian Government.

8305. (*Chairman.*) You then calculated that 1,000 men were employed upon the station?—(*Admiral Kennedy.*) They took roughly 1,000 men in the six ships.

8306. And how many men do you reckon now to be employed?—Well, in the four ships it would be roughly about 500, but I think we could tell exactly. There would be the "Marathon," the "Brisk," the "Pigeon," and the "Sphinx." The "Brisk" would be 175, the "Marathon" would be 200.

8307. The total is 623, is it not?—(*Mr. Cuming.*) I can give you the complements of the ships on which the present subsidy is based; the four ships amount to 623.

8308. How long did that arrangement of 70*l.* a man for 1,000 men remain in force?—That went on up to the year 1888.

8309. And then the force was reduced, was it not?—(*Admiral Kennedy.*) It was reduced then to four ships.

8310. Costing India by way of contribution how much?—(*Mr. Cuming.*) 38,500*l.* and five per cent. on the cost of the "Sphinx." (*Admiral Kennedy.*) Making 41,600*l.*

8311. And that was calculated at the same rate of 70*l.* each for officers and men, was it not?—Yes, on 550 men. (*Mr. Cuming.*) When the Committee sat which brought in that alteration, it was ruled that it was not open to them to consider the rate; and that they were only entitled to consider the number of ships and the number of men.

8312. Therefore they had to continue to take the 70*l.* per man basis?—Yes, the 70*l.* rate was not considered by that Committee.

8313. That arrangement did not meet with the approval of the Treasury, did it?—The Treasury strongly objected to it from the first; they allowed it to go on for; I think, three years, but they strongly objected to it.

8314. (*Sir Ralph Knox.*) Then is it not the fact that in 1887 Lord Cross, who was then Secretary of State for India, pressed upon the Admiralty the substitution of modern vessels of increased speed and with powerful armaments?—(*Admiral Kennedy.*) Yes. (*Mr. Cuming.*) Yes, that is so.

8315. This representation is contained in a despatch of 29th July 1887?—Yes, there is a memorandum by Lord George Hamilton, when he was First Lord, which is printed in the correspondence put in by the Admiralty. In that memorandum he points out: "In the meantime, and "more especially in Despatches No. 14 of the 29th July "1887 and No. 117 of the 25th August 1890, the Indian "Government had pressed upon the Admiralty the "substitution of modern and more powerful vessels for "the older types then on service in the East Indian "Squadron. Four vessels, of which one, the 'Tur-"quoise,' was included in the ships above-mentioned, "were particularly objected to."

8316. (*Chairman.*) That does not give an answer directly to Sir Ralph Knox's question as to whether that remonstrance emanated from the Indian Government or from the Secretary of State?—It was in a despatch from the Government of India.

8317. The result of the remonstrance of the Treasury against that arrangement, which resulted in the payment of 41,000*l.* instead of 70,000*l.*, was a correspondence which eventually led up to what is called the Foreign Office conference, is it not?—(*Admiral Kennedy.*) Yes.

8318. No change was made in that charge of 41,600*l.* until the Foreign Office conference?—(*Mr. Cuming.*) No, the Treasury allowed it to go on under protest.

8319. And at the same time, while the Treasury was the active department in moving for reconsideration of the arrangement, it was acting in accordance with the Admiralty view, was it not?—Certainly.

8320. The Admiralty equally with the Treasury did not think the contribution sufficient?—That is so.

8321. We come next to the reference of the dispute to the Prime Minister in what is called the Foreign Office conference: What view does the Admiralty take of the decision then arrived at?—(*Admiral Kennedy.*) The Admiralty has always accepted this decision, and understood that it was accepted by all parties, including the Indian Government.

8322. The decision was to the effect that a certain force must be kept for Indian purposes, but the Foreign Office decision did not define those Indian purposes, did it?—No. That has always been the vexed question. (*Mr. Cuming.*) No, but as far as it went the Foreign Office decision was accepted by everyone. (*Admiral Kennedy.*) The Admiralty hold that the term "Indian purposes" has a wider significance than has been given to it by India.

8323. The terms of the Foreign Office decision were: "The Indian Government is to be consulted as to the "number and class of ships required in the Persian "Gulf and off the coast of India for Indian purposes. "When that number is settled by the British and "Indian Governments jointly, it will be arranged that "the ships are not to be employed beyond certain "limits to be agreed upon, except with the consent of "the Indian Government. They will be under the "control and orders of the naval commander-in-chief, "to whom will be sent the wishes of the Indian "Government, with which it will be his duty to comply. "India is to pay the whole cost, effective and non-"effective, of them." Therefore the conference contemplated that the Admiralty and the India Office would take the definition of "Indian purposes" into consideration, and settle between themselves the number and class of ships required?—Yes.

8324. And after the conference there was a consultation—a correspondence rather—between the Treasury, the Admiralty, and the India Office as to the number and class of ships required; but that correspondence led to no useful result, because the Indian Government and the Admiralty and the Treasury could not agree upon the definition of Indian purposes?—That is so, and the Admiralty hold that the term "Indian purposes," in addition to police duties, comprises the general protection of India, her trade, and her coast.

8325. And the India Office wanted to limit the purposes very considerably?—(*Mr. Cuming.*) To police duties.

8326. To police duties—at least, that would be your definition of the view the Indian Government took of their duties?—Yes.

8327. Then, so far as the Admiralty was concerned, there was no difficulty in accepting the decision of the Foreign Office conference, so far as it went?—(*Admiral Kennedy.*) No. The whole difficulty turned on the definition of the term "Indian purposes," as on that depended the number and class of ships to be selected on which to calculate the subsidy.

8328-9. Could you tell us shortly what the difference between the Admiralty and the India Office came to when expressed in ships? We know that the Admiralty thought necessary for the station these four ships which are described in Mr. Forwood's memorandum?—Yes, and the difference between what they think fit and what the Indian Government think fit is, that the Indian Government claim that three ships of the small class will do their work.

8330. What was the tonnage of those four ships that the Admiralty proposed as necessary for the Indian station?—(*Mr. Cuming.*) Including the "Marathon," the Admiralty proposed 6,605 tons; the Indian Government proposed the "Sphinx" and two vessels of the "Pigeon" class.

8331. Which would make a tonnage of—?—2,640 tons.

8332. (*Mr. Buchanan.*) Is the "Pigeon" a gunboat?—She is a gunboat of 755 tons.

8333. And what is the "Marathon"?—(*Admiral Kennedy.*) The "Marathon" is a third-class cruiser of 2,900 tons. She was not employed solely in Indian waters when I was out there. The selection of ships was agreed to subsequently to my time; but she formed part of the squadron.

8334. Are there four vessels exclusively employed in Indian waters now?—Four of them never leave Indian waters.

8335. Do you include in Indian waters the Persian Gulf?—Most certainly.

8336. The Sphinx is permanently stationed there?—The Sphinx is permanently in the Gulf, and the other three are employed in this way: There would be one always at Aden, one in the Bay of Bengal, and one at Bombay waiting to relieve the one in the Gulf. You cannot do with less than four, that is impossible.

8337. (*Chairman.*) And it was arranged under the Foreign Office Conference that those ships are not to be employed beyond certain limits to be agreed upon except with the consent of the Indian Government?—That is so.

8338. And that rule is observed now?—Yes. The latest orders were issued after my time. These are the orders to the Admiral:—"The ships will "be under your control and orders but you are to "comply with the wishes communicated to you "by the Indian Government as to their employ-"ment. These ships are not to be employed without "the consent of the Indian Government beyond the "under-mentioned limits." Then come the limits of the waters, namely, north of an imaginary line drawn from Cape Guardafui to Point de Galle, and thence south of the Nicobar Islands to Cape Salang.

8339. Those limits were agreed upon between the Admiralty and the India Office?—Yes. (*Mr. Cuming.*) A copy of the letter which was sent to the Commander-in-Chief was sent to the India Office, and they either accepted formally—I do not recollect whether they made a formal acceptance—or took no notice of it.

8340. On that point there is no difference between you?—No difference.

8341. (*Mr. Buchanan.*) Of these four vessels one is permanently stationed in the Persian Gulf, another permanently stationed at Aden, and the third out of the four relieves the Persian Gulf vessel?—(*Admiral Kennedy.*) Relieves the Persian Gulf vessel, and one is stationed in the Bay of Bengal, generally at Trincomalee.

8342. Then there is only one permanently stationed in the waters of India, that is in the Bay of Bengal?—The others are all in Indian waters. You must have a ship at Aden, that is in Indian waters; you must have a ship at Bombay to relieve the Gulf ship, and the other is in the Bay of Bengal, with her headquarters at Trincomalee.

8343. But do you consider that "Indian waters" means the same thing, when applied to the Persian Gulf, and the waters immediately round the coast of India?—Yes; I can see no other solution. If the Persian Gulf is not Indian waters, to what does the term apply, to whom does it belong? It must be Indian waters. All the interests round the Persian Gulf are Indian interests; the officials are all Indian officials.

8344. But do you think there are no Imperial interests connected with the Persian Gulf?—When you get up to Bagdad, I suppose we are touching an Imperial interest, but even there they are all Indian officials.

8345. (*Chairman.*) Did you ever send one of the other ships on the Indian station up to the Persian Gulf?—Whenever required. Whenever any outbreak was expected, or took place in the Gulf, the Indian Government would call upon the Admiral to send another ship, which, of course, he promptly did.

8346. And that ship would, probably, be one of those ships on the station to which India does not contribute?—Yes, one of those on the station.

8347. Therefore, of these ships there are two stationed on the coast of India, one in the Persian Gulf, and one at Aden?—Yes.

8348. The basis of the Foreign Office decision carried out what had previously been the understanding, namely, that the Indian Government is to be consulted as to the number of and class of ships in the Persian Gulf and off the coast of India for Indian purposes?—Yes.

8349. Therefore, the Persian Gulf was always included, so far as concerns questions connected with the Indian Government, in Indian waters?—Yes.

8350. (*Mr. Buchanan.*) Does not what you have read distinguish between the Persian Gulf and off the coasts of India? Do you not consider that it is fair to draw a distinction between the naval services in the Persian Gulf and the naval services, in the words of the Treasury, "off the coasts of India"?—No, I think not. (*Mr. Cuming.*) I think the Admiralty would hold that both

Vice-Admiral W. A. Kennedy, R.N., and Mr. W. Cuming.

6 May 1896.

are Indian purposes, that the Persian Gulf was as much an Indian purpose as the Bay of Bengal.

8351. (*Chairman.*) The old Indian Navy used to look after the Persian Gulf, did it not?—(*Admiral Kennedy.*) Yes.

8352. And, therefore, at the time when the Indian Navy existed, the service in the Persian Gulf was looked upon as an Indian service?—Yes, it was. There is another view; if the Persian Gulf is not Indian waters, why do the Indian Government always keep one of their ships up there permanently? She goes nowhere else. The "Lawrence"—one of the Indian Marine ships—is always stationed in the Gulf for the purpose of taking the Resident about from place to place, showing clearly that it is Indian waters.

8353. I see that when the Admiralty and the India Office came to conference after the Foreign Office decision, the Indian view of the tonnage required, as Mr. Cuming has told us, was 2,640 tons, against the Admiralty view of the requirements, namely, 6,605 tons. The Indian view was to the Admiralty view almost exactly as 1 to 2½?—(*Mr. Cuming.*) Yes.

8354-5. (*Mr. Ryder.*) Is that quite correct to say that the Indian view is 2,000 tons odd; was it not 4,000 odd?—Not the ships that they first wished to select The 4,000 odd tons was the amended offer of India after the decision of Lord Rosebery.

8356-7. (*Chairman.*) That is their present offer?—Well, it was an offer that they made after Lord Rosebery's decision. But at the time when the first dispute began after the Foreign Office Conference they wanted to have the "Sphinx" and two "Pigeons."

8358. Yes?—That narrows Indian purposes down to the "Sphinx" for the Persian Gulf, and the two "Pigeons" for police duties. (*Admiral Kennedy.*) When I was out there—I do not know that it has any bearing on the subject—I was not tied to any particular ships, only to four ships—it was left to me what four.

8359. Out of your squadron?—Out of my squadron. I just used the ships which were most suitable. The "Marathon" did not happen to be one, although she was on the station, but she would take her turn with the rest. (*Mr. Cuming.*) That system was based on the old arrangement for the men; no ships were specially allotted; in fact when payment came to be made the flagship was allowed to reckon as one of the ships in Indian waters.

8360. And now?—And now there are four specially allotted; formerly any four might have been there; the Admiralty rather hold that the fact of the flagship having been allowed to reckon as one, clearly take "Indian purposes" at that time as being something more than police purposes. (*Admiral Kennedy.*) I think myself it is a mistake tying us down to particular ships, because it is better for the squadron to keep them on the move for the health of the men; but still they have made other arrangements since.

8361. You would hold, of course, that these four vessels which are now permanently stationed in Indian waters are more valuable for their purposes than those for which they were substituted?—Undoubtedly; the others were obsolete. (*Mr. Cuming.*) There is a comparison in the correspondence on the subject which shows that very clearly. (*Admiral Kennedy.*) The present ships are superior in tonnage, speed, and armament.

8362. In fact, they satisfy the object of Lord Cross's letter of 1887 which has been alluded to?—Yes.

8363. Can you say what meaning the Admiralty attached to the proviso in the Minutes of the Foreign Office Conference that India should be consulted as to the number and class of ships to be selected for Indian purposes?—The Admiralty considered that the initiative in the selection of the ships rested with them, as it was necessary that they should consider the requirements of the station as a whole, and the proportion which the ships specially selected for Indian waters should bear to the full strength of the squadron. The letter of the Foreign Office Conference no doubt required the consent of India to the selection, but the spirit of the Conference would not admit of the consent being unreasonably withheld. The objection on the part of the Indian Government arose from the restricted view they took of the term Indian purposes.

8364. And that was the real difference between the Indian Government and the Admiralty, that the former took a much lower view of the number and the nature of the ships required for Indian purposes?—Yes.

8365 Has the Indian Government expert advice on maritime matters which would entitle its opinion on the requirements of the Naval Service to equal weight with that of the Admiralty?—Possibly as regards the vessels required for police purposes, but not as to the general duties, *i.e.*, general protection and protection of trade, &c. The opinion of the naval authorities, who are responsible for these, must obviously have greater weight, and indeed for all the duties the service responsible would appear to be able to form the best opinion.

8366. I suppose the Admiralty view would be this: that the Admiralty, being charged with the defence of the Empire, must be the deciding authority as to the manner in which that defence is carried out on any particular coast?—They would consider that greater weight should be given to their opinion.

8367. And they could not admit a divided and duplicate authority in deciding how that defence was to be carried out; they would allow that under the Foreign Office Conference the India Office might require a certain number of ships to be constantly kept in Indian waters, but beyond that the Indian Government must leave the manner in which those ships are used at different times to the Admiral representing the Navy?—Yes. The Admiralty are the best judges of the ships required for each part of the world.

8368. And though we know they have got an experienced naval officer on the spot, yet the opinion of that officer alone would hardly be taken as a counterweight to the opinion of the Admiralty?—His opinion is very good. Captain Hext, of course, is a naval man who knows just as much about it as any of us, but not more.

8369-70. I do not in the least mean to depreciate the value of Captain Hext's experience in any way; but in such a case as that, it is the opinion of an individual officer against the department with the Minister at its head?—Yes.

8371. And a Department with the Minister at its head is the authority responsible to Parliament?—I think so.

8372. (*Mr. Courtney.*) But do these authorities proceed on the same basis? Does Captain Hext regard purely what he thinks is necessary for India; do the Admiralty take in other considerations as to the employment of the fleet?—Captain Hext takes the view of India, if that is what you mean, sir, no doubt.

8373. Yes, but the Admiralty something more?—The Admiralty would take a broader view of the situation. Captain Hext on the spot as a servant of the Indian Government would, naturally, I do not say, be biassed, but, of course, he would view it from the Indian standpoint, which possibly may be a restricted one.

8374. May not both conclusions be right though they differ from one another? May not his conclusion be right as to what is wanted for India, and the conclusion of the Admiralty be right, having regard to what is wanted for the Navy?—They are both right but the rock they split upon is always "Indian purposes." Captain Hext contends on the part of India that a few small ships is all that they require; the Admiralty contend that that is not sufficient.

8375 For what?—For the general protection of India. Then we come to the question of "Indian purposes." Lord Rosebery in his award maintains in regard to "Indian purposes," the broader view. Captain Hext says that he could do certain police duties and protect the interests of India generally, with, say, three small ships. Well, we say it is impossible. Then there is another question which we have not perhaps come to yet, and that is the arming of the Indian Marine ships. If he had all his ships armed, no doubt he could do a great deal; but then there is a great objection to arming those ships.

8376. (*Chairman.*) That we shall come to later on?—Yes.

8377. (*Mr. Courtney.*) Is there any analogous controversy between the Australian Colonies and the Admiralty?—No, it is not altogether a parallel case. (*Mr. Cuming.*) There is no controversy with them that I know of. They have made an arrangement and they pay under it regularly and no question arises.

8378. But has that settlement been effected more in accordance with the Indian or the Admiralty view of the Indian difficulty?—I could not say. It was settled at a conference. I believe representatives from the Colonies came here, but I do not know how they arrived at the arrangement. But the calculation

is under an Act of Parliament, and it is on a different basis from what was settled at the Foreign Office Conference and applied to the Indian ships.

8379. (*Mr. Buchanan.*) But it gives much better terms to Australia than India gets?—Well, Australia has no power to requisition ships as India has. The Australian ships do no police duties for the Colonies The ships that we have in Indian waters can be requisitioned by the Indian Government, and the Commander in-Chief is bound to comply with any request that is not absolutely dangerous; but there is no such power on the part of the Colonies.

8380. No, but from the financial point of view Australia gets much better terms than India does from the ships supplied?—I do not think you can quite sever the financial advantage to the one or the other from the services required from the one or the other.

8381. As a matter of fact Australia does get better terms?—As a matter of fact Australia does not pay the full cost of the ships which are there, and India is expected to.

8382. They get a much larger tonnage for the money they give than India does?—I have not the actual tonnage in my mind, but I should admit that they paid less for the ships than India is asked to pay, because they do not pay the full cost.

8383. (*Mr. Courtney.*) That is quite sufficient; in the one case you get what you believe to be the full cost, and you desire to get that; and in the other you do not?—Yes, but the Admiralty pointed out in a letter to the India Office when they brought forward the Australia case, that the two things were different. There were two different agreements to work on. The Australian was based on an Act of Parliament, but it did not follow that the Admiralty might not get, if the arrangement were renewed, better terms in the future. I imagine that the Admiralty would probably endeavour to get the full cost. It was the first arrangement made with the Colonies, and it was a tentative arrangement.

8384. (*Mr. Buchanan.*) But is there any equitable reason why you should endeavour to get the full cost out of India and not out of Australia?—I should not like to give an opinion upon that.

8385. But can you give the Admiralty opinion?—I have never seen any official opinion on the part of the Admiralty. (*Admiral Kennedy.*) The India Office, in a letter on the 23rd May, 1895, says *apropos* of that:—"You now, however, state that the subsidy paid by the "Australian Colonies falls considerably short of the "sum actually incurred; and as Mr. Fowler does not "wish to urge a departure from the agreement to pay "the whole cost of the vessels that may be selected, he "will no longer press for a reduction on the analogy of "the Australian agreement."

8386-8. (*Chairman.*) But, Mr. Cuming, I think it has been argued, and is argued in these papers, that, though the basis of the calculation for the Australian Squadron, and that of the Indian Squadron would differ, in substance it does not come to a very great difference?—(*Mr. Cuming.*) The Admiralty has, as far as possible, avoided all controversy in detail on the subject of the different contributions. I think, in one letter, they pointed out that taking the proportion of tonnage of the squadron there was not very much difference between the two cases.

8389-90. In a letter from the Admiralty to the Treasury, dated 8th January, 1891, the following passage occurs:—"In the minutes of the conference, "an allusion is made to the arrangement with the "Australian Government for the vessels provided under "the Imperial Defence Act. This had reference more "especially to the limit of radius of employment of "the special Indian ships rather than to the financial "terms of the arrangement. For the purposes of "comparison, I am instructed to enclose a memoran-"dum marked B., showing what the amount payable "by India would be if the terms were the same as those "with Australia. In doing so, however, I am to "observe that the circumstances of the two cases are not "altogether analogous, and that, although no provision "was made with the Australasian Colonies for a sinking "or replacement fund, on the other hand the duration "of the contract is limited to ten years, and the rate "of interest chargeable on first cost is five per cent., "instead of three per cent. as now proposed. The pro-"posal is based on the principle of India recouping the "actual outlay incurred in providing and maintaining the "vessels," and enclosed in this letter are two statements, the first showing the Admiralty calculation about which we are speaking, namely, that which arrived at the total sum for the four vessels, the "Marathon," the "Brisk," the "Pigeon," and the "Sphinx," of 117,000*l.*; the second statement showing the first cost, the contribution at the rate of five per cent. per annum on first cost, and the estimated amount of annual maintenance of the four above-mentioned vessels to be employed in Indian waters (on the basis of the arrangement made with the Australasian Colonies), and that amounts to 106,000*l.* As therefore, under the arrangement now made, the Imperial Government accepts 100,000*l.* from India, I think if the Admiralty was right in that calculation, it is clear that the Imperial Government is accepting a less sum than would be payable, if the squadron were calculated on the basis of the Australasian agreement?—That is so. It is quite true, as you were suggesting, that, based on the Australian mode of calculation, the four Admiralty ships would be paid for by India at the rate of 106,000*l.* a year, instead of 117,000*l.* a year. As a matter of fact, India only pays 100,000*l.*

8391-3. (*Mr. Buchanan.*) I am speaking from memory, but I think it was stated in Captain Hext's evidence that for the vessels supplied by the Admiralty to Australia, Australia pays less than India does. Is that not a matter of fact?—I do not think so. There was a calculation made, but it was not followed up very much. India did not think our calculation was a correct one, but, as they dropped that question, it was not gone into. It was that the tonnage of the ships selected by the Admiralty for India was ·44 of the whole squadron and the tonnage of the Australian ships was about ·43.

8394. (*Mr. Buchanan.*) This is the statement which I was referring to. Captain Hext says (Q. 7036-8) "according to the last produced evidence Australia "for 126,000*l.*, which they submit must not be "exceeded, has four cruisers and one gunboat in "commission, total tonnage 11,035 tons; and one "cruiser and one gunboat in reserve of 3,310 tons and "the whole of these ships are in addition to the Royal "Navy Australian squadron; thus, even if we leave "out the two ships in reserve, Australia pays 11·4*l.* per "ton." Then he contrasts the payment of India, and says "India will pay at the rate of 15*l.* per ton and "not only this, but not a single ship is added to the "existing squadron." Do you admit the correctness of that evidence?—I should like to examine it very carefully before I could give any opinion about it.

8395. (*Chairman.*) It would be useful to us if you would look at this statement, which I have read to you, which gave 106,000*l.*, instead of 117,000*l.*, as the sum which, on the Australian principle, India would contribute, and compare it with Captain Hext's statement, and show us if you can reconcile them. Could you?—Yes.

8396. (*Mr. Buchanan.*) And then, is it not a fact that besides this payment of 100,000*l.* a year, India makes a payment of 60,000*l.* a year for the other four ships and that there is no corresponding payment on the part of Australia?—Australia keeps up some ships of her own.

8397. So does India, so far as the Indian Marine is concerned, but the 60,000*l.* is beyond that.—

8398. (*Chairman.*) Australia does not contribute anything corresponding to that 60,000*l.* a year?—It does not employ the Admiralty to do any work of that sort.

8399. But does she keep any floating batteries of her own?—She has some for harbour defence.

8399*a*. (*Mr. Buchanan.*) But she makes no payment in any sense corresponding to this 60,000*l.*?—No, she manages them herself. (*Admiral Kennedy.*) There are some vessels belonging to Australian Colonies for local defence, maintained at the cost of the Colonies.

8400. (*Chairman.*) That is to say, both India and Australia protect what you may call their interior waters and their ports?—(*Mr. Cuming.*) Yes.

8401. Australia keeps her own ships, and the charge for these ships is borne on her own budget?—Quite so.

8402. As far as a certain class of ships, which India has for that purpose, is concerned, she, as it were, contracts with the Imperial Government to do the service by the payment of 59,600*l.* a year, and for that payment of 59,600*l.* a year the Imperial Government keeps up these port defences?—(*Admiral Kennedy.*) All the port defence ships.

Vice-Admiral W. A. Kennedy, R.N., and Mr. W. Cuming.

6 May 1896.

8403. And, therefore, until we know for what number of ships for defence of ports the Australian budgets provide, we should not be in a position to compare that 59,000*l.* with the Australian charge?—No.

8404. (*Mr. Buchanan.*) There is nothing in Australia which at all corresponds to the Marine Survey Department which is maintained in India?—(*Mr. Cuming.*) The Australians have paid a good deal towards surveys in Australia; they have paid a contribution to several of them.

8405. But they do not pay any fixed annual contribution, do they?—Yes, I think in some cases they have paid half.

8406. For special services?—Yes.

8407. But there is a regular Survey Department in the Indian Marine, is there not; one or two ships told off?—(*Admiral Kennedy.*) Yes, there is the "Investigator."

8408. There is nothing of that sort in the Australian service?—(*Mr. Cuming.*) There may be; I could not say one way or the other, but I know they have contributed towards surveys carried out by the Imperial Government.

8409. But the whole of the surveys in Indian waters are done by the Indian Government and at their charges?—(*Admiral Kennedy.*) Yes, that is so.

That is an additional expense which India takes upon itself?

8410. (*Chairman.*) There is this difference; we must bear in mind that this contribution from Australia is the first of its kind. Until 1888 or 1889, Australasia never paid anything whatever towards the Navy; on the contrary, from very early times, from the time the English became the masters of India, the East India Company had always maintained an Indian Navy. The two States, therefore, if I may call them so, start from a different point, that is to say, the Indian Government had always maintained its own Navy, the Australian Government had never maintained its Navy?—No. (*Mr. Cuming.*) I think it might be said the Colonies were behindhand; they were not, as has been put, a duly-constituted Empire, and they were gradually growing up. It was only about the year 1870 that the English troops were withdrawn, so that England paid for the whole of the troops for the Colonies up till then. Then the Colonies took the cost of the troops, and it is hoped, as time goes on, that they will take more and more a share of the cost of the Navy. (*Admiral Kennedy.*) Some of the Colonies do not pay anything at all towards the up-keep of the Navy, but I think they ought to.

8411. Without pressing that point further, it is fair to bear in mind that in the one case it has been the recognised duty of the Indian Navy to look after the protection of her own coasts and her own trade, whereas it had not been so in the case of the Australian Colonies; and, as you say, there are a good many Colonies that do not contribute anything?—That is so.

8412. (*Mr. Courtney.*) It is a matter of history; it is more a matter of asserting power than the recognition of duty?—(*Mr. Cuming.*) I am afraid that is a question which does not come within my province to answer.

8413. (*Chairman.*) Do you suppose, if the two Governments reverted to the old state of things before 1862, if the Admiralty restricted its duties in Indian waters precisely to those which it discharged before 1862, that the Indian Government would be able to effectually discharge the duties thus devolving upon it with the force which they now represent as sufficient?—(*Admiral Kennedy.*) No.

8414. May it not explain the divergence of views which now exist, that the Indian Government do not contemplate undertaking, or paying for, the same amount of duties as devolved on the old Indian Navy?—I think so. The Indian Government would throw the whole cost of the general protection afforded by the fleet on the Imperial Government.

8415. And that would be transferring to the Imperial Government a portion of those duties which the Indian Government discharged while it had its own navy?—Yes.

8416. In fact, it assumes as granted the transfer from the Indian taxpayer to the British taxpayer of a considerable part of the naval charge which the Indian taxpayer bore before 1862?—It appears to be so.

8417. Is there any proof that the Admiralty or the Treasury have ever accepted that position?—I have never heard of it.

8418. Have you any knowledge of the cost of the Indian Navy, *i.e.*, of that portion of it, the duties of which were assumed by the Admiralty in 1862?—I have no actual knowledge. I think they admit 300,000*l.* per annum. (*Mr. Cuming.*) That was a calculation made. I do not know whether the Government of India made it. (*Admiral Kennedy.*) That was a very rough calculation, but I think it was admitted that it cost 300,000*l.*

8419. I think Mr. Ryder made as profound a study of the subject as could be made on the very indifferent and insufficient material that was at hand; and, I think, he came to the conclusion (concurring in that with Captain Low's book) that about 300,000*l.* represented the sum which the Navy cost the Indian Government.

8420. (*Mr. Ryder.*) I think the Treasury thought that was a safe estimate. It was put before the India Office; the India Office have referred to it from time to time in papers of their own, but have never directly combated it, and we may suppose that they would have done so if they had had the power of disputing it?—It seems to be admitted, then. (*Mr. Cuming.*) It was in a paper put before Lord Rosebery.

8421. (*Chairman.*) Since 1864 there has been a large increase in our naval expenditure?—(*Admiral Kennedy.*) Yes.

8422. How would the estimates of 1858 59 compare with those of the present year?—The estimates for 1858-59 were 9,140,127*l.*, and for 1896-97 21,823,000*l.*, an apparent increase of 12,682,873*l.*, but, after allowing for transfer of services, the net increase is about 12,000,000*l.*

8423. Over double?—From 9,000,000*l.* in the one case, to nearly 22,000,000*l.* in 1896.

8424. Do you suppose that, if the Indian Navy had been maintained to the present day, discharging the same duties as it discharged in 1862, its cost would have increased?—Very much so, it certainly would have been doubled or trebled.

8425. Then, if its net cost in 1862 was 300,000*l.* or thereabouts, you would expect that its cost now would be at least 600 000*l.* or 700,000*l.*?—I certainly think so, because to keep pace with the times and keep ships up to date would require such an enormous outlay compared with that on the old ships.

8426. Before the great war the power of France in the East Indies had been practically crushed, had it not?—I believe so.

8427. And during the great war did the Admiralty keep a great force on the coast of India?—No, I think not, to the best of my knowledge.

8428. Did the Admiralty convoy the Indian trade? or did the bulk of the East India Company vessels sail armed and able to defend themselves?—I am under the impression that they defended themselves.

8429. So far, then, the East India Company kept their own coasts and looked after their own trade?—Yes.

8430. Putting all these facts together, would you hold that the abolition of the Indian Navy in 1862 was financially a boon to the Indian Government, and that the present subsidy does not impose so great a burthen on the Indian taxpayer as he must have borne if the old condition of things as it existed prior to 1862 had remained in force?—Yes, the abolition of the Indian Navy must be financially a boon. As regards the second part of your question, the cost to the Indian taxpayer, had the old conditions continued, would have been much greater than the subsidy.

8431. Were you aware, when you were in command of the East Indian Squadron, of the existence of the Indian Marine Act of 1884?—I was aware of it but had no occasion to deal with it, seeing that it did not apply to me.

8432. But you knew of the Act?—Yes, I was familiar with it.

8433. The policy of not keeping up a separate Indian Navy must be regarded as settled, but Captain Hext seemed to think that, from a financial point of view, it might be cheaper for India to keep her own navy. Looking at the question simply as a financial problem, should you agree with Captain Hext on that point?—No. I cannot see how it is possible that it should be

cheaper for India to keep her own navy. To start a navy they would require at least half-a-dozen ships of the "Bonaventure" class, which would cost a couple of millions straight away, besides a large flotilla of gun-boats and smaller vessels. And, having got them, I do not see how they are going to man them or fight them; they could officer them, they have got very good officers in the Indian Marine; but, though the Bombay Lascar is a very good sailor man, I am afraid that he would hardly be fit to be matched against the men of a foreign up to date navy.

8434. (*Mr. Buchanan.*) Is not that rather a different sort of navy from what Captain Hext had in contemplation in his evidence the other day?—Possibly.

8435-6. I mean, you are contemplating the establishment by India of a naval force similar to that which we keep in Indian waters?—Yes.

8437. I certainly do not think Captain Hext meant that?—He meant, perhaps, arming the present Indian Marine ships.

8438. I would say, summarising what he said, he meant that if you allowed the armament to be put on board the ships they have already got they could discharge all the duties enumerated in the Indian Marine Act?—Just the police duties, yes. (*Mr. Cuming.*) I think all Captain Hext's calculations are based on the understanding that the Rosebery award is to be put aside, and that the whole cost of general protection is to fall on the Imperial Government. It is a question, wherever you touch it, that always comes back to what is the definition of "Indian purposes."

8439. I am afraid that is another question; but what I meant was that it is hardly fair to Captain Hext, when you are speaking about the financial question, to set up a comparison of that sort?—(*Admiral Kennedy.*) The answer is "No" to that question about the financial aspect of the case; but it is trenching on the next question about the armament of the Indian Marine; if that was his idea.

8440. (*Chairman.*) The position, in fact, that Captain Hext was taking up was this, that the Indian Navy should consist of the existing ships which are under his direction, employed in police duties along the coast, and transporting troops round the coast—insignificant duties of that kind?—Yes.

8441. And his re-constitution of the Indian Navy, therefore, meant this that the Imperial Navy was to do all the duties of guarding the Indian coast, only that India was to be relieved from paying for them. That is what it must come to?—Yes, but then I think he proposes to arm the Indian Marine.

8442. Yes, I have not come to that, but I think he did.

8443. (*Sir James Peile.*) Certainly he deprecated greatly their armament having been disallowed?—Yes, but we will come to that presently.

(*Chairman.*) Perhaps he was prepared to take rather more work than at present; he was prepared to do the work, you say, of the "Sphinx"?

8444. (*Mr. Buchanan.*) I understood his idea to be that he would be prepared to do all that is done by the Indian Marine now, and also all that is done by three ships out of the four—the "Sphinx" and the other two ships—that he would be prepared to do that under the Indian Government, and that he thought it could be done equally efficiently and at any rate not at a financial loss to India?—Yes, but to do so you must arm those ships.

8445. And he was, of course, strongly in favour of putting an armament on board the Indian Marine ships?—Well, I will tell you the answer of the Admiralty to that when the question is put to me.

8446. (*Chairman.*) Supposing that idea were carried out—supposing those Royal Navy ships were withdrawn and nothing paid for them by India, and that India bought its own three ships and kept them on the coast as part of its navy, do you think that they could do that cheaper than 100,000*l.* a year?—If they bought their own ships?

8447. Yes, and added them to their Indian Navy, manning them and paying for all the expenses of them?—I should think they could, but I have never gone into the calculation.

8448. Less than 100,000*l.*?—I should think so, subject to a calculation being made; but then they could not do it at all unless the ships were armed.

8449-50. But including the armament, I mean. They are to be completely masters of the ships, to buy them, to maintain them, to man them, and to arm them, and, if they did that, could they do it do you think for less than 100,000*l.*?—I think they might do it with 100,000*l.* (*Mr. Cuming.*) Should not the comparison be with 50,000*l.* not with 100,000*l.*, 50,000*l.* is for the police duties; they offer the Admiralty 50,000*l.* for doing the police duties.

8451. I was taking what Mr. Buchanan said, which probably, as far as I remember, correctly represents what Captain Hext put, that, if he had an independent navy, he would add to the present Indian Marine a couple or three ships.

8452. (*Mr. Buchanan.*) Enough ships to do these duties. I do not know that he stated the amount.

8435. (*Chairman.*) And I want to get Admiral, Kennedy's view, whether, if these three ships were added, he could establish them and add them to the Indian Navy for less than 100,000*l.* a year? (*Admiral Kennedy*) I think we could arrive at that if we knew what is the cost of the "Sphinx." She is a perfect ship for the Gulf, and the "Lawrence" is another, a sister ship to the "Sphinx."

8454. (*Mr. Buchanan.*) The "Lawrence" is one of the Indian Marine?—She is one of the Indian Marine. (*Mr. Cuming*) 61,000*l.* was the cost of the "Sphinx." (*Admiral Kennedy*) To do the work of the Persian Gulf alone would require three ships, I consider, of the "Sphinx" class; but, even if there were only two, that would amount to 120,000*l.*, supposing there were two "Sphinxes." (*Mr. Cuming.*) The yearly cost on our basis is 21,000*l.* (*Admiral Kennedy.*) Well they could run three "Sphinxes" for 60,000*l.* roughly speaking.

8455. (*Chairman.*) The point that struck me was this—the Admiralty is a great organisation and probably it could keep three ships of that kind going somewhat more cheaply than the very small Indian Department which the reconstituted Indian Navy would represent. I should have thought that if India started its own Navy again, even in that small beginning, she would find it more expensive than the Admiralty?—Well the wages are so cheap; I should think that India could run them cheaper; but that is exclusive of many charges which do not come into the Admiralty calculation.

8456. (*Sir James Peile.*) Why would you require three "Sphinxes" for the Persian Gulf when one "Sphinx" suffices now?—I believe you could do the work of the Persian Gulf really with two ships of the "Sphinx" class, supposing they were armed, one relieving the other, but it is not allowing for any contingency of taking down or refitting, and that is the reason why, to do the work properly, you would always have to have one in reserve—making three.

8457. (*Chairman.*) Have you anything to say as to the desirability of reconstituting an armed Indian Marine, as recommended by Captain Hext, involving as it does the armament of the ships?—I have no instructions to notice the opinions expressed by the Director of Indian Marine in his evidence before this Commission on the subject of the reconstitution of an Indian Navy, or to admit directly or indirectly that such a question is open. It has been finally decided that a return to the system which existed in the days of the East India Company is not possible. There can be but one Navy for that service, the Imperial Navy, governed by the Queen's officers with undivided responsibility.

8458. And, therefore, inasmuch as the Indian vessels would not be under the Imperial Naval Commander, the Admiralty would object to their being armed?—They object most strongly, but if the "Lawrence," for instance, were armed and placed under the orders of the Admiral, I myself see no objection to it whatever, and I do not think that their Lordships would either; but they would insist, if the ship were armed, that she must be under the orders of the Admiral.

8459. (*Sir James Peile.*) Just as the turret ships are?—Yes. For instance, in war we should at once utilise all the Indian Marine ships, and most valuable they would be. They have got their armament out there ready; they could be turned into men-of-war very quickly; but they must be under the one head, and it is very easy to see why it should be so, because

Vice-Admiral W. A. Kennedy, R.N., and Mr. W. Cuming.

6 May 1896.

otherwise you would have the Admiral with his fleet, and you would have the Director of the Indian Marine with his armed fleet possibly committing an act of war in some other part of the station, which would lead to complications; you cannot have two heads.

8460. (*Mr. Buchanan.*) But that could surely be adjusted; it is clear that they must both be put under the same command; but, apart from that, this vessel, the "Lawrence," is at present in the Persian Gulf?—Yes.

8461. Doing what sort of duty?—She is really a yacht for the Political Resident to move about in the Gulf, and she has certain guns for saluting purposes. It is most important to salute the Sultan of Muscat and the different Sheikhs; they think a great deal about salutes, therefore she has just a small armament.

8462. Then does she act quite independently of the "Sphinx" in the Persian Gulf?—Entirely, we never interfere; we have never interfered with the "Lawrence" or any of the ships of the Indian Marine, and they do not interfere with us; they are entirely under Captain Hext.

8463. The "Lawrence" is employed in the Persian Gulf under the arrangement that she belongs to the Indian Government. Do I gather that that arrangement is not satisfactory to the Admiralty?—No. It is quite satisfactory at present.

8464. Because she is not armed?—Because she is not armed. They did arm her; but it was objected to, and the guns were taken out of her.

8465. So far as your knowledge goes, what do you consider to be the duties performed by the "Lawrence" in the Persian Gulf? Do they, as Captain Hext thinks, include suppression of piracy?—She acts as a moral force, but you can hardly say that a ship that is unarmed suppresses piracy.

8466. Therefore she is not actually employed in the suppression of piracy?—No. Directly you admit that she suppresses piracy, you imply that she is armed, and she is not allowed to be armed.

8467. You observed that Captain Hext stated in his answer to a question that one vessel in the Persian Gulf which, I suppose, was the "Lawrence," might have been carried by a pirate dhow?—Yes.

8468. What would you say upon that point?—I certainly think that any ship employed in the Persian Gulf or in the Andaman Islands ought to have arms aboard sufficient for her own protection; but I take it that all the Indian Marine ships have that. They have all got small arms aboard. Of course, that is an exaggerated case about the "Lawrence" being carried: it is not actually the fact; she could make a very good fight with the arms she has.

8469. In fact, the Admiralty would admit that any vessel of that kind ought to be sufficiently armed to defend herself?—Most certainly. I think it would be a very wrong thing to send a ship up there without sufficient small arms for her own protection, or to the Andaman Islands.

8470. (*Sir James Peile.*) Is it not a waste of force to have armed and unarmed ships exerting the same influence in the same waters?—A waste of force?

8471. Yes, having both classes?—The "Lawrence," though unarmed, is very useful indeed, because the Political Agents could not dispense with her services as a yacht.

8472. (*Mr. Buchanan.*) Would she not be more valuable as an auxiliary to the Navy if she were armed?—I think she would be most useful to us; but then the Admiralty would insist upon her being put under the Commander-in-Chief. On those terms they would have no objection to her being armed.

8473. (*Mr. Naoroji.*) That could be done in a time of war?—In a time of war they would arm the "Warren Hastings" and the "Clive;" they have their guns, and they are very smart ships.

8474. (*Sir Donald Stewart.*) Supposing the ship is armed in time of peace, how would the discipline be carried on?—Supposing they were armed?

8475. On board the "Lawrence," we would say?—In war time they would be immediately put under the Articles of War.

8476. In time of war, I know: but in time of peace?—The Indian Marine Act would be quite sufficient.

8477. The Admiral would be satisfied with that, would he? I should think so; dealing with black crews, Bombay lascars. I think that Marine Act would meet the case perfectly well.

8478. You think there would be no objection to be raised on that ground?—I should think not. The arming of the Indian Marine is a question which the Admiralty have not admitted for a moment.

8479. I quite see that?—They do not admit that it is capable of argument at all. Therefore it must be only my own opinion about it.

8480. (*Sir James Peile.*) Would the Admiralty object to the British Resident being carried on a ship of war under the Admiral's command?—No; he constantly is so carried. When the "Lawrence" is down refitting, the "Sphinx" takes her place, and takes the Resident about; he goes just as much in the "Sphinx" as he does in the "Lawrence"; in fact, she is fitted up with saloons on purpose for taking the Political Resident about.

8481. (*Mr. Buchanan.*) With regard to the armament; do I understand that there is an excellent armament for the "Lawrence" lying on shore?—Yes, she had it actually on board her at one time.

8482. And I also understood from another answer of yours that there is armament also provided for another ship of the Indian Marine, which the Admiralty ordered to be put on shore?—No; the "Lawrence" was the only ship that was armed and was disarmed by order of the Admiralty.

8483. But armament was also provided for another ship?—Yes; there is an armament for the "Warren Hastings," and for at least three ships, all ready in Bombay Dockyard, that can be put on board at 24 hours' notice. That is all part of the scheme; but only to be put on board in case of war.

8484. Is it not rather a waste of power then, that there should be these vessels there and armament provided for them by the Indian Government, and yet, owing to this question of the command, which surely might be settled, by legislation if necessary, these ships with their armament on board cannot be made available for general naval purposes?—It is not a waste of power, because the ships are very useful all the time as troopers; trooping is their legitimate work; that is what the Indian Marine is for.

8485. There are three, which, we were told, were troopers? The "Warren Hastings" is a trooper, so is the "Clive" and the "Canning"; everyone of them does trooping service except the "Lawrence;" she does a little in that way, but it is not her business.

8486-7. But if the "Lawrence" had armament on board and the question of the command were settled, would not she and the "Sphinx" be quite sufficient for all purposes in the Persian Gulf at no extra cost to the Indian Exchequer?—I believe they would, with a reserve at Bombay. You cannot run them for ever. It is just the same as if you had two omnibuses or two cabs, you must have a third in reserve. That is easy to understand; but still the "Sphinx" and the "Lawrence" could do the whole of the Persian Gulf with a gunboat or a third ship.

8488. And the "Lawrence" and the "Warren Hastings," or any other ship for which armament is provided, if armament were put on board of them, would be good additional auxiliary cruisers for naval purposes in Indian waters?—In time of war, most certainly.

8489. So that, owing to this difficulty about the command, practically we are deprived of the naval services which the Indian Government is prepared to render to us?—That is one way of looking at it.

(*Sir Donald Stewart.*) But that is not the right way of looking at it though.

8490. (*Mr. Buchanan.*) We suffer the loss owing to this difficulty that has arisen about the question of the command; this armament has been ordered to be put on shore, and we do not get the value of the services of those two vessels?—You get the value of the ships, because they are doing good useful work all the time; and the guns are not deteriorating in any way—the armament is all stored in Bombay Dockyard and most carefully kept in beautiful order, and it does not cost anything, barring the first cost.

8491. (*Sir. Donald Stewart.*) Do you know for what purposes these ships were built and supplied?—The "Warren Hastings" and so on?

8492. The whole of those ships of which you are talking?—Troopers; they are fitted for troopers.

8493. And for that only?—For that only.

8494. And for the purpose of utilising these ships in time of war, armaments have been provided for them; but it is not their business to do any work excepting trooping work?—That is so; in that respect they are much the same.

8495. Otherwise, the Government of India would not have gone to the expense of purchasing vessels for trooping purposes, if they had not been required?—They are on much the same footing as the large Cunard and other steamship lines, which are fitted by order of the Admiralty to carry guns, and would do so in time of war.

8496. To defend themselves in time of war?—To defend themselves in time of war.

8497. (*Chairman.*) With reference to these ships being used as transports, may I call your attention to the recital in that Act of 1884 as to the services for which the Indian Marine is established. "Whereas a marine "establishment, called Her Majesty's Indian Marine "Service, is employed under the direction of the "Governor-General of India in Council" . . . "for "the transport of troops" comes first "the guarding of "convict settlements, the suppression of piracy, the "survey of coasts and harbours, the visiting of light-"houses, the relief of distressed or wrecked vessels, "and other local objects, and is maintained out of the "revenues of India"?—Yes.

To carry out these duties, they have the following force, as Captain Hext describes it to us:—10 seagoing vessels and five river vessels; three of these 10 vessels are employed as transports; there is one ship at Aden, one ship in the Persian Gulf, one at the Andamans, one on the coast of Burma doing lighthouse work, one with the Government of Bengal for work on the Hooghly, and one surveying ship; and the five river steamers are employed, four on the Irrawaddy and one on the Tigris. Therefore, three of these ships are constantly employed in carrying troops, one ship is engaged in lighthouse work, and one ship is employed in looking after the convict settlements.

(*Sir Donald Stewart.*) I beg your pardon, it is not for defending the settlements that the vessel is provided; it is not an armed vessel, it is for enabling the Superintendent to move about.

(*Chairman.*) I was not saying that it was for defence.

(*Sir Donald Stewart.*) She is for the use of the Superintendent.

(*Mr. Buchanan.*) "Guarding convict settlements" is the wording of the Act.

(*Sir Donald Stewart.*) I do not know how a vessel can be said to guard them when it has no guns.

8498. (*Chairman.*) My reason for asking you the question is to ascertain whether, after hearing the recital of that Act, you would at all limit the statement that the Indian Marine exists for the transport of troops, which I gathered that you said?—I should say that the transport of troops was their principal duty.

8499. That is, three out of 10 ships are engaged in it?—Are only three out of the 10 for the transport of troops?

8500. Three out of the 10; the others are all employed on different duties?—Yes, there are lighthouse duties and the Andaman Islands.

8501. And surveying?—Yes.

8502 And one ship on the Hooghly for the service of the Government?—Yes. I think most of those 10 are probably river boats for going up the Rangoon river.

8503. There is only one ship on the coast of Burma?—Yes.

8504. They have got four small steamers on the Irrawaddy?—Yes, are those included in the 10?

8505. No. There are 15 altogether: five river steamers and 10 sea-going ships?—I should say, still, that their principal duty was trooping, because all the best ships, the larger ships, are employed for trooping. Of course the smaller ones have other duties to perform,

8506. The "Lawrence" is really only employed to carry the Resident about?—That is what she is, only a yacht.

8507. (*Mr. Buchanan.*) Still, guarding convict settlements and suppression of piracy are two of the objects of the establishment of the Indian Marine as set forth in the 1884 Act?—Yes.

8508. (*Sir Donald Stewart.*) Of course it may be put into the Act, and the wording is no doubt correct; but practically the vessel at Port Blair is only a despatch-boat for the service of the Superintendent of the settlement. The Andamans have been occasionally without any boat at all. The "Enterprise," built specially for the settlement, had no guns, nothing but small arms. She was not for defensive purposes at all?—I think she was lost there, was she not?

8509. Yes, she was wrecked in the harbour?—Yes.

8510. (*Mr. Buchanan.*) I quite understand; but Captain Hext's view would be that these words in the 1884 Act justified him in making the proposals for the armament of some of the ships of the Indian Marine?—It is quite true that it is an anomalous position to expect ships to guard, suppress piracy, and so forth, without arms; but then we do not know anything about that Indian Marine Act. I do not know who invented it; and we do not admit it at all from the naval point of view. (*Mr. Cuming.*) At the time when that Act was under consideration between the India Office and the Admiralty, the Indian Marine was described in the India Office letter of the 13th February 1883 as "a purely non-combatant service."

8511. (*Mr. Mowbray.*) And when was this armament put on board the "Lawrence?"—(*Vice-Admiral Kennedy.*) It was on board when I went out in February 1892; she had all her arms on board, and while I was on the station orders came that she was to be disarmed. It is difficult to understand how you could have an armed force out there unless actually commissioned men-of-war; they would have to fly a flag, and be under the orders of the Admiral, become men-of-war, otherwise they would become a sort of pirates.

8512. What colours do the Indian Marine fly?—They fly a blue ensign with some device on it—the Star of India, I believe.

8513. (*Chairman.*) What would you suggest as an improvement on the present arrangement, presuming that the "Lawrence," or some other vessel, is necessary in addition to the "Sphinx"? Would you propose that the "Lawrence" should be put under the command of the officers of the naval squadron, instead of being simply at the disposal of the Resident?—If she is armed, she would have to be put under the orders of the Admiral; but I should think that the Indian Government would object to that themselves; they would prefer to keep her as she is.

8514. Would they object, or the Resident?—I do not think the Resident would care, because he uses one ship like the other.

8515. Does he use your ships?—Yes, he uses the "Sphinx" just as much as he uses the "Lawrence;" I do not think it would matter to him. But Captain Hext himself would be the first to object; he prefers, naturally, to have the Indian Marine ships under his orders; and he is quite right from his point of view, and he has them under his orders. That is the difficulty. Directly you arm them they become pirates; they have no status if they are fully armed.

8516. There is another way of solving the question. Would you, from the Admiralty point of view, like to undertake the whole of the Indian Marine as it exists, so as to have those vessels armed and ready for service in case of necessity?—I do not know what the Admiralty view would be in that case. That is what it would come to in time of war; but in time of peace I should think that they would prefer to let these vessels do their own work.

(*Mr. Cuming.*) You mean that we should work the ships and charge the Indian Government another subsidy for it, and that they should pay us the cost?

8517. I mean that you should extend the arrangement made with regard to floating batteries?—Undoubtedly I think the Admiralty would rather not.

8518. As a method of remedying the Indian complaint that their ships are useless because the Admiralty pre-

Vice-Admiral W. A. Kennedy, R.N., and Mr. W. Cuming.

6 May 1896.

vent them being made useful, it might be a solution of that difficulty if the Admiralty undertook the whole business?—The local troop service—the Admiralty would not care to take that over, and on it, as the Admiral says, the Indian Marine ships are largely employed.

8519. When we look at Captain Hext's evidence we see that three ships out of the 10 are so employed?—(*Vice-Admiral Kennedy.*) The others are small.

8520. (*Sir Donald Stewart.*) But if the ships are not wanted for trooping purposes, would not the true economy be to sell them, to get rid of them?—But they always are required for trooping services; they are constantly taking troops about.

8521. (*Chairman.*) That is rather at variance, I think, with what Captain Hext says. I gather from his evidence that three are kept upon the trooping service; and then he distinctly states that such and such ships—the other seven ships—are kept upon these different stations. For instance, the ship of which Sir Donald spoke?—Yes, one at Aden, one at the Andamans, one at Rangoon, and so forth.

8522. Might there not be an advantage if those ships were put under the Admiralty, so as to have only one authority?—I do not know what the Admiralty view would be as to that.

8523. That has never come under your consideration?—No

8524. Have you anything to say on the statement that the "Marathon" is a ship that draws 22 feet or more, and would be perfectly useless in the Persian Gulf?—Yes, I think Captain Hext a little exceeded the facts there. The "Marathon" as a matter of fact draws 19 feet instead of 22, and as to her usefulness in the Persian Gulf, she is not suited for the Persian Gulf. She could get up within four miles of Bushire, but, as a matter of fact, she is not intended for the Gulf.

8525. And you do not use her in the Gulf?—No; we never send her up there by any chance. She would be useful at Muscat, for instance, where there is very often trouble, but that is not in the Gulf, and any ships can get there.

8526. Did you form a bad opinion of the behaviour of the "Marathon" at sea?—No, she is a very good ship; what sailors call "lively," but fast and perfectly safe; a good ship.

8527. Captain Hext appeared to me to have an opinion that the Admiralty had not taken into consideration the services of the "Lawrence" in the Persian Gulf; and that the presence of the "Lawrence" there should be taken into consideration in connection with the contribution; do you think that the presence of the "Lawrence" in the Persian Gulf has been taken into consideration in the contribution that has been fixed?—No, I should think not; it has nothing to do with it.

8528. Do you think there is anything in his view, as I understood him, that in consequence of the presence in the Persian Gulf of the "Lawrence," which is paid for by India, some reduction should be made in the Indian contribution for the other ships?—She does not do any fighting; she is most useful as a yacht, but supposing the "Lawrence" is up there single-handed and there is any disturbance, they immediately telegraph to the Admiral, who sends a man-of-war; so that I do not see that she can be taken into consideration as a force.

8529. Looking at the financial point; supposing she were put under the orders of the Admiralty and armed, should you then be able to withdraw a ship from the Persian Gulf?—She is just as good as the "Sphinx," perhaps better; but they would still want a yacht up there. I think myself that that really would be the best way of working the Gulf, because those two ships are so specially fitted that they are very healthy, and our gunboats are not suited for it.

8530. Then you think there might be an advantage in making such an arrangement as that? Is your opinion based on the ground that the Persian Gulf is bad for the white man?—I do not say that it is unhealthy for the white man, but the heat is so terrific that you require a special ship for him and special precautions; and the "Sphinx" was always perfectly healthy, the most healthy ship in the squadron, though she was up there all the year round with white men on board; but then, of course, they were taken the greatest care of

8531. But the upshot of it is that if the "Lawrence" was under the Admiralty orders, there might be an advantage in keeping her in the Gulf and withdrawing the "Sphinx"?—I would not withdraw the "Sphinx," but the "Lawrence" and the "Sphinx" between them would do the work well.

(*Sir Donald Stewart.*) My Lord, I have got the papers here which will explain to you exactly what the "Lawrence" was built for. The Government of India wrote in 1881:—"Having regard to the peculiar "circumstances of the appointment, it seems very "desirable that the Resident in the Persian Gulf should "no longer be dependent for his visits by sea to the "places within his political charge, upon the vessels of "the Royal Navy stationed in these waters. For the "prompt and regular discharge of judicial duties, and "for the proper political control of the Gulf coasts, the "Resident undoubtedly requires to be able, at the "shortest notice, to proceed himself, or depute one of "his subordinates, to any part of his charge. So long "as he has to rely entirely upon the aid of Her Majesty's "gunboats, such free action is out of the question, for "these vessels are not always available; nor, when "available, are they in all respects suitable for this ser-"vice. The practical usefulness of the Bushire Residency "is therefore much impaired, and no corresponding "advantage appears to be gained by Her Majesty's "Navy, as the crews of British vessels suffer from "employment in the Gulf during the hot weather. "Under these circumstances, we have the honour to "recommend that a special despatch vessel be provided "for the use of the Resident, the cost being met by "the withdrawal of one of the gunboats upon the "East Indian station. For the services of these "vessels the Government of India pays 70,000*l.* per "annum, or at the rate of 11,666*l.* apiece. It is "estimated that a special vessel of the character "required could be maintained for about Rs. 80,000, or "6,666*l.* per annum, and that the initial cost of such "a vessel would be about 25,000*l.* in England. The "annual saving, therefore, would be about one-fifth of "the initial cost." So that we were to reduce the ships of war from five to four and were to provide in the place of the reduced ship this vessel, which would be a despatch boat for the use of the Resident; and for that purpose this vessel was built and sent out there.

(*Mr. Buchanan.*) And paid for by the India Government?

(*Sir Donald Stewart.*) And paid for by the Indian Government.

8532-3. (*Chairman.*) Then the proposal of the Government of India, as far as the financial contribution went, was this, that the Admiralty should withdraw a gunboat, that gunboat being replaced by a ship that was not under Admiralty orders?—Yes.

(*Sir Donald Stewart.*) And would be less costly than the gunboat.

(*Sir James Peile.*) Was a gunboat reduced?

(*Sir Donald Stewart.*) Yes, I believe a gunboat was reduced.

(*Mr. Buchanan.*) Then that was a saving to the Admiralty.

(*Mr. Cuming.*) No, to India, because the subsidy was reduced from 70,000*l.* to 41,600*l.*

(*Chairman.*) What year was that, Sir Donald?

(*Sir Donald Stewart.*) This letter was written in 1881. Then there is another letter in 1884 on the same subject.

(*Chairman.*) There were six vessels under the old arrangement?

(*Sir Donald Stewart.*) There were six vessels under the old arrangement. In 1887 they were reduced to four.

(*Chairman.*) Exactly; they were reduced to four.

(*Sir Donald Stewart.*) From six.

(*Chairman.*) This being part of the arrangement which made that reduction of the subsidy possible?

(*Sir Donald Stewart.*) Yes.

(*Chairman.*) The "Lawrence" went up in 1887, did she not?

(*Sir Donald Stewart.*) She was ordered in 1881 and she was working in 1887.

(*Chairman.*) Therefore the arrangement in 1888 under which a reduction was made in the number of ships

employed by the Admiralty and the contribution paid by India was in part rendered possible by this employment of the "Lawrence"?

(*Sir Donald Stewart.*) Yes.

8534. (*Chairman.*) India would not gain any financial advantage, unless the "Sphinx" was withdrawn, would she? The "Sphinx" is the only ship of war in the gulf?—(*Vice-Admiral Kennedy.*) Yes, the only one.

8535. Therefore, for financial advantage, if the "Lawrence" is to be put under Admiralty orders, she must be able to replace the "Sphinx" altogether, must she not?—I think you would want them both; she would take the place of the reserve gunboat really.

8536. You always have a gunboat in reserve?—We have a ship constantly in the Persian Gulf; the gunboat is the reserve ship; she stops at Bombay. That was always the plan I think, and whenever the "Sphinx" came down the gunboat took her place.

8537. What it comes to is this, that if the "Lawrence" were put under Admiralty orders, that gunboat might be free for other service?—There would still be a gunboat in reserve at Bombay.

8538. But as far as the Persian Gulf was concerned, there might be a financial advantage in it?—There might be. That would be the best way, for the Admiralty to buy the "Lawrence" right out. That is what I should do; I should buy the "Lawrence" right out.

8539. It would be a question of re-considering the number of vessels in respect of which the contribution is paid?—Yes.

8540. Captain Hext mentioned that the Indian Navy had been of very considerable use to the Imperial Government, and he cited the services which were rendered by it in New Zealand and in China. They were a very long time ago; I do not know that he was quite positive in his opinion that no payment had been made by the Imperial Government on account of the Indian Navy in those times. Do you know whether at that time, if the Indian Navy was ordered outside Indian waters for Imperial purposes, any payment was made by the Admiralty to India for the services they rendered?—No, I do not know on what footing they were employed.

8541. Have you had an opportunity of reading page 26 of Sir H. Waterfield's paper which is understood to represent the form of the India Office objection to the Rosebery award? "In view of the decision given "by the Prime Minister, it is not desired by the India "Office to dispute the arrangements recently made upon "any arithmetical or technical grounds. But the "attention of the Commission is requested to the broad "question whether it is right to exact from India within "17,000*l.* of the full charge, effective and non-effective, "of the squadron, seeing that—(1.) Although the "Admiral is required to comply with the wishes of the "Government of India when communicated to him, "still the ships are not at their disposal in the same "degree that the Army is. (2.) The vessels not employed "in the Persian Gulf are under the command of the "Admiralty, and must be occasionally employed on "other than Indian services (*see* Treasury letter of "June 30th 1888) for which India gets no return. (3.) "The number and class of the vessels employed is not "that which the Government of India think necessary "but that which the Admiralty determine." Would you wish to make any observation upon that representation?—The Admiralty might demur to it on the ground that it was, so to speak, an objection, not to Lord Rosebery's award, but to the decision of the Foreign Office Conference, which, it was understood, had been accepted on all sides. In the minutes of that Conference it was provided that for the ships selected India should pay the full cost. The Admiralty would point out that in the arrangement they have made, they are receiving less than the full cost, which is 117,000*l.* They are in fact foregoing 17,000*l.* a year. They assented to this in order to settle a long controversy, and because, as stated in their letter of the 30th May, they were willing to recognise that, as intimated in paragraph 7 of the India Office letter of 28th March, there may under existing circumstances be a limit to what India should be asked to pay.

(*Mr. Cuming.*) There is a small paragraph in a letter of the Secretary of State, which I might be allowed to read, that rather covers that.

8542. What is the date of that letter?—It is a letter from the Secretary of State of the 26th June 1895 communicating the terms of settlement with the Admiralty to the Indian Government. It says: "As to "the annual payment I am of opinion that, while a "reference to arbitration would probably not result in "better terms than those offered by the Admiralty, it "might possibly increase the Indian payment beyond "what the Admiralty were willing to accept. I de-"cided, therefore, in Council to accept the proposed "compromise, which is, I am satisfied, the best arrange-"ment which could be secured in the interests of India." That seems to show that the Admiralty made, in the opinion of the Secretary of State a very reasonable proposal.

Vice-Admiral W. A. Kennedy, R.N., and Mr. W. Cuming.

6 May 1896.

8543. (*Sir Donald Stewart.*) That is an opinion?—At any rate it seemed as if he thought an arbitrator might take that view.

8544. (*Chairman.*) The first point upon which the Indian Government rely in making, what I may call, their appeal to the Commission is that the ships are not at the disposal of the Indian Government in the same degree as the army is?—(*Vice-Admiral Kennedy.*) No.

8545. But I would ask you, is it not almost a necessity of the case? Assuming that these ships are used solely for the purposes of India, would you not say that it is desirable that one authority should determine the manner in which a naval force should be used?—That is the reason why the Admiralty never would allow their Admiral to be under the orders of anyone; we do not admit anyone over us out there, not even the Viceroy of India; but, of course, if he expresses a wish it is the duty of the Commander-in-Chief to comply with it.

8546. I mean, looking at it from the common-sense point of view, is there not something almost untenable in the idea that the Viceroy—a landsman—should direct the movements of the ships in Indian waters?—That is the reason.

8547. (*Sir Andrew Scoble.*) The First Lord of the Admiralty is a landsman?

(*Chairman.*) But then he is only one of a Board?—Oh, yes, and for that reason, I was going to say, he knows nothing about ships. But of course it is not necessary for the First Lord of the Admiralty to know anything about it; there are great questions for him to deal with.

8548. (*Mr. Courtney.*) But is that distinction between the Navy and the Army sound? The Viceroy may be a pure civilian, yet he is at the head of the military forces?—I do not know, I am sure, how he stands with regard to the military; but I do not suppose the Viceroy would give any orders to troops except through the military Commander-in-Chief. He would express his wishes, of course; I am speaking in the presence of Sir Donald Stewart, who knows all about it, and I do not; but I take it that that would be the way in which he would order troops about.

8549. Through the Commander-in-Chief?—I suppose so.

8550. Might he not, in the same way, order ships through the Admiral?—Well, it would amount really to an order, although not admitted as an order. If he were to say to the Admiral, "I wish you to send a ship "to such and such a place," it would be the duty of the Admiral, under his instructions, to comply. It is laid down expressly in the minutes of the Foreign Office Conference that the vessels will be under the controlling orders of the Naval Commander-in-Chief, to whom will be sent the wishes of the Indian Government, with which it will be his duty to comply. Of course it amounts to the same thing.

8551. (*Chairman.*) Therefore would you lay very much stress upon that ground of remonstrance, that the ships are not at the disposal of the Indian Government?—No, I should not lay much stress upon it, because it is not really a fact. The Indian Government have only got to express a wish and it is complied with directly; they very seldom did express a wish.

(*Mr. Cuming.*) Those are the exact terms that were laid down at the Foreign Office Conference; the Admiralty has adhered to them strictly. The Foreign Office Conference gave the Indian Government a limited control of the ships.

8552. When I was asking Admiral Kennedy about the advantage of a single authority, I was thinking of a case

Vice-Admiral W. A. Kennedy, R.N., and Mr. W. Cuming.

6 May 1896.

of this kind; if an operation was about to be carried out, would you hold that it was necessary that the Admiral should decide what number of ships should be used upon the service?—(*Vice-Admiral Kennedy.*)—Certainly.

8553. And supposing the non-naval authority on shore said "Oh, no, three ships are not required for that, two will do;" that is a case which, the Indian Government not having an expert department to advise it comparable with the Admiralty, might lead to considerable mischief, might it not?—Of course the Admiral would be obliged to act entirely on his own judgment. There was a case rather bearing on that subject with regard to the defences of Bombay. The military authorities claimed the right to control those two turret-ships and the Coast Defence flotilla generally for which India pays. I was obliged to explain that, as it was a purely nautical question, they must be under the orders of the Admiral or the senior naval officer in Bombay harbour at the time, who would, however, work concurrently with the General. They would never be working in opposite directions; they would all be working for the public good. But it would not do for a landsman to give orders to those ships.

8554. Then the answer to the first complaint is that, practically, the wishes of the Indian Government are carried out?—Invariably carried out.

8555. (*Mr. Courtney.*) Has any similar question arisen with regard to Australia?—I do not know at all what footing they are on in Australia.

8556. What are the orders or directions given to the admiral on the station?—I have been senior officer on other stations, but never as an admiral. The orders, however, always are to assist the civil authorities in every possible way, and to oblige them in any way. We could not take orders from them. For instance, in Australia most likely the Admiral's orders would be to support the Governor in anything he may wish. If the Governor wished a ship sent round to any place, the Admiral would be most happy to oblige him, but he would not be under his orders.

8557. Supposing some difficulty arose at Norfolk Island and the Governor of New South Wales wanted a ship to go there?—It would be sent immediately.

8558. There would be no question of considering the authority of his requisition?—There would be no question. The Admiral would not dispute it. The mere fact of the Governor, who would know all about it, requesting a ship to be sent there at once would be sufficient. If the senior naval officer, whoever he might be, did not do it, he would act at his own peril, and most likely would be superseded as not fit for his post. There might be a massacre at that place; if he did not send up a ship at once, he would, I think, fail in his duty. Such a thing would never arise, because the Navy is always most anxious to assist the political authorities, whoever they may be, whether governors or viceroys.

8559. (*Mr. Naoroji.*) But you would have the power of refusing if you chose?—Certainly; it might be impracticable to comply for reasons of a naval character.

8560. That makes all the difference?—Yes.

8561. (*Chairman.*) Coming now to the second complaint: "The vessels not employed in the Persian Gulf "are under the command of the Admiralty, and must "be occasionally employed on other than Indian ser- "vices." But I gather, from what you have told us about the arrangement between the Admiralty and the India Office, that those vessels cannot be employed, without the consent of the Indian Government, outside certain limits?—Certain limits, which are clearly defined.

8562. And those limits are defined with the assent of the Indian Government?—Inside those limits they may move about as they please, but they are not to go outside those limits.

8563. Therefore, is it quite correct to say that they must be occasionally employed on other than Indian service? They could not be employed on other than Indian service, except with the consent of the Indian Government, could they?—Since I left the station the orders are more binding on the Admiral. I think it is mentioned in them that he cannot move those ships without the consent of the Indian Government. It was not so in my time, but I kept them always in Indian waters; they were always there, and they were carrying out the usual duties of the station.

8564. And in that case, I suppose, from what you said before, you would, as far as possible, carry out the wishes of the Indian Government?—Yes. As a matter of fact, the Indian Government rarely expressed any wish at all. Only once or twice, I think, I was asked to send a vessel up the Persian Gulf in consequence of trouble at Muscat and other places. Of course it was sent immediately.

8565. (*Sir Donald Stewart.*) But your ships go to the Mauritius and Madagascar, which are not in Indian waters technically?—Yes, but I always had four in Indian waters. That would still leave the Admiral four ships to go to Mauritius and Madagascar; but he would leave the four in Indian waters all the time.

8566. Is that the present arrangement?—Yes.

8567. There are always four in Indian waters?—Always supposed to be.

8568. But are they in fact? In my time, I can answer for it, there always were four; I never left less.

(*Mr. Cuming.*) Under the old arrangement of 1869 to 1887 it was six ships first, and four afterwards. If there were less than six ships, or four, India had the right to reduce the subsidy, and she did so on more than one occasion.

8569. May not the fact that the full number of ships was not always in Indian waters have been the reason—I do not know—why this proviso was specially put in?—(*Vice-Admiral Kennedy.*) There may have been some complaint lately; I do not know about that.

8570. (*Sir William Wedderburn.*) I just wish to ask whether general instructions were given by the Admiral to officers commanding men-of-war in the Persian Gulf to carry out requests from the Political Residents?—Always.

8571. There were general instructions?—Most particular instructions that he really was at the disposal of the Political Resident to carry out his wishes in every way. In fact they do so. The "Sphinx" has her headquarters at Bushire and is entirely at the service of the Political Agent there.

8572. And as regards the location of these men-of-war, is that under the direct instructions of the Admiral or does that depend on the request of the Political Resident?—On the request of the Political Resident in the Gulf. The ship leaves with the Admiral's orders, for instance, to go to the Gulf, and there her duties are clearly defined—suppression of the slave trade and so forth—but she has always to be in touch with the agent at Bushire and carry out his wishes.

8573. Have there been any cases in which a difference of opinion has arisen between the Political Resident and the Naval officers—any cases of complaint?—I never heard of one.

8574. Things have always been arranged in an amicable way?—Always very amicably.

8575. (*Mr. Naoroji.*) Do I understand that the second complaint is that India gets no return?—That seems to be the complaint as far as the remonstrance goes; it was "India gets no return."

(*Chairman.*) You must read the words before "occasionally employed."

(*Mr. Naoroji.*) "Vessels not employed in the Persian "Gulf are under the command of the Admiralty, and "must be occasionally employed on other than Indian "services," *see* Treasury so and so "for which India "gets no return," and that I understand was the complaint.

(*Chairman.*) But the complaint is that they are occasionally employed on other than Indian services, for which India gets no return.

(*Mr. Naoroji.*) I merely wanted to know what the real complaint was.

8576. (*Chairman.*) Then what would you say about the third complaint?—"The number and class of the "vessels employed is not that which the Government "of India think necessary, but that which the "Admiralty determine"?—That is true; because, for instance, they object to the "Marathon," and yet the "Marathon" is selected.

8577. But would not the answer be, that the Admiralty are the expert department?—They are the best judges.

8578. And therefore best fitted to determine?—They are the best judges of the all-round work of the station. It is perfectly true, as Captain Hext says, that the

"Marathon" is no use for the Persian Gulf; she is not the sort of ship; she is too big; she draws too much water.

(*Mr. Cuming.*) That was a point that the Admiralty was willing to go to arbitration about, but the Secretary of State accepted their modified offer instead of going to arbitration. I do not know whether the Government of India has accepted it, but the Secretary of State has accepted the ships.

8579. (*Sir James Peile.*) What was the modified offer you speak of?—To take 100,000*l.* instead of 117,000*l.*

8580. (*Mr. Buchanan.*) Does the Rosebery Award in this case, with regard to the third complaint, go beyond the terms of the Foreign Office Conference of 1890?—Not at all. The Rosebery Award merely explained what was the meaning of the term "Indian purposes."

8581. But was not the power of the Indian Government to choose their ships, and to name the class of ships, more definite under the Foreign Office Conference agreement than under the Rosebery award?—I think not; I think Lord Rosebery's award left the Foreign Office Conference exactly where it was. All it did was to define the meaning of "Indian purposes." The Admiralty hold that the interpretation put by Lord Rosebery on "Indian purposes" justified their selection of ships; the India Office consider that they should have a voice in the selection of the ships; the question was who should name the ships first.

8582. (*Chairman.*) As far as the Foreign Office award went, it merely named Indian purposes without defining them?—Quite so.

8583. Then when the Admiralty and the India Office could not come to an agreement as to what those Indian purposes were, it was necessary to call in a referee?—Yes.

8584. Lord Rosebery was the referee?—Yes.

8585. And his award simply defined what was to be the meaning of "Indian purposes"?—Quite so.

(*Mr. Mowbray.*) Have we had that definition put before us? We have not got the award before us, and it is very difficult to follow without seeing it.

(*Chairman.*) It will be distributed with the papers containing the Indian and Admiralty cases.

8586–7. (*Mr. Mowbray.*) I only wondered whether we could have the definition?

8588. (*Chairman.*) You have the Rosebery award before you?—(*Admiral Kennedy.*) Yes.

8589. Perhaps you would read the conclusions at which Lord Rosebery arrived?—"My conclusions therefore are: That the old Indian Navy did perform, or "co-operate in the performance of, duties more extensive "than are now admitted under the expression 'Indian "purposes' as limited in the India Office case. (2.) "That this expression cannot be limited to merely "maritime police and the repression of piracy, but must "be held to include some portion at any rate of the "duties devolving on the Royal Navy for the defence of "India and the protection of trade in Indian waters. "(3.) That the transaction of 1862 represented at most "a temporary waiver of the claim of the Imperial "Government to a contribution from India in respect "of the performance of those duties. (4.) That in any "case, nothing then said or done could affect the right "of the Imperial Government to raise such a claim on "its merits at any subsequent period. (5.) That the "basis on which such a contribution should be calculated "does not admit of a permanent definition, but should "be settled between the Home and Indian Governments "from time to time, at fixed intervals of, say, ten years.

8590. At all events that was the answer of the arbitrator on the question of what were Indian purposes.—(*Mr. Mowbray.*) Yes.

8590*a*. (*Chairman.*) Besides the ships in respect of which the subsidy of 100,000*l.* is paid, are there not ships in reserve and torpedo boats which have been transferred by the Indian Government to the Admiralty and maintained by the latter in return for an annual payment of 61,000*l.* Would you give us the Admiralty view of this arrangement?—(*Admiral Kennedy.*) The annual payment is 59,600*l.* The vessels in question form the Indian Coast Defence Flotilla, and are:—1 turret ship, 1 torpedo catcher, and 3 torpedo boats in commission, and 1 turret ship, 1 torpedo catcher, and 4 torpedo boats in reserve.

8591. And how are these ships that are in commission employed?—Those that are commissioned are in Bombay Harbour and they remain there; the turret ships never leave Bombay Harbour except for exercise. The torpedo catchers and torpedo boats are constantly exercised up and down the coast to keep them up to the mark.

8592. But they belong to Bombay?—They belong to the defence of Indian ports, not all to Bombay. The reason that those seven torpedo boats are kept at Bombay is that the dockyard is there, and they are kept in good order; but in time of war they all belong to all India. In time of war they would be dispersed wherever it might be thought fit; in fact, one belongs to Calcutta, and another to Rangoon, another is probably for Kurrachee, and Bombay would take the balance.

8593. The arrangement under which the Admiralty took these over is approved by the Admiralty?—Yes. there is no objection on either side. I have never heard any; Captain Hext does not raise any complaint.

8594. Does the Imperial Government, in your opinion, lose or gain by it financially?—I do not think there can be anything one way or another.

8595. And, therefore, as far as the Admiralty is concerned, they would suggest no modification of it, speaking of it now from a financial point of view?—I have not heard that there is any gain or loss. Mr. Cuming is an expert in finance, he may have heard of it. (*Mr. Cuming.*) There is no difficulty.

8596. Captain Hext holds that the Indian Government render great service to the Royal Navy by having provided docks, for the use of which the Navy pays nothing, or, at most, an insufficient sum. What is the Admiralty view on this point?—(*Vice-Admiral Kennedy.*) There is no doubt about the usefulness of the docks, and the service is very well performed; the ships are very well looked after, the work thoroughly done; as regards the payment, that is an arrangement that has been made between the Governments, and I have not heard any complaint until now.

8597. It is a reciprocal arrangement, is it not?—Yes, a fixed charge.

8598. Only the Indian Government has no ships over here?—They very seldom come here.

8599. But it was made at a time when the Indian Government had the big troopships, was it not?—Yes; they had the benefit for about 30 years.

8600. And at that time these troopships which belonged to the India Government were constantly in dock?—They were docked in Portsmouth.

8601. Now the India Government does not get that advantage?—Not since the withdrawal of the Indian troopships.

8602. It has become a one-sided arrangement?—Our ships are docked out there, and their ships do not come here. Whether they lose or gain by the operation out there I cannot tell.

8603. (*Sir Donald Stewart.*) I think the complaint is that there is little reciprocity—that the docking charges in India are very favourable to Her Majesty's ships, and that when an Indian ship is docked in one of the Government yards in England it is charged full rates?—(*Mr. Cuming.*) I do not think so; I think the same charge is made, the actual wages, the material, and 10 per cent. on that.

8604. Is that so?—Oh, yes. (*Vice-Admiral Kennedy.*) That is the arrangement.

8605. (*Chairman.*) Captain Hext laid stress upon that point. I had always understood that the arrangement was reciprocal, and that whatever charges were made there were made here also; that is to say, the contingent charge of 10 per cent.?—(*Mr. Cuming.*) Yes. (*Vice-Admiral Kennedy.*) The fall of the rupee may account for the discrepancy in charges.

8606. That would not be the case if the charge was a percentage of the actual cost, would it?—(*Mr. Cuming.*) In one case that Captain Hext quotes the apparent difference is owing to exchange.

8607. (*Mr. Mowbray.*) The case of the "Clive"?—Yes, that is it. It is a mere difference of exchange. (*Vice-Admiral Kennedy.*) Yes.

8608. (*Chairman.*) Do you wish to make any remark as to the statement "At Bombay large works have "been undertaken by the Government of India

Vice-Admiral W. A. Kennedy, R.N., and Mr. W. Cuming.

6 May 1896.

"almost entirely to meet the requirements of the "Navy," &c., &c.? These works appear to be the deepening of the Duncan Dock, construction of a ship and torpedo basin and dock, and the purchase of a dredger. Also, as to the statement that the docks, before they were deepened &c., were quite equal to Indian requirements?—Yes, I think it requires some qualification. A despatch from the Government of India to the Secretary of State, dated 11th February, 1890, intimates that the former had under their consideration the provision of shelter for the torpedo boats lying in Bombay Harbour, and proposed for the purpose to construct a wet basin, that is for their own torpedo boats. The torpedo boats in question are the property of the Indian Government, and form part of the Defence Flotilla. The despatch goes on to say that it was proposed to take advantage of the opportunity to carry out a "much needed improvement" to the Duncan Dock itself, as owing to its insufficient depth ships could be taken in and out at spring tides only. As an instance a case was given that had actually occurred in connection with the "Serapis," an Indian troopship, which might have involved an increased expenditure of 18,000*l.* out of Indian revenue. The despatch adds:—"When the Duncan Dock is deepened as proposed, "there will be no difficulty in docking any of H.M. "Indian troopships at any time." As regards the dredger, in a letter to the Indian Government, dated 7th October, 1887, Captain Hext, in dealing with the question of deepening the existing channel, says: "this last, as a "new dredger must, in any case, be ordered from "home, need not be taken into account, as *it would be "part of the dredger's current work.*" As a matter of fact, neither the "Boadicea" nor the "Bonaventure," the past and present flagships, have ever been into the Duncan Dock, on account of the approach thereto not being properly dredged; they have had to go into the Mereweather Dock, a private concern.

8609. Would the Admiralty consider then, that, looking at the whole question, there is any force in the argument that these docks have been enlarged, and that, if it had not been for the presence of Admiralty ships, smaller docks would have sufficed? Or would it be answered that if the Indian Government had their own Navy, docks of equal magnitude would have been required to dock those ships?—No; the dock, as it was before, undoubtedly would have taken any ship in the Indian Marine; but the basin was built for their own purposes, viz., for their torpedo boats, and for docking their own ships in the wet basin in the South West monsoon. Undoubtedly the dock was increased in size for the benefit of Her Majesty's ships, or for Indian troopers.

8610. Supposing the Indian Navy had remained, belonging to the Indian Government, would they have been obliged to construct similar docks, do you think?—That would depend on the class of ships they possessed.

8611. Of course, these docks are constructed for the repairing and maintenance of ships that are required for Indian purposes?—Really that Duncan Dock was increased for the benefit of the troop ships.

8612. That was an Indian service?—That was an Indian service, and as a matter of fact it will not take in the flagship at the present day; it might just at certain times, spring tides, but it would be rather risky.

8613. If the Indian Navy had remained and, we must suppose, been brought up to the rates of the present time, they would have had a flagship of equal size?—Undoubtedly they would have required the docks; I did not understand you. If they had their own navy and ships up to date, they must have increased the dock accommodation.

8614. And are these docks ever used by ships of Her Majesty's Navy that are not appropriated to Indian waters?—Yes, certainly, every one of the ships on the station goes into them.

8615. The ships on the station; may it not be fairly argued that the ships on the Indian station are there for the purpose of defending India, and therefore that docking accommodation should be provided for them? But what I meant was, are the ships of other squadrons ever brought into dock there?—They are; just ships passing through: not often, but such things have occurred.

8616. But so far it is a convenience, and that is a point that might be taken into consideration fairly in considering the question of contribution, might it not?—I think so. You see it would not often happen that a ship that did not belong to the Indian station would go to Bombay at all; of course she would go to Colombo instead, wherever she was bound for.

8617. That reduces the value of these docks to vessels other than those on the Indian station, to very small dimensions?—It is very little advantage excepting to ships on the Indian station; in a short time we shall have a dock at Colombo which will discount the Bombay dock.

8618. Can you furnish any information as to the 10 per cent. paid by the Admiralty on the repairs of their ships?—The Admiralty pays 10 per cent. in addition to the actual cost of labour and material, which includes that expended on actual docking and undocking. The same charge would be made against India for work performed in Imperial dockyards on Indian vessels. The repairs and docking of the five Indian troopships were performed on this arrangement. This 10 per cent. is supposed to cover incidental and establishment charges.

8619. Is not that very much the same as you charge in England upon ships docked here? (*Mr. Cuming.*) Yes, we should charge them exactly the same; we should charge them wages and material, with an addition of 10 per cent. on it.

8620. And the only question, therefore, which arises there is, first of all, whether now there is any reciprocity, since troopships belonging to India no longer come over here?—(*Vice-Admiral Kennedy.*) No, there are no longer troopships.

8621. But apart from that, are you satisfied in England that 10 per cent. is a sufficient charge?—(*Mr. Cuming.*) I have never gone into the percentage; it does not include capital charges, but has been accepted by both Governments.

8622. Have the Treasury any view upon that point? Because, without of course their being in any way concerned in the *minutiæ* of those charges, the question has arisen, from the financial point of view, as to what the Admiralty charge to cover indirect expenses should be?

8623. (*Mr Ryder.*) I rather think that the Admiralty have two scales of charges, one for what I may call the family, viz., Government departments and India, and one for outsiders?—Yes.

8624. And in the case of outsiders the charge is supposed to cover various things, such as interest on original capital, cost of headquarters administration and that kind of thing, which are omitted in the case of charges to Government vessels?—Yes; they are rather, I imagine, prohibitive charges; it is not desired to encourage people to come.

(*Chairman.*) And therefore the charge made by the Admiralty of 10 per cent. is supposed to be sufficient to cover and save the Admiralty from loss in the case of public departments using their works?

(*Mr. Ryder.*) Yes, I think so.

8625-6. (*Chairman.*) Would they charge the 10 per cent., supposing there was a case of an English merchant ship being allowed to use the docks, or would they in that case put the non-family charge in force?—Yes. That would be a non-family charge. She would be looked upon as a private individual. (*Vice-Admiral Kennedy.*) There is not the slightest doubt of the enormous accommodation of these docks at Bombay, of course, because we have no other dock on the station. Trincomalee has none. But they are going to have a very good dock at Mauritius and another one at Colombo.

8627. (*Mr. Molesbray.*) What charges do you pay when you do repairs at Trincomalee? At Trincomalee there is our own dockyard; there is charge for the plant; I do not know whether there is any scale. (*Mr Cuming.*) To outside people?

8628. No, to the Indian squadron? There is no charge; it simply comes into the expense accounts. (*Vice-Admiral Kennedy.*) It is our own dockyard there.

8629. Provided for by the British taxpayer?—Yes.

8630. (*Chairman.*) Can you explain the difference in cost in docking the "Clive" at Portsmouth and Bombay, viz., 111*l.* at the former and 77*l.* at the latter?—(*Mr Cuming.*) It is supposed that this is due to the low rate of exchange, and that if the rupee were now worth 2*s.*, the cost in sterling of docking at Bombay would be

rather more than at Portsmouth. The calculation is 115*l.*, as against 111*l.* at Portsmouth.

8631. That is to say, the "Clive," going with sovereigns in her locker to Bombay changes those sovereigns and pays in rupees, and makes a good thing of it?—They calculated the cost at Bombay in rupees and then turned it into sterling.

8632. Have you any remark as to the retaining fee of 2,438*l.* paid for the smallest of the P. and O. Steamers as an armed cruiser?—(*Vice-Admiral Kennedy.*) This rate is for vessels of over 6,000 tons and 7,000 indicated horse-power. Payment is made to the P. and O. Company for three vessels, but it holds ten others at the disposal of the Admiralty without further subsidy.

8633. Therefore you do not consider there is much force in Captain Hext's implied remonstrance?—No, I do not think it is of any consequence.

8634. You will observe that some of Captain Hext's observations are based on the long time in the year that the docks are occupied by the ships of the Royal Navy?—We have no records at the Admiralty to verify that; there is no doubt that ships have been a long time years ago. He mentioned the case of the "Briton" having been in dock 115 consecutive days; but that is very ancient history.

8635. When was that?—The "Briton"—it must have been 15 or 20 years ago.

8636. (*Sir Donald Stewart.*) She was out there in 1872–73, about that time?—About 1872.

8637. (*Chairman.*) You do not think he could adduce anything similar in later days?—Ships are never in dock a moment longer than it is necessary for the repairs required.

8638. I suppose the meaning of that is that not only do they charge less, but the ship was an old ship and consequently requiring repairs?—I should think she was a worn-out old tub; it is 25 years ago.

8639. Would you tell us shortly the changes which have taken place of late years in the transport arrangements between England and India? Formerly the ships belonged to the Indian Government, did they not?—Yes.

8640. But of late years those ships have been given up, have they not, and the transport has been taken up from the trade, has it not?—That is so. It is a subject with which I am not familiar, Admiral Brent is the proper person to give information about it; but what you say is correct, that the trooping used to be performed by the Indian troopers, and that they are all worn out and no longer running; and, since, that the trooping is done by hired transports belonging to the P. and O. and British India Companies.

8641. And speaking of that, from the financial point of view alone, are the Admiralty satisfied that that is an economical way of doing the service, and is that the object with which they have made the change?—That is a question which I could not really answer with any authority. (*Mr. Cuming.*) We do not know much about that. There is one department in the Admiralty which acts as the agent for India and as the agent for the War Office as regards transport; but all the claims and all payments are made between them and the India Office, and the Admiralty does not see anything of the financial working of it at all.

8642. If we want any information as to the reasons for that I suppose we can get it?—(*Vice-Admiral Kennedy.*) Yes, it is quite easy to get the information. I fancy that it is much more expensive running the hired transports than on the old system, but I have no personal knowledge on the subject.

8643. I want to know whether the Admiralty have made the change from financial reasons or from other reasons?—That really is a question which it would be better to put to Admiral Brent. My impression is that it is force of circumstances; the old troopers are worn out and they have got to transport the troops by some means, and that is undoubtedly the best means but possibly the most expensive.

8644. (*Mr. Buchanan.*) The coasting transport is still done by the Indian Marine, is it not?—Yes, entirely.

8645. It is merely the home transport?—Only the home transport.

8646. Can any further use be made of the transports owned by the Indian Marine than is made at present?—Do you mean with regard to bringing the troops to England?

8647. Would it be possible to use any of them for that purpose?—It would be quite possible; the ships are good enough, and are well fitted. I fancy the difficulty would be that these ships have no status outside of Indian waters; but as regards their accommodation they are quite capable.

8648. As transports they are quite fit for the work? Yes.

8649. Then it is merely the same difficulty as we had before about the status of the ships and the position of the officers?—That is where the difficulty comes in.

8650. So that we are at a loss here again financially owing to this difficulty?—Yes.

8651. (*Mr. Courtney.*) Is that the reason that they were discontinued?—No; the troops used to be carried by certain troopships which are worn out, no longer in existence.

8652. Is the reason why they were not renewed that which you now state, the difficulty of status?—Oh, no, the old Indian troopships were under the English flag and flew the pennant.

8653. (*Mr. Buchanan.*) Has it ever been considered by the Admiralty whether they could not use these Indian transports for bringing troops to England?—I expect it has been; you may depend upon it that there is some good reason against it.

8654. Apparently it would save money to have these efficient transports, and yet they do not make use of them?—They do make use of them for the coasting service.

8655. (*Sir Andrew Scoble.*) Has not the "Clive" brought troops from India to England?—I believe she has; she was certainly over here in English waters. (*Mr. Cuming.*) She brought the Shahzada.

8656. I do not mean the Shahzada—the troops?—I never heard of it. (*Vice-Admiral Kennedy.*) And the "Warren Hastings" came to England the other day; she brought Lord Lansdowne home.

8657. Did she not take troops back?—I am not quite sure about that. (*Mr. Cuming.*) I do not know; I have nothing to do with it.

8658. (*Sir William Wedderburn.*) May I ask if you know of any actual case of outside ships being hired when Indian Marine transports were available; do you know any actual instances?—(*Admiral Kennedy.*) You mean for the transport of troops to England?

8659. To England, yes?—No, not when Indian ships were available; I do not know of anything of the kind.

8660. You do not know of any actual cases?—No, I never heard of any case.

8661. (*Sir Donald Stewart.*) Troops have occasionally been brought home in small parties on trading ships, have they not?—Not to my knowledge.

8662. (*Chairman.*) There is one remarkable statement in a Treasury Memorandum, which is one of the papers put in, about which I would ask you whether you have noticed it, and whether you would agree with it, namely, that, when the old Indian Navy existed, taking the value of the Indian trade, and looking upon the cost of the Navy as an insurance upon the trade, the cost to India was about 4 Rx. per 1,000; if you take the cost of the contribution the Indian Government pays now, the Treasury work it out as being not 4 Rx. per 1,000, but 4 Rx. per 10,000. My only reason for calling your attention to that point is that it gives one the idea that the present arrangements, as compared with the arrangements of 35 years ago, are not very onerous to India?—No, I should not have thought they were. It seems a very small sum really, looking at it from a broad standard, to pay 100,000*l.* a year as an insurance for the protection of Indian trade round her coasts; that is what it amounts to.

8663. (*Mr. Buchanan.*) She has built a dock for you that you get the benefit of?—It is generally admitted that she required it in any case.

8664. I mean there are certain points to be put on the other side?—Yes.

8665. (*Mr. Naoroji.*) Does the Royal Navy admit any Indians in employment either as crew or as officers?—No, only as cooks and stewards.

8666. One or two?—Plenty of them are employed.

Vice-Admiral W. A. Kennedy, R.N., and Mr. W. Cuming.

6 May 1896.

8667. Then that means that India should pay for that from which no Indians derive any benefit of employment?—But they do derive benefit.

8668. I mean benefit of employment in the Navy. The whole employment must go to the benefit of the Englishmen according to present arrangements?—No. They have benefit, because there are a great number of lascars employed in the defence ships, for instance.

8669. I mean in the Royal Navy, in the Royal Squadron for which India pays this 100,000*l.* and 60,000*l.*; I am only talking of the Royal Navy, not the Indian Marine. They get no benefit out of this contribution which they pay for the Royal Squadron?—No, we do not ship Natives as seamen in the English Navy because they are not trained for it, and in like manner, I conclude, officers; but Lascars are employed in the Defence Flotilla.

8670. But is it simply because they are not trained, or is it a determination not to employ them at all? Facilities might be given for them to be trained; is facility given nor them to be trained? I know of one instance where an Indian here wanted to be employed—I do not know whether it was exactly as a crew—in one ship, and he was distinctly refused; so; too, in the Army; they are distinctly refused to be employed at all either in the Royal Navy or the Royal Army?—The natives of India are largely employed in the Army.

8671. The Native Army, but I am talking of the European officers?—Who wanted to join this army?

8672. We will confine ourselves to the Navy?—Yes. I am not prepared to say whether an Indian gentleman who wished to get his son into the Navy, and who was prepared to send him home to pass his examination—I do not know at all why he should not be admitted; there could be no bias against him. But I am only speaking without authority on the matter.

8673. That is exactly what I wanted to know. As far as I understand, he would be distinctly refused; if any Indian gentleman's son went home he would not be admitted to any training college or any place at all?—Oh, no; try it on. I am sure he would be heartily welcome: there is no feeling of that sort at all.

8674. His "trying it on" means a deal of expenditure, therefore can we not have any authoritative expression that, if an Indian came here and wished to enter the college and to be trained just as others—it would be no concession at all—that he would be freely admitted on the same terms as any Englishmen passing the same examination, and so on?—Yes.

8675. Till that order is made, or until that is publicly known, "trying it on" means simply expenditure and going back disappointed?—That could be ascertained quite well. I shall have very great pleasure in finding out for certain, because I cannot answer the question entirely myself.

8676. I should be very glad if you would find that out?—I will find it out without any delay.

8677. Assuming that India has an Imperial interest in the Royal Navy, there is so far an equal interest to Britain to maintain its rule also in India?—There is no doubt that Britons do take a great interest in India.

8678. So far, assuming that the account is balanced with equal interest, is it not right that India should have a proportionate share of the benefit of the employment according to the money India pays? That will be answered if you will kindly find out what I have asked; I need not ask that any further?—Has an Indian man or gentleman ever expressed a desire, because it is rather springing a mine on one; I have never heard that they wanted to come, generally the climate is against it.

8679. Not necessarily?—They would not like to leave their own home.

8680. They believe that they would never be admitted?—I see; you start under the belief that there is a great bias against it.

8681. Both in the Army and in the Navy?—But I do not think so.

8682. I shall be very glad if you will find out that?—Yes.

8683. Now, it is said that when any expenditure is incurred by the British Exchequer, either here or in India, in which both countries are interested, India must contribute a share; on the same principle does not justice require that, when any disbursement is made from the Indian Exchequer for any purposes in either country in which both countries are interested, the British Exchequer should make a fair contribution?—It seems so.

8684. In apportioning charges between Britain and India should not their respective capacity be taken into consideration? Britain is a vastly rich country, and drawing its riches largely from India, and India is an extremely poor country owing to Britain carrying away its wealth; should not Britain have some consideration for these circumstances?—Of course, these are really questions for experts, and it is the first time I have heard that India is a very poor country, or that it is drained for the benefit of England. I always thought that it was a very rich country and self-supporting, and that without England it would be in rather a bad way.

8685. We differ very largely in that?—I do not see exactly what you are aiming at. Your contention is that if England had nothing whatever to do with India, India would be better off than she is now?

8686. That is a different question?—That is what you are thinking of, is it not?

8687. I say that comparatively Britain and India are very different in their capacity for payment or in their wealth. England, taking the expressions of Secretaries of State——?—Has a large swallow.

8688. England is a very rich country, and India is distinctly poor, as Lord Cromer has stated. Now, I say that in apportioning charges for any purpose which is common to the interests of both, is it not necessary, as the Government of India has also asked, that their comparative capacity to pay must also be taken into consideration, and not merely the arithmetical division?—I expect that if I expressed any opinion upon that subject it would not be worth anything whatever; no one would pay any attention to it: I am afraid the Chancellor of the Exchequer would tell me to mind my own business.

8689. That is true, but an English gentleman may express his views, whether the Chancellor of the Exchequer hears him or not?—I think you should put that straight to the Chancellor of the Exchequer, but not through me.

8690. But, if I am supported by good English opinion, I might put it more forcibly to the Chancellor of the Exchequer?—Yes, but you must get an opinion that is worth having, and not mine, upon such subjects as that; it is quite valueless.

8691. We have got here that they constantly use the words "Indian purposes" and "Indian requirements"?—Yes.

8692. But is it not the case that there are two parties concerned in all these purposes: the English purpose, namely, the English rule, and the Indian?—Yes.

8693. Therefore, whatever is supposed to be an entirely independent Indian purpose, as if it was the case of the United States or France, is it not right that in considering all these Indian purposes both these parties should take their fair share in everything that is for the interest of both; that is a question very similar to what I have already put, in fact?—Yes. That is the very reason why India pays this subsidy, because they ought to take their share.

8694. In the same manner Englishmen ought to take their share for purposes for which India pays?—Of course, we do, because this 100,000*l.* per annum must certainly be a very small proportion of the enormous burdens that England has to bear. And, in alluding to Indian purposes, of course they would claim that all our squadrons are really for the benefit of India. We take so much interest and care of India that we keep up large fleets in the Mediterranean and all over the world, on purpose to guard India, which we do not want to lose.

8695. Which we do not want to lose?—Which we do not want to lose. That is right; if we lost India we should put down a great many of our expenses; therefore all these questions are really Indian purposes, and the whole East Indian squadron is for Indian purposes, because they are looking out to prevent the enemy from coming and attacking India. Without that squadron we might have other people prospecting round the coasts of India and making themselves very disagreeable, no doubt; so that the indirect advantage that India gets from the English Navy is enormous. I

should say that if they really wanted to claim their just rights they would be estimated at at least half a million sterling.

8695*a*. I grant that India has so much benefit out of this squadron, but is not this squadron for the defence of India as much for the interest of England as of India? Is it not for the preservation of British rule, and therefore you pay a portion of the expense, I grant, in this matter?—Yes.

8696. Well, in other matters there are other purposes also common to both, for which India alone pays, and of which Britain ought to take a share just on the same principle?—Yes. Well, I am not aware of such a case.

8697. If there are cases they should be fairly taken into consideration?—Yes, I should conclude so.

8698. Now, in Question 6938 we are told: "Then "summing the whole matter together, the cost of the "Marine to you is 20 lakhs: there is the 160,000*l.* which "is paid as subsidy, which, of course, we must turn "into rupees at the rate of exchange; there are the "stores for India, 130,000*l.*, which we must treat in the "same way" (stores, of course, is a material I have nothing to do with). Captain Hext answered, "The "Marine budget is 19 lacs." And then about the pensions he said they are something about 6 lacs more. Now, considering the squadron expenditure to be for common purposes we contribute this 160,000*l.*?—Yes.

8699. Then, on the other hand, we spend 20 lacs in India for the marine and other purposes in which both are interested, because any defence of India, large or small, is for the purpose of defending British rule as well as Indian; therefore, should not the British Exchequer take a share in this 20 lacs in the same way as we take a share of 160,000*l.* in the Royal Squadron?—I do not know exactly what you would propose, supposing the squadron was withdrawn, to substitute in lieu of this 160,000*l.*

8700. I do not object to the 160,000*l.* at all, which I say is very properly paid, but I do object on the ground that there are common purposes, and that therefore the Government here supplies this squadron and undergoes certain expenditure, and out of that expenditure not the whole, as I understand, but a portion of it, is paid by India, which comes to 160,000*l.*?—Yes.

8701. Now, I say that the Indians spend 20 lacs of rupees there for purposes of defence, harbour defence and coast defence, and so on, in which both parties are interested, whether the sum to be divided be large or small?—Yes, but more especially the Indian, I suppose, who pays for his existence.

8702. Your British rule is far more important to you than it is to the Indians. Would you care a single farthing, if British rule were not there, to go and protect India?—You mean that it is not entirely philanthropic?

8703. Supposing the British rule were not in India, would you care a straw to go and protect India in any way whatever?—I do not suppose that we should go to a great outlay under such circumstances, if the Russians were in possession; but, viewing from the Indian standpoint, they are very much better as they are than under any other circumstances, and therefore pay a very small percentage for protection.

8704. I accept the Indian point of view as you put it; I want the British point of view to be taken in the same way?—I should say that that is a point I am not prepared to discuss.

8705. I do not know what the British Empire would be if India were lost; British India is of the highest importance to the British Empire?—No doubt about it.

8706. Then, with regard to the protection of trade; the question was 6934—"Nor with the defence of Indian trade"—that is to say, was not the protection for the defence of Indian trade. Then the answer was:—The "Indian trade is virtually English trade. It is all "carried in English boats, and paid for by English "money. The Indian trade itself—of India itself—is "next to nil." Do you agree with that?—No; there is a very large local trade in India, as you know. Perhaps you know Mr. Shepherd, who owns an enormous fleet of ships that never leave Indian waters; there is the Pilgrim line that trades to Mecca, that is all Indian trade; there are companies running up the Persian Gulf which are entirely owned by natives. Of course, the bulk of the trade starts from England, there is no doubt about that, and runs to Bombay; and there is an enormous sailing fleet which comes round the Cape for Calcutta as well. But I suppose that a great deal of the money must remain in India, or in the hands of people of India, and there are a great many wealthy natives who are interested in these ships—largely interested.

8707. What I want to say is this: the trade that is afloat, exports from India or imports into India from foreign countries—which is in fact, the bulk of the trade; the coasting trade is very little compared with it, and most of this trade—first of all, the whole shipping is entirely English interest?—Yes.

8708. With no share at all of the Indian in it. Then the cargo also, as long as it is floating on the sea, is primarily at the risk of the East India banks, and of the English marine insurance offices, because the East India banks, which are, strictly speaking, British interest, supply all the money for the exports or the imports. Therefore, what I mean to say is that while any cargo or any ship is floating on the sea, it is essentially primarily a British interest and British money is concerned in this ship and cargo; and, therefore, I said Captain Hext was quite right in saying that the Indian trade, strictly speaking, was *nil*, or very little compared with the whole British risks that are involved in the whole of the foreign trade of India?—Yes. I do not know what he means in saying such a thing; it may be the case.

8709. What I say is this; that when we are told that the squadron is needed to protect trade it is forgotten that this trade is mostly British trade, or almost wholly, and very little Indian interest in it?—I suppose these ships pay duties in bringing their cargoes to India, do they not?

8710. I am talking of the ship and the cargo while it is on the sea, and when the squadron is expected to protect it. While it is on the sea the interest is of British capital almost entirely. Of course, I may take you through the whole process of the transaction in order to explain that to you?—I will take your word for it. Your argument is that the Navy is no good to India at all.

I do not mean to say that it is no good to India at all; we are paying this share, but at the same time I say that the argument which is constantly urged, that the Navy is necessary to protect the Indian trade, the East Indian trade, is a very misleading one; the real interest of the capital that has to be protected is almost wholly British. I wanted to make a correction of your expression "Indian trade."

8711. (*Mr. Ryder.*) There is only one question I should like to ask, and that has reference to one argument used by Captain Hext, which, I think, has not been alluded to to-day. In the course of his evidence he said, substantially, I think, that it was right enough for the East India Company to pay for the Indian Navy, because it was required for the protection of their trade?—Yes.

8712. They naturally paid for it out of the profits of their trade; but when the change of Government took place after the Indian Mutiny, the maintenance of the Navy became an Imperial service, and, therefore, ought to be paid for like other Imperial services by the British taxpayer. I should like to ask whether, in the opinion of the Admiralty, that argument is held to be a sound one?—(*Mr. Cuming.*) I have been looking up that subject, and trying to find out when the monopoly ceased, and it is not very easy to find out. In 1832 there was an Act which took away their monopoly with China, but I am not sure whether the monopoly of India with the rest of the world existed then. I do not think, so far as the Act goes, that it existed at all.

8713. I think the monopoly ceased in 1834?—It certainly ceased by an Act of about 1832 or 1834, as regards China.

8714. And is it not the case that the Indian Navy, at any rate for 25 years, was not paid for in any sense out of the profits of the East India Company, but was paid for out of the taxation of the people of India?—I could not answer that; I should say that would be my impression, but I have no absolute knowledge of the matter.

Vice-Admiral W. A. Kennedy, R.N., and Mr. W. Cuming.

6 May 1896.

8715. Would not the Admiralty hold that, although the change of government was a very good reason for concentrating the command of all the naval forces in the hands of the Admiralty, yet it did not follow necessarily that there should be any change in the incidence of the charge?—I think so; I think they would hold that the fact of its being absolutely necessary for the Admiralty to take the responsibility did not preclude them from being assisted as to the cost.

8716. (*Mr. Naoroji.*) If in former days the British Government imposed any particular taxation, does it mean, therefore, that that is a justification, whether it was right or wrong, for future conduct of the same kind?—(*Vice-Admiral Kennedy.*) I do not know; I am not an exponent of the views of the Government.

8717. (*Chairman.*) Have you any general remarks to offer?—Only that the whole question resolves itself into the exact interpretation of the much-used expression "Indian purposes." If Lord Rosebery's view as to "Indian purposes" be accepted, the case for India, as advanced by Captain Hext, falls to the ground. Viewed from that standpoint, I contend that India pays a mere trifle for the insurance of her coasts and her trade. What is the East India squadron kept up for but for that purpose? and, indeed, it is not too much to affirm that without India we have no need for a fleet in the Mediterranean.

The witnesses withdrew.

Adjourned till Wednesday next at 11 a.m.

(For the 18th Day's Evidence, *see* page 266.)

At the India Office.

NINETEENTH DAY.

Tuesday, 19th May 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

Sir WILLIAM WEDDERBURN, Bart., M.P.
Field-Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Mr. G. L. RYDER, C.B.
Mr. T. R. BUCHANAN, M.P.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary.*

Captain JOHN HEXT, R.N., Director of the Royal Indian Marine, re-called and further examined.

Captain J. Hext, R.N., C.I.E.

19 May 1896.

9265. (*Chairman.*) Captain Hext, you have read the evidence of Admiral Kennedy and Mr. Cuming?—Yes.

9266. I will, if you please, take you through some of the evidence that Admiral Kennedy gave, and ask you if you have any remarks that you wish to offer upon those points; I think that would be the best way of eliciting your views. Have you any remark to offer on that evidence as contained in the answers to questions 8230 to 8236: You will see that the Admiralty define the duties the Admiralty discharge for India. "Generally speaking, the duties for which "armed vessels are required, *e.g.*, general defence "(including trade), suppression of piracy and slave "trade in Persian Gulf and on Indian coasts, &c. "Police duties in Indian waters requiring armed "vessels." Then Admiral Kennedy goes on to say that at the time of the existence of the Indian Navy, the Indian Government did their own protection; and he speaks of the fact that the force which the Admiralty kept in Indian waters while the Indian Navy was in existence, was not such a force as could be said to have had the full responsibility of protecting trade with India. Then Mr. Cuming read a paragraph from a letter of Sir Charles Wood to the Admiralty, which defines the duties transferred from the Indian Navy to the Imperial Navy. Those are the points upon which I wish to know whether you have any remarks to offer?—I think there is little to be said beyond what has been already put before the Commission; but I would point out that the Indian Navy did not perform duties on the high seas. Their only duties were on the coasts of India and at political stations such as Aden and the Persian Gulf.

9267. How do you reconcile that with Sir Charles Wood's statement that the general defence and the protection to trade generally and the measures for putting down the slave trade on the eastern coast of Africa, which had hitherto been performed partly by Her Majesty's Navy and partly by the Indian Navy, should be undertaken by Her Majesty's Navy?. That statement on the part of the Secretary of State for India certainly conveys the impression that the protection of trade and measures for putting down the slave trade, which, I should think, would involve duties on the high seas, were performed partly by Her Majesty's Navy and partly by the Indian Navy?—The slave trade referred to was principally on the coast of Zanzibar and on the coast of Arabia.

9268. I do not think that that quite answers my question. Sir Charles Wood says that these duties have been "partly performed by Her Majesty's Navy and "partly by the Indian Navy," and among these duties he gives general defence, the protection of trade generally, and the measures for putting down the slave trade. That is an authoritative statement from the representative of India, the Secretary of State, and I think it gives rather a wider definition, does it not, than that which you are giving now?—The protection of trade, as I understand it, means the protection of the sea-borne trade from India and the East. No great naval war, as far as I know, occurred during the time the Indian Navy existed; and, if one had occurred, undoubtedly the Imperial Government would have had to add to the defensive squadron in the high seas of the Indian Ocean. The old paddle-wheeled frigates existing in 1863 could never have done this work.

9269. I think that that does not quite meet the point that I am putting to you. I take the representative of India, the Secretary of State, the chief authority of the Indian Government, and I find that at the time the transfer took place, namely 1862, he gives a definition of the duties that have been performed between the Indian Navy and Her Majesty's Navy, and he includes general defence and protection of trade. You say that no duties were undertaken by the Indian Navy on the high seas. Those two statements do not seem to me to quite run together, and I would call your atten-

tion to the matter. It is Sir Charles Wood's statement, a statement made by the highest Indian authority at the very moment when the transfer was about to take place, and indeed when the Indian Navy was still in existence, and when, therefore, he must have been aware, or had every opportunity of being aware, of the duties which the Indian Navy had to perform?—It would be presumptuous of me to question a definition of the Secretary of State; but at the same time I can find no evidence given by an expert in any record of the Government of India on the duties performed on the high seas for the protection of trade, and I believe from what officers who served in the Indian Navy have told me, that the duties on the high seas were comparatively, if not entirely, nil.

9270. On the other side, the Admiralty state that their ships kept on the Indian station before the abolition of the Indian Navy were very few, and were unable to perform such duties as you speak of?—The same answer might equally apply to Australia, where in those days I think only two ships comprised the Australian Squadron.

9271. But you observe that a very small number of ships was apparently thought necessary in those seas at all; and, if the Indian Navy had a few ships and the Admiralty had a few ships, they might divide those existing duties, so far as they were necessary, sufficiently well according to the requirements of that time?—The duties performed in Indian waters were almost entirely confined to action against savages; and therefore very inferior ships and small numbers sufficed.

9272. I think in your former evidence you mentioned certain services which had been rendered to the Imperial Government by ships of the Indian navy at the time of the New Zealand war and the first China wars?—Yes.

9273. That looks as if the ships of the Indian Navy were available and useful for services on the high seas?—Hardly so; take the Peiho and the coasts of China, they did no duty on the high seas.

9274. They had to cross the high seas to get to the coasts of China?—Yes.

9275. And to New Zealand?—Yes.

9276. And if they were useful there, I think you might say that they were useful on the high seas. And after all, the ships of the Indian Navy were as good as the ships of Her Majesty's Navy, were they not?—In 1863 the paddle-wheel steamers were practically dying out, and the only ships that had screws were the transports and the "Sir Hugh Rose" and the "Clive" gunboats.

9277. You mentioned just now, I think, that you could not find any record of the Indian Navy doing any service in the time of war; when was the Indian Navy instituted?—I think it was 1829; Sir Donald Stewart said so the other day.

9278. (*Sir Donald Stewart.*) Yes, in 1829.

9279. (*Chairman.*) Up to that time had the Indian Government no ships of their own?—They had the East Indian traders.

9280. Which were armed?—Which were armed for the protection of their own interests and to protect the cargoes which they had on board.

9281. (*Sir Donald Stewart.*) I want to bring out about the protection of trade. Are you aware that the Indian Navy ships' duties were confined practically to the coasts of India and Arabia, where Indian interests prevailed?—I believe that was so entirely.

9282–3. And therefore the protection of the coasting trade perhaps would be a more correct definition of the work devolving on the Indian Navy; the protection of the coasting trade would be considered to be one of the duties of the vessels to be provided for Indian general service, which are referred to in Despatch No. 3 of 1870, addressed by the Government of India to the Secretary of State?—I think so.

9284. (*Chairman.*) Then in answer to question 8243, which dealt with the suppression of piracy, Admiral Kennedy made some remarks; would you have anything to say upon that evidence?—No, no remarks.

9285. The Indian Marine as it exists now, though in the Act of 1884 the suppression of piracy is stated as one of its duties, does nothing in that direction?—It is powerless to do so, because the ships are not allowed to be armed.

9286. In answer to question 8253 there is a statement of the number of vessels of the Royal Navy kept upon the Indian station?—Yes.

9287. It is said to be eight, towards four of which India contributes, whilst the remaining four are kept entirely at the charge of the Imperial Government; do you agree with that statement?—Four ships are subsidised by India, but four ships are not kept in Indian waters, unless Aden is considered purely Indian, which I submit it is not.

9288–9. And what about the other four ships? You are aware that considerable stress is laid upon the fact of the amount of the contribution paid by India towards the Royal Navy and of the ships which are kept in those waters; and I want to know whether you agree with Admiral Kennedy in his description of the force kept in those waters, namely, a force of eight ships, to four of which India contributes in part, and for four of which the Imperial Treasury defrays the whole charge. It is only a question of fact?—That is perfectly correct.

9290. Then with regard to the ships not being kept within limits—is not that an old complaint which has been rectified by a recent arrangement made at the Foreign Office Conference, under which the Indian Government in concert with the Admiralty have laid down certain limits, outside which these four ships are not to be employed without the consent of the Indian Government?—Yes; but what I should wish to point out to the Commission is that the duty of one of these four subsidised ships lies at Aden, and the Home Government recognise the fact that Aden is not entirely an Indian port. Why, therefore, should India pay the whole subsidy for a ship stationed at Aden?

9291. Does Aden lie within those limits that have been agreed upon between the Indian Government and the Admiralty?—I do not think those limits have ever been defined.

9292. We have evidence before us that they have been defined?—I have never seen the definition.

9293. Then perhaps I may ask you this: if there are certain limits, which have been agreed upon between the Admiralty and the India Office, may we not consider that to be a settled question? If the Indian Government have agreed to that delimitation, is it necessary to open it up again? or are you desired by the Indian Government to reopen it?—I think it is my duty to place before the Commission anything tending to any reduction of the subsidy

9294. Quite so; the Commission are very glad to hear the evidence which you lay before them. What I want to be sure of is the extent to which this question has been already considered; and I think it is important to bear in mind whether the India Office have come to an agreement upon any of these points with the Admiralty, or whether they belong to that class of points which are still in dispute between the Admiralty and the India Office. You will see that if the Indian Government and the Admiralty have agreed on certain limits, outside which these ships are not to be employed without their leave, to a certain extent that question is a settled one, and so long as the Admiralty do not employ their ships outside those limits without the Indian Government's permission the bargain has been kept. It is no doubt quite reasonable for you to express a view on points connected with that agreement, but that is somewhat different from the position which the question would assume, if you were dealing with an unsettled point?—The last communication from India as to the number of ships required stated that only three were wanted; and it is a question whether Aden would not have to do without a subsidized ship. The Imperial Government pay towards the defences of Aden, and it is undoubtedly partially an Imperial business, and therefore, it seems unfair that India should pay the whole expense of the ship stationed at Aden.

9295. This is the point. A letter from the Admiralty, dated 24th October 1895, to the Commander-in-Chief in the East Indies, says:—"I am commanded by my Lords "Commissioners of the Admiralty to acquaint you "that the conditions of the arrangement"—that is, an arrangement arrived at between the Secretary of State and the Admiralty—"are as follows," (Then follow the five conditions). "These ships are not to be employed without the consent of the Indian Government "beyond the under-mentioned limits, viz.: Indian "waters as defined in Article IV. of your Standing "Orders of January, 1895, viz.: north of an imaginary "line drawn from Cape Guardafui to Point de Galle,

Captain J. Hext, R.N., C.I.E.

19 May 1896.

"and thence south of the Nicobar Islands to Cape "Salang?"—It does not give the east or west boundaries.

9296. No; that is why I am anxious to know whether you hold that Aden is outside that arrangement?—I maintain that Aden ought to be considered outside those limits.

9297. I think you have some observations you wish to offer upon the answers given by Admiral Kennedy, beginning with that to question 8250 and going on to 8260. This evidence relates in the main to the method in which the contribution was estimated?—I have already pointed out that four ships are not kept always in Indian waters, unless Aden is counted as an Indian port.

9298-9. Perhaps you could find out in the India Office whether Aden is counted in Indian waters, because, if Aden is counted in Indian waters, it would be desirable that the answer should not be put in such a manner as to imply that the Admiralty is breaking the arrangement?—I think Aden is considered in Indian waters; I think there is not any question about that.

9300. Therefore, as far as it goes, you admit that the settlement which I have just read to you has not been broken?—It is a new bargain: it has hardly as yet been in force; it was only made in 1895.

9301. But is it in force now?—Yes.

9302. And you have no reason to believe that it has not been observed?—I believe that it has been perfectly observed.

9303. In that case it is quite fair evidence to put before us that you think that that definition made by the Secretary of State for India is faulty, in that he ought to have excluded Aden from Indian waters; that is really the position, is it not?—This correspondence does not show the basis upon which the four ships were required. In all the correspondence about the duties of the ships, the places they were desired to be stationed at were mentioned as the Persian Gulf, Aden, one ship in the Bay of Bengal, and one ship in reserve at Bombay; and the question seems to be now whether, in consequence of India wishing the ships to be reduced to three, the Aden ship should not be either partially paid for by both Governments or entirely by the Home Government.

9304. You have one Indian ship at Aden now, have you not?—Yes. She has just gone to Suakin.

9305. If India keeps one ship of her Indian Marine at Aden, does not that look as if she regarded Aden as within Indian waters?—The reason an Indian Marine ship is kept at Aden is that, when the Royal Navy undertook to do the duties performed by the Indian Navy, they could not do them; and the result was that the Government of India had to provide a ship for carrying the small reliefs to Perim and the Somali coasts.

9306. Then surely that implies that Aden is Indian?—Aden is manned by Indian troops.

9307. And therefore it surely comes within Indian waters?—But India always contends, or has contended for some time, that the Imperial Government have an equal interest in Aden.

9308. You observe that there is a force of eight ships on the Indian station, four of which the Imperial Government entirely maintains; and those ships are available for any services within the Indian seas that may be needed. But without dwelling on that point any further, I think you have some observations you wish to make upon the answers to those questions which I have mentioned, 8250 to 8260?—With regard to 8254, Mr. Cuming estimates the up-keep of the four ships at 117,000*l.* plus 4,000*l.* I should like to draw attention to the maintenance and repairs of the "Marathon" which are put down in the Admiralty estimate at 7,150*l.* per annum—the annual average of five years' repairs to the "Marathon" amounted to 8,352 rupees, and during that five years she was re-commissioned once. The "Brisk" is put down at 4,840*l.* for annual repairs. Her average for five years was 20,825 rupees per annum, and she was re-commissioned twice. With reference to the third ship, the "Pigeon," she is put down at 3,220*l.* for repairs. Her annual repairs actually came to 5,611 rupees, and she was re-commissioned twice. The Admiralty estimate for the three ships amounts to 15,210*l.*; the actuals amount to 34,778 rupees, which at the present rate of exchange amounts to 2,030*l.**

* *See* Appendix 62.

9309. Where do you draw your figures from?—I have got here a table of the repairs and stores of each of Her Majesty's ships.

9310. This comes from the Admiralty?—No; it comes from our dockyards.

9311. These are repairs in your dockyards?—All the repairs virtually are done in Bombay.

9312. Have you asked at the Admiralty if they can explain why their figures are so much higher than the actuals?—No.

9313. The item to which you are calling attention is renewals to hulls, I suppose, is it not?—No; it is maintenance and repairs.

9314. Maintenance and repairs?—Hulls, machinery, gun-mounting, masts and yards, and rigging. You see there are other things besides that, but I do not touch those at all.

9315. (*Mr. Mowbray.*) Those figures, which you have given us, are the actual cost of the labour and materials in Bombay Dockyard with 10 per cent. added; is that so?—Yes. I would point out that small repairs may have been executed to these ships at Trincomalee or others ports, but they must necessarily have been of a very minor character.

9316. (*Chairman.*) And your point is that, having before you the actual expenditure on the repairs and maintenance of these ships, it shows a sum spent over five years far less than that which the Admiralty put forward as the probable estimated amount for repairs, and therefore, of course, that the sum charged against India is too high?—I was simply commenting on Mr. Cuming's evidence.

9317. But that, I presume, was your purpose?—I spoke with the view which I always have in my mind, of getting the subsidy reduced in any shape or form whatever.

9318-21. Quite so, and the point here is that the actual facts show that the Admiralty estimated that item very much too high?—Just so.

9322. Do you make any comment on the statement by Lord Rosebery in his award, which view is supported by the Admiralty, that the fact of the Admiralty making no claim from 1863 to 1867 for any contribution, was at most a temporary waiver of their claim?—This certainly was not the view held by the Government of India, and no mention is made in any correspondence which I have ever seen, of a subsidy ever being in future intended to be claimed.

9323. You consider the position of the Indian Government to be this, that, inasmuch as the Admiralty consented to take over the duties, or the greater part of the duties, of the old Indian Navy without making at the time a distinct stipulation about the payment, that act is really equivalent to taking over for ever those duties without payment?—Yes, and I think if it were placed in any court of law it would be held that that was the intention. Moreover it was a case of the Imperial Government taking over their legitimate duties from the remains of a trading company.

9324. You say that a court of law would sustain that view. Do you think that, if a friend comes forward and helps a man in distress—undertakes some part of his household expenses—a court of law would hold that that act of charity on his part bound him to continue the boon without consideration for ever?—I do not find it anywhere stated that it was an act of charity.

9325. Clearly an act of charity in that case. I think it is agreed that it was done under the financial pressure that India had undergone in consequence of the mutiny?—Sir Charles Wood goes on to say in his despatch: "Her Majesty's Government, there-"fore, consider that, in the future, vessels of the "Royal Navy should be employed in those seas instead "of vessels of the Indian Navy, and that, as the "purposes for which they were employed were "Imperial, so their cost should be borne by the "Imperial Exchequer." There is no mention of charity there.

9326. Where is that quotation?—It follows the definition of the nature of the services which had been performed by vessels of both the Imperial and Indian Governments.

9327. We need not dwell on that point; only it is difficult for laymen to say what a court of law would do?

—Perhaps my reference to a "court of law" might be withdrawn.

9328. Then I think you have something to say about Question 8267. That is the question whether the necessities of the present time require that India should have the support of a larger fleet than between 1832 and 1867?—I would like to point out that the number of ships now is eight. You asked a question whether a larger fleet was required. The number of ships in 1887 was 10 and in 1890, 13. This seems to show that a reduction has been considered advisable in late years.

9329. On the Indian station?—The number of men-of-war on the Indian station, and therefore there is a reduction in the fleet.

9330. (*Mr. Mowbray.*) That answer which Captain Hext has given with regard to the number of ships in 1890 is hardly an answer to the question as to the requirements of India at the present time compared with the time between 1832 and 1867 to which the question referred?—No; but I think you will find further on there is another question bearing on the same thing.

9331. (*Chairman.*) You will make your answer quite complete if you will say what I anticipate you wish to say, that now more ships are required on the station; and I thought probably it was in illustration of that that you gave the greater number of ships that have been on the station within the last few years, 10, 13, and eight?—I do not think that more ships are required on the station.

9332. Than between 1832 and 1867?—I cannot go back so far as that; I was thinking of the period of the subsidy, from 1887.

9333. (*Mr. Buchanan.*) You would agree with Admiral Kennedy in what he says in answer to Question 8274?—Yes.

9334. Entirely?—Yes.

9335. (*Chairman.*) That is the answer which you would like to give to that question?—Yes. I agree with Admiral Kennedy.

9336. Then next you call attention to the answer to Question 8234, where Admiral Kennedy spoke of the fact that the financial disturbance caused by the mutiny made it an inopportune time for dealing with the financial question. Probably your previous answer about Lord Rosebery's award covers that, does it not?—The only thing I object to there is that Admiral Kennedy says no doubt the reason was that the executive part of the question pressed urgently. We do not find that anywhere in the evidence.

9337. You do not find it on record?—I do not find it on record.

9338. Therefore you demur to the assumption, unless it is clearly shown that it is an assumption?—Quite so.

9339. The next question that you mention is 8314, which called attention to the fact that Lord Cross in 1867 pressed upon the Admiralty the necessity for modern vessels of increased speed and with powerful armaments?—Yes, this is put forward by the Admiralty as pointing to the conclusion that India wanted ships of increased speed and more powerful armaments. If the despatch is read I think it will be seen that the remonstrance was made with regard to the condition of the ships subsidised by India, as they were in a disgraceful state.

9340. Would you read any part of the despatch which would bring that out?—This is an extract:—"Many of the vessels which have been attached to the "squadron were virtually worn out when coming on "the station, and cost a needlessly large sum in repairs "and refit; and, in some cases, their Indian commis-"sion has been their last. The "Philomel" was sold last "year at Bombay for Rs. 28,000, the "Woodlark" for "Rs. 27,000, and the "Briton" is now for sale." Both the "Philomel" and the "Woodlark" were subsidised ships in the Persian Gulf, and the reason that the Government of India complained of the condition of the ships was that the ships for which they paid were inefficient and rotten.

9341. You observe that in paragraph 8 of that report the Government of India invite the Secretary of States' attention to the following extract from a report made by Sir F. Roberts, when Commander-in-Chief of the Madras Army, regarding the defence of that Presidency, in which Sir F. Roberts says, "I need not, however, point "out how very desirable it is that any such attempt (to "land troops) should be made impossible by our "having a sufficient number of heavily-armed, fast-"steaming cruisers to guard our sea-board." The Indian Government adopt that quotation apparently, and send it forward to the Secretary of State,—do you not think that that justifies the Admiralty in saying that the Indian Government were anxious for vessels of increased speed and more powerful armaments?—Hardly. I think, if the whole of the despatch is read, the tendency is to show that the state of the whole squadron was bad. In fact I know the reason myself, because I was ordered by the Government to report on the ships. The "Woodlark" and the "Philomel" were both under my orders when I was senior officer in the Persian Gulf, and, when surveyed, were condemned by my officers.

9342. But, without any reference to these particular ships, here is the Indian Government quoting the Commander-in-Chief in Madras, and laying stress upon there being an insufficient number of heavily armed fast-steaming cruisers. I think that that would justify the Admiralty in saying that a demand was being made for ships of the most modern type?—In any case they were not sent at that time—not till long afterwards.

9343. Because, if you remember, at that time the Indian Government were only paying 40,000*l.* a year?—Quite so.

9344. As soon as the Indian Government showed a willingness to pay a larger subsidy, the Admiralty showed that they were willing to provide better ships?—I do not think you can take it in that light, because, if they had kept out the original ships, they would probably have sunk. They had to sell three, and in the course of events they were bound to replace them with new ships.

9345. I do not know whether you have any remark that you would like to make upon Admiral Kennedy's evidence as to the sufficiency of the rate of 70*l.* a man. If you look at Question 8290, you will see that in his answer he remonstrates against the idea of that 70*l.* per man, which had been the basis of the contribution at that time, being at all an adequate representation of the cost?—I think the Admiralty had a perfect right to ask for the readjustment, if they thought they had claims to it.

9346. Next you call my attention to the questions beginning at 8322 and going to 8327. They deal with the question of the definition of "Indian purposes," I think, do they not?—There is little to be said on this question that has not been said before. India maintains that the high seas are outside the sphere of their duty, and it is ruled at home that they are within it, and, in the face of Sir Charles Wood's despatch, which was quoted before, which says "Her Majesty's Government, "therefore, consider that in the future vessels of the "Royal Navy should be employed in those seas instead of "vessels of the Indian Navy, and that, as the purposes "for which they are employed are Imperial, so their "cost should be borne by the Imperial Exchequer," it is contended that India should bear a portion of the cost of the duty on the high seas.

9347. You observe the difference mentioned in Question 8330 between the Admiralty view of the tonnage required in Indian waters and the Indian view. It brings the point at issue before us in a very intelligible shape, because it shows the difference in tonnage. Is there anything in regard to that to which you would like to call our attention?—No more than to point out that the "Marathon" for Indian purposes is comparatively useless, and that the only reason she was introduced is for Imperial purposes in the high seas.

9348. (*Mr. Buchanan.*) Has she been there some time?—Never in the Persian Gulf.

9349. What use has been made of her?—To proceed to Mauritius, and for the work at Mozambique.

9350. But when she was in Indian waters what did she do there?—She lay at anchor at Bombay, and cruised about and exercised her men: there was nothing for her to do.

9351. You think that a smaller vessel would have been of much greater use in Indian waters; or you could have done without a vessel at all, is that what you contend?—We could have done without a vessel at all, as far as India is concerned.

9352. (*Chairman.*) In answer to Question 8524 you see what Admiral Kennedy says on that subject. I think you, Captain Hext, had in your original evidence

Captain J. Hext, R.N., C.I.E.

19 May 1896.

remarked upon the comparative uselessness of the "Marathon," and made some comments upon her?—Yes, I did.

9353. And Admiral Kennedy says, with regard to your observations, that the "Marathon" would be perfectly useless in the Persian Gulf. "I think "Captain Hext a little exceeded the facts there. "The 'Marathon' as a matter of fact draws 19 feet "instead of 22, and, as to her usefulness in the "Persian Gulf, she is not at all suited for the Persian "Gulf. She can get up within 4 miles of Bushire, but, as "a matter of fact, she is not intended for the Gulf. *Q.* "And you do not use her in the Gulf?—No; we "never send her up there by any chance. She would "be useful at Muscat, for instance, where there is "very often trouble, but that is not in the Gulf, "and any ships can get there. *Q.* Did you "form a bad opinion of the behaviour of the "'Marathon' at sea?—No, she is a very good ship; "she is what sailors call 'lively,' but fast and "perfectly safe; a good ship." Then you mention *Q.* 8342. That relates to the places where ships are stationed, and Admiral Kennedy says that you must have been mistaken: "The others are all in Indian "waters. You must have a ship at Aden, that is in "Indian waters; you must have a ship at Bombay "to relieve the Gulf ship, and the other is in the Bay of "Bengal, with her headquarters at Trincomalee." I think that upon that and the two or three following questions you would probably like to make some observations?—The Admiral points out that you must have a ship in Bombay to relieve the Gulf ship, but the Government of India have already a ship of the Defence Flotilla lying in Bombay, the "Plassy," which can be sent to the Gulf, and has been sent to the Gulf, when the vessel which was supposed to have been in Bombay to relieve the Gulf ship was not there.

9354. That is all the comment you wish to offer upon those questions up to 8347, which deal with the stations of these ships?—Also upon question 8343. The Persian Gulf is ruled not to be Indian waters by the Admiralty, at all events as far as the survey is concerned.

9355. But you see the Admiral, who represents the Admiralty, takes another view?—I know that the Indian Marine survey ship is not allowed to go into the Persian Gulf, because it is not Indian waters. I got that from the Admiralty.

9356. Your ships are not allowed to go?—My surveying ship does not undertake work in the Persian Gulf, because it is not Indian waters.

9357. But at the same time you keep a ship there because you have a Resident up there, do you not—the "Lawrence"?—Yes, we do.

9358. And the Admiralty state that it is Indian waters. It may not be Indian waters for the purpose of survey, but that is hardly a complete answer, is it?—With reference to Question 8344, we keep the "Comet" at Bagdad, surely a portion of her duty is Imperial?

9359. (*Mr. Mowbray.*) Who does the surveying in the Persian gulf?—It never has been surveyed since I have been in India. I sent the "Investigator" to survey at Jask recently; but I got the permission of the Hydrographer to do it. That is only a very small portion of the Persian Gulf, just one little harbour.

9360. But it must have been surveyed at some time?—It was surveyed in the old days by the old Indian Navy, like most of the Indian seas were.

9361. (*Chairman.*) I do not quite understand the drift of your objection to this evidence of Admiral Kennedy. Are you arguing that the Persian Gulf is not Indian waters?—I am trying to point out that at all events a portion of the charge of the Persian gulf might be borne by the Imperial Government.

9262. Because they are not Indian waters?—Because they are not on the Indian coast.

9363. Is that the view of the India Office itself?—I think so, decidedly. In fact they objected, I believe, to paying for the legation in Persia.

9364. That is rather a different matter, is it not?—Is it? I think it goes to show there are Imperial interests in the Persian Gulf.

9365. I mean, a different class of questions may come in with regard to the legation.

9366. (*Mr. Buchanan.*) But your contention is, Captain Hext, that, just as the charges for the legation are shared by the Imperial Exchequer and the Indian Exchequer, so you give us the opinion of the Indian Government that the naval expenses of the Persian Gulf ought also fairly to be shared by the two exchequers?—Just so.

9367. And I gather that that was the substance of your contention about Aden, that, just as there had been a plea put in that military expenses at Aden should be shared between the Imperial and Indian Governments, so you think also that the naval expenses might fairly be shared by the Imperial and the Indian Governments on similar grounds?—Yes.

9368. (*Chairman.*) At present the Indian Government acquiesce in the Persian Gulf being Indian waters, do they not?—I cannot say that the point was ever raised.

9369. Surely it was raised in the discussion about the contribution?—Yes, as far as the actual subsidy to the ships goes. Sir Charles Wood says in his despatch that "for the present" the expenses in the Persian Gulf will be borne by India, thereby implying that a question might occur in future as to the re-adjustment.

9370. Then next you call attention to Question 8346?—The Admiral there says that the ship sent to the Gulf in consequence of an outbreak would probably be "one of those ships on the station to which India "does not contribute." I would point out that the duty would be done by the subsidized ship kept in reserve at Bombay, or, in the event of her absence, by the "Plassy," which is one of the Indian Defence Flotilla.

9371. But I suppose that, if it suited the Admiral, it might equally well be one of those four which the Imperial Government maintains?—Yes, of course it might; but still, if he did not send a subsidized ship when he had got one, he could not justly charge for the other one.

9372. I think the meaning of it is this: there are eight ships on the station, four of which are subsidized and four of which are kept at the sole charge of the Imperial Government. If there is not a second subsidized ship up there, the Admiral would send up one of the other ships?—In case of necessity doubtless he would send the whole squadron, but in answer to that question he apparently implies that he would have had to send one of the ships that were not subsidized, and thereby do us a favour.

9373. Then next you call attention to question 8363, the number and class of ships to be selected for Indian purposes?—I think we may omit this. The thing has been gone into over and over again; the whole Commission are thoroughly acquainted with the question. India takes one view and the Admiralty take another.

9374. Next you refer to Questions 8368 to 8370. They refer to the possibility of the opinion of the officer at the head of the Indian Marine being at variance, I think, with that of the Admiral on the station?—As far as Indian requirements are concerned, I humbly submit that my experience of three years in command of a man-of-war on the station and 13 years as Director of Marine would give me an equal, if not a greater experience than the Board of Admiralty, as regards Indian requirements.

9375. That would be rather an argument in favour of a separate Indian Navy, would it not?—No, I do not think so. It is a matter of no importance whatever, except that I maintain that I must know more of Indian requirements than Admiral Kennedy, a most able man, who has been only three years on the station, as I have been there 16 years.

9376. Unfortunately individual names are used, but the meaning of the question is, I think, rather this: can you expect a body like the Admiralty with full responsibility for everything that is done in Indian waters, and having their own naval officer out there, to accept a dual authority in the matter? That I take to be the meaning of the question. Of course they ought to take the advice and avail themselves of the experience of an experienced officer on the spot; but still, when you come finally to the deciding authority, do you not think that any profession would desire to keep that authority, for the exercise of which they are responsible, in their own hands, rather than submit to, or accept the directions of, another department, which has not the responsibility? Shall I pass on now to Questions 8379 to 8383?—I think we may omit those.

9377-8. The next questions, 8386 and the following questions, refer to the comparison between the Indian

ships and the Australian. Have you any remarks to make upon Admiral Kennedy's evidence there?—Only to point out what I have already pointed out, that Australia gets much better terms than India; and, moreover, in answer to Question 8379, Admiral Kennedy says that Australia has no power to requisition those ships like India has. I would point out that further on in his evidence he says—in answer to Question 8556, —" For instance, in Australia most likely the Admiral's " orders would be to support the Governor in anything " he may wish. If the Governor wished a ship sent " round to any place the Admiral would be most " happy to oblige him, but he would not be under his " orders." The cases are exactly the same, though the Admiralty have made a great point about the four ships being under the orders of the Government of India. The Australian Squadron are moved exactly in the same way—by requisitions of the Government to the Admiral—as the Indian Squadron is moved on the requisitions of the Viceroy.

9379. You mentioned just now that the Admiralty gave worse terms to the Indian Government than they do to the Australian Government. As far as the claim goes, it is true; the Admiralty claim 117,000*l*., when from the papers before us it appears that according to their calculation, if their claim had been based on the method adopted for Australia, it would have been 106,000*l*.?—Yes.

9380. But, whatever the value of those two calculations, are they not out of place at present, since the Admiralty, under the Rosebery Award, accepts 100,000*l*. 100,000*l*. is less than either calculation, and therefore need we trouble ourselves with the differences between 106,000*l*. and 117,000*l*.?—The difference is not so much in the actual amount of the money, as in the fact that Australia had a large number of ships added to the existing squadron, whereas India has herself added to the Royal Naval Squadron, and the Royal Navy have not increased the squadron by a single ship. That is where the great difference comes in.

9381. As far as I understand it, the Admiralty do keep four ships at the entire charge of the Imperial Government on the station, and four ships which are in part subsidised by the Indian Government?—Yes. But in Australia they also keep seven ships in addition to the subsidised squadron, and the original strength of the Australian squadron consisted of seven ships, in the same way as the original strength of the Indian squadron, if you may say so, consisted of eight.

9382. And what we learn is that, before the Indian Government gave up their Navy, and transferred it to the Imperial Government, the outside number of ships which the Admiralty had in those waters was three ships; now she has four, consequently the Admiralty has slightly increased its number?—I think you will find there were more than three ships in Indian waters. Do you think that, if any war occurred, they would keep any one of those subsidised ships on the coast of India; or, if there was any occasion for it, that they would not be taken as a matter of course? In fact, when the Russian war-scare took place, the "Sphinx" being a useless ship to fight, her crew were told off to man one of the turret ships in Bombay Harbour.

9383. All this is conjecture, is it not?—No, not at all conjecture.

9384. The Admiralty is responsible for the defence of the empire, and it would have, to the best of its power, to concentrate its ships where it could do so most usefully?—Of course, it is the Admiralty's province to do so; but at the same time they would then take the ships away from their Indian duties to do that work, as a matter of course. Nobody would cavil at it; the last people to cavil at it would be the Government of India.

9385. Are we not getting a little wide of the point? First of all, you say that the Admiralty keep as many ships on the Australian coasts as it did before it got this additional force, and, I presume, from that you imply that it does nothing of the same kind on the Indian coast?—I point out that the Admiralty keep four ships on the Indian coast against seven on the Australian coast, in addition to which the Australian Government for 126,000*l*. have a certain number of additional ships. Whereas, the Indian Government find the ways and means for a certain number of ships on the Indian coast, and have no ships added.

9385*a*. Is there any great difference between the two things?—I think that Australia and India were exactly on the same footing, or virtually on the same footing, as regards the number of ships in 1861 or 1862, inasmuch as both squadrons were of a very slight nature.

9386. Do you know how many ships there were on the Australian station in 1862?—I think I should be correct in saying that there were not more than four in 1861—I am speaking from memory.

9387. We have had it in evidence that the outside number of ships that the Admiralty could formerly divert for Indian purposes, because then there was no Indian station, was about three vessels?—Three or more.

9388. Mind you, they were diverted from the China Squadron?—The ships were on the India and China stations.

9389. Since then she has placed four ships on the Indian station permanently?—The Admiralty have increased the Australian squadron from time to time at their own cost, and increased the Indian squadron at their own cost, and relatively the numbers have kept about the same. Now Australia gets a large increase to the squadron without one of those ships being reduced, but we get no increase. That is the point I want to make.

9390. Formerly there were three ships that might be diverted from the China Squadron on to the Indian coast; now there are eight ships permanently stationed on the Indian coast, four only of them being subsidised; is that not an increase?—When the subsidy was 79,000*l*. there were 13 ships.

9391. Let us keep to the point of comparison of 1862 and the present time; you were saying that formerly, at a time about 1862, the Australian Squadron was less comparatively than it is now?—Yes.

9392. Well, I point out that this was part of the general squadron in those seas, three ships the Admiralty might have diverted. It did not station three on the Indian coast?—The stations for China and India were the same virtually.

9393. Now the Admiralty has established an Indian station, on which she permanently keeps four ships of her own and four to which India contributes. That is a very considerable increase of force, is it not?—It is not an increase in comparison with the increase in the foreign stations in general.

9294. At all events the Admiralty apparently considers that force sufficient. This is rather a new point. I understood that the India Office demur, not merely to the number of the ships, but to the way in which the subsidy was calculated. On that you do not want to make any observations now?—Except that the subsidy was calculated on larger ships, and the Government of India wished to have smaller ones—that is the only question.

9395. I want to bring this point out. Although the Australian Government contribution is calculated in a different form, and although, if the exact sums were worked out according to the Admiralty calculation, these ships, to which India contributes, would cost 117,000*l*., yet the Admiralty only claim to charge India 106,000*l*., or we will say 10,000*l*. or 11,000*l*. less than on the Australian basis; but, as a matter of fact, we need not really go into that, inasmuch as the Admiralty only receive 100,000*l*., which is less than either, need we?—I quite agree to that, except that the amount is based on larger ships than India requires.

9396. The next question upon which you desire to make an observation is 8391. All these questions really refer to the comparison with the Australian squadron. I do not know whether you think you have already mentioned these points?—I only wish to draw attention to the fact that the vessels enumerated on page 379 of the Navy List are under the Government of Australia; they are armed, their officers bear commissions, and they fly a pennant; and yet they are not under the Admiralty.

9397. The point of that is that you think the same terms ought to be given to the Indian Marine?—Just so; in fact all dependencies should be treated upon the same footing.

9398. Then perhaps you would look at Questions 8400 to 8405, and say which of them you would like

Captain J. Hext, R.N., C.I.E.

19 May 1896.

to make a remark upon?—With regard to 8400, India provides a floating defence at her ports to a much greater extent than Australia does.

9399. Can you show to what extent the difference exists?—Yes. India has two turret ships, whereas Australia has one of the same class; the Indian ships have modern armaments on board, the Australians have not. In other respects, except that the Australian ships are older, the two Governments may be considered on an equality.

9400. Do the Australian Governments keep, like the Indian Government, any torpedo boats?—I do not think so.

9401. You do not know what the Australian force is?—Yes, I can give you the Australian force exactly. The Australian force is given in the Navy List. All the ships there shown are under the different Governments, not under the Navy. That to a certain extent answers 8403. Then we come to 8404 and 8405. Mr. Cuming says: "The Australians have paid a good deal towards "the surveys which they have had in Australia; they "have paid a contribution to several of them. *Q.* But "they do not pay any fixed annual contribution, do "they?—I think in some cases that they have paid half." In our case the Imperial Government have paid nothing, and India had to supply the ship at a cost of over 4 lakhs and keep up the survey yearly entirely without any contribution whatever from the Imperial Government.

9402. Of course you lay stress upon that as a charge undertaken by India, which Australia does not undertake?—Just so.

9403. Does the performance of this duty date from the time of the old Indian Navy, or is it one recently undertaken?—It was reorganized, and Sir Charles Wood ruled that it should go on as before for the time being.

9404. The old Indian Navy made their own surveys?—Not only so, but the whole of the surveys of the Red Sea, and did extraordinary work in the surveying way.

9405. Therefore that is a service which India has undertaken for a very long time?—Just so, but it is a service which no dependency of the Imperial Government undertakes, and therefore India thinks that some consideration might be shown for it.

9406. (*Mr. Buchanan.*) And it is a service from which the whole naval service profits?—The whole naval service and the whole trade of the world, we may say.

9407. (*Chairman.*) Then come Questions 8410 and 8411, which relate still to Australia?—There is little to be said on them, except that there is no doubt that India protected her own coast trade and her own coast; but it is hard that, because she did that, she should now be put on a different footing to any other dependency of the Crown.

9408. Then come Questions 8414 and 8415, relating to the question arising out of the duties which devolved upon the old Indian Navy?—India has carried out the protection of her main ports, and certainly thinks that the Imperial Government should do the work on the high seas.

9409. Then with regard to 8417; is there any proof that the Admiralty or the Treasury have ever accepted the principle of the permanent exemption of India from subsidy. The answer of Admiral Kennedy is, "we have never heard of it"?—I say that the Admiralty accepted it voluntarily; and what India feels as a hardship is that, having accepted the Admiralty protection and done away with their Navy, a subsidy should have been asked, when they were powerless to refuse it, which subsidy is now increased.

9410. The Admiralty undertook the duty practically upon the suggestion of the India Office, did it not? The Admiralty did not come forward and volunteer—it was in consequence of these despatches from Sir Charles Wood that the Admiralty entertained the idea?—I have never seen any correspondence showing who made the first offer; but Sir Charles Wood had been First Lord of the Admiralty, and therefore probably understood the views of that Board.

9411. We have not got the correspondence before us. Then next we come to Question 8425, as to the cost?—Yes. The Admiral says he certainly thinks that to keep pace with the times, and keep ships up to date, would require an enormous outlay compared with the old ships; but all that would be required to carry out the duties originally performed by the Indian Navy, would be the arming of three small ships, which India has already provided.

9412. I feel some difficulty in taking that view?—I am only commenting.

9413. It is difficult for me to take your view, restricted as it is, when I have Sir Charles Wood's definition before me?—I rely upon the paragraph I quoted just now, that the Admiralty were to do the duty on the high seas.

9414. My point is that here I find Sir Charles Wood, the representative of India, stating that these duties, which are extensive in their nature, were divided between the Indian Navy and the Imperial Navy, and it is difficult to see how five-and-thirty years afterwards a more restricted definition of the duties can reasonably be put forward. That definition by Sir Charles Wood at that time seems to me final as to the duties that the Indian navy performed.

9415. (*Mr. Buchanan.*) You would say that the duties at that time and the duties at the present time cannot be fairly compared?—I would say the duties at that time and the duties at the present time cannot be compared in the least. The same thing applies to every station in the world.

9416. (*Chairman.*) Sir Charles Wood defined the policy at that time; it might be entirely changed since?—Just so.

9417. But is it quite sufficient to say now that you could do certain very restricted duties at a small cost, when it has never been admitted by the Imperial Government that the duties ought to be so restricted? Before your view could be accepted the question would have to be answered, why should the duties formerly discharged by the Indian Navy be so much changed and restricted? That question has not been settled, because at the present moment the contribution, as agreed upon between the Indian Government and the Home Government, is based upon India contributing on the basis of very much the same sort of duties as she performed when she had a Navy?—All I object to in Admiral Kennedy's answer is that he talks of the enormous outlay required, whereas the outlay would be very small; it is a minor detail.

9418. Then we come to Q. 8428?—Yes. As I pointed out just now, the Indian Navy did not exist in the old days when the old East Indiamen were attacked by foreign powers, and the old East India Company armed their ships to defend themselves, in the same way as many other ships, the West India trade, for instance, were armed to defend themselves.

9419. Then so far you agree with those answers?—Yes; but in this respect, at present, the whole question is altered. The Government of India is directly under the Crown; the trade of India is virtually the trade of England, and therefore it becomes clearly the duty of the Imperial Government to protect its trade.

9420–1. That is your view?—That is my own view decidedly, and the view of the Government of India.

9422. The Government of India are making contributions for that purpose?—No; they are making those contributions for special services which they require, namely, the police of the Persian Gulf; they are not contributions for the protection of the high seas; that is what the Government of India object to throughout.

9423. But read the Rosebery award?—They objected to the Rosebery award.

9424. They accepted it?—They accepted it pending its being referred to the Royal Commission, and it is in your hands now. I am trying in my humble way to make every point I can to lessen the amount of the Rosebery award.

9425. Then Q. 8433?—The Admiral says we would require half a dozen ships of the "Bonaventure" class. Of course, he is assuming the defence of the seas again. The whole thing lies in the same point; there is nothing more to be said, I think, about it.

9426. Then Q. 8437?—With regard to Q. 8437 I had no idea of adding at all to the Indian Marine, only of placing the armaments already existing on board them.

9427. And that covers Q. 8438, I suppose, does it not?—Yes, that covers Q. 8438. Then with regard to Q. 8441, I would propose that the Indian Marine should do the duties of the Indian coast, releasing the Imperial Navy from that duty for its more legitimate one on the high seas.

9428. Then Q. 8444?—In Questions 8444, 8446, and 8447, the question of the cost of the "Sphinx" and the "Lawrence" comes up. The cost of keeping up the "Sphinx" is, according to the Admiralty calculations, including the repairs, 21,000*l.* The average of keeping up the "Lawrence" for three years is 8,500*l.*; so there is a vast difference between the up-keep of the two ships.

9429. But those questions there were rather directed to your view as to the Indian Marine?—I am trying to point out that the Indian Marine would be so very much cheaper. In your question 8446 you ask: "Supposing that idea were carried out, supposing those "Royal Navy ships were withdrawn and nothing paid "for them by India, and that India bought its own "three ships and kept them on the coast as part of "its Navy, do you think that they could do that "cheaper than 100,000*l.* a year," I put those figures in to prove that we could not only keep three vessels but that we could keep nearly seven, for that sum.

9430. (*Sir Ralph Knox.*) What is the main point of difference of the expense?—The crews principally.

9431. The Admiralty ships are manned by English crews and the others are manned by Indian crews?—Ours are Bombay Lascars; the provisions of course are cheaper.

9432. Then it is the pay and maintenance of the crew?—The pay and maintenance of the crew are the main items. I think too we work more economically in many other ways, in the way of repairs.

9433. (*Chairman.*) Then we come to Questions 8457, 8458, and 8459; they refer to the reconstitution of the Indian Marine?—I do not see how the Admiralty can reconcile the fact of Australia having armed vessels under a pennant, independent of the Admiralty, with their refusal to consider for a moment the question of Indian vessels.

9434. Then Q. 2466. It turns upon the vessels not being armed?—Yes, in that case the Admiral suggests that I rather exaggerated the case. Well, I submit that I did not exaggerate in the slightest degree. There were no less than 70 armed dhows with a large number of men, and, if those dhows had got alongside the "Lawrence" at anchor, it is a moral certainty that they must have carried her; the small crew of the Lawrence could not have defended themselves. It may be argued that the "Lawrence" ought not to have been there, but the Resident had to be there, and he proceeded there with the "Lawrence"; and it would be rather an extraordinary proceeding for an Indian Government ship, having landed the Resident, to immediately proceed to a port of safety at a distance.

9435. What is the reason the Admiralty object to your vessels being armed—because of the dual authority in the seas?—The dual authority exists in Australia. I know of no reason why India should be treated in this way except that she can be forced by a Secretary of State's Order, while Australia cannot, because Australia has independent governments.

9436. And therefore the Admiralty have no choice in the matter where the independent Government exists?—Just so; they are bound to do with the colonies exactly what the colonies are willing to do. I can hardly understand how a vessel can be sufficiently armed to defend herself (which Admiral Kennedy thinks would be right), and yet not be allowed to take on board the small number of guns which the Government of India wish to place in their ships. The "Minto," for instance, carries only six quick-firers, three pounders; she has just been sent to Suakin.

9437. Then the next question on which you would make a remark is 8486-7, is it not?—Yes: the Admiral says "with a reserve at Bombay." We have already a reserve, as I pointed out in a previous paragraph—the "Plassy," owned by India.

9438. Then Questions 8492 and 8493, with regard to the vessels fitted out for transport?—Yes; as I pointed out before, only three of these vessels are really troop ships, the remainder carry small bodies of troops when required.

9439. (*Mr. Buchanan.*) May I ask you a question about that? These troopers are on occasion valuable naval auxiliaries to the naval force of the country?—The Admiral recognised that in his evidence.

9440. Of course we have got visible evidence of this at the present moment in their being employed for transporting troops to Suakin?—Yes, quite so; but, I may say, they would be actually valuable in time of war when the Indian Marine came under the Naval Discipline Act, inasmuch as the "Warren Hastings" would make a most excellent cruiser. It is acknowledged by the Admiral in his evidence.

9441. (*Chairman.*) Then we come to Questions 8495 and 8496?—The Admiral says in answer to Questions 8495 and 8496, "that they are on much the same foot-"ing as the large Cunard and other steamship lines, "which are fitted by order of the Admiralty to carry "guns, and would do so in time of war." Well, on the contrary, the vessels are subsidised by the Admiralty to make auxiliary cruisers of in time of war to meet vessels of the same class fitted out to prey on our commerce; and for the "Arcadia" at the present moment they pay a retaining fee of 2,438*l.* a year. I submit that the "Warren Hastings" is an equal, if not a better, ship, and her armament is already provided for her at a cost to India of 12,000*l.*

9442-3. Then Question 8497?—I think I can show in recent correspondence that in building the "Minto" to replace the "Enterprise" the Government of India attached considerable importance to her being armed to enable her to protect or afford a refuge in case of a rising among the convicts in the Andamans.

9444. But, generally speaking, you have been advocating, have you not, the armament of all these ships?—Only a certain number, not all: I would only arm three.

9445. Then you pass on to Question 8511?—I think we may omit that. 8512 to 8515 relate to the flag we wear, and the question about the Resident using our ships.

9446. Have you not already put that before us in speaking of the Australian squadron?—I was going to point out that the Admiral says in his answer to Question 8515, "Directly you arm them they become "pirates; they have no status if they are fully armed." The question seems to me to be, whether the Admiralty have the power to override an Act of the English Parliament. The Act passed by Parliament distinctly says, "the suppression of piracy in Indian waters," and I fail to see how the Indian Marine ships can possibly become pirates as long as that Act exists.

9447. Your argument I suppose, would be that, if it is possible to keep these ships in Australian waters under the local authority, it could be done in the Indian waters?—That is one point in my argument, but my main argument is based on the Act. The Act distinctly enumerates our duties, and yet the Admiral in his evidence says that, if we try to perform those duties, we become pirates. The question is which is the superior authority, the Admiralty or the House of Commons, as far as I can see.

9448. I suppose the objection the Admiral puts forward is really to having two armed forces under separate commands?—Yes, and he refers afterwards to his making war in one portion of the station and my making war in another. But he forgets or overlooks one answer in my evidence (7127) in which I distinctly said that in all cases of offensive operations the vessels should be under the orders, or placed at the disposal of, the senior naval officer, so that there would be no question of authority clashing. But the Admiral omitted that answer altogether.

9449. (*Mr. Buchanan.*) Then would you limit the powers that the Director of Indian Marine should have over these ships, supposing they were armed?—We have had cases where the Indian Marine ships have been placed under the orders of the senior naval officer and have acted under him.

9450. But supposing you got your way and had them armed, would you be prepared to put them under the command of the senior naval officer for all purposes off the coast of India?—For all offensive purposes off the coast of India certainly.

9451. Of course they are so substantially?—Not for interior economy or for actual work on the coasts of India itself. We have had our ships actually under the command of naval officers, handed over to them, with our officers working under them in warlike operations, and no friction arose.

9452. (*Sir Ralph Knox.*) Your argument generally is that if your ships were armed, these armed ships which are supplied by the Admiralty might to a large extent be dispensed with?—You might certainly dispense

Captain J. Hext, R.N., C.I.E.

19 May 1896.

with one or two of them, not altogether. You must have the "Sphinx." In my previous evidence I said so.

9453. But the other three might be dispensed with?—I should dispense probably with two, I would not say three.

9454. Still two of them might be dispensed with?—Two of them.

9455. And in time of war, or threatened war, you would be prepared to hand over those ships, to put them under the command of the English Admiral in command in those seas?—In time of war it is provided for by the Act. The Act provides that in time of war the Queen under her sign manual can place the whole of the Indian Marine under the Naval Discipline Act, and then they become part and parcel of Her Majesty's naval forces.

9456. And distinctly under the Admiral's command?—I believe those are the very words of the Act. They shall be "placed under the Discipline Act and become "part and parcel of Her Majesty's naval forces." That is in time of war.

9457. And you hold that your ships, if carrying the armament which you contemplate, would be able to meet the attack of an armed cruiser of any other nation?—Certainly not; not for a moment.

9458. What would they be able to do?—They would only be able to do the duty of the police on their own coasts, and the suppression of piracy on their coasts.

9459. They would not be able to perform the duty that these Imperial ships perform?—Certainly not. That is an Imperial question.

9460. Is not the "Marathon" capable of meeting the attack of an armed cruiser of any other nation?—The "Marathon" is only a third-class cruiser.

9461-2. (*Chairman.*) Admiral Kennedy was asked in Q. 8522: "Might there not be an advantage if those ships "were put under the Admiralty, so as to have only one "authority"? (A.) I do not know what the Admiralty "view would be as to that." What would you say to it?—I see no objection whatever to this, provided they are placed under the orders of the Admiral in the same way that Indian Navy ships were, when acting with the China squadron.

9463. And that brings us to Question 8531, does it not?—I should like to say something on 8528 if I might.

9464. Certainly?—The Admiral says: "She (the "'Lawrence') does not do any fighting; she is most "useful as a yacht." But if she was armed, he himself acknowledges in one of his answers (8529), she is as good, perhaps better, than the "Sphinx." Then he says, that if "there is any disturbance, they immediately telegraph to the Admiral, who sends a man-of-war; so that I do not see that she can be taken "into consideration as a force." The work of the Persian Gulf is very seldom of a very urgent nature. We generally have a week before it is decided, whether action will be taken or not, very often a great deal more, and in that time there is ample time to send a vessel from Bombay if required, which would prevent the "Lawrence" being left there single-handed, if the "Sphinx" were away, and therefore undertaking offensive operations on her own account.

9465. Then on that point, perhaps, you would just look forward to Q. 8537, which endeavours to sum up what might be the result of arming the "Lawrence," and putting her under Admiralty orders. It seemed to me too that the Admiral allows that there might be practically a gunboat saved?—Oh yes, I think there is no doubt whatever of that; in fact, a gunboat is saved now.

9466. But is that the amount of saving that you think might be effected by means of the "Lawrence" being armed?—I think so; but I go further than that. I think the "Lawrence" should be put as an offset to the "Sphinx." One should be held to do the Indian share of the duty, and the other should be held to do the Imperial share, unless the Persian Gulf is to be held to remain for ever under India.

9467. What have you to say about Q. 8538?—The Admiral says that it would be the best way for the Admiralty to buy the "Lawrence" right out; but, if they bought the "Lawrence" and manned her themselves, as I pointed out in a previous answer, the cost of the "Sphinx" being enormously greater than the cost of the "Lawrence," the only result would be that we should be asked to pay a subsidy for the "Lawrence" in the same proportion as for the "Sphinx."

9468. (*Mr. Mowbray.*) That is caused by the difference between a white crew and a lascar crew?—Yes; I could not give you all the details. I gave you the exact cost of the up-keep of the two ships; I got an average for the three years out of the Marine Estimates.

9469. (*Chairman.*) Then we go to Q. 8562:—"And "those limits are defined with the assent of the Indian "Government." Those are the limits outside which the vessels cannot be employed without the consent of the Indian Government?—They would certainly be removed at once in time of war.

9470. But that would be with the consent of the Indian Government?—Consent or no consent, the Admiralty would take the ships.

9471. Q. 8578 refers to the question of the Admiralty being the best judges?—I have nothing to say about that.

9472. Q. 8581 is about the power of the Indian Government to choose the ships?—I would like to point out with reference to that, that the Government of India had chosen the ships and named the class before the Rosebery award.

9473. Then with regard to Q. 8592?—The Admiral says here that in time of war the Defence Flotilla would be dispersed wherever the Indian Government thought fit. There is an apparent contradiction in this, inasmuch as the Admiral says the Government of India cannot give him any orders; it can only requisition, whereas according to this the vessels would be actually detailed for certain places to which he would be obliged to send them.

9474. Then we come to Q. 8608, which is about the large dockyard works at present in Bombay?—Yes, the deepening of the Duncan Dock originated entirely from a proposal of the Admiralty to build a gigantic dock in Bombay. This the Government of India refused to do, but deepened the Duncan Dock at their own cost to meet, as far as possible, Admiralty requirements.

9475. (*Mr. Buchanan.*) Did the Admiralty want the Indian Government to build this big dock at its own expense?—At first at its own expense, and afterwards they offered to subsidise it to a certain extent.

9476. (*Chairman.*) I think, if I remember rightly, they offered a considerable subsidy, did they not?—India altered the Duncan Dock at a cost of about five lakhs. It really was not altered primarily to meet the requirements of Indian troopships at all.

9477. (*Sir Ralph Knox.*) Was the alteration necessary to meet the requirements of these four ships that are subsidised?—It is before a vessel of the "Marathon's" size was ever mentioned. The Admiral quotes a letter of mine about the dredger's current work. We had an old dredger which could dredge to 16 feet, but when we deepened the docks to try to meet Admiralty requirements, we had to get a dredger which could dredge 24 feet. Then he says that "neither the "'Boadicea' nor the 'Bonaventure,' the past and "present flagships, have ever been into the Duncan "Dock, on account of the approach not being properly "dredged." A week after I left Bombay the "Bonaventure" was to have gone in, and there was ample water for her and two feet to spare.

9478-9. Is she much larger than those subsidised ships?—Considerably; I should think she is 300 feet long, and I think the "Marathon" is 260; the "Bonaventure" is a second-class cruiser.

9480. (*Chairman.*) Then you go on to Q. 8614. Are not these docks constructed for the repair and maintenance of ships that are required for Indian purposes?—I virtually answered that before; the dock was not increased for the benefit of the troopships, but to meet requirements of the Admiralty.

9481. Q. 8613 turns upon the question whether, if the Indian Navy had remained, large docks would not have been required?—No, I certainly think not; I think the present docks would have been amply sufficient.

9482. (*Mr. Buchanan.*) You would still maintain then that the alterations made by the Indian Government at its expense were largely to meet the requirements of the Royal Navy, and have been available for that purpose?—Certainly.

9483. (*Chairman.*) Then we come to Questions 8616 and 8617, regarding the convenience of the docks?—

Yes, the Admiral there talks of the vessels going to Colombo when the dock is made there. They might go there for cleaning purposes; but, if anything like extensive repairs were required, they would find a want of artificers and a want of material unless the Admiralty established a depôt.

9484. Then Q. 8620 as to whether there is a reciprocity?—I only wish to reiterate what Admiral Kennedy has already said, namely, that there is no reciprocity whatever now-a-days.

9485-6. Because there are no longer any troopships?—Because there are no longer any troopships. The arrangement is entirely one-sided.

9487. Now comes the question of the docking of the "Clive" at Portsmouth and Bombay?—Yes, Q. 8630, Mr. Cuming says, the low charge is supposed to be due to the low rate of exchange, and that, if the rupee were worth 2*s.* in sterling, the cost of the docking in Bombay would be 115*l.* as against 111*l.* at Portsmouth; but he does not say that out of the sum that it cost to dock the "Clive" in Bombay 1100 rupees had to be paid for material—for the paint to put on her bottom which had to be obtained from England—which if the rupee had been at par would have cost 630 rupees, so the consequence is that he is entirely wrong about that. The actual cost, if the rupee had been at par, would have been 630 rupees, plus 300 labour = 930.

9488. I suppose that labour is cheaper?—Labour is extraordinarily cheaper, but of course loss by exchange punishes us in the way of having to pay for the material from England.

9489. (*Sir Ralph Knox.*) Is the material obtainable on the spot?—We keep large stocks of it.

9490. But where do you get it from?—England.

9491. (*Chairman.*) We learn from your evidence given last time that the larger portion of your stores are bought in England?—Just so.

9492. 130,000*l.* to 150,000*l.* a year, was it not?—It is a very large amount.

9493. One year it was 130,000*l.*, and I think in another year you showed us it was 150,000*l.* Then we come to Q. 8632 about the retaining fee paid for P. and O. steamers as armed cruisers?—Well, I have already commented on that in my answer to Q. 9441.

9494. Then next are questions 8634, 8635, and 8636, upon the length of time that Admiralty ships have been in dock?—I only wish to point out that the "Briton" was not so very long ago; the "Briton" was in dock in 1887, and I could give you the cost of every ship docked within the last 10 years. The Admiral says it is a case of ancient history—it was in 1887.

9495. Would you like to put in any statement showing other cases of ships that have been in the dock for a long time?—I will put in a statement.*

9496. Does that finish all the questions to which you wish to call attention?—No, there is one question with reference to the repairs of the "Sphinx"; may I read this letter to me from the India Office?

9497. If you please. What is the point to which that letter refers?—The question of fixing an annual sum for the repairs of the "Sphinx" instead of the present existing arrangement: "India Office, White-"hall, London, 11th March, 1896, Sir, I am directed "by the Secretary of State for India in Council to "forward for your information a copy of a telegram "from the Government of India, requesting that when "the subject of India's contribution towards the cost "of Her Majesty's ships in Indian waters comes before "the Royal Commission, arrangements may be made "for the subsidy to include a fixed annual sum for "the repairs of the 'Sphinx', or her successor, "instead of being exclusive of this item, as already "arranged; and I am to say that you are authorised "to communicate the wishes of the Government of "India in this matter to the Commission, together with "a statement of the average cost of the repairs in the "past, which you are probably prepared to furnish. I "am to observe, however, that the decision will not rest, "as the telegram seems to imply, with the Commission, "but with the two departments, Admiralty and India "Office, after consideration of the views of the "Commission."

The telegram from the Viceroy, dated 28th February, 1896, is as follows:—"With reference to the corre-"spondence forwarded with paragraph 1 of your "military despatch of 23rd January last, we request "that when subject is before Royal Commission, "arrangements should be made for subsidy to in-"clude fixed annual amount for repairs of 'Sphinx,' "amount to be subject to revision when 'Sphinx' "is replaced by a new vessel. A despatch on "the subject will follow." I apprehend that the reason of this despatch was that the repairs of the "Sphinx" were settled under Lord Rosebery's award, and therefore could not be arranged between the two departments. At present India has to pay for the repairs to the "Sphinx" and the result is constant correspondence and unpleasantness as to what can fairly be charged to India.

9498. Would you prefer that the repairs to the "Sphinx" should be carried out as the repairs to the other ships are?—I should infinitely prefer it, and so would, I may say, the naval Commander-in-Chief, who has been in correspondence with me on the subject.

9499. (*Sir Ralph Knox.*) And that the 100,000*l.* be adhered to?—We should have to pay the estimated repairs of the "Sphinx," in addition to whatever subsidy is decided upon eventually.

9500. (*Chairman.*) At present it is paid separately? The present operation of the award is that 100,000*l.* is paid in money to England, and 4,000*l.* in India for repairs to the "Sphinx"?—It is not really 4,000*l.*; that is the estimate, but it does not amount to that as a rule.

9501. But that is what it really comes to, that India pays 100,000*l.*, and, in addition to that, she pays the bills of the "Sphinx" when she is repaired?—Just so.

9502. You would prefer to pay 103,000*l.*, or whatever the sum would be, and that the "Sphinx" be repaired as other vessels?—Just so, and that would follow the practice at present prevailing, that for the repairs of the whole of the Defence Squadron the Government of India pay a lump sum to the Admiralty, and the Admiralty spend it just as they please.

9503. (*Sir Ralph Knox.*) I thought that was one of the items that you complained of very considerably?—So it is. This letter refers to "a statement of the "average cost of the repairs in the past, which you "are probably prepared to furnish."

9504. (*Mr. Mowbray.*) Why was the "Sphinx" differently treated to the other ships?—I never could quite understand. When the Defence Squadron was placed on the lump sum basis, it seemed obvious that the "Sphinx" should be treated in the same way; but apparently it was not thought of.

9505. Have you got the actual figures of the repairs of the "Sphinx" at Bombay for the last five years?—Yes, so far as I can get them from my records.*

9506. (*Chairman.*) Have you any remarks you would wish to make upon the changes which have taken place lately in the transport service between England and India? a considerable change has taken place—the old Indian transports have been abolished, and at present the transports are hired, are they not?—Yes.

9507. I do not know whether you may wish to offer us any remarks upon the financial aspect of that change?—No.

9508. Lastly, I think you have a statement, which possibly you might like to put in, which will give some idea of what the cost of the Indian Navy was to India, while it existed?—You refer to Question 6911 of my examination?

9509-14. Would you wish to put that in?—Yes (*statement put in*).†

9515. Is there any other point to which you would wish to call our attention?—There is one small question with regard to the armament of the "Lawrence," which Sir Donald Stewart raised in the course of Admiral Kennedy's evidence. I want to draw some small attention to that—with regard to Q. 8531—Sir Donald Stewart read a letter, which is dated 1881, which distinctly points out that the "Lawrence" was not intended to be an armed ship; but the "Lawrence" did not go up to the Persian Gulf till 1887, and the Government of India in a despatch, written in 1892, says: "It was "originally intended that the 'Lawrence' "should be a purely non-combatant vessel and not "armed, but the Indian Marine Act, passed in 1887" —that was a subsequent Act to 1884—"seems to "warrant the arming of a Royal Indian Marine vessel "for particular service such as the 'Lawrence' is "employed on, and we accordingly took the necessary "steps to place her guns on board, and informed your

* *See* Appendix 62.

† *See* Appendix 61.

Captain J. Hext, R.N., C.I.E.

19 May 1896.

"Lordship of our action in the statement attached to "paragraph 19 of our military despatch No. 4 of the "14th January 1891." The "Lawrence" being unarmed, of course, was the original idea, but on the Act being passed for the suppression of piracy, &c., the Government of India thought it within their power to arm her, and they did so accordingly. I only point that out as a sequel to the other letter.

9516. (*Mr. Naoroji.*) Now, it is generally stated that the Imperial conditions have very much changed, and that therefore, all the interests of the British Empire having increased, the Indian Empire must contribute to all those increased interests. Now would Britain hold that all the interests that have arisen from change of time and circumstances have not arisen from the interests of Britain herself; that is to say, her rule in the Indian Empire and her position in Europe and her own condition?—I am afraid I am not a politician; I can give no answer to a question of that sort.

9517. We are often told about the common interests of the Empire in which India is interested, but, where India and England both are interested, is it not proper that England should take a share instead of putting the whole burden upon India?—I should say most assuredly.

9518. In all the common interests, yes. This is a question based upon the award, and the award is before us, so I will put the question now. Is not the whole award based one-sidedly on the fallacious assumption that India is an independent country, master of itself, of its own resources, and having her own benefits at her own command, instead of being kept down in helpless subjection by Britain, and Britain having most vital interests of her own at stake, as well?—I do not quite follow you.

9519. I am taking the whole award. Is not the whole award based on a one-sided fallacious assumption, namely, that India is an independent country, master of itself, of its own resources, and having her own benefits at her own command, when in reality she is kept down in helpless subjection to Britain, Britain having most vital interests of her own at stake, and Britain having the whole power to do what it likes with the resources of India? The fallacy lies in this, that India is considered as if it were negotiating independently on her own strength with an equal power. That is the whole drift of the whole award, and therefore she is made to pay the whole cost of the armament and of the naval supply with which we are now dealing?—If you ask me if I think the award a strictly fair one to India, I should say no.

9520. If India is asked to take a share in all Imperial burdens, is it not right and just, therefore, also that India should have all Imperial rights in all the services, Army, Navy, Civil, of the Empire, because she is often told that she is a part of the Empire and she must contribute to the defence, and the words there are "general defence of the Empire"?—I think that is a question I can hardly answer. As I said before, I am not a politician, and I do not study these questions.

9521. Then the same remark I may apply to the Conference, whose decision has been constantly appealed to in the whole controversy, that the Conference has gone entirely on the assumption that India was, as it were, an independent power to negotiate with, and that India therefore has certain responsibilities as one who has its own resources at its own command. If that is not accepted, if that is not correct, then the whole decision of the Conference goes for nothing?—There were members of the Conference representing the Government of India, though no one was actually sent from India in the same way as from Australia.

9522. But then the Government of India, or the Secretary of State for India, are a department of the British rule, and they do not represent, as Mr. Gladstone himself admitted, the interest of the Indians, as an independent Indian nation altogether; it is all subservient to the British rule and British power and British interests?—They are governed by England.

9523. Without any voice in the disposal of its resources?—Except that the Government of India watch the interests of India as closely as possible in every possible way.

9524. Yes, all the departments that have been discussing this question have been all acting upon that principle of getting what they can out of India, but they have never recognised the principle that whatever is done in India for the interests of both—that is to say, both for the British rule and for India itself—that the British exchequer also should contribute. That point has not been touched upon by any one of the controversialists; can that be fair?—I have never sat on any board of the sort; therefore I cannot give an opinion.

9525. I am only talking about the correspondence as it is here. This correspondence does not show in the slightest degree that either the Government of India or the other parties have taken that view of it. Well, then it is said here that India has to pay the whole cost, effective and non-effective, of this armament. Now, is not this the same one-sidedness upon which the whole of this controversy is carried on, ignoring all along the interest which Britain also has, even more vitally than India, in all the interests for which those services are required, small or large?—I do not think I am capable of giving any opinion except on the matters which have already been placed before the Commission, where I have endeavoured to show the Indian point of view.

9526. From the Government of India point of view, not the Indian's point of view?—Yes, and also the interests of the people of India.

9527. Yes, but the interests of the people of India have had no expression whatever, either in the Conference or on the representation for the award or in any way whatever, so you can hardly know what the interests of the people of India were. I am talking more of the Government of India in that respect. Then in a Treasury letter to India Office, these words occur, "securing to India an effective voice in "its control." "The principle that India ought to pay "for the whole cost of the squadron was admitted at "the Conference, with the proviso that its composition "was to be revised, and that arrangements were to be "made for securing to India an effective voice in its "control." Now, is not this expression and the whole reasoning in fact utterly misleading—"securing to "India an effective voice in its control"; is it not simply the voice of the British by means of its own agents, servants, and departments? There is no voice of India itself in the matter at all, while the British public understands it to be the voice of India, when it is very well known that the whole resources of India are entirely at the disposal of the British authorities, and to say the Government of India echoes the voice of India is what Mr. Gladstone has called a paradox. Now with regard to comparisons made with Australia; constant comparisons are made, and arguments are based upon them; but should not this be borne in mind, that Australia is its own master; whatever she does is within her own power, will, and voice; she can do whatever she considers for her own interest. Also an Australian has access to every and any service of the empire. Well, have the Indians any such power, will, or voice? Has India any command of her own resources? are they not entirely at the mercy of the British, to be disposed of at their own sweet will, and, as far as possible, to their own interests? and the Indians also have no access to all the Imperial services of the empire. Now, is not this fact a contrast between the two? If India were in the same position as Australia to speak her mind and to act according to her own interest, the case would be quite analogous and right; but as it is at present, to treat India as Australia for British purposes, and then to treat India as it is actually treated for Indian purposes, is it not altogether unfair? Then the words "Indian purposes" are constantly used here, on which the Conference and the award are based, and what does this "Indian purposes" mean? does it mean that in all those purposes Britain has no share whatever in its own interest? should it not be called "British and Indian purposes," and, instead of putting the whole cost of the squadron upon India alone, should it be divided between the two in some fair ratio according to the capacities of each and according to the interests of each? The word "Indian purposes" is entirely misleading?—The word "Indian purposes" has been the rock upon which the whole controversy has set in.

9528. And it is wrongly interpreted all along, and upon that fallacy is the whole award and the whole conference based. Now taking the past instances of the East India Company spending a certain amount of money, the contention that we ought therefore to be prepared to spend the same amount of money now. I will just take one instance in the last century—the British Administration was the most oppres-

sive and the most plundering that has ever existed in the world (those are the words of the report of the Directors, not mine). Now, would the present Royal Lady Empress follow such an example? Certainly not. Then in the same way, supposing the East India Company of their own free will and of their despotic power, which they possessed, had done certain injustice to India before in compelling her to find everything for their own interest; would it be right for the Victorian rule to follow the same precedent, and say to us that, as we spent so much before, we must spend the same amount now?—I think the whole of my evidence before the Commission goes to show that I wish to see fair play between both; I hope so.

9529. I do not know whether it is said in the award, or not, that the arrangements made in 1861–62 were not binding on the British Government; however, on the same ground shall I say that referring or appealing to past evidence, whether right or wrong, just or unjust, in order to strengthen the position which the Admiralty takes up here, is not fair. Well now, with regard to Australia again. Here are a few words, which I will just quote, which explain the whole position. Mode of calculating the cost, paragraph 3, page 53. "Under "the agreement arrived at in March 1890, the charge "against India is to take the form of the whole cost, "effective and non-effective, of certain ships. My "Lords remark that the maximum calculation by the "Admiralty of this cost seems very moderate." These sentences need not be quoted; what I want is the following part. "To compare it with the charge made "to the Australasian colonies for the increase of the "Australian squadron is irrelevant, because that "charge does not pretend to represent the whole cost "of the ships, but is what the Australian colonies were "willing to pay and Parliament thought it expedient "to accept." Now is not that a comment upon the position of Australia and India, that from Australia the Government here can only get what they will give, and from India they may take whatever they like. They cannot make Australia pay whatever they like. Well, I think I will stop here.

9530. (*Sir Donald Stewart.*) I have only one question to put. Can you furnish a general statement showing how the vessels of the late Indian navy were usually employed between the years 1830 and 1860. My object in asking the question is this: I think there has been some misconception as to the meaning of a sentence in Sir Charles Wood's despatch of 1860; I think it has not been quite clearly understood. The paragraph to which I refer will be found at page of the papers relating to Lord Rosebery's arbitration statement. The Secretary of State said, "as regards India, the general defence, "the protection to trade generally, and the measures "for putting down the slave trade on the eastern "coast of Africa, which have hitherto been performed "partly by Her Majesty's Navy and partly by the "Indian Navy, should be undertaken altogether by "Her Majesty's Navy." I think that this has been read as if all these duties had been performed partly by Her Majesty's Navy and partly by the Indian Navy, but that is clearly not the interpretation of that sentence. The duty that was performed partly by Her Majesty's Navy and partly by the Indian Navy was the suppression of the slave trade, and that alone, if you read the paragraph carefully.

(*Chairman.*) It reads both ways, does it not?

(*Sir Donald Stewart.*) Well, I do not see how it can, as the whole tenor of the correspondence leading up to Sir C. Wood's despatch supports my interpretation of the sentence.

(*Chairman.*) "The general defence, the protection to trade generally, and the measures for putting down the slave trade, which have hitherto——"

(*Sir Donald Stewart.*) The "which," clearly applies to the measures for the suppression of the slave trade.

(*Chairman.*) When you join three duties together in that way, followed by a "which," the "which" may refer grammatically to all, may it not?

(*Sir Donald Stewart.*) I do not think so, because, if you read the rest of the despatch, it is clear that this interpretation was not in the mind of the Secretary of State. If you look at page 19 you will find the Secretary of State's definition of the duties which the Royal Navy would be required to undertake on the abolition of the Indian Navy. "The Indian Navy "was abolished by an Order dated 22nd April 1863. "The Admiralty having inquired what force had "hitherto been maintained for such duties as the "Royal Navy would henceforward be required to "take 'for the protection of the Indian Seas,' "'the India Office, on the 7th November 1862, "replied, 'At all times there have been several vessels "'of Her Majesty's Navy in the Indian Seas for the "'general protection of trade,'" there is the very phrase, "'and to be at the same time available for any "'general service which might be required by the "'Government of India. A considerable squadron of "'the Royal Navy has always been maintained on "'what is called the East India and China station, "'and the number of ships and vessels on the coast "'of India has varied from time to time according to "'the known or anticipated requirements of the "'various posts of that extensive naval station.'" There is nothing here to show that the vessels of the Indian Navy were ever employed in the protection of trade generally on the high seas; and it is to establish this point that I ask for this statement?—I will do my best.

9531–2. It will be a very useful statement, if it can be obtained?—I think I can get something from the history of the Indian Navy, and I think I might get some other records here. As far as my experience goes, and conversation with Indian naval officers, who are now quite old men, the duties performed were not on the high seas, but were simply the local duties as you point out, and in reading this paragraph from the Secretary of State's despatch I have in reading it never understood "the protection of trade generally," and thought, until you put this light upon it, that it applied more or less to the protection of the actual coasting trade of India; but, now you have pointed out this interpretation, I have no doubt whatever that the last paragraph is intended only to apply to the slave trade as being jointly performed by the two; but the protection of the trade generally was always the duty of the Royal Navy. I will do my best to work that out if I can. I think it is a most important question.

9533. (*Sir Ralph Knox.*) Do you think there is really any reason for so restricting it?—I think there is every reason for restricting it, because, as I said before, the trade on the high seas was not protected by the Indian Navy, as far as my knowledge goes, in any way.

9534. But, so far as Indian interests are concerned, do you not think that India should bear a share in such protection? The trade of India is very extensive; it belongs to India and it belongs to Britain very largely?—No, it belongs to Britain, not India.

9535. Not India?—No.

9536. You do not think that the trade of India is of any advantage to India?—I mean to say, that the actual sea-borne trade is owned by England, and the ships are owned by England, and the cargoes are owned by England. I do not say that the bales of cargo belong to England, but, the ships having once sailed, they are the property of English merchants, and the cargo is the same.

9537. But the cargo generally consists of the produce of India, does it not?—It is the produce of England sent to India.

9538. But I mean the other way?—It is bought by English money.

9539. Yes, but produced by India?—Produced by India, but the actual protection of it ceases to be an interest of India after it leaves Bombay or an Indian port.

9540. But do you think that that trade would exist, if it was not protected?—Certainly; it has existed all those years perfectly well. There has been no war.

9541. Yes, but the existence of a fleet is for protection against war and war risk, is it not? That is the only reason for it?—The principle is a free trade one, and would be acknowledged, I think, by every Englishman; but until it is applied in its entirety to Australia and to all the great dependencies of the Crown, I do not see how you can make India do one thing and let the others do nothing.

9542. (*Mr. Naoroji.*) But while this trade which we are now considering is under protection, is it not entirely the British interest of the East India banks and the insurance offices—the whole cargo is entirely a British interest while it is floating, and while it is under this protection?—I think that is going a little too far, there is no doubt India has an interest in the cargo if they have sold it; otherwise it would not produce it.

Captain J. Hext, R.N., C.I.E.

19 May 1896.

9543. That is true, but that is not the question. The question is, while under this protection, is it British interest or Indian interest, that is the question; while under this protection it is entirely British interest.

(*Chairman.*) Well, Mr. Naoroji, you see there is a difference of opinion; I should say exactly the contrary.

(*Mr. Naoroji.*) I only say what my opinion is, as matter of fact.

(*Chairman.*) It is entirely in the interest of India that it comes over here. India is interested in selling her corn and cotton, which add immensely to her wealth; and as much as any country in the world she is interested in her foreign trade.

(*Mr. Naoroji.*) I will admit all that, but the question is simply this, that with regard to this protection of trade, at the time this protection is given to the trade, it is entirely British. It is with that point that we have to deal.

9544. (*Sir Ralph Knox.*) As regards the charge that is made of 100,000*l.* a year, is your argument that this should be divided, or should be abolished altogether?—Oh, I think I cannot hope to have it abolished altogether; I should like to see it very much reduced.

9545. On what grounds do you think it should be reduced?—On the ground that the services of India to the Navy have not been taken into consideration, and that the words "Indian purposes" have been misinterpreted.

9546. What services of India to the British Navy?—I mean to say, as I said in my evidence before, that without our dockyards and harbour defences, &c., &c., the English squadron could not exist out there.

9547. But those dockyards exist really for the maintenance of ships in Indian waters, mainly for the protection of Indian interests, do they not?—No, they were originally for the old Indian Navy, and then they also worked for the Royal Navy by building wooden line of battle ships in the old days for the British navy.

9548. But the ships that are repaired in the dockyard are the ships that are exclusively employed in Indian waters, are they not?—Those ships and any other men-of-war that pass by.

9549. But do many men-of-war pass by?—I think I can give you a considerable list in the last 10 years. The "Garnet" was only temporarily on the station, coming home from China, that is one; and the "Blanche" only temporarily on the station, two.

9550-1. Well, there were some ships coming from the China station?—Homeward bound from the China station, and also ships going out; and we had one or two ships under considerable repair. Still you see the dockyards are available for all men-of-war that happen to require to go there, not only at Bombay but at Calcutta.

9552. I see that the proposal is to charge 100,000*l.* a year as against a calculated actual expenditure of 117,000*l.* a year, that is to say, a reduction of 15 per cent. That, of course, is a considerable sum; it is a considerable percentage upon the calculated charge. Assuming it to be an approximation to the real charge, I find that the 17,000*l.* in fact represents the whole cost of the "Pigeon;" or, taking it in another way, it nearly represents the whole cost of the hulls of the ships?—Not the hulls of the ships; repairs to the hulls of the ships.

9553. No, the hulls of the ships, the entire charge of the hulls of the ships is put at 19,555*l.*?—That is to keep them in order, surely, is it not?

9554. No, the annual charge?—That is the 5 per cent. on the original cost.

9555. Yes, for paying off the first cost of the ships, with 3 per cent. interest for replacements?—Oh, yes.

9556. The rebate or the discount of 17,000*l.* amounts to very little short of the total cost of building the ships?—Surely not the building of the ships, the building of the "Marathon" alone cost 160,000*l.*

9557. No, 123,000*l.*?—And for armament.

9558. Yes, her armament 39,000*l.*, yes, well it is on those figures that the calculation is made?—Therefore you cannot say that 17,000*l.* is paid for the hulls of the ships.

9559. That 19,555*l.* is put down for the total annual cost of those ships, and India is to be remitted 17,736*l.* per annum. It is a sum which represents, whatever way you may put it, either practically the cost of the hulls of the ships, or the cost of the maintenance of the ships, or the total cost of the one ship "Pigeon:" they are all approximate to that amount?—Yes.

9560. I find also in the comparison that has been made, that the cost of the Australian fleet has been worked out at so much per ton, but this table here shows that that seems to be rather a fallacious method of making a comparison. I find for instance that the "Marathon" costs 16*l.* a ton, whereas the "Brisk" costs 20*l.*, the "Pigeon" 20*l.*, and the "Sphinx" 20*l.*; in point of fact the smaller the ship the greater the cost per ton. Is that the general experience?—I think it holds good, except where you bring in armour-clad ships, and then again the price increases, I think.

9561. The ships that form part of the Australian fleet are larger ships than the "Brisk,' the "Pigeon," and the "Sphinx," are they not?—No, there are one or two smaller, two smaller I think, and I will give you the tonnage of the others. The "Mildura" is a twin-screw cruiser, third class, 2475 tons, and the "Marathon" is 2950, therefore they get five ships of the "Mildura" class, I think, and two of the "Karakata;" the "Karakata" is 735 tons; she is a gunboat.

9562. That is like the "Pigeon"?—Yes, well she is not quite like the "Pigeon;" she is more like the "Plassy" and the "Assaye."

9563. Yes, about the same tonnage?—About the same tonnage. I took the tonnage because, as they were all more or less of the same class, I thought it was a fair way of taking them. But, when you are on the question of the calculations about the subsidy, I should like to point out one thing. There is a great variation in the calculation of the cost in calculating the subsidy. The annual cost for maintaining the four undermentioned vessels in Indian waters, the 'Turquoise,' the 'Mariner,' the 'Algerine,' and the 'Sphinx,' is taken in a letter dated the 1st of February 1890, at only 76,079*l.* We then have a further calculation on the same four ships. I think in the second calculation they make it 103,000*l.*, and in the third calculation based on the "Marathon" class they make it 117,000*l.*

9564. (*Sir James Peile.*) Adding the renewals, it comes out at a higher sum?—Yes, and all those three calculations are made within a very short time of each other.

9565. (*Sir Ralph Knox.*) Yes, but in one case the capital charge was not included?—I see that.

9566. The main difference is the interest on first cost at three per cent.; then there is the item for hulls at six per cent., and waste on armaments, and so on; those are not included in the first statement—all those were added subsequently; in fact if you take the figure 30,296*l.* which is pay and allowances, it agrees with the other calculations?—But I might point out the calculations of the Admiralty are rather one-sided. They put down, if you notice, waste on armaments. Well now, every one of those ships, the "Turquoise," the "Mariner," the "Algerine," were all obsolete ships, and the principal portion of their arnament was 64-pounder muzzle-loaders, The proof of my contention is that they all came home, and they were never commissioned again.

9567. I think the idea of the Admiralty was to get at some sum which they could charge India for some series of years, was it not?—The agreement was for ten years.

9568. Which would fairly represent the cost of what the fleet might be, although it might be changed. They did not bind themselves to keep these particular ships there?—Oh, no; it would be very unfair to India if they did; you would have to re-commission them, and every time you re-commissioned them, it would cost some more money.

9569. (*Mr. Mowbray.*) What class of vessel is your ship that you have at Aden?—The vessel there at present is a despatch boat.

9570. She would not, even if she were armed, be capable of taking the place of the Royal Navy ship that is maintained there?—I should say yes, considering all the work that the Royal Navy ship does on the Somali coast. Certainly she is only armed with three six-pounder quick firing guns—that is the armament arranged for her—and she was built entirely as a despatch boat, but I think she can carry about 100 troops at the outside; she is very fast, the "Minto."

9571. She is the "Minto." Is that part of your idea, that she would be able, if armed, to relieve the Royal Navy of the expense of keeping their ship at Aden?—My whole object in putting forward the question of arming the Indian Marine ships has been to try and show that we could actually do the police work on our coasts independently of the Royal Navy, and that therefore we should not be heavily charged for doing work which we could perform ourselves. For all purposes that I have seen at Aden for the last 10 or 12 years that I have been connected with the Government of India, I think that the "Minto" would do the work admirably well. But you will understand that I am only putting this forward, not because I wish to arm them, but in order to point out that we could do the work, and that therefore our not being allowed to do it ought to be considered in the question of the subsidy.

9572. But I also understand that you wish to have Aden removed from the category of Indian waters, and that you think that the Imperial Government ought to contribute more largely to the expense in connexion with Aden?—I think that every man who gives the question one moment's thought must agree with me that Aden is on the high way to Australia and China and is equally important to them; why should India pay and England not pay?

9573. Do you think that the development of the Australian trade has altered the position of Aden in that respect?—To a great extent, and, moreover, if it is fair that England should bear, as she does, half the cost of fortifying Aden, it seems to me that in any case on the same basis she should bear half the cost of the ship that is kept there.

9574. (*Chairman.*) Surely Aden is of primary importance to India, is it not? As I understand, Aden is the very key of the Red Sea, is it not, and it is at that point that any irruption of ships from the Mediterranean could be stopped?—I should think they would stop them at the other side; I should think that would be the naval policy.

9575. That is, the Imperial Government would render this enormous service to India, unpaid by India, on the other side?—Just so, yes.

9576. I should have thought that the position of Aden at that point was one that gave India very great power of arrest?—There is no doubt it is a great strategic point, but I think the principal part of the work would be done on the other side.

9577. (*Sir James Peile.*) You look upon the interests protected by the naval vessel at Aden as not being peculiarly Indian; they are just as much those of other British settlements, Australia, China, and so on?—I think there can be no doubt whatever about it.

9578. Aden is our naval base for operating on the Red Sea?—No; the Red Sea now is on the Mediterranean Station.

9579. Yes, I was aware of that; but still that is the purpose that Aden would fulfil in time of war?—Of course it would, and for that reason it was fortified, and also, I suppose, the harbour deepened to allow the big ships to go in and coal under the protection of the batteries, all of which has been done by India.

9580. With regard to your general view of the subject, you point out that from 1863 to 1869 India paid nothing for the services of naval vessels?—That is so.

9581. And in 1869 she began to pay for the pay and victuals but not for other charges, that is, she paid 70,000*l.*?—79,000*l.* I think it was.

9582. That was for pay and victuals only, not for other charges?—Yes, and the head money, 7*l.* per head.

9583. Since that, we have got on to the payment by India of all charges?—That is so.

9584. And in the meantime a settlement has been made with Australia on a different basis?—A settlement has been made with Australia on a different basis.

9585. I say in the meantime, during the course of these alterations in the settlement with India, a settlement has been made with Australia on a different basis?—Yes.

9586. Different in regard to two points; in the first place the payment Australia makes is for a definite additional force of ships?—Yes.

9587. And secondly she does not pay the whole cost, but, as it is expressed by the Treasury, "what the Aus-"tralian Colonies were willing to pay and Parliament "thought it expedient to accept." That was the basis of what Australia paid?—That is exactly the case.

9588. We have the statement before us that as the Indian payment has now been fixed at 100,000*l.*, India does not pay the full cost?—So the Admiralty say.

9589. In 1895-96, however, she paid 117,000*l.*, did she not, plus 4,000*l.* for the "Sphinx"?—I am not quite sure of that, but you must recollect that the 4,000*l.* for the "Sphinx" is a sum estimated by the Admiralty; in reality the "Sphinx's" repairs have not come to anything like that amount.

9590. I was just going on to that. You have pointed out that in the 117,000*l.* there are sums for maintenance and repairs, and also this payment for the "Sphinx" of 4,000*l.*, which are a great deal more than the actuals?—I have.

9591. So that it is not quite clear that the 100,000*l.* is less than the actual cost?—I should be very glad to take a contract to run the ships for 100,000*l.*

9592. The question will revive in 1901, I think; the 100,000*l.* settlement is up to 1901?—Yes.

9593. The question of the amount will then be revived; it will have to be reconsidered?—Yes, but if it is reconsidered on the same basis, namely, that India is to contribute to Imperial purposes, there is no doubt that it will be considerably increased.

9594. That is if the total cost is taken?—Yes.

9595. But I suppose there is a certain advantage in having got the principle recognised up to 1901 that India should not pay the whole cost? It is considered that the 100,000*l.* is not the whole cost; that principle is to be recognised now up to 1901, is it not?—But that is only because India wished to have smaller vessels, and it is a kind of compromise.

9596. But the Admiralty case is that the 100,000*l.* does not represent the whole cost?—It does not represent the whole cost of the four ships which the Admiralty say are required, but which India does not agree to.

9597. Well, they admit that they have accepted a smaller amount than the whole cost?—For the four ships which they say are required.

9598. The principle is admitted that they will accept up to 1901 something under the whole cost?—Apparently so.

9599. Will you kindly look at a letter from the India office to the Admiralty dated 25th February 1869—that is the occasion on which a payment was first required from the Indian Government for ships—and see what the object there mentioned is, for which the ships are required. "Their Lordships are aware that the Govern-"ment of India have recently invited the serious "attention of the Secretary of State for India in "Council to the want (especially for service in the "Persian Gulf, where complications are frequently "arising which demand our intervention for the main-"tenance of the maritime police of these waters) of an "adequate naval force, under the control of the Indian "Governments and their representatives, for the "support of British authority on the seaboard." That is the object, the support of British authority on the seaboard. Then it goes on to say that a proposal had been made to have a special force organised for this purpose, but that Her Majesty's Government had objected; "it then remained to be considered in "what manner the required service might be per-"formed by Her Majesty's vessels on the East India "station. The Lords Commissioners of the Admiralty "now suggest that, whilst the entire expense on that "part of the squadron employed in the suppression of "the slave trade on the coast of Africa should be "provided out of Imperial funds, the cost of the "maintenance of the ships employed in the Bay of "Bengal, the Arabian Gulf, the Persian Gulf, and "Red Sea, should be charged upon the revenues of "India, the number of vessels so employed and paid "for by India being six." That was actually carried out; six vessels were so employed and 70,000*l.* was fixed as the payment?—Yes, that was actually carried out.

9600. Now you see the object of the whole arrangement was to provide for the support of British authority on the seaboard. There was nothing said about protection of trade or general defence of India?—I have never seen the protection of trade mentioned.

Captain J. Hext, R.N., C.I.E.

19 May 1896.

9601. That seems to have been a new arrangement entirely; is it not distinct from that made in 1863?—My interpretation of it is that the Admiralty, wishing to get as much money as they could, when the Foreign Office Convention sat and decided that India was to pay the whole cost, added bigger ships, and for the first time made a complete *volte face* and brought in Imperial purposes; and it is the first time since the Indian subsidy or the Indian Navy was done away with, that that thing was mentioned.

9602. Then you would hold that in 1863 the British Government, the Admiralty, took over the duties which are specified there, the general protection of trade and so on, without payment?—Entirely so.

9603. But in 1869 a payment for six ships began for the specific purpose of the support of British authority on the seaboard?—In 1869, for the first time, they asked for a subsidy.

9604. For that specific object?—Yes, and this letter which I do not see anywhere printed among these records, and I think a most important one, actually suggested that the Government of India were so disgusted with the idea of a subsidy, that they wished, as I said before, to get their own ships and do the work, but I have not seen the despatch in any compilation yet. It is a most important letter to the Duke of Argyll when Lord Mayo was the Viceroy.

9605. (*Mr. Mowbray.*) In 1869?—The date of this letter is 22nd February 1870, in which the Government of India object to the whole award and ask to overrule it. They objected to the subsidy and wished to establish their own vessels again. I think it is a very important despatch.

9606. (*Mr. Naoroji.*) With regard to dividing, should not the amount be divided, because all those interests are not merely Indian interests, but joint British and Indian interests?—I think, whenever they were joint interests, that the cost should be borne by both sides.

9607. Then, if we are asked to take a share in the expenditure for the protection of trade, must we not then have a fair and full share in the service which protects, and to which we are asked to contribute?—I do not quite follow you.

9608. The Navy is to protect the trade, as it is said?—Yes.

9609. And we are asked to contribute to that protection; then should we not have a share in the service itself, which is to protect, that is, in the Navy?—A share in what?

9610. In the employment in the service as officers, as crew, in every way, fully; if we are asked to contribute, we ought to have a share of the profits also of its employment?—The natives of India, as a rule, are not at all suited to a sea life.

9611. That is not the question; supposing that they want, is it open to them—should it not be open to them, they must have a fair share?—If they were thoroughly efficient there is no doubt they would have, yes.

9612. That is just the thing that they are not at present. Very well, then is not everything that is important to India as important to Britain, just as long as it has its own rule and power in its great Empire of India?—I should say the interests of the one were bound up in the interests of the other.

9613. Indissolubly bound up, as Lord Roberts said?—Quite right.

The witness withdrew.

Adjourned till Wednesday the 3rd June next, at 11 a.m.

(For the 20th–25th Days' Evidence, *see* page 284 *et seq.*)

At the India Office.

TWENTY-SIXTH DAY.

Wednesday, 8th July 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. LEONARD COURTNEY, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary*.

Sir H. Waterfield, K.C.S.I., C.B.

8 July 1896.

Sir HENRY WATERFIELD, K.C.S.I., C.B., recalled and further examined.

12,269. (*Chairman.*) I propose to ask you a few questions on the subject of the apportionment between the Imperial Government and the Indian Government of postal expenses. Some gentlemen from the Post Office are in attendance, and I propose to ask you whether there are any points to which you would draw our attention. The Post Office payments, I suppose, are confined to the contract with the Peninsular and Oriental Steam Navigation Company, are they not?—The present contract is with that company. The tenders for the new contract have lately been issued and are about to be received by the Post Office.

12,270. There has been some controversy between the Imperial and the Indian Governments as to the apportionment of the charge of that contract, and the principle of payment was settled by an award of the late Lord Halifax, was it not?—That is so; in the year 1876.

12,271. Would you tell us what the principles of that award were?—The questions at issue then between the two Governments were mainly as to the proportion in which the subsidy for the Mediterranean section was attributable to India, and to other countries. In the last contract the service was limited to India and countries further East, China and Ceylon, and the Straits; and the Australian service was conducted under a separate contract, so that that part of the question passed away; but the division of the Mediterranean and other sections under the Indian contract is still made under the award of Lord Halifax in 1876; and one of the points I have to put before the Commission is that the proportions of the correspondence have probably changed; that the correspondence with Egypt and with East Africa has assumed much larger dimensions, although I am not able to say until the statistics are taken how that would affect it, but we

hardly think that the award based on correspondence of more than 20 years ago is applicable to the present contract.

12,272. Can you tell us what Lord Halifax actually laid down as the principle? Was it simply that of apportionment according to correspondence?—Apportionment according to correspondence in such a manner that so many per-centages of the Mediterranean section were chargeable to India, and so much to England. The section from Port Said to Bombay was equally divided between the two Governments. I have worked it out; I think the per-centages roughly were these——

12,273. Before you tell us the per-centages, may I ask if you happen to have Lord Halifax's award with you?—I have not got it with me, because it is not in a very intelligible shape. The award was given in this way: Question A, so much, Question B, so much; and it would require a perusal of a long correspondence to see what Question A and Question B were.*

12,274. The answers to Question A and Question B are the several per-centages?—The per-centages were subsequently slightly modified, and the Post Office, when the last contract was under consideration furnished figures which bring out these per-centages. Of the Mediterranean section, India would bear 37·114; the Port Said and Bombay section was equally divided, India would bear 50 per cent.; on the Port Said and Colombo, India was not charged at all; Colombo and Singapore, India paid 3·039 per cent.; Singapore and Hong Kong, India paid 2·799 per cent.; Hong Kong and Shanghai, India paid 1·988 per cent.; adding the incidental expenses, the gross amount payable was divided so that India bore 24·941 per cent.—you may call it 25 per cent.—and then from that was deducted the sea postage. The net amount payable left a charge on India of 21½ per cent.

12,275. When you say that the sea postage was deducted, what was the principle upon which sea postage was brought to account? Did England and India each retain the sea postage levied in India and England respectively, or was it apportioned upon the same principle as the award as to payment?—Under the award and the calculations made under it the sea postage was rendered to the General Post Office and deducted in the gross; but latterly there has been a re-arrangement, and now India retains its share of the sea postage and pays a larger proportion to the Post Office in consideration of that.

12,276. That is only a method of account?—It is merely a method of account.

12,277. The principle underlying the arrangement being that from the gross charge of the contract sea postage is deducted, and that then the remaining charge is divided, upon the per-centages which you have described, between the Imperial Government and the Indian?—Yes.

12,278. Was there any provision under Lord Halifax's award for re-adjustment, or for a re-inquiry, after a certain lapse of time?—No; his award was given on the existing state of things, but by consent there was a slight modification made afterwards with reference to one or two sections. It did not affect the per-centages materially.

12,279. What I mean is this: you gave us one section, the Mediterranean, I think, in which India paid 37 per cent.?—37 per cent.

12,280. But you mentioned that you thought the other countries, such as the east coast of Africa and Egypt, had probably been taking a much larger share of the correspondence. If a fresh arbitration on Lord Halifax's principles were set on foot now, you contend that perhaps that per-centage, instead of being 37 per cent., might now be 25 or 30?—Yes, possibly.

12,281. And you would contend for the principle, I presume, that from time to time there should be a reassessment?—I think so.

12,282. It is not that you are authorised to remonstrate to us against Lord Halifax's award; you only remonstrate against that award as having laid down the per-centage in perpetuity?—Yes; the award was based on the statistics, and I think a similar award should be based on fresh statistics.

12,283. On what principle would you provide for such re-adjustment? That it should take place every 10 years or something of that kind?—It should be left entirely to the Postmaster-General to make it after some reasonable interval of time. I think it is a matter in which the Indian Government would not wish to be unduly severe in its criticisms, but we do think statistics of 1874 are hardly applicable to the present time.

12,284. (*Sir Ralph Knox.*) The Indian Government would be equally anxious for a change, supposing it was likely to tell the other way, I suppose?—We wish to have it fairly assessed. I do not know whether it would go for us, or against us. It is a very difficult matter with regard to audit, because we cannot say how it will turn out, so long as it is based on a condition of affairs of more than 20 years old.

12,285. I only ask that question because that is not quite the view they take with regard to army charges.

12,286. (*Chairman.*) What has been the effect on Indian finance of the postal union? Has the result of that been to make the net charge on Indian Revenues for the conveyance of mails heavier than it was?—According to the estimate it was considerably heavier, but I think the accounts are working out better than the estimate. At the same time I think we can hardly judge yet what is the effect of the last reduction of postage; the question is so much mixed up with the returns in India that, until we get five years' returns of the working of the Post Office in India, I could not give a confident opinion.

12,287-8. When did India join the Union?—In 1876. Just about the time of the award being given.

12,289. Then you have had 20 years' experience of the postal union?—I beg your pardon. I thought you were asking about the reduction of the rates lately made.

12,290-1. At a certain time—I thought it had been six or seven years ago—India entered the Postal Union?—No. India entered the Postal Union in 1876. But I thought you were asking me what had been the effect of the great reduction of letter postage that had taken place in recent years on Indian finance.

12,292. I was coming to that; when was the last reduction made?—It was agreed upon in 1890, and took effect from the beginning of 1891.

12,293. It was then reduced to 2½*d.*?—The letter rate; the newspaper rate was reduced in 1892; the reduction of the letter rates took effect previously.

12,294. And how did that turn out financially, so far as you have been able to ascertain at present?—It was certainly expected that there would be a very heavy charge, but I have not been able to make out clearly to what extent the Indian finances have been affected by it; certainly not to so great an extent as had been expected.

12,295. That is to say, I suppose, the increase of letters carried went some way, to compensate for loss caused by the reduction?—Yes, and to a greater extent, I think, than had been expected.

12,296. How long will it be before you will be able to arrive at some definite conclusion upon the effect of the reduction on Indian finances?—From an examination of the reports on the Indian Post Office, I have obtained the following statistics:—

ESTIMATED NUMBER OF ARTICLES TRANSMITTED BETWEEN INDIA AND THE UNITED KINGDOM.

Letters.

Years.	Despatched from India.		Received in India.	
	Number.	Increase Per Cent.	Number.	Increase Per Cent.
1890-1 - - -	2,467,371	—	2,575,489	—
1891-2 - - -	2,535,884	4·8	2,836,848	10·1
1892-3 - - -	2,885,220	10·4	3,081,754	8·6
1893-4 - - -	2,920,744	2·3	3,151,357	2·3
1894-5 - - -	3,030,941	3·8	3,208,899	1·8
Increase in 4 years -		22·8	633,410	24·6

* *See* Appendix 63.

Sir H. Waterfield, K.C.S.I., C.B.

8 July 1896.

Newspapers and Book-packets.

Years.	Despatched from India.		Received in India.	
	Number.	Increase per Cent.	Number.	Increase Per Cent.
1891-2 - - -	658,425	—	3,056,461	—
1892-3 - - -	807,521	22·6	4,091,291	33·9
1893-4 - - -	892,752	10·6	4,653,456	13·7
1894-5 - - -	912,209	2·2	5,328,183	14·5
Increase in 3 years -		38·5	2,271,722	74·3

The reduction in the postage of letters to India from 5*d.* to 2½*d.* per half oz. was 50 per cent.; the increase in correspondence is 24·6. The reduction in the postage of letters from India from 4½ to 2½ annas per half oz. was 44½ per cent.; the increase in correspondence is 22·8. The Government of India anticipated an annual loss of Rx. 38,000; I cannot say how nearly the estimate has been realised.

On newspapers the rates were reduced by 33⅓ per cent., and on book-packets by 66⅔ per cent.; the increase in the number of these articles is 74·3 per cent. going to India, and 38·5 per cent. coming from India. It would appear, therefore, that the anticipated reduction of 16,000*l.* a year may have been to a great extent covered by the development of this class of correspondence.

The Director-General remarks, in the report for 1894–5, that the immediate effect of the reduction of the letter rates of postage in 1891 in the way of stimulating correspondence has passed away, and the actual increase from year to year has now become normal.

12,297. Then as the result of your evidence on this point, so far as it bears on the question of apportionment, we understand that the Indian Government are desirous that there should be periodical re-adjustments and re-assessments?—That is one point. There is another point which I should like to mention, though I believe it has been provided for in the recent tenders. We think that by the division of the subsidy on the *pro ratâ* principle, as it is called, the Indian section, which is the more lucrative to the company, has to bear a larger portion of the subsidy than it would if the contracting parties allotted a share of the subsidy to each section, and, therefore, is burdened with the dead weight of the eastern portions, which are less lucrative.

12,298. Could you explain that to us a little more fully?—The China section involves a much longer sea voyage, and relatively it is not so profitable to the company as the Bombay and Aden section; and on the last occasion the company tendering put in its contract for the whole of the eastern section in one lump sum. The consequence was that we could not say what portion was due to India and what to China. The Post Office asked the Peninsular and Oriental Company to make a division, but they said that they were unable to do it accurately. We were not satisfied with the result, and we thought that, if the tender were made for the Aden and Bombay section separately from the Aden and Ceylon and China section, it would give a fairer view of the amount which India ought to bear. I rather think that that has been provided for; that the tenders have been called for separately, and, therefore, the point is not being overlooked; but we have not that officially before us.

12,299. When you speak of the section of the passage between India and Egypt being more profitable to the company than the section to the far East, in what sense, do you mean, is that more profitable?—On the passenger traffic.

12,300. You mean that the company derive a greater profit from that section, as a whole, and therefore could afford better terms for postal carriage than it can in the more distant part of its route, which does not pay so well?—That is my meaning.

12,301. Are there any other points to which you would call our attention, on behalf of the India Office, connected with the postal arrangements?—I think not.

12,302. There are some Telegraph questions upon which, possibly, the Post Office witnesses may have something to say, after hearing any remarks you may have to make upon them. The questions to which I refer, are the Red Sea and Indian telegraph, the Zanzibar and Mauritius cable?—Those are the only two. I have nothing to say more than I have put on the paper. The Red Sea and India telegraph is an old line which is doing no duty now. In the case of the Zanzibar and Mauritius cable a division has been agreed to, and I have nothing to say about it. The Government of India were obliged to pay rather more than they expected, but it could not be avoided. When they offered to divide the balance, after deducting the payment which the Mauritius Government were ready to make, they thought there would be 16,000*l.* to be divided, and that 8,000*l.* was the maximum that they would have to pay. In the end it was found necessary to pay 10,000*l.*; but I have nothing to put before the Commission on that point.

12,303. The whole service turned out more expensive than the Indian Government and the Mauritius Government together had anticipated?—Yes.

12,304. I do not think those questions came before what is called the Foreign Office conference, did they?—No.

12,305. You give certain subsidies to the Euphrates and Tigris Steam Navigation Company, as to which you raise a question, but I do not quite understand whether you raise that question on postal grounds?—No, it is on political grounds rather than on postal grounds, I think.

12,306. (*Mr. Buchanan.*) With reference to the Mauritius cable, I see your statement says that a departmental committee recommended, in the interests of India, and mainly on strategic grounds, that a cable should be laid. Was that a departmental committee of the India Office?—Of many offices; the Foreign Office, the Colonial Office, the India Office, the War Office, and the Admiralty, I think.

12,307. But is this cable connected with the Indian system of cables?—India is connected with Aden, and there is a line from Aden to Zanzibar, but this particular line is from Zanzibar to the Seychelles Islands, and thence to the Mauritius.

12,308. It has really connected Mauritius and the Seychelles with the telegraphic system of the world, has it not?—Quite so.

12,309. Giving them telegraphic facilities?—Yes.

12,310. Then what is the particular interest of India, that it should pay 10,000*l.* out of 28,000*l.* for connecting the Mauritius and Seychelles with the telegraphic system of the world?—The subject was taken up at the instance of the Goverment of India. They were very anxious to have telegraphic communication with the Cape of Good Hope, and at first they proposed to have a cable laid from India to the Mauritius, the line being thence carried on to the Cape; but that was found to be too expensive and difficult, and, as a more easy plan, it was decided to connect the Mauritius with the African lines: the original proposal came from the Government of India.

12,311. Then the interest of India was that, for the purpose of military or naval defence, it was desirable that there should be telegraphic communication with the Seychelles and the Mauritius?—With the Cape of Good Hope, I think, primarily.

12,312. But you rather demur to the amount of the subsidy that India had to pay?—I only wished to say that, when the Government of India made the proposal, they thought they were not incurring a greater expense than 8,000*l.* a year. It proved that they had to pay 10,000*l.*, because the total cost was 28,000*l.* and the proportion that the Mauritius and the Seychelles Islands would take was 8,000*l.*, which left 20,000*l.* to be divided between the two Governments.

12,313. The Indian Government did not stipulate in advance as to the maximum proportion they were to be called upon to pay?—The India Office, or rather the Government of India, had agreed to pay one half the balance, after deducting Mauritius's portion. When they made that agreement they thought they were only pledging themselves to 8,000*l.* a year; but it was found impracticable to make the arrangement except with a balance of 20,000*l.*, which left them 10,000*l.* to pay.

12,314. With regard to the Red Sea and India Telegraph Company, that company never really transmitted messages at all, did it?—I think they did for a day or so, but no more; the line broke almost immediately.

12,315. The Treasury gave a guarantee for 50 years to make up 4½ per cent. return on the capital; that was a guarantee, I suppose, made on the part of the Home

Government on its own responsibility altogether?—With the consent of the Secretary of State in Council.

12,316. But did the Secretary of State join in any way in the guarantee?—I am not certain whether it was the Secretary of State or the East India Company, but one or the other did join; it was done in 1858; I am not sure whether it was before or after the 2nd September, but it was by agreement between the two parties that they should jointly give the guarantee.

12,317. (*Chairman.*) It was, perhaps, rather a hasty act, due to the great desire of the two Governments to get into prompt communication at the time of the Mutiny?—Yes.

12,318. (*Mr. Buchanan.*) But the bad bargain was really made jointly by the Indian Government and the Home Government?—Yes, it was.

12,319. (*Mr. Caine.*) How long has the 10,000*l.* for the Mauritius cable to be paid?—For 20 years from the 24th November 1893.

12,320. Is it always subject to the dividends of the Eastern Telegraph Company, because they pay very handsome dividends?—No; the subsidy has in any case to be paid for 20 years from the 24th November 1893.

12,321. And you consider that is a fair apportionment for India?—I think so, under the circumstances, considering how largely the Government of India were responsible for the transaction.

12,322. Has it ever been of any use to the Indian Government?—I do not know that I can say that it has. Happily we have not had a European war and hostile cruisers in the South Seas; but that, I believe, is the great object, to put India in immediate communication with England in the event of the Suez Canal being blocked and hostile cruisers threatening the coasts of India. A ship could very readily go to Mauritius and send a message thence. *Sir H. Waterfield, K.C.S.I., C.B.* 8 July 1896.

12,323. (*Sir Ralph Knox.*) The object of the telegraphic communication with the Mauritius then is, practically, to summon the fleet of the empire to the assistance of India in the case of general confusion?—To summon the forces whether naval or military; but probably the fleet on the Cape of Good Hope station would be the first to be called on for assistance.

12,324. But there is telegraphic communication between the Mauritius and the Cape of Good Hope, is there not?—I think not direct; I think only to Zanzibar.

12,325. But this telegraphic communication was intended to complete the line to the Mauritius and the Cape, was it not?—Yes.

12,326. In order that the Indian Government might summon to the defence of India such forces as were available?—Yes. With the permission of the Commission, I hand in a memorandum by Mr. Jacob, representing at greater length the view of the Government of India on the subject of the Mauritius-Zanzibar cable. (*Paper handed in.*)*

The witness withdrew.

Mr. H. Buxton Forman, Assistant Secretary and Controller of the packet services of the General Post Office, and Mr. James J. Cardin, Receiver and Accountant-General of the General Post Office, called in and examined. *Mr. H. B. Forman and Mr. J. J. Cardin.*

12,327. (*Chairman.*) We are directed to inquire into the apportionment of charge between the Governments of the United Kingdom and of India for purposes in which both are interested; and we have had some evidence tendered to us on the subject of the postal relations. While not objecting to the principle of Lord Halifax's award at the time it was given, Sir Henry Waterfield has pointed out that there is no provision for re-adjustment of per-centages. There may be grounds for thinking that other correspondence for other countries along the route has increased, which would naturally tend to a diminution of India's quota, and we should like to hear from you what you would say to that suggestion on the part of the India Office?—(*Mr. Cardin.*) The apportionment of the cost of the Eastern Mail Service was made after Lord Halifax's award, and it was made upon figures which were ascertained after that award was given.

12,328. That was in 1876?—Yes, the date of the award is the 25th February 1876, and the decision, No. 2, inserted by Lord Halifax was to this effect: "These decisions will enable the Post Office to make "up the account for 1874–5 in accordance with those "decisions; and I was assured by the gentlemen "whom I saw that there could be no difficulty in "doing so, with the concurrence of both parties." After that we compiled accounts and came to an agreement with the India Office as to the amount that they should pay. That process would be repeated upon any new contract, that is to say, the latest figures available would be used. That course was followed when the present contract was entered into in March 1887. The figures that were then acted upon were those of the mails of 1886–7, so that the figures of 20 years ago will not be used in any case.

12,329. That is to say, that at the present time you are going on the figures of 10 years ago?—At the present time the India Office is paying an agreed sum, which was fixed, with the concurrence of the Treasury, without prejudice to any question whatever; a lump sum was agreed to be paid, and we were guided to that lump sum by the mails carried in 1886–7; and the arrangement was, by agreement, to continue to the end of the present contract.

12,330. The present contract terminates in 1898?—It terminates in 1898.

12,331. When you make a fresh tender, would you naturally re-adjust the proportions and ascertain that proportion of postage which fairly belongs to India as compared with the English portion and the portion due to countries along the route?—That is the course we should propose to adopt.

12,332. And therefore you consider, so far as that goes, that you are practically doing that which the India Office think ought to be done?—Quite so.

12,333. That being so, there would be no difference between you?—I do not foresee any difficulty; as regards the weights of correspondence there would be no difficulty, because we should be dealing with actual figures.

12,334. And the only question then would arise whether there ought to be opportunity for revision between the commencement and the termination of the contract?—Yes, that would be a matter for discussion.

12,335. Probably not a very practical one, because it is not likely that the Imperial Government and the Indian Government would agree for a fixed proportion during the currency of a long contract?—Quite so. I may mention that several alterations have taken place since the payment under the present contract has been in operation. The reduction, for instance, of the postage to 2½*d.* altered the payments; and there was a further alteration made when the Australian service was altered from once a fortnight to once a week. We should anticipate that any important alteration would be followed by some re-adjustment of the sum agreed upon on either side.

12,336. That is to say, the Post Office is quite ready to meet the India Office on questions of adjustment of this kind?—Yes, in the future, as in the past.

12,337. I do not think there has been, since the time of Lord Halifax's award, any great difference of opinion between the two Offices, has there?—There was a considerable discussion about a payment of 10,000*l.* a year for increased speed on the Suez and Bombay section. The speed was increased on that section in the interests of India, and the Post Office thought that it would not be right to charge all the other sections of the service with any portion of the increased cost, but that question was never settled.

12,338. You have not had any need to go to arbitration, I suppose?—No; the India Office agreed with the Treasury to pay a lump sum; but that lump sum was without prejudice to any point of principle.

12,339. And will that question come before the two Offices when the new contract is made?—I am not acquainted with the new contracts. Mr. Forman is connected with the new contracts. (*Mr. Forman.*) Perhaps I ought to have explained, before handing over the last question to Mr. Cardin, that he is intimately acquainted with the whole history of this question, and that he probably would have been sent alone to give evidence upon it; but it was thought that you might

* *See* Appendix 64.

Mr. H. B. Forman and Mr. J. J. Cardin.

8 July 1896.

have questions to ask about the future as well as the past, so I was sent with him to answer anything that was answerable about the future.

12,340. Well, can you tell us whether this question of 10,000*l.* for increased speed, which has been at issue between the two Governments, will be taken into consideration further in making the new contract?—I think I may say for certain that every question of that sort will be taken into consideration, because I believe it to be the intention of the Postmaster-General to advise the Treasury to refer the whole question of the apportionment of expenses to an inter-departmental committee, which has advised him and the Treasury upon the subject of the tenders that are now on the point of being answered and acted upon; so that, if that point were referred to the inter-departmental committee, there would *ipso facto* be a discussion of the whole matter between the India Office, the Colonial Office, the Post Office, and the Treasury, the four departments concerned.

12,341. In the case of a departmental committee of that kind, the Imperial Government being more represented than the Indian Government, is there any danger of the Indian view being over-ruled in consequence?—I should not think so; I should not think that danger would arise out of the composition of the committee. The India Office has its one representative, the Colonial Office only one, the Post Office only one, the Treasury only one. The Chairman is the Right Honourable W. L. Jackson, who gives to the Committee an essentially non-parochial character. I do not think there would be any chance of India being borne upon hardly in such a committee.

12,342. Of course, the Treasury and the Post Office might be supposed to work together; India in such an event having only one representative?—I should not anticipate a combination of that sort.

12,343. You do not think there is any real danger to India?—I am sure the Post Office has an open mind on the subject; there would be just as much probability of a combination between India and the Colonies, I think.

12,344. (*Mr. Courtney.*) Is not the inter-departmental committee meant to supersede Lord Halifax's adjudication?—I do not think there is the slightest intention of such a thing. I have not heard it mooted on any side.

12,345. What would be the relation of their labours to his investigation?—If the Committee decided that the principles of Lord Halifax's award were still good, it would be merely a question of applying those principles to the new circumstances.

12,346. And they are to re-examine the principles of his adjudication?—I take it they would do so; there is no reference on the subject yet.

12,347. (*Chairman.*) I suppose the principle of Lord Halifax's adjudication was this. Taking, we will say, four or five contributories to the charges of the contract, the respective per-centages of those contributories were determined by Lord Halifax?—(*Mr. Cardin.*) No; might I explain? Lord Halifax examined all the conditions under which the division was being made. For instance, the first was the mileage. The annual number of miles for each section was ascertained, and the subsidy was divided by the total to see the cost per mile; and then the United Kingdom was charged with 50 per cent. of the cost of each section, and the remaining moiety was divided between the colonies and countries using the section in proportion to the use they made of it.

12,348. After that, a separate contract was made for the Australian mails, was it not?—Yes, but the Australian mails were always separate from the others from Colombo.

12,349. But, when it was a perfectly separate contract, I suppose it was necessary to re-adjust the figures?—The figures were re-adjusted, but that did not affect the principle. Lord Halifax settled the principles of division, the main point being that the services should be treated as a whole, because of advantages to be gained by it.

12,350. You still treat it as a whole?—Yes, the Eastern Mail Service. India gets advantages from being associated with the Colonies in the other sections; for instance, over the Mediterranean and Port Said to Bombay sections there was a speed of 12·54 knots, but over the other sections only 11·2 knots.

12,351. What do you call the other sections?—They would be Colombo to Singapore, Singapore to Hong Kong, Hong Kong to Shanghai. Then with regard to the transmission of the mails across the continent of Europe by the special trains, it was owing to the aggregate bulk of the correspondence that France and Italy were induced to reduce the rates per kilogramme for those mails; the rates were at one time 25 francs 52 centimes per kilogramme; they are now reduced to six francs.

12,352-3. And India would not have had that advantage, had it not been for the association of her mails with a great number of other mails?—And it would not have had that advantage, but for association with the other mails.

12,354. Then, I think, Sir Henry Waterfield called attention to another point, namely, the division of the subsidy on the *pro ratâ* principle?—Yes.

12,355. He was pointing out that the Indian portion is the more lucrative to the company, and, therefore, as I understood, he thought that India was entitled to better terms than those arranged for the portion of the route to the far East?—That strikes at the principle of the Halifax award, viz., that the service should be treated as a whole. The Post Office would contend that the Halifax award would settle that point, and that, if we prepare an account, the sectional arrangements should continue. As I was just saying, there are distinct advantages to India arising out of that system.

12,356. (*Mr. Courtney.*) That would bring us back to the question I was asking just now, whether this inter-departmental committee will re-examine that question?—It would be competent, I presume, for them to do so, but it is not contemplated; it is not the object of the committee to in any way question the Halifax award.

12,357. (*Chairman.*) If the India Office chose, at the inter-departmental committee, to bring forward this point, would the committee say, "This is contrary to the "Halifax award, and we cannot consider it," or do you think they would take it into consideration, and examine the grounds upon which the India Office contention is based?—I, of course, can only express an individual opinion upon that; but I think the Postmaster-General would decline to re-open any question settled by the Halifax award. The Marquis of Salisbury himself, in consenting to accept the Halifax award, thanked Lord Halifax for it, and said, "I have no doubt that "your Lordship's award will have the excellent effect "of preventing any renewal of discussions in connec-"tion with the contract for the mail service between "England and India."

12,358-9. (*Sir James Peile.*) Do I understand that the per-centages of the award by Lord Halifax are really adjusted from time to time according to the amount of correspondence passing over each section?—Yes. To be correct, I should say that Lord Halifax did not settle the per-centage. Lord Halifax settled the principles upon which the accounts should be prepared, and they were prepared upon those principles; they were re-cast in 1886-7, and, if a new contract were made now, and we were to prepare accounts, we should take the latest figures available.

12,360. The figures of the weight of correspondence?—Yes, of all the correspondence, as in the two previous cases.

12,361. And that would regulate the per-centage paid on each section?—We worked out the cost of each section and the per-centage of each section to the total. The Indian section was a per-centage of the total. She continued to pay that per-centage.

12,362-3. (*Mr. Courtney.*) You proceed upon the principle of the Halifax award. Is that principle that the cost of conveying a certain weight of letters a certain distance is the same from end to end of the service?—No, I would put it this way, that the total cost of the service is divided by the total mileage, and then the cost of each section is worked out at that rate.

12,364. Well, is not that the point? I said that the cost of conveying a certain weight of postage a certain distance is the same from end to end of the service?—It is under this arrangement.

12,365. That is the principle?—That is the principle; but India gets a benefit, because over the Mediterranean

and Port Said sections on which the bulk of her letters go, there is a speed of 12·54 knots, as compared with 11·2 knots over all the other sections.

12,366. Although India contributes to what is really the higher payment in the further East, it gains by the lower payment in the West?—I do not know that they would quite equalise one another, but those are the two conditions.

12,367. That is the principle?—That is the principle.

12,368. (*Chairman.*) But in respect of that speed as far as India, has there not been a question raised between India and the Imperial Post Office? Does not India pay 10,000*l.* a year, to which she rather demurs, or at all events a part?—We raised the question; we estimated that the additional speed cost 10,000*l.* a year on that section; but, as I have said, that point was never settled.

12,369. (*Sir James Peile.*) You would not charge it wholly on India, would you?—No.

12,370. (*Chairman.*) Would you explain a little more fully? What I understood Sir Henry Waterfield to say, was that one of the few questions that had been raised for some time past between the two Governments was one which arose out of an extra payment for increased speed?—Yes. I am not aware of any discussion existing about the increased speed.

12,371. We understood the payment of 10,000*l.* was in dispute. Sir Henry Waterfield, we might ask you a question here. I do not know whether you heard what Mr. Cardin was saying?—(*Sir Henry Waterfield.*) Yes, I was listening.

12,372. Perhaps you could give us an explanation that would make it clear to us what the point at issue between the two Governments at that time was?—(*Sir Henry Waterfield.*) I think I did not mention the extra charge for the increased speed as a specific sum of 10,000*l.* I did not go into that point because, as Mr. Cardin says, it was not eventually taken into consideration. But my point is this: if the Peninsular and Oriental Company can undertake to carry on the whole contracts for the Eastern mails at a certain rate, and that is divided out by mileage, then the charge per mile is the same on the Bombay and Port Said section as on the China and Port Said section; and, if the contract was made in sections, owing to the more lucrative character of the passenger traffic between Port Said and Bombay, the company would very likely tender for a less subsidy on the Bombay and Port Said section. Therefore, by adopting the mileage instead of the sectional division of the total subsidy, the Government of India is charged with a heavier charge for mails than might otherwise be the case.

12,373. I understood that ground of objection to the present arrangement, but I thought, Sir Henry, you had brought forward another case. If I remember right, I asked you whether it was not the case that there had been no great difficulty between the two Post Offices for some time past; and I thought you mentioned that there had been a controversy on the subject of a sum required for increased speed as far as India?—Yes, it is true that there was a controversy, but it passed away. I did not bring it forward as a point of complaint at all. It was a discussion of whether India should pay more on account of that extra speed, but eventually it was merged in the general payment. I think the point I put before your Lordship was this: that we asked the Post Office what was the extra payment on account of that scheme; when the Post Office desired to find that out, they made an estimate, through the information that they derived from the Peninsular and Oriental Company, that 10,000*l.* might have been charged; but it was impossible to say what was the real charge of the extra speed, because the service had not been dealt with by sections.

12,374. And, therefore, the point at issue between the Indian Government and the Post Office at present might simply be restricted to that question which you have just explained, that, if the line were divided into sections, the section to India, inasmuch as it is the most paying section on the line, might afford to carry the mails at a less cost than the sections beyond India?—Yes.

12,375. And that we might take really as the only point at issue between the two departments, always apart from the question of re-adjustment from time to time?—Yes.

12,376. What has been the general effect, Mr. Cardin, of the reduction of postage to 2½*d.*? The Indian Government appear not to have fully made up their mind as to the financial result, but they think that the result has not been such a loss as you and they anticipated at the time when the reduction was decided upon. May I ask what the view of the Post Office is upon that point?—(*Mr. Cardin.*) I have not the figures with me, but I am not of opinion that the loss is less than we anticipated.

12,377. The increase of letters carried has not gone beyond what you anticipated?—No, and as we have a loss upon all the correspondence, the increase of business is not satisfactory. (*Mr. Forman.*) The increase of business might be said to make the loss larger than was anticipated.

12,378. Do you carry at an actual loss now?—Oh, yes.

12,379. At that rate the more the correspondence, the greater the loss?—Certainly.

12,380. Then it is to be hoped that only one letter would go?—(*Mr. Cardin.*) From the Post Office revenue point of view only.

12,381. I do not know whether there is any other point connected with the postal arrangements with India, which you would like to mention?—No, I think nothing further.

12,382. Well, I do not know whether you are much concerned in these telegraphic questions, are you?—No, the Post Office is not concerned with them.

12,383–4. You have nothing to do with the Zanzibar and Mauritius cable?—No, the Post Office is not concerned with it.

12,385. You have some arrangements, I suppose, about the cost of the messages?—Yes; if we send any messages over the wires; we are not interested in the cables.

12,386. (*Mr. Courtney.*) Have you any reason to believe that the increase of postal communications along the east coast of Africa, which we may assume to have occurred, has altered the relative amount of work done for India and done for Egypt?—Do you mean now, speaking of the present service?

12,387–8. I mean work under your new adjustment; it is suggested that you will have to take more seriously into account the work done, say, between Aden and Zanzibar and the Mauritius, in connexion with the apportionment. That would not make any difference in the relative change?—No, I should say not; it is not expected.

(*Mr. Buchanan.*) Egypt might; the increase of correspondence to Egypt.

12,389. (*Mr. Courtney.*) Do you think the Egyptian correspondence has increased so as to alter the proportion?—No. I think not seriously to alter it. It is not the English Post Office alone that conveys letters to Egypt.

12,390. (*Mr. Buchanan.*) But the bulk of the letters go by the Peninsular and Oriental mails?—The English mails, yes.

12,391. It is a very large item in carriage of mails by the Peninsular and Oriental Company from Brindisi to Port Said?—I should not expect the increase would make any material difference.

12,392–3. Have you any figures to show the amount of correspondence which is carried to Egypt within recent years?—We should take the latest figures, in the event of any re-arrangement, for all places.

12,394. (*Chairman.*) That question, I understand, would come under the consideration of the Departmental Committee in the course of its inquiries relative to a new contract?—I doubt it.

12,395. (*Mr. Buchanan.*) Did you say just now the terms of reference to this Departmental Committee had not yet been settled?—(*Mr. Forman.*) They have not; but I think I ought to say, on behalf of that committee, that, as far as I know the style in which things are done there, unless it was expressly told that anything contrary to Lord Halifax's award was not to be considered, it would consider anything put forward and come to its own conclusions upon it.

The witnesses withdrew.

Sir H. Waterfield, K.C.S.I., C.B.

8 July 1896.

SIR HENRY WATERFIELD, K.C.S.I., C.B., recalled and further examined.

12,396. (*Chairman.*) I think the next point that we will take up, Sir Henry, is the Persian Mission. On that, I think, there has been a certain difference of opinion between the Imperial and Indian Governments, has there not?—There has.

12,397. And that was one of the points that came before the Foreign Office Conference, was it not?—It was.

12,398. Perhaps you could tell us the point upon which the India Office considered they had ground for remonstrance?—It was the question of the proportion in which the share of the expenses of the legation should be divided between the two Governments. I have stated the facts in the printed paper:—"In 1835 the East "India Company agreed to contribute 12,000*l.* a year "to the maintenance of the Persian Mission. In 1858, "when the Mission was for a time placed under the "Government of India, the Imperial Government "agreed to contribute 5,000*l.* On the Mission being "in 1859 again transferred to the Foreign Office, Lord "John Russell refused to revise the agreement; and "thus it became recognised that India should pay "$\frac{1}{17}$ths of the cost, subject to a maximum of 12,000*l.* a "year. In 1871, the Select Committee on Diplomatic "and Consular Services recommended that the pro-"portion paid by India should be reduced, as it had "been found that, out of an average of 15,122*l.* a "year, the Imperial Government had paid only 3,122*l.* "Correspondence ensued; and at length the annual "charge against India was reduced in 1880 to 10,000*l.*, "and in 1891 to 7,000*l.* till the 31st March, 1901." That was the award of the Foreign Office Conference.

12,399. A ten years' agreement under which India contributes 7,000*l.* a year?—That is the present arrangement.

12,400. (*Mr. Courtney.*) What is the total cost?—I am not able to say positively. I have tried to make a calculation, and I think that even 7,000*l.* a year is too much relatively. The division in 1886-7, which is the last for which we have actual figures prepared by the Government of India, showed that the total payments made by the Home Government and by the Government of India amounted to 37,609*l.*; out of that India was paying 29,609*l.*, and England 8,000*l.*

12,401. (*Chairman.*) What does that 37,000*l.* include?—It included the charges for the Khorassan frontier, and generally for the diplomatic and consular establishments in Persia, and also those for Turkish Arabia.

12,402–4. I have a paper before me, compiled by the Treasury, which takes Persia as a whole, and which, I think, will answer Mr. Courtney's question. "In-"cluding consulates as well as the Mission, the "expenditure of India may be estimated as follows, "on data given to the Treasury in 1891." I am now going to take first of all only the Persian Mission, and I am going to take the Consulates afterwards. "The Persian Mission: Direct, for telegraph estab-"lishment, &c., 3,350*l.* Indirect, being contribution "paid to United Kingdom, 7,000*l.*, making a total "of 10,350*l.*" The expenditure on the other hand of the United Kingdom may be estimated thus: "Persian "Mission: Direct, for salaries, pensions, buildings, "stationery, and miscellaneous, 18,500*l.* Less Indian "contribution, 7,000*l.*, making a total of 11,500*l.*, and "telegrams 2,000*l.*" I suppose at that rate we might take the Persian Mission alone as costing India 10,350*l.*, and the United Kingdom between 13,000*l.* and 14,000*l.*?—I suppose on those figures it is so, but I cannot check them.

12,405. Well, then we come to the Consulates, and India according to this paper pays for the Khorassan agency, the Bushire agency, and miscellaneous, respectively 3,750*l.*, 6,900*l.*, and 3,600*l.*, making over 14,000*l.* On the other hand, the United Kingdom contribution to the Persian consulates is 2,900*l.*?—My figures do not at all agree with those. I am unable to say what the accurate figures of the British Government are. I tried to take them out of the estimates, but I was not satisfied that I had them complete. But the statements sent by the Government of India showed that they were paying the following sums in rupees in the year 1886–7; for the Persian Legation 44,810 rupees; for Khorassan, 24,000; for Bushire, 104,250; for Turkish Arabia, 88,400; making a total of 261,460 rupees, which, at the rate of exchange at that time, gave 19,609*l.*; to which was added 10,000*l.* paid by the Government of India in this country; and the Government of India set that against 8,000*l.* paid by England, so that they considered that out of a total of 37,609*l.* they were paying 29,609*l.*

12,406. I am afraid that from these two accounts we shall get into rather a barren controversy; do you not think it would be possible for us to come to some agreement upon them?—I ought to point out to you that these figures, as given by the Treasury, were for 1891, whereas you are dealing with 1886. I gathered from the figures you gave that it was at a time when India was paying 10,000*l.*?—That is so. I have the figures for India for a later period; but it is the English part that I feel so uncertain about. The Indian figures have risen largely under Khorassan; otherwise they are much the same, and India is now paying Rupees 3,94,696—that is to say, she was in 1893–4. It has again increased since that. Converting that at the rate of exchange of 1*s.* 2$\frac{3}{4}$*d.* which was the official rate of that year, India was paying in English money 24,257*l.*, to which must be added the English payment of 7,000*l.*, which would bring her payments up to 31,257*l.*; and, as far as I can judge from the English estimates, the total charge for the Legation was 12,170*l.*, of which India contributed 7,000*l.*, so that the net charge on the United Kingdom would be 5,170*l.* No doubt that must be increased by an estimate for non-effective charges, and very possibly there may be something to add for establishment; that I suppose the Foreign Office would be able to tell us. I should have to apply to them to know what they consider the cost; but on the figures that I made out, I think that India is paying more than 85 per cent., whereas under the proportion of 12 to 5 she ought only to be paying 70$\frac{1}{2}$ per cent.

12,407. This account which I have before me, which comes from the Treasury, comes to a very different result, because it gives three-fifths to India and two-fifths to the United Kingdom, whereas your account gives four-fifths to India and one-fifth to the United Kingdom?—Yes, it is very different.

12,408. You have given me a paper which I think states shortly what the point is to which the Indian Government would wish to draw the attention of the Commission, in order that we may express our opinion as to the figure of apportionment?—Yes. It is simply whether or not the 7,000*l.* is an unduly large proportion of the total charges.

12,409. (*Mr. Courtney.*) Do you submit any basis of division?—I am not authorised to recast the proportion of 12 to 5 that has existed now for a great number of years; and I really am hardly competent to say what the relative interests of the two Governments are.

12,410. (*Chairman.*) The paper you have given me gives a ratio slightly different to that. You give 7 to 3 as the ratio of India?—You will observe that in the calculation which I gave you I said "supposing the payments of India to be as before"—that is in 1886–7—but I was able afterwards to find the actual payments for 1893–4.

12,411. With the 7,000*l.*?—Yes.

12,412. That represents the ratio payment according to your view?—It has increased recently because the charges for Khorassan have very largely increased.

12,413–4. So much depends upon the figures representing the respective charges of the two countries being agreed upon, that it would, perhaps, be better that you should formulate the point to which you desire to call our attention, after you have ascertained the actual payments made by the Imperial Treasury?—I have obtained from the Foreign Office a statement of its payments from 1893–4 to 1895–6;* and I now hand it in with the statement of the payments by the Government of India during the same period. The total paid by the British Government in the three years was 52642*l.*, towards which India contributed 21,000*l.*, leaving the net charge borne by the United Kingdom, 31,642*l.* According to the accounts and revised estimates India's payments during the same three years, including the 21,000*l.* paid in England, were 91,568*l.*; so that India contributed 74·32 per cent. of the total charges, or about 4 per cent. more than even the proportion of $\frac{12}{17}$ths, by which the payments are professedly regulated.†

12,415. Then, I think, the next point is the question of the payment for the consular establishments in China?—Yes. In 1834, when the cost of the establishments of the British Superintendents of Trade in

* *See* Appendix 65.

† These figures have since been revised, with the result that the totals now shown are in the ratio of 58·3 for India and 41·7 for the United Kingdom. *See* Appendix 65.

China was accepted as a charge on the Imperial revenues, it was agreed that one-third should be defrayed by India. Owing to the great increase in the total cost of the establishments, the amount falling on India rose from an average of 4,676*l.* between 1835–6 and 1842–3, to 22,000*l.* or 23,000*l.* from 1867–8 to 1871–2. From 1859 onwards the Secretary of State in Council constantly protested against the charge, and especially against the claims for 1872–3 and subsequent years. In 1876 the Government of India proposed an annual payment of 10,000*l.* In 1877–8 a payment was made by the India Office of 58,327*l.* in satisfaction of all arrears to March 31st, 1876, thus making the average annual payment 20,962*l.* from April 1st, 1867, to that date. The Treasury, however, demurred to so great a reduction as was implied by agreeing to 10,000*l.* a year from India; and at length 15,000*l.* a year was accepted with effect from April 1st, 1876. This arrangement, in spite of protests that the charge was too heavy, lasted till 1890, when a further reduction to 12,500*l.* was accepted, as a mean between 15,000*l.* and 10,000*l.*, the agreement to be in force till March 31st, 1900.

12,416. And that was under the award of what is called the Foreign Office Conference?—Yes. The only further point that I wish to put before the Commission is that the Government of India agreed to the plan to have a fixed payment so that they may know really what they have to pay; and, unfortunately, a payment fixed in sterling is by no means so fixed if payable in rupees. When the present amount was adopted in 1890–1, exchange was at 1*s.* 5*d.* per rupee; it is now about 1*s.* 2*d.*, and has been as low as 1*s.* 0½*d.* In 1876–7, when exchange was at 1*s.* 8½*d.*, a payment of 15,000*l.* cost Rx. 17,561. In 1890–1, when exchange was at 1*s.* 5*d.*, a payment of 12,000*l.* cost nearly the same amount—Rx. 17,447. In 1896–7, when exchange was at 1*s.* 2*d.*, a payment of 10,000*l.* cost Rx. 17,143, so that, though nominally a fixed payment, the burden on India through the fall in exchange has risen by 50 per cent., and in 1894–5 it was nearly 57 per cent. over the charge in 1876–7. In paying 12,500*l.* now we are really paying Rx. 21,428, whereas if it was reduced to 10,000*l.* we should be practically paying about the same as was fixed in 1876–7 and again in 1890–1.

12,417. That is a complaint directed against the inconvenience of the fall in exchange?—It is so.

12,418. Of course the Imperial Government paid the sum in sterling, and, put into plain language, you are asking the Imperial Government to bear the loss of exchange instead of the Indian Government. Is it not so?—If their payments in sterling remain the same, that would be so; I do not know whether that is so.

12,419 (*Mr. Courtney.*) What is the currency of China?—It is a silver currency, dollars and haikwan taels are the coins.

12,420. (*Chairman.*) That is the case. At first sight one would say that the establishment in China would be paid in silver, but I think I am right in saying they are all fixed in sterling?—I believe so.

12,421. And we have to pay in sterling or the equivalent of sterling; and, therefore, of course your share must be in the equivalent of sterling?—The salaries of the legation are in sterling. The charges for buildings, maintenance, and so forth, would be in silver.

12,422. And the wages of natives are in silver?—Yes; establishments generally.

12,423. Apart from the burden inflicted upon India by the fall in exchange, do you remonstrate on general grounds against the present partition?—No, excepting that I have to represent to the Commission that the Government of India have for 20 years been contending that 10,000*l.* a year in sterling was the utmost they ought to be called upon to pay.

12,424. Apart from any exchange question, on what do you base that contention?—It was not on any exact arithmetical calculation, I think; but many years ago the East India Company entered into an agreement which was to involve them in a charge of about 4,000*l.* a year; and, the establishments having been enormously increased, the Government of India said that they could not afford to pay at a rate which had then risen to about 20,000*l.* a year or more than that, and they considered that 10,000*l.* was the utmost they ought to be required to pay. They have no means themselves of checking the expenditure there, and they do not approve of having their contribution increased by measures over which they had no control; but I do not think that the 10,000*l.* was based on any particular calculation.

12,425. (*Sir Donald Stewart.*) Was it not on the ground that we had very little interest now in China apart from the opium traffic?—That was the reason why the Government of India declined to keep on adding and adding to their contribution.

12,426. That is the point.

12,427. (*Mr. Buchanan.*) The commercial connection was much closer in 1834 than later?—Yes, in those days the East India Company had a direct monopoly of the trade.

12,428. Quite so.

12,429. (*Chairman.*) And up to 1834 the East India Company paid the whole charge of the few consulates that existed in China, I think?—Yes, I believe it was so.

12,430. (*Mr. Buchanan.*) You would contend that the increase in the establishments in China has been due to Imperial interests rather than to Indian interests?—I know of no Indian interests that should have led to such an increase.

12,431. (*Chairman.*) Well, I suppose the Treasury maintain that the equitable way of measuring the charge on India is to compare our trade to China, with that of India to China. Now it is an argument on the part of the Imperial Government that India's share of the trade cannot be put at less than 25 per cent., and, putting the divisible charge at about 60,000*l.* a year, this proportion would give a charge of about 15,000*l.* a year against India, and the Treasury have been contending for that contribution. Do you consider that an unfair basis upon which to fix the contribution?—I do not think it is fair to charge India with a proportion of the establishments based simply on the trade. I do not think it is reasonable that the whole of the trade between India and China should be treated as if it were solely Indian, and the United Kingdom had nothing to do with it. The shipping is largely in the hands of British owners. No doubt the opium trade is largely carried on by natives of India.

12,432. But you observe that that is only an estimate of what India's share in the total trade is?—Yes.

12,433. Supposing that these figures are correct, and that 25 per cent. represents India's share in the trade of the Empire with China, would you say then that 15,000*l.* a year, being 25 per cent. of the total cost, is unfair?—My point is that the trade between India and China is not exclusively Indian; it is largely in the hands of British owners; and I do not think it is fair to say that India should be debited with a proportion relative to the volume of trade between India and China, as compared with that between England and the other colonies and China.

12,434. If you are going to make any arrangement between India and England as two partners, is not that the basis upon which the arrangements must be made. Can we go into such details as you mention, and meet with any success? Must we not be contented in the long run with some such rough method of calculation as is afforded by a comparison of the trade of the countries?—I think, if it were accepted, you would have to press it much further, because India would have to take a share in the establishments at the Cape or in Australia or many other places.

12,435. No, hardly so, because in this case the United Kingdom is taking the whole of the charge of the Colonial trade with China, as I understand it?—Yes, the United Kingdom takes the whole of that charge, on the ground that she is interested in the maintenance of the diplomatic and consular establishments in China.

12,436. But she debits India with a certain proportion based on India's trade?—Yes, but she does not debit it to other colonies.

12,437. No, but, as far as that goes, it has always been the case as between England and India, but it has not been the case with the Colonies, that any adjustment of that kind has taken place?—I do not know why India should be charged on such a principle as that.

12,438. Formerly, India, while she had a monopoly, bore the whole charge, and the United Kingdom paid nothing?—Quite so, but the English Government took that monopoly away from her.

12,438*a*. And then reduced the charge to India proportionately; and since that time the ruling idea has

Sir H. Waterfield, K.C.S.I., C.B.

8 July 1896.

been that the apportionment should bear some relation to the trade?—I do not think the Government of India has ever accepted that as a principle.

12,439. You allow that you may rightly contribute something?—Yes, I do.

12,440. What is your measure of the something?—I am afraid that I can only say that the Government of India measure it at 10,000*l.* as the maximum.

12,441. Why?—I do not know why.

12,442. Why not 5,000*l.*?

12,443. (*Sir Ralph Knox.*) Is it because 15,000*l.* is the sum named and 10,000*l.* is 5,000*l.* less than 15,000*l.*?—Because they think that an increase from 4,000*l.* to 10,000*l.* is quite sufficient.

12,444. (*Sir Donald Stewart.*) But I presume that, if it were not for India's direct interest in the opium trade, India would decline to pay anything?—Yes; the charge has grown up from India's trade with China—not only the opium trade, but trade with China generally.

12,445. That is the only remnant?—And the only ground, I suppose, for submitting to it still is the great interest which India has in the opium trade, or rather the opium revenue, I should say.

12,446. (*Chairman.*) Of course we get into very difficult questions if we go into a more minute division than that. For instance, I suppose the Imperial Government would argue that at present, at all events, India is much more interested than England in the trade, because something like one-eleventh or one-twelfth of her revenue is derived from opium, which is sold in China?—The proportion has fallen greatly in recent years.

12,447. It is falling, it is true; but still it occupies that relation at present, does it not?—About 7 to 9 per cent. of the net revenue is now derived from opium sent to China.

12,448. It is not desirable to minimise India's interest in having officers to look after such a material interest to India as that?—Oh no, I do not think that the Government of India would at all wish to disclaim all interest in keeping the establishments effective.

12,449. But is not the Indian way of dealing with this somewhat like Oriental bargaining in a bazaar. England puts in this claim for 15,000*l.*, and India says "Make it 10,000*l.*; we will give 10,000*l.*"?—India never agreed to give more than 10,000*l.* except after a long controversy which went on for more than five years; and, in order to close a very troublesome correspondence, they said that they would pay the arrears, which amounted to 20,000*l.* or 21,000*l.* a year, but they would not agree any longer to pay any more than 10,000*l.* The 12,500*l.* at which it is now fixed was merely agreed upon as a mean between the two proposals.

12,450. Is that an unfair result? Let me put this case. (I do not ask you to accept my figures); the Indian trade is 25 per cent. of the Imperial trade; 25 per cent. of the Consular charge amounts to 15,000*l.* a year; that, therefore, is not a very unjust demand on the part of England. Then India, I think you say, without any special ground upon which to base the reduction, says, "On the whole, it is not convenient "for us to pay more than 10,000*l.*" That, practically, goes before the Prime Minister at the Foreign Office, and he settled 12,500*l.*; is that a very unfair result?—I am not at all disputing the award. I only mention that the payment of 10,000*l.* a year, which India has accepted as the maximum, is now really as heavy a burden to her as 15,000*l.* a year was.

12,451. Yes, unluckily that is the result of the fall in exchange?—Yes, it is now as heavy as it was without that fall, which is the great cause of India's difficulties.

12,452. You are in hopes that the rupee may rise, are you not?—Yes.

12,453. (*Mr. Courtney.*) It may point to a revision in the diplomatic salaries in China?—Yes. I should not like to base our contribution on the prospect of the rupee rising.

12,454. Or on the prospect of the revision of salaries?—Or on the prospect of the revision of salaries over which India has no control.

12,455. (*Mr. Buchanan.*) At the Foreign Office Conference, when this subsidy was fixed, was it argued out at all on the proportion of Indian trade?—I think it was taken simply as the mean. The grounds for the two charges were not investigated. It was merely that a long controversy was closed by striking a mean between the two.

12,456. You are not prepared, on behalf of the Indian Government, to accept the principle of taking the apportionment on the basis of the proportions of the trade?—No, the Government of India have never accepted that as a ground for varying the subsidy.

12,457. Nor do you accept the Chairman's definition of Indian trade with China?—I have not investigated that; I should not like to accept it without looking into it.

12,458. (*Chairman.*) I am only putting this forward purely as the Treasury view. I do not wish to commit you in any shape or kind to the accuracy of the figures?—One reason why I should not like to take it is that the figures of the trade are reduced in the United Kingdom tables at a sterling rate calculated on the fall in silver. I think that they would be very different if they were rendered in silver prices, for past years at any rate.

12,459. (*Mr. Buchanan.*) Have you ever tried to make any of these bargains in rupees, and not in sterling?—The British Government never will accept the payment made here in rupees, that is to say, they will not accept the fall in exchange. Some of the payments are made in Eastern countries, and then they are settled in silver.

12,460. There has been no pressure put upon the Home Government by the Indian Government, since the great fall in exchange, to get the Home Government, if not to accept the whole, at least to accept part of the loss by exchange?—In particular cases the Government of India have made great endeavours to do so; and they have repeatedly said that they must limit their payment to so many rupees; but it has never been found possible to enforce that, unless we could arrange at the same time that the payment should be made in the East. For instance, the cost of the Chiengmai Vice-Consulate is settled in rupees, because it is paid there by bills drawn on Calcutta.

12,461. But I understand that a good many of the payments in China are paid in silver. Would not that give a sort of claim to you on behalf of the Indian Government?—The claim on us is prepared here by the Treasury.

12,462. And you simply pay in sterling over here?—Yes.

12,463. (*Chairman.*) Mr. Buchanan will recollect that, when he debits the China Consulate, he does not see so many pounds for the salaries of the superior officers, and so many taels for the current expenses and for the wages of native servants. All that is turned into sterling, and the Indian contribution is fixed on the result, which you bear in sterling?—Yes.

12,464. (*Mr. Courtney.*) Has the Indian Government ever pressed upon the Imperial Government the propriety of re-considering the payments in China in consequence of the change in the value of silver?—I think not, because the controversy which was carried on with, I may almost say, acrimony for some years, was at the time when exchange had not fallen so much, and the ground of complaint then was the great increase of the charges in China.

12,465. (*Sir Andrew Scoble.*) I should like to ask one question of Sir Henry Waterfield. These contributions to the missions in China and Persia are survivals from the old East India Company times, are they not?—Yes.

12,466. And the East India Company had diplomatic arrangements of their own with these countries in the first instance, I believe?—Diplomatic arrangements in Persia, consular establishments in China. I think there was no legation at that time.

12,467. (*Chairman.*) Was there not a Minister previous to 1834?—Was it so old as that? I did not know that there had been a resident Minister. Of course one knows the celebrated Macartney mission.

12,468. But was not Sir George Staunton before that time?—Yes, but I think he was not Minister.

12,469. (*Sir Andrew Scoble.*) What I wanted to bring out was this, that the British Government now takes over the diplomatic arrangements with both those countries?—Yes.

12,470. And claims this payment rather as a survival from old times than on any other ground?—I think so.

Of course this claim is based on services rendered to India at present, but it is the result of what passed in former years.

12,471. But the ministers in Persia and in China are under the Foreign Office, and not in any way under the Government of India?—That is so now.

12,472. (*Chairman.*) Well, we will pass on to the Jeddah Consulate?—"In view of the number of Indian "pilgrims passing through Jeddah to Mecca, India "agreed to pay half the net cost of the consulate. "The amount is revised triennially, on the actual "charge in the three preceding years. The triennial "payments have been fixed at 475*l.*, 500*l.*, 410*l.*, 458*l.*, "and now 426*l.*"

12,473. Do you make any remonstrance on that?—No.

12,474. You agree that that is a fair division?—I think it is a fair division.

12,475. Then the Chiengmai Consulate; what is the history of that?—It is a vice-consulate, which has been founded in consequence of the interests of India in Siam, and India has agreed to pay its cost. The contribution was assessed in 1891 at Rs. 12,022, and, allowing for non-effective charges and expenses of all kinds, buildings and furniture, the total was estimated at Rs. 15,020, and India has agreed to pay that sum up to the present time. There has not yet been any revision of the amount. I suppose it will be very shortly revised.

12,476. In that case also, I understand you are not making any remonstrance, are you?—No. This is a case in which the rupees are paid by bills drawn on the Comptroller General in Calcutta, and there is no difficulty in the matter of exchange.

12,477. (*Mr. Buchanan.*) Is that the only contribution towards the expenses in Siam?—That is the only one.

12,478. Is that the only contribution that the Imperial Government has asked from the Indian Government towards the diplomatic or consular establishments outside its area, with the exception of Persia and China?—The only payment of a permanent character, besides that for Jeddah, which I have already mentioned. In the case of what was called the Mekong Buffer State Commission, India shared the expense of Mr. Scott's mission and his party. That was a temporary arrangement which has passed away.

12,479. (*Chairman.*) Then we come to the subsidies to the Euphrates and Tigris Steam Navigation Company for the mail service between Bussorah and Baghdad, and in aid of the steamship service on the Karun river?—The subject divides itself into two parts. There is a subsidy for the navigation of the Tigris which dates from 1863. That is paid in India, and a new contract has recently been made for 10 years—at least it has been agreed to, but I believe the contract is not yet signed; it is a reduction from 36,000 rupees to 24,000 rupees a year. The other part of the question is in relation to the navigation of the Karun river, for which a subsidy has been granted here by the British Government since 1890. At first they gave 3,000*l.* a year, which has been now reduced to 2,000*l.* for a time. The Indian Government shared that subsidy; but they have lately protested against making any payment, and, as I understand the point, they say that they are willing, in consideration of the interests of the large native Indian community which there is at Baghdad, to pay the subsidy for carrying on the navigation of the Tigris; but they do not think that Indian interests are to an equal degree promoted by the navigation of the Karun. If they are called on to share in the subsidy for the Karun, they think the British Government should share in the subsidy for the Tigris; or they are content to pay the subsidy for the Tigris and leave the British Government to pay the subsidy for the Karun.

12,480. That is the position which the Indian Government wish to bring before the Commission?—Yes.

12,481. And the contention, I suppose, will be that the English Government should take the Karun subsidy, the Indian Government having to pay that for the Tigris?—That I understand to be the point which they wish to bring before the Commission.

12,482. (*Sir Donald Stewart.*) I think the payment now is entirely dependent upon the report of this Commission.

12,483. (*Chairman.*) If that be so, we should hear both sides of the case?—Yes, the Indian Government have agreed to pay temporarily, pending the opinion of the Commission on this subject.

12,484. Can you tell us what is the origin of the subsidy for the Karun navigation? Was it undertaken for political reasons, or under what circumstances?—I think it was for both commercial and political reasons. It was thought that any company carrying on trade on that river would necessarily do so at a loss for some time, and, therefore, might require a subsidy; but that the interests of trade generally would be promoted by having vessels constantly up the river as far as Ahwaz, and trade going on with Shuster, and that it was politically desirable thus to keep open the navigation for British vessels.

12,485. Do you happen to recollect how that proposal was brought before the Indian Government?—The first letter relating to the subsidy was one from the Foreign Office, dated 20 May 1890, which inclosed an application from Messrs. Lynch, the proprietors of the Tigris and Euprates Steam Navigation Company, to the Foreign Office and the India Office, to grant to them a subsidy for the navigation of the river Karun.

12,486. I suppose the Imperial Government put to the Indian Government, as a reason why they should contribute, that both countries are interested in Persia?—That was the ground on which India was brought into it. I see in the first letter I have of Mr. Lynch he says: "In November 1888, my company, acting in concert "with Her Majesty's Government, took immediate "advantage of the opening of the Karun River, by "sending their steamers to navigate it, and to establish "the right of navigation urged by Her Majesty's "Government. It was felt that the occasional visit of "a steamer would be of little avail to open up this "important trade route, and from November 1888 to "the present day a fortnightly service has been main-"tained, and the mails have been carried free of "charge."

12,487. That was all done in communication with the Foreign Office?—Yes, the two offices were in constant communication at that time on the subject.

12,488. (*Sir Donald Stewart.*) But is it not a fact that this line is the shortest route to Ispahan and Teheran?—It is, certainly, to Ispahan. I suppose it would be to Teheran also, but certainly to Ispahan.

(*Sir Donald Stewart.*) If there was a good road from Karun to the capital it would stimulate trade enormously.

12,489. (*Chairman.*) It will be difficult for the Commission to make the separation of interests between England and India in the case of the Karun. If in other cases the interest of India is admitted, what answer would you make to that?—I am hardly competent to speak of the political interests. I am afraid I can only refer to the Political Secretary for that information; but, as regards the trade, I do not think that India has any such interest in the trade up the river Karun as she has in the trade on the river Tigris. There is a very large Indian community at Baghdad, and undoubtedly communication between India and Baghdad is of importance to India. I do not think there is any such direct communication with Shuster or Ahwaz, or Ispahan, although, no doubt, some Indian traffic might go that way.

12,490. Up the Karun river is not by any means a populous country, and there is very little trade?—I believe so.

12,491–2. We should have to hear from the Foreign Office if they have got any special ground on which they can defend the charge?—Yes, I think from the Foreign Office and from Mr. Lee Warner, the Political Secretary of this office, if necessary.

12,493. Then there is the Mekong Commission?—The Mekong Commission I referred to in reply to a question by Mr. Buchanan. India's share in the expenses was a moiety of the cost of the temporary expedition of Mr. Scott and his party. There is no permanent charge in connection with it.

12,494. There is nothing that you call attention to on that point?—No.

(*Mr. Buchanan.*) India only bore a part of it.

12,495. (*Chairman.*) You mentioned two or three other cases in which payments are made by the two Governments for joint services; for instance, payments for emigrants?—Yes; certain payments by India; 300*l.* a year paid to the consul at Réunion for house

Sir H. Waterfield, K.C.S.I., C.B.

8 July 1896.

allowance and other incidental expenses; and an outlay not exceeding 200*l.* a year for two interpreters.

12,496. Do you demur to that?—No. Those are in the interests of the Indian emigrants, and I think very proper charges; and in 1884 India agreed to pay 100*l.* a year to the Consul at Surinam, which was raised in 1886 to 150*l.*, on the same ground.

12,497. Then there is a payment made on account of the International Tariffs Bureau at Brussels?—Yes, that is a charge which is divided among many nations, and India's share is 4,970 francs. I have no comment to make on that.

12,498. India, I suppose, is free not to join that?—She voluntarily joined and took her rateable share.

12,499. Imperial Institute?—It is stated in the printed note that India contributes 1,000*l.* a year, which was the case when that paper was written; but the payment now is 750*l.* a year, besides which India bears the charge of the salary of the Curator of the Indian section, which is 500*l.* a year, and incidental expenses for fittings and so forth which are estimated to come to about 600*l.* a year.

12,500. That I take it is a voluntary charge?—A voluntary charge; it is under the management of a special committee.

12,500*a*. That, I think, leaves only one other question, namely, Aden?—Yes.

12,501. First of all, perhaps you will tell us what the relations between England and India are with regard to Aden, and next what is the point upon which you would think the Commission might make a recommendation?—Yes; it is important that the Commission should have this paper on Aden before them. I do not know whether you would take it as you have it put in or wish me to read it in evidence. That statement has been carefully prepared.

12,502. (*Sir Ralph Knox.*) It is included in your memorandum?—Yes. I have nothing to add to that statement. It has been prepared by the Political Committee of this Office. The whole charge for Aden is borne by the Government of India, excepting that connected with the special defences, in which the British Government has shared equally with the Government of India; and the point that is put before the Commission is that the interests of the United Kingdom, both directly and in respect to its great dependencies, Australia and the Cape, and also its foreign trade, are so very large that it is thought that a contribution should be made by the Government of the United Kingdom to the payments for Aden, and that India should not be left to bear the whole cost.

12,503. Having obtained a considerable concession as regards fortifications, you want to drive that home?—I have no objection to drive it home in that way, but it is not on that ground that the claim is preferred.

12,504. (*Mr. Buchanan.*) The Home Government share of the expense of fortification is limited, is it not?—The charge for those special defences is divided in the following manner: the cost of the works is equally shared, the payment by the British Government being limited to a fixed sum; the cost of the armaments is also shared, the payment by India being limited to a specified amount. That is to say, in each case the Government which was carrying on the work was to bear any excess over the original estimate.

12,505. (*Chairman.*) And as far as the works go, were the works completed within the estimates?—The works were estimated to cost about 213,000*l.*; the United Kingdom agreed to pay a moiety, or 106,573*l.*, and she has paid that. The accounts are being received from India, and rather fairly bear out the estimate, although it is possible that it may be somewhat exceeded; but the share of the British Government is limited. On the other hand the cost of the armaments was to be borne by India to the extent of 52,655*l.*, and for that accounts have practically been rendered, though I think it is still subject to some adjustment.

12,506. But is it not the case that the armaments cost a great deal more than was expected?—I do not think that the armament has cost more than the estimate. I am speaking of the revised estimate which the British Government accepted.

12,507. At one time there was a bargain made between the Indian Government and the British Government; the Indian Government were to complete the works on a certain estimate of which, we will say, the British Government were to take one half, but it was not to exceed a certain sum?—Yes.

12,508. As I understand you, those works have been completed for something very like that sum?—Yes.

12,509. Therefore the limit which was imposed upon England has not been a source of heavy charge to India, who, of course, would have to pay any overplus. But on the other side my recollection is that the armament estimate was very much exceeded?—The original estimate was exceeded.

12,510. And if so, does it not follow that England had to pay a great deal more than she ever expected to have to pay for armaments?—I think you are referring to the original estimate which was completely thrown aside. The works were altered and another estimate for the armament prepared; but the revised estimates have been practically adhered to in both cases, as far as I know. In regard to the cost of the armaments, you rather imply that it was the fault of India that the estimate was exceeded, but that was prepared at the War Office.

12,511. It has been a great source of contention, but without the figures before me I should not like to rely upon my memory. I think Sir Ralph Knox will confirm me that in a number of colonial ports there was a division made between the armament and the works. The works, I think, often were carried out for the sum originally stipulated; the armaments which England undertook—I am not speaking now of India alone but of different colonies—exceeded very much the estimate, and, therefore, what was intended originally to be a the half-and-half charge as between the dependency and the mother country resulted in a larger proportion being paid by the mother country, and a less proportion by the dependency. Whether that applies to Aden I do not like to say, because I have not got the figures?—I believe there is no doubt that the eventual payment by India will be more than was estimated as her half share of the charge; but that is because armament has been required beyond the original or revised estimate. As regards such armament as was included in the revised estimate, I have no reason to think that that has been materially exceeded; if it has, no doubt the War Office will have to pay the excess.

12,512. I ask you the question. I am not in the least demurring to what you say?—I believe that certain improvements have been demanded which were not in the revised estimate, and of these India will have to pay the whole cost.

(*Sir Donald Stewart.*) The charge for the guns and the emplacements was enormously increased owing to the change in the nature of the guns.

12,513. (*Chairman.*) Then, perhaps, you could tell us shortly, out of your memorandum, what is the ground upon which the Indian Government base their view that England ought to contribute towards Aden; I suppose it chiefly turns upon trade?—To some extent it turns on trade:—

"Of recent years the trade of Aden has grown to a position of considerable importance. In 1894–5 it was valued at Rs. 86,802,214; of this trade India's share was nearly 19 per cent., and the share of the United Kingdom nearly 9 per cent. Suakim, Zanzibar, Mauritius, the Straits Settlements, and Hong Kong, also enjoyed appreciable shares in this trade. In these figures are not directly included the trade of the Somali Coast, which amounted to Rs. 9,437,966. The following statistics of shipping entered and cleared at the port of Aden (Perim is not included) in 1894–5 will show the enormous value of Aden as a port of call, and the relative shares of this value accruing to (*a*) the United Kingdom, Colonies, and British Possessions other than India (with Burma), (*b*) India (with Burma), (*c*) Foreign countries (including Zanzibar)":—

	(*a*) United Kingdom, &c.	(*b*) India.	(*c*) Foreign Countries.
Tonnage entered	685,024	695,510	899,945
„ cleared	819,615	530,888	931,715
Total	1,504,639	1,226,398	1,831,660
Per-centage	33	27	40

"The tonnage totals do not include the ships calling at Perim only. In numbers, the Perim shipping is about 37 per cent. of that at Aden; the above figures might, therefore, be increased to that extent, to include Perim, which, for the purpose of this note, must be considered a part of Aden. In estimating these relative proportions, it must be remembered that ships entering from, or clearing for, India may have originally come from, or may be subsequently proceeding to, ports in the further east, and in most cases to ports belonging to the British Empire. Of the shipping passing through the Suez Canal, 57 per cent. called at Aden, and about 20 per cent. at Perim *en route*. The total shipping using the canal exceeded 8,000,000 tons, of which nearly three-fourths were British. The actual number of merchant vessels that passed through the Suez Canal in 1894–5 was 3,255; of these, 2,462 passed the port of Aden; of this number, 1,309 called at Aden, and 486 at Perim, and 667 at neither station. As to the nationality of ships calling at Aden, out of 1,309 merchant steamers, 837 carried the British flag. The port was also used in 1894–5 by 33 vessels of the Royal Navy, 10 British Government troopships, and 30 vessels of the royal Indian marine. In times of peace almost the whole of the trade between Europe and the coasts of Asia and of eastern Africa passes by Aden. As a naval fortress and coaling station for ships of war, Aden is a place of great importance, and its value has been so far recognised by the British Government that a moiety of the cost of the permanent Aden defence works has been borne by British revenues. The British Government has also borne a share of the charges for the Red Sea telegraph. In one other respect Aden has been of very appreciable value to the United Kingdom. It has assisted, and at the same time diminished the cost of, the operations undertaken in pursuit of the British policy of suppressing the slave trade on the Red Sea and East African coasts. So long ago as 1836 the Government of India urged the propriety of the expenses of Aden being divided between Great Britain and India, and its transfer to Imperial control under certain conditions was, at a later date, seriously discussed."

12,514. You would not agree, so far as keeping the route between Great Britain and India is concerned, that a fair division is that England should keep the route upon one side of the canal and India the route upon the other?—No, I do not think that would be a fair division, because that would throw upon India the whole of the Eastern route.

Sir H. Waterfield, K.C.S.I., C.B.

8 July 1896.

12,515. I am only speaking of the route as far as India. I am not speaking of the route beyond India. What I mean is this, that just as we keep Gibraltar you should keep Aden?—No, I should not agree to that parallel. So far as it is a question merely of the division between England and India, I think it is fair to say that England should take one half and India the other; but, if you say that the United Kingdom is to take Gibraltar, and, as a set off against that, that India is to take Aden, that throws on India the whole of the burden of the Eastern seas.

12,515*a*. The importance of Aden as a post, then, constitutes the ground upon which you think that England should contribute towards the expenses of Aden?—Yes. That she should make some contribution towards it.

12,516. (*Mr. Buchanan.*) You would say that Aden is an Imperial fortress and not merely an Indian one; and protects an Imperial route to the East, and not merely an Indian route to the East?—That is so.

12,517. Besides that, you ground your claim upon the political interests of this country in Africa and elsewhere in the East; and also on commercial grounds, upon the value of the trade?—On both.

12,518. (*Sir Andrew Scoble.*) The recent partition of Africa has increased very much the importance of Aden as an Imperial fortress, has it not?—I think it must have very largely.

12,519. And as far as the Suez Canal and the Red Sea route are concerned, that route is now, if possible, more important to Australasia and the further East than it is to India, is it not; I mean as to the amount of traffic and the tonnage employed?—Yes, I should think a larger proportion is concerned with Australia and China and other countries than with India alone.

The witness withdrew.

Adjourned to Wednesday next at 11 a.m.

At the India Office.

TWENTY-SEVENTH DAY.

Wednesday, 15th July 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. W. L. JACKSON, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary*.

Sir RALPH KNOX, K.C.B., Accountant-General of the Crown, examined.

Sir R. Knox, K.C.B.

15 July 1896.

12,520. (*Chairman.*) Would you define what you consider to be the actual cost to the British Exchequer of maintaining a force in India?—According to my view, the actual cost consists of every expense incurred at home which would not be incurred if it was not necessary to send the reliefs and drafts to India.

12,521. That would include the cost in the wide sense, I presume, of raising, paying, and maintaining the force existing at any time in India?—Yes, quite so.

12,522-3. But what is now included in the charge represented by the capitation payment of 7*l*. 10*s*.?—In the first place, there is the calculated charge for training the individual soldier according to the arm of service to which he belongs. In addition to that there is the charge of the officers and non-commissioned officers who train him. Inasmuch as the charge per man is calculated upon the definite individual despatched, there is also a charge which may be represented as being for waste in the production of these men, in the form of a charge for those who, on an average, desert or die during the first year of service. In addition to that there is a charge for the pay of young officers who are appointed to the Indian regiments as vacancies

Sir R Knox, K.C.B.

15 July 1896.

occur in those regiments, and who are awaiting their orders to be despatched to India. In former times that used to be paid directly by India; but, to meet the convenience of the two departments, it was arranged that the War Office should make these payments and charge India through the medium of this capitation sum. There is also the cost of the young officers who are appointed to the Royal Engineers, and who are under a lengthened training—unlike the infantry officers—at the School of Military Training at Chatham, which lasts between two and three years; there are, forther, some minor charges in connexion with the training of veterinary surgeons and the examination of candidates for the Indian Medical Service; that, of course, might have been made a direct charge against India, but it was thought advisable to sweep into this account as many constant charges as was possible. The next item is a charge for the expense of what I should call the educational establishments, where the officers undergo a certain amount of elementary education and training.

12,524. (*Sir James Peile.*) Is that still in the 7*l.* 10*s.*?—That is in the 7*l.* 10*s.* That includes the Royal Military College, the Royal Military Academy, the Staff College, the Army Medical School, the School of Gunnery, the School of Engineering, and the Artillery College. Formerly, before India had established a school of musketry herself, there was a charge for the School of Musketry at Hythe; but since the schools of musketry have been developed in India, no charge is made on account of the school of musketry at home. Then there is a charge for the advance of pay to drafts proceeding to India; every man gets an advance of from 18 to 25 days' pay, it varies, and has been altered from time to time. Then there are the expenses of the men sent home from India, either as invalids or time expired men awaiting discharge, and that includes their pay while on the passage home. Then a claim is made for the expenses of the Indian invalids at Netley Hospital, so long as they remain as invalids there, and at Woolwich Hospital. A portion also of the expense of the discharge depôt, which was established in order to avoid the expense of sending the men home to their individual depôts all over the country to be discharged. At Gosport, near where they land, a depôt is established which receives them and takes the necessary steps to wind up their accounts and, to send them away to their different homes. This, of course, is distinctly an economical arrangement as compared with sending the men all over the country in the first instance.

12,525. (*Chairman.*) Are you coming to deductions now?—Yes.

12,526-7. Would you let me interpose a question there. The total cost of these services that you have been enumerating has been calculated, I think, at 677,000*l.*, has it not?—Well, whenever a calculation has been made, we have found always that the numbers vary, and therefore the charge. We gave the advantage to India; if there had been a reduction in the price of provisions, or if the price had gone up for forage, and so on, the charge would be varied, so that none of the calculations which have been made from time to time exactly agree; but I can quite understand that in that year, for which you may have the figures before you, it did amount to that sum. I have a year before me in which it does not amount to quite so much.

12,528. Would that sum of 677,000*l.* include all the services which, we will say, Colonel Tulloch's Commission had before them when they fixed on 10*l.* a year?—No, it would not; and that gives rise to a very considerable difficulty in making comparisons from time to time of the different systems which have been in operation. Two or three very important charges were covered by Colonel Tulloch's arrangement, so to speak, which are omitted from this in consequence of changes of system which have been introduced. The money which India paid under Colonel Tulloch's recommendation included the furlough pay given to officers who might from time to time come home from India. I should like to make a remark as regards that presently. It included also a charge for the pay of the honorary colonels, for India's share of the 1,000*l.* a year which they used to receive. Of course, that is properly a retired pay charge, and, since Colonel Tulloch's time, it has become a non-effective charge, and that is omitted from the present claim, as compared with Colonel Tulloch's arrangement. As regards the furlough pay, there was a considerable, I will not say miscalculation, but want of foresight in what happened as regards the furlough pay. When Colonel Tulloch's calculation was made, it was thought, that, judging by past experience, the charge for furlough pay would amount to, I think, between 60,000*l.* and 70,000*l.* a year; but when the 10*l.* capitation was agreed upon, whether it was in consequence of the increase of the army, or of the fact that 10*l.* covered all the charges, we found that the furlough pay charge went up from that estimate to something like 150,000*l.* a year. The men came home very freely from India, and we paid for them; that is now terminated.

12,529. The calculation in the 10*l.* being only intended to cover 60,000*l.* or 70,000*l.*?—Quite so, a small sum. We found that before we terminated this arrangement we were paying 150,000*l.* a year for furlough pay. The Indian Government has now taken that over, and they pay direct. We thought that it was far better that they should make a direct payment for that charge. Those, with the educational establishments, are the principal items omitted from the charges covered by the 10*l.* rate.

12,530. Could you say what the charge for the honorary colonels was?—I think it came to about 67,000*l.* a year.

12,531. Had you finished with the definition of the exceptions?—I think you may take it that those are practically the sums which should be struck out of the Tulloch arrangement.

12,532. I am anxious that the Commission should get into their minds the services included in the various rates so that, when we are speaking of the various sums which India paid first of all before the Mutiny, then under the 10*l.* a head arrangement after the Mutiny, up to the time when the 7*l.* 10*s.*, which is the present rate, was decided upon, we might know to what extent those charges are comparable?—Yes.

12,533. Now, going back to the earlier time, would you describe the European force kept in India before 1860, which was the date, I believe, of the abolition of the local European force?—I assume you mean what we call the Royal troops, that is to say, those forming an integral part of the British forces. There were four regiments of cavalry—of course they varied from time to time; they had five regiments at one time, but that arose, I think, from the frontier wars that had taken place. At the time of the outbreak of the Mutiny the number of regiments was, of cavalry, as I have said, four, and of infantry 24. The total force numbered from 28,000 to 24,000; in 1844 there were 28,000 of all ranks; and in 1857 there were 24,000.

12,534. The India Office give it thus: The effective strength of the British regiments in India from 1834 to 1857 averaged 24,133. The payments made for the depôts and recruiting districts, and for expenditure by regimental agents, from 1834 to 1857 averaged 195,171*l.*, or about 8*l.* per man serving in India?—Quite so.

12,535. With regard to that, do you consider that the average of 8*l.* per man is a fair standard, or was it higher, do you suppose, in the later years? You see, the number of years from 1834 to 1857 is a long period for a service like that of the army, and we know that after the year 1852 or 1853 the expenditure on the army increased very considerably?—Yes, very considerably. Well, there a correction is required to make anything like a comparison, for in the charges represented by that 195,000*l.*, there were included these charges, which I have previously referred to as covered by the 10*l.*, that is to say, the pay of the honorary colonels, although a smaller number, for a smaller force, and also the furlough pay of the officers.

12,536. The furlough pay would probably have approximated to the 60,000*l.* which formed the basis of Colonel Tulloch's computation, would it not?—Yes, but I have not the exact figures. We have only really the agents' accounts of payments, and those it is impossible to analyse.

12,537-9. Therefore, if we compare the 8*l.* per man with the 7*l.* 10*s.*, you have, on one side, to bear in mind that the 8*l.* comprised two very heavy charges, namely, the furlough pay and the pay of the honorary colonels; and, on the other hand, that the 7*l.* 10*s.* includes the enormously increased cost of army administration. And, further, does it not also include the deferred pay, which did not exist in those days?—No; the 7*l.* 10*s.* does not include the deferred pay; that is an extra charge. But there was another element as regards the 10*l.* The history of it is very extraordinary; elaborate

calculations were made which seem, some of them, to have been *à propos*, and others not *à propos;* and the War Office representatives and the India Office representatives, seem to have had many meetings and consultations, and made efforts to come to a conclusion; but the only conclusion they could come to at the last was to make a shot with very little reference to the actual calculations they had gone through, and they said, "Well, for the present, and for peace and "quietness' sake, let us take 10*l*." But I wanted to say that that 10*l*. was exclusive, and deliberately exclusive — as stated in the Minutes of the Committee and by the Treasury—of what we call the educational charges; that is to say, the charges for the Military Academy and the Military College. "It will "not include transport, passage money, clothing, arms, "accoutrements, or other stores, nor any expenses "chargeable to the revenues of India on account of "the instruction of officers of the Royal Artillery, "Royal Engineers, or medical service, nor any other "charges which were not taken into consideration by "the Committee in arriving at the average rate which "they have recommended." So those were all charged for outside the 10*l*., but the present 7*l*. 10*s*. covers them.

12,540. In that year, of which the analysis is before me now, the educational establishments would amount to about 37,000*l*. a year?—About that, yes.

12,541. Under what head would clothing and stores, which, I think, you mentioned as excluded, come?—Direct charges were made against the Indian Government for stores actually supplied at a price.

12,542. But are these charges included in this cost of an infantry recruit, we will say, of 21*l*. 5*s*. 2*d*.?—The clothing and the arms, and so forth, that were used at the depôts were formerly charged separately against India; but now there is a calculated amount included in the charge, covered by the 7*l*. 10*s*.

12,543. And that would account, I suppose, to a certain extent, for this somewhat curious result, that Colonel Tulloch's Committee, it is stated, on the basis of the previous ordinary charges, recommended 11*l*. 1*s*. 6*d*. per annum for each infantry soldier sent out in the year, whereas, under the calculations which preceded the 7*l*. 10*s*. arrangement, the cost of an infantry recruit embarked for India was 21*l*. 5*s*. 2*d*.; the 21*l*. 5*s*. 2*d*. includes clothes and arms used at the depôt, whereas the 11*l*. 1*s*. 6*d*., though it led up to a bigger charge, namely, 10*l*., than the 7*l*. 10*s*., did not include those items?—Quite so.

12,544–5. Without pressing you further, Sir Ralph, upon that point, I think what you say establishes for the Commission this fact, that we must be very careful in comparing, without very great reservations, the 8*l*. per man payable before the Mutiny, before the abolition of the local force, the 10*l*. under Colonel Tulloch's Commission, and the 7*l*. 10*s*. which is now payable?—Quite so. They are all calculated on different bases.

12,546. Will you describe shortly the methods of charging India for the cost of recruiting up to the date of the Mutiny?—The main cost was, of course, the depôt charge. At that time there was no distinction between what was called the training establishment and the men trained, a distinction which we have sought to make in later years. The depôt of each battalion that was serving in India consisted of some three officers and the regular number of non-commissioned officers and so on, together with the private soldiers under instruction and training—they formed the depôt, which was looked to to supply all the wants of the battalion that was serving in India. It was also the receptacle of all men who came home from India for any reason, those who came home to await discharge, the invalids, who came home, were kept there until they completed their time for discharge; the necessary men for properly carrying on the training of the young soldiers who joined and so forth—all those were brought together into this home, as it were, of the battalion that was serving in India. Well, the actual pay lists kept by the paymaster of the cost of that depôt were made up and sent in, just as the pay lists of a home regiment would have been sent in, to the War Office; the War Office examined them and sent them then for a general audit to the India Office, and the actual disbursements on those pay lists formed the claim for these expenses against India, and India paid the whole of those charges.

12,547. That was up to the time of the Mutiny?—That was up to the time of the Mutiny.

12,548. At that time, when, as I understand, the precise bill was sent in, did the War Office agree pretty well with the India Office, or was there the same disagreement and delay that took place after the Mutiny under the present system?—I cannot say that I find that there were any disputes during those quiet times between the India Office and the War Office in this matter; and it appears that the system went on continuously from 1834 to 1857. But searching, as a matter of curiosity, into some old documents the other day, I found that this dispute between the Home Government and India was of very old date indeed, and that there is a very interesting Blue Book of 1805 and 1807 in which you will find exactly the same arguments being advanced and refuted as are being advanced and refuted to-day, not only as regards claims of this kind, but also as to the cost of expeditions to Egypt.

12,549. Sir David Baird's expedition?—Yes.

12,550–3. With reference to the recruiting for the Queen's regiments, or, as they were called, the Royal Regiments?—Yes. A claim was also made for a proportion of what was called the staff of the recruiting districts throughout the country. There were then in existence certain recruiting centres which followed more or less the more populous towns, as they grew up during that period, and there were some seven to ten of those; and a portion of the cost of the staff of those centres was charged against India. Then a calculated amount was also charged on account of barrack accommodation. There was a charge for forage, which represented practically the issues of forage to the cavalry depôt, which was at that time at Maidstone. I believe the actual contractor's bills for the forage supplied to this depôt were sent in to the Indian Government. Then they also paid the charges included in the Agent's account of the regiment: that would include the pay of the officers serving at the depôt, as all pay of officers is issued through the Army Agents, and also the pay of the officers who were on leave, and in that way the furlough pay to which I have alluded, became a charge covered by this arrangement for the home charge. There were other contingent expenses, but of a small kind, which the agents also incurred on behalf of the regiments. Then there was the charge for the pay of men on passage, both out and home; that was made up as a separate item, which was called, passage pay list, and that pay list, just like the depôt pay list, was sent in as a claim against the Indian Government. That has been described from time to time as the actual charge system, and to a very great extent it did represent the actual bills, as it were, and pay lists, which were presented to the War Office as representing the expenditure under those particular heads on account of the regiments in India. That covers the period before the Mutiny, and for the Royal regiments.

12,554. But besides that, do you know anything about the regulations, under which the recruiting for the local European force in India was carried on?—That was referred to in the earlier minutes of Mr. Seccombe's Committee, which considered this question in the year 1869, and they described at some length the system which was in existence at Warley, Warley being the depôt at which the recruits for the infantry, artillery, and engineers in India for the local forces were raised. They show *in extenso* in that report what they represented as the recruiting charges for the year 1854–5, and they give as totals what the expenditure was at the depôt at Warley for other earlier years. Warley, as it has been described by many persons—I have gathered my information from reports of Royal Commissions, especially the Sanitary Commission on the army in India—was merely a receiving depôt. They had in the earlier years, 1850, 1851, 1852, a comparatively small number of men to raise, something like 1,000 a year.

12,555. Was that about the average number of men sent out in that day?—In 1850, 1851, and 1852, before there was any disturbance at all, that was the number of men sent out; 1,215 in 1850, 858 in 1851, and 1,017 in 1852; in the later years they increased in number. That was due to the Crimean War in 1853, 1854, and 1855. The European regiments of the Royal army were being withdrawn from India, and the Indian Government decided to raise three additional European regiments of their own; then the recruiting was very brisk, and this same establishment recruited practically and despatched the numbers that were required in those years; but those were abnormal years, and really do not fairly represent what the cost of the training of a recruit was but rather the catching of a recruit at

Sir R. Knox, K.C.B.

15 July 1896.

Warley. The Indian Government and the Committee in dealing with these charges threw in the subsequent years, and also the years 1857, 1858, and 1859, which were the years of the Mutiny, when every man that could possibly be caught, was caught, and was sent out; and then they recruited 3,800, 6,000, and 4,000. Those were the recruits in that period, and they did not fairly represent the normal condition of the working of the Warley establishment. I find, first, taking the first three years, that the average charge per man despatched, taking these figures, was 30*l.* In one year, which is an unfair year to take, because an abnormally low number was sent out during that year—but still the Indian Government and the India Office do not mind using such arguments against the War Office—the cost was 40*l.*, and in the year 1852 the cost was 37*l.* a man. But a note which heads this column should specially be noticed, as it states that the cost of clothing, the cost of arms, and the cost of accoutrements were excluded. And in examining the detailed charges, which are given in the paper which I have referred to, for the years 1855 and 1856, they seem also to have left out the man's house, which is rather an important item of charge, even with a soldier. There is no charge whatever for barrack accommodation, so that the figures that are given as really representing the Warley charge are practically useless for the purpose of comparison; they do not represent anything like the proper charge; and further, as I have insisted before, the fact should be borne in mind that it was not a training depôt in any sense, it was simply a receiving depôt for recruits. It took some time, of course, to accumulate a thousand men, and, while the men were there, they did the goose step, no doubt, and some other elementary practice of that kind, but they were not trained; it was not supposed that they were trained; they did not go out as trained men, but men were shipped, some of them, the same week that they were recruited, so that really the expenditure at Warley and the expenditure under the old system that took place at the English depôts, are in no way comparable. In the first place, the same items are not included, very important ones being omitted; and further, the system of recruiting and training was absolutely different.

12,556. Do you know how long it usually took to make up a draft of a thousand men or whatever the number might be?—It seems to have been something like from three to four months.

12.557. And, therefore, if three to four months was the whole time, the average time of training that a man was undergoing, while he was there, would not be even one-half that time, I suppose? What I mean is this; they were collecting men during those three to four months, and the draft would comprise both the men who arrived three months previously and the men who arrived the day before it started?—Quite so.

12,558. So that that only gives an average training of much less than three or four months?—Yes. Still I cannot be quoted as an authority upon that; I am only re-stating descriptions of the Warley training, which I have read in papers.

(*Sir Donald Stewart.*) I can endorse generally the accuracy of what Sir Ralph Knox says.

12,559. (*Chairman.*) Quite so. And then you give 30*l.* as your calculation of the cost of each recruit sent out to India from Warley?—Sent out to India from Warley.

12,560. Then I find that, in this paper handed in by the Financial Secretary of the India Office, it is stated that, omitting the exceptional years of the Mutiny, the number of recruits sent from their depôt at Warley between 1850 and 1859 amounted to 24,783, at an average cost per recruit of 19*l.* 14*s.* 10½*d.* per man, or, omitting the exceptional years of the Mutiny, 26*l.* 7*s.* 5*d.* That 26*l.* 7*s.* 5*d.* is, I suppose, a rather minute estimate of that service which, according to your view, amounts to 30*l.*?—Well, no; I propose to omit from their calculation the years in which there was a special pressure—the years in which they raised the three additional regiments; they more than doubled the number of men that they had sent out in that short time.

12,561. You say that that estimate of 30*l.* excluded clothing, arms, and accoutrements; and, so far, it corresponds with the basis, does it not, on which Colonel Tulloch calculated his cost of a recruit, because I think I understood from you that he excluded clothing, arms, and accoutrements?—No, I do not think I stated that Colonel Tulloch omitted those in his calculation; in the prices that he proposed to to charge he did not omit clothing, arms, and accoutrements; but they built up the charges for the men, and having built up that charge, what it would amount to for each class of individual, they said "Let us take 10*l.* a head"; so that you cannot say that Colonel Tulloch had included any particular thing, or what particular thing he had included in his calculation of the cost of an infantry man; the first calculation which he made included everything except transport, passage money, clothing, arms, accoutrements, or other stores.

12,562. That was the 11*l.* 1*s.* 6*d.*?—Yes.

12,563. Therefore, should I be right in supposing that the method in which the Warley charge is made up, really excluded those same items which Colonel Tulloch excluded?—Yes, you can, certainly.

12,564. Then if that is the case, 30*l.* per head per recruit is not a very cheap charge, is it?—No; considering that the men were not trained for any length of time, that there was no pretence of really training the men as soldiers, the charge is a fairly respectable charge.

12,565. And does not compare so very badly with the charge, as now made?—No.

12,566. Even though the force of the army at present is much greater than it was then?—Quite so.

12,567. I think the Indian Government have relied very much upon the cheapness, as they hold it, of the Warley system as compared with the British army system?—Quite so. That is a point that I am very anxious to bring out too; and there is no doubt that in these earlier years, which I have mentioned, in the ordinary time the charge came out at over 30*l.*, varying from 30*l.* to 40*l.*; one year it was exactly 40*l.*, another year it was 30*l.*, and another year it was 37*l.*; that was the charge for the Warley recruit, and that with the very small period of training that he had.

12,568. No doubt the 30*l.* included, did it not, a considerable number of charges, which you have stated separately, but which, when Lord Northbrook's Committee was making up its calculation, upon which the 7*l.* 10*s.* was founded, and of which you have given us the heads, were outside the capitation rate?—Yes, there would be some miscellaneous charges of small amounts. For rewards for apprehending deserters, 82*l.* is included; for the payments made to the Roman Catholic minister and the Presbyterian minister, the clerk, and so on, 60*l.* is included. There is 20*l.* for the schoolmistress at the depôt school; 61*l.* for repairs of arms (that is what the local armourer would do), and expenses of that kind are included in this, which India had to pay under her own system, but for which no charge whatever is made. For instance, for these chaplains, and for any expenses of that kind, no charge whatever is made in the cost of the soldier, as now built up and claimed from India.

12,569–70. Then, on the whole, you would think that the 30*l.* which the recruit cost at Warley compares tolerably fairly with the sum which you calculated on the Northbrook Committee?—Well, they practically approximate for the infantry soldier; and that is practically what these were—infantry soldiers and artillery; these men were not trained as mounted artillery in any way; they were caught in the same way, only they wore perhaps a different coloured coat, and were sent off to India to be trained. But what we now calculate as the cost to be charged to India for an infantry recruit very much corresponds with what the charge was at Warley at these early dates.

12,571–2. In the time that you have been describing to us, before the Mutiny, did the War Office make any charge upon India for central administration?—No. Perhaps I ought to say that the present charge, as calculated, includes all the increase that has been made in the expenses of the soldier—in his pay and all other charges included—since those times.

12,573. I have said to you that we must bear in mind that the soldier is a more expensive person now than he was in the time before the Mutiny?—Oh, he gets distinctly something like fourpence a day more in pay, apart from deferred pay.

12,574. (*Mr. Jackson.*) When you say that the charge now made includes those items, it does not mean that it covers them?—The charge now made works out, I think, at something like 32*l.* or 33*l.*, and it includes the charge for the rate of pay now given to the soldier.

12,575. That is to say, that is all the payment you get for all these services?—Yes; that is all the payment we get for all these increased charges.

12,576-7. (*Chairman.*) As far as the Warley charge goes, you would have to add a considerable sum to the 30*l.*, if you included the clothes, arms and accoutrements, and barrack accommodation?—Oh, a considerable sum, certainly.

12,578-9. Have you any idea what that addition would be?—Well, I cannot say. I may say that we calculate that the barrack accommodation alone for a soldier costs about 7*l.* 14*s.* a year.

12,580. And you include that in the capitation rate as calculated by the Northbrook Committee?—We charge only a portion of it.

12,581. Then, if you were to add an allowance for clothing, arms, and accoutrements, it would come to a very considerable addition?—Certainly it would.

12,582. What was the period of service given by the soldier under the old system before the Mutiny? I am now speaking of the Queen's regiments?—There were two systems running side by side, as there very often have been. There was the old system of enlistment, which was practically an enlistment for life, and the new system, which had come into effect from the year 1847, which was a system of 10 years' enlistment with every encouragement to extend the service beyond 10 years; and a great number of men did extend their service, but a very fair proportion of them left the army after completing their 10 years. But, as that commenced in 1847 only, of course it could hardly have had any effect upon the army, or any effect in increasing the number of recruits, until the year 1857, practically when the Indian Mutiny broke out; but I mention that, because in those years that we were calculating, the demand for recruits was very small, because really the life system of enlistment was in existence. But very soon after that, the 10 years' enlistment of course began to tell, having commenced in 1847. From 1857 onwards there was a large number of what are called casualties, men who leave the service with the colours, and the number of recruits required to keep up the army everywhere considerably increased.

12,583. (*Mr. Jackson.*) Has the short service system increased the cost of the soldier furnished to India?—Well, we have made every endeavour to keep the cost down as far as possible; and I think it is shown by the fact that in these calculations we make a charge of something like 31*l.* or 32*l.* against India for every recruit sent out, and give a rebate—to which I very much object, by the way—for every soldier that comes back as well, and that 30*l.* a year was the charge set down under the Warley system, which excluded the charges for accoutrements and clothing and so forth and barrack accommodation. This shows that, so far as our charge against India is concerned, we have very much diminished the charge I am speaking mainly of the infantry soldier. Warley, of course, provided no mounted services at all. The mounted services represent a very heavy charge, although the infantry is the most numerous. The mounted services represent a very heavy charge for raising and training men; a longer period of training is required, far longer than is charged against India, and the cost of keeping horses and providing them and foraging them and so on is a very considerable item, there is also the keep of the men to look after those horses. But, as regards the infantry charge, I think it can be shown that we are charging India less than was charged before under the old system *per caput* for each man we supply, and that the charge compares favourably with the system which was in existence at Warley.

12,584. (*Chairman.*) Can you tell us what was the period of enlistment of the local European force?—I believe that they were enlisted for life. It was a very popular service, so from reading I gather. The local force there was small—12,000 men. The number of recruits required was about 1,000, and the Indian Government got very good men for this small army, because they were able to offer, in proportion to this number of men, a very good number of berths of various kinds in the way of civil appointments, or appointments connected with the army, in which a man might easily end his life in a very comfortable position; and these were no doubt a very considerable inducement, which India was able to offer to that small number of men that they recruited; but practically the men went for life, and a great number of those who survived the earlier years died in India.

12,585. Well, that of course would tend to diminish the number of recruits required every year, would it not?—Yes; the longer, of course, a man served, in that way the less number of recruits were required. Of course, that is the great change of the short service system, a larger number of men have to be enlisted; but *per caput* for the men enlisted, so far as our charge is concerned, our charge compares very favourably indeed with all the systems of charge in the previous years.

12,586. Now you say that to keep up a force of 11,000 men or 12,000 men, 1,000 recruits were required. You would multiply that by about six, if the present force of 72,000 to 73,000 men were to be recruited at the same rate?—Yes.

12,587. That would be 6,000?—6,000.

12,588. Whereas you reckon the present annual recruitment at about 12,000?—Yes; under the short service system we reckon about 12,000.

12,589. We are right, therefore, in coming to the conclusion that under the old Indian system the number of recruits required each year for the local force was very much smaller than the proportion now required?—Very much smaller.

12,590. I am asking these questions to lead up to an understanding upon an important point. The Government of India have relied upon the fact that, if you partition out the cost of the recruits at Warley per man on the establishment in India, whereas your royal recruits cost 8*l.* per man up to the time of the Mutiny, whereas Colonel Tulloch estimated them at 11*l.* or 10*l.* per man of the whole force, and Lord Northbrook's Committee at 7*l.* 10*s.*; the Indian recruiting expenses per man for the whole establishment only amounted to 2*l.* 8*s.* 11*d.*?—I thought it was 3*l.* 3*s.* 9*d.*

12,591. 3*l.* 3*s.* 9*d.* if it includes the Mutiny service?—Yes.

12,592. They put it in this way: the East India Company's European force from 1818 to 1857 averaged in number 11,758; we will call it 12,000; the number of recruits sent from their depôt at Warley between 1850 and 1859 amounted to 24,783, at an average cost per recruit of 19*l.* 14*s.* 10½*d.* per man; or, omitting the exceptional years of the Mutiny, of 26*l.* 7*s.* 5*d.*, giving 2*l.* 8*s.* 1*d.* per man on the establishment in India?—Well, that may be.

12,593. The reason why that charge is so small when it is reckoned out per man on the establishment was the smaller number of recruits that was required under the life system?—Quite so.

12,594. But when we turn it back again to find what each recruit cost, it by no means represents a very small sum, as compared with the sum that had been worked out by the different Imperial officers?—Quite so.

15,595. And therefore, if we wanted to find out the real cost of Warley as compared with the present cost, we must take the cost per recruit, not dividing it out by the number of men on the establishment?—Quite so.

12,596. The cost of Warley itself was not, as the Indian Government represent it, so very much cheaper than the cost at which the Imperial Government were raising recruits per man turned out?—I should say that I am comparing now the charge that we make against India for a recruit, which in a certain sense compares well with Warley. The Warley charge for a man may have been something like four to five months, say, for the pay of the individual; we charge India with only the pay for a soldier for six months. Of course, we have him very much longer, and that is a subject I shall touch upon when we come to the question of rebate.

12,597. (*Sir Andrew Scoble.*) Is the average time that you keep a recruit before you sent him out to India much longer than six months?—Very much more than six months.

12,598. What would you say the average is?—I should say the average was 18 months.

12,599. (*Chairman.*) The Indian Government raise an important question which has a bearing upon this charge. Before the Mutiny, the force at their recruiting depôts rarely exceeded half a regiment of cavalry and 1,100 or 1,200 infantry; and even after the emergency had passed away, the depôt establishments of Indian regiments numbered very nearly 10,000 men.

Sir R. Knox, K.C.B.

15 July 1896.

I am calling your attention to the point with reference to the argument of the Indian Government, that with the largely increased number of men on the Indian establishment, you have a respectable force now training at home, which would be available for home defence, and which ought, therefore, to be taken into consideration?—Yes, but it is a respectable force that we do not want; that is the difficulty. That force would not be in existence except for the fact that they have been raised, and are being trained for India, in order to meet the demand of India, that is to say, that they shall be 20 years of age in every case and that they shall be fully trained.

12,600. But I suppose that the argument of the Indian Government is that, supposing, for instance, there was an invasion, then the men at the depôts would be trained soldiers, or men in the course of training, who would be available for defence?—They would be in existence, but what we should argue would be that these men should be in reserve, and cost us 6*d.* a day, instead of being on full pay, costing us, in many cases, sums varying from about 50*l.* to 100*l.* a year.

12,601. (*Mr. Naoroji.*) You say you do not want them; is it not for the maintenance of the British rule that it is absolutely necessary for you to have a European force in India, according to the declarations of the Government itself; but for that the Indian army would be quite enough to meet any contingency; but it is because you say that you want to maintain British rule in India that you want a European army there as strong as possible, to defend it both against Russia and against the Indians?—We supply the demands made upon us by the Indian Government.

12,602. Yes, but the Indian Government is the British Government. The Indian Government is nothing but British Government and British rule.

12,603. (*Mr. Jackson.*) That raises rather a large question, does it not?—Yes.

12,604. (*Chairman.*) After the Mutiny, what increase was made in the British army in India, and how was it obtained?—Well, that great increase of 10,000 men that you mentioned just now, as compared with the previous smaller number, arose entirely from the considerable permanent increase that was made in the European army in India. I think during the Mutiny something like 40 additional regiments were sent out to India; and, after the Indian Mutiny was suppressed, the Government having determined that this large force should be maintained, it was necessary to add considerably to the number of battalions in the British army, in order to meet the demands of the Indian Government, and battalions were added. First, I think, second battalions were added to something like 20 regiments of infantry, and certain cavalry regiments were raised also. These additions have enabled the Government to supply the additional force that was required, but they were specially raised, in order to raise the establishment of European forces in India.

12,605. You did not raise the Imperial army here by the whole amount of the men you sent out to India?—No.

12,606. Roughly speaking, you mean that you were enlisting about half the force?—Yes, about half the force; and that gave rise, of course, to the existence of these 10,000 men at home. These 10,000 men, by the way, I should say, included the men whom we may regard as transferred from the Warley depôt, because the local European army was merged into the British army. Depôts were formed for those new battalions; these were transferred, and then depôts had to be raised for the other new battalions that were added, and that, of course, especially in conjunction with the operation of the 10 years' Enlistment Act which then had been at work for three or four years, and was being felt, increased the number of men who would be in training at the depôt.

12,607. Would it be a correct representation of the difference in the force that followed the transfer of India from the Company to the Crown, to say that previous to that transfer, in ordinary times the European force in India consisted of about 24,000 men of Royal regiments, and 12,000 of the local force, making, I will call it, 37,000?—Yes; and the average number of officers and men in India from 1861 to 1870, I see, was 63,000.

12,608. And that would represent, I suppose, the increase that followed that transfer?—Yes, but that has been further increased since then by 10,000 men. There are now 73,000 men in India.

12,609. Did any change take place at that time in the system of enlistment, or did that system of enlistment, which you have told us of, as dating from 1847, remain in force?—That system remained in force until 1867. Then a Royal Commission inquired into the recruiting, which was in a very unsatisfactory state; we were unable to get the men that we wanted either for home service or for Indian service, and we were in great straits. The Commission made various recommendations, and one of these was that the period of 12 years should be substituted for that of 10, and that extra money should be spent to persuade men to extend their time beyond the 12 years; but they added to their report words of warning, that no country could regard itself as in anything like a safe—I will not say even safe, a decent—condition, unless it had a reserve beyond the force it had with the colours.

12,610. That was really rather a lengthening of the service at that moment than a shortening of it?—It was. It was a return as it were to a longer period of service, with the view of keeping the men longer, in order to reduce the waste. That was started in 1867 or 1868, but of course it would have no effect for 12 years' time, or rather for 10 years' time, and long before then, within a very few years, the whole system was altered and the short service system adopted.

12,611. At what date was it that the House of Commons passed the resolution that recruits were not to go out to India under 20 years of age?—I have not the exact date.

12,612. Is that a recent resolution, or is it one that dates back to about that time?—Oh, it is not a recent resolution; it was Mr. McCulloch Torrens who moved the resolution many years ago, but whether it was anterior to the introduction of short service or was a little time afterwards I cannot say.

12,613. (*Sir Donald Stewart.*) I think it was afterwards?—Afterwards.

12,614. (*Chairman.*) When did short service come in?—In 1872.

12,615. And the rule about the age limit for India in recruits followed the introduction of the short service?

(*Sir Donald Stewart.*) Oh, yes, it was quiet recent.

12,616. (*Chairman.*) You have explained to us the details of the Tulloch recommendation. The 10*l.* per man on the establishment in India continued to be paid in respect of the effective services until about 1870, did it not?—Yes.

12,617. Then there was an interim time, during which the actual bills were furnished, which a committee (on which I think you served) passed from time to time, was not that the case?—No, I do not think the committee referred to the actual bill system. One of its first recommendations was that the 10*l.* should go on pending its recommendations.

12,618. And how long did the 10*l.* then go on?—(*Sir Donald Stewart.*) The 10*l.* went on to 1869-70.

12,619. (*Chairman.*) Did it not go on rather beyond that?—Yes, it went a little beyond that.

12,620. (*Sir Donald Stewart.*) Apparently not?—The payments were made "on account" at a little less than the calculated sum. India made advances, in fact.

12,621. (*Chairman.*) But, in the long run, you recommended that those advances should be treated as a final settlement, did you not?—I think the Treasury came to the agreement after some time. The Indian Government had been reducing their advances every year, pleading poverty and urging a reduction of charge.

12,622. (*Sir Andrew Scoble.*) I do not think you will find the payments have invariably decreased since that year. There was a period of diminution and a period of increase while those payments on account were going on?—It is stated here that 505,000*l.* was issued "on account" in 1870-1 as against a payment of 597,140*l.* in the previous year. The next year 435,000*l.*, the next year 450,000*l.*, in 1873-4, 400,000*l.*; in 1875-6, 380,000*l.*; in 1876-7, 320,000*l.*, and so on.

12,623. Then it comes up in 1877-8 to 500,000*l.*, and in 1878-9 to 530,000*l.*?—530,000*l.*?

(*Mr. Jackson.*) Yes, but the point appears to be this: in 1870 India disputed the fairness of the 10*l.* rate, and, pending a revised agreement, declined to pay more

than certain sums "on account." That went on until by Treasury minute of 2nd July 1878, confirmed by 45 & 46 Vict., chapter 79, it was agreed that the above payments "on account" should be accepted in full discharge of India's liabilities for the years mentioned, and 400,000*l.* was remitted?—I think, on the whole, the change of system was called for, not merely by the Indian Government but by the Home Government. When the 10*l.* was established—which was admitted to be only a shot—a division was set up in the War Office to record what the expenditure really was from year to year as against the 10*l.* arrangement; and we found by that time that the cost of supplying recruits to India had been so heavy during those years that the 10*l.* did not nearly cover the expenditure that had been incurred; and the War Office, certainly—Lord Cardwell was then minister—was most anxious to have the rate revised in order to get more money from India on account of the home recruiting charges.

12,624. (*Mr. Mowbray.*) In the result you got less?—In the result we are getting now——

12,625. I am not speaking of now. In those years?—It was arranged that during those years especial expenses, which I have already alluded to, should be dealt with separately, namely the colonels' pay and the furlough pay. Direct charges were made against India for them, and they were no longer a part of the effective home charges, and we, therefore, submitted to a considerable reduction in the amount to be paid by India; but, inasmuch as no settlement was come to, they made these reduced advances.

12,626. Does the colonels' pay, to which you are referring, appear anywhere on this paper?—I do not think it is stated definitely in any of these papers; but it did amount to 67,000*l.* a year, I think, at that time.

12,627. (*Mr. Jackson*) The remissions were 400,000*l.* for eight years, that is 50,000*l.* a year, therefore the payments on account were presumably less than the amcunt which would have been charged under the old system by 50,000*l.* a year?—Those advances were not based upon calculation at all as to what the actual charge was. A reduced sum was paid, because it was known that India would pay directly the colonels and the furlough pay; and they gave us what they liked in fact, as a balance. They estimated the amount, and said that it was not convenient to pay any more, and they thought that the committee, which was sitting, would reduce the charges. When ultimately it came to be settled, the War Office was not at all inclined to give up anything of the calculated amount recommended by Mr. Bouverie's Committee, but the Treasury, under all the circumstances of the case, said that they were willing to take the advance that had been made by India as the payment that India should make during those years.

12,628. (*Sir Andrew Scoble.*) Was there not another reason why that allowance was made, because Lord Cardwell, who had been Secretary of State for War from 1868 to 1874, admitted that the system was unnecessarily expensive as regards India?—No, he admitted that the expenditure that had been incurred by the British Government during this period of the 10*l.* system was excessive.

12,629. And that was why the remission was given, was it not?—But India was only charged the 10*l.*, notwithstanding that the cost was greater.

12,630. Yes; but because of the War Office system having been unnecessarily expensive, the remission was made in favour of India, on the ground that India ought not to be charged with the cost of an unnecessarily expensive system?—That I cannot say. India was not charged anything like the full cost of the expenditure which had been incurred in the depôts; and the War Office member—the late Accountant-General, Sir John Milton—drew the attention of Lord Cardwell to the fact that the depôts were costing us a huge amount, and that, if that system was to go on and India was to pay the expense of it, we ought to get more money from India; otherwise there ought to be a change in the system. But the whole of the excess cost of that system had been borne by the Imperial Exchequer during the whole of the time; the Indian Government had only paid the 10*l.* The Bouverie Committee was then appointed to come to some conclusion as to what modification could be made in the system of raising and training the men and charging India. The basis of their recommendation was, that a price per man should be charged for these men, instead of a claim being made for the charges in the pay list. This price swept into it all sorts of incidental expenses that grow up round the raising and training of a soldier and military services generally, India being relieved, as far as possible, of charges of that kind. They recommended that we should earmark a charge per man as an average claim to be made against India, including a proper proportion of the expense of educating the men and fully training them, and that charge swept away practically a very large amount of the expense which accumulated round a depôt, which I have no doubt Sir Donald Stewart will quite understand. The system which is now adopted for charging India follows out exactly that principle, so that we are able to charge this reduced amount per man, because we absorb all the waste into the home battalion. I think the charge is too low as it stands, but, accepting it, India is relieved of what used to be a very heavy charge against her under the separate depôt system.

12,631. (*Chairman.*) When that remission was made in 1878, was not that at a time when India was very much pressed on account of the Afghan war, and had not that a good deal to do with the rather unusual leniency on the part of the Treasury?—There must have been some very extraordinary reason for it.

12,632. I think that, at all events, one reason for making it was that it was not a moment to press India?—It was.

12,633. I see that the average of those nine years 1861 to 1869 was 630,000*l.*, and in the eight years following it came to about 450,000*l.* That was a practical reduction of 181,000*l.* a year. First of all you account for that by the remission of 400,000*l.*, but the balance, I suppose, represents furlough pay and colonels' pay?—Colonels' pay; quite so.

12,634. But that would not leave a very large sum for those two services, would it?—No, it would not, seeing what furlough pay had gone up to, as I have described.

12,635. I have before me a return of ten years, and there I see the furlough allowances ranged from 317 000*l.* to a maximum of 349,000*l.* during those years; but the lowest sum during the whole time was in 1885–6, and then it was 106,000*l.*?—Are those military furlough allowances?

12,636. Yes, part of the military expenditure of the Government of India?—That must include the furlough allowances for the officers of the Indian army as well.

12,637–8. The furlough charges you speak of as calculated by Colonel Tulloch's Committee, at 60,000*l.* or 70,000*l.* a year, which you found rose to 150,000*l.*, are not treated separately?—No.

12,639. That charge was transferred from the capitation rate direct to the Indian Government?—Quite so. Of course, we saw at once, when this furlough expenditure went up at this rate, that under the 10*l.* arrangement we had been subjected to an unexpected charge; and that element alone meant a huge excess above the 10*l.* expenditure.

12,640. At what date was Mr. Bouverie's Committee appointed? I think Mr. Bouverie's Committee was the next step, or rather I ought to put it in this way: a Departmental Committee was appointed just after the House of Commons Committee in 1874 reported. They added a person of political weight to the Committee as Chairman?—Yes, they did.

12,641. Therefore, I suppose, that would be about 1875?—1875, yes.

12,642. Are there any points you would like to call our attention to in the acts of that Committee, separating that Committee from the subsequent one, on which you, I think, served, with Lord Northbrook as Chairman?—I served on Mr. Bouverie's Committee as well, and they worked out this system of charging India consequent on the adoption of the short service system, and the formation of two battalions to all regiments. They saw plainly that they could fairly make a charge against India for drafts sent out, calculated upon the actual expense of the man for a certain period, absorbing all the waste from convalescent invalids and men used for instructional purposes in the home battalion; and they made that the basis of their charge. They calculated a certain cost for each of the depôts that were used as training establishments for the young soldier, and then calculated the cost of the soldier for the periods that were fixed as the training periods; at that time six

Sir R. Knox, K.C.B.

15 July 1896.

months was set down for an infantry soldier, nine months, I think, for the mounted portion of the army. The cost of the depôt was arranged in this way: each regimental district included the staff of the depôt, plus the militia non-commissioned officers, adjutants, and so on, and they were all formed into one body, and the cost of that body so constituted was calculated out. It came to something like 9,600*l.* odd per annum for each depôt, and the Committee decided that it would be fair to charge India one-fifth of the cost of that depôt, as representing the work done by it for the battalion that was in India. It roughly divided the work into five portions which were not equally large. The largest part of the work was done for the Indian battalion because it consisted of the largest number of men; but one-fifth was allotted to it, one-fifth to the home battalion, and one-fifth to each of the militia battalions attached to the depôt, and one-fifth was regarded as attributable to the portion employed in looking after the reserves, the staff of auxiliary forces, and so on. It will be seen, therefore, that it was held that there were five functions discharged, and that that discharged for India was the heaviest, but one-fifth only of the depôt charges was claimed from the Indian Government. Strangely enough that compares —I drew attention before to the fact when I was cross-examining Sir Edwin Collen—very curiously with the calculated cost of the staff of the depôt in existence in the pre-mutiny time, which included only the officers and non-commissioned officers down to the corporals. That worked out, I think, to a cost of 1,922*l.* That is stated in one of these reports as the cost of the old depôt charged against India in former times; and this one-fifth of the present depôt charge, amounts to under 2,000*l.*, notwithstanding that it includes various expenses for arms and accoutrements and clothing and increased pay, which were none of them in existence in the earlier period. That one-fifth was the basis of the charge, and that accounts for a very heavy portion of the claim which is made against India.

12,643. What did the 1,922*l.* represent?—1,922*l.* was calculated to represent the cost of the old depôt in former times.

12,644. And the corresponding cost now is about 2,000*l.*?—Well, it is under 2.000*l.*; but that amount includes charges which are not included in the 1,922*l.*

12,645. The whole cost of the depôt was not represented by the 1,922*l.*?—It was the cost of what we call the staff of the depôt, that is to say, the captain, and two lieutenants, the sergeants, and the five corporals, I think it is.

12,646. Mr. Bouverie's Committee had before it the note by Mr. Seccombe and General Jameson on the third report of Mr. Seccombe's Committee, and in that note Mr. Seccombe and General Jameson say, "We "feel it to be our duty again to refer to the fact, stated "in the first report of the Committee, that the East "India Company were able to send efficient artillery "and infantry recruits to India at a cost of 26*l.* 7*s.* 5*d.* "per man." The 26*l.* 7*s.* 5*d.* is the figure I called your attention to as against your 30*l.*?—Yes, quite so.

12,647. And you gave a reason, and a very intelligible reason, for preferring your 30*l.*; but they were two figures based on the same calculation?—They were for different periods.

12,648–50. And that figure represented the cost of training instead of 136*l.* 13*s.* 11*d.* for cavalry and 63*l.* 8*s.* 5*d.* for infantry recruits, as now calculated?—Those were the figures that were worked out by Mr. Seccombe's Committee. Mr. Seccombe's Committee was appointed in 1869, I think it was, and they first of all worked out the prices which they apparently recommended. These were 45*l.* for a cavalry man, 27*l.* for infantry, 47*l.* for horse artillery, and 40*l.* for garrison and field artillery; but then those figures were not accepted. I think that these must be regarded as the figures which are referred to by the India Office as having been recommended by Mr. Seccombe's Committee; but they were not accepted. That Committee had not included in them enough for these depôt charges, the cost of officers and non-commissioned officers, and training the men. They were therefore requested to make another calculation which worked out at a much higher rate; for instance, for a cavalry soldier, 108*l.*, and they added subsequently a charge for losses by desertion. "The "Committee are of opinion that, if to the expense of "each recruit, as already shown, a sum equal to one-"third thereof be added, adequate provision would be "made for the charge consequent on deaths, desertions, "or inability of recruits to proceed to India. The "charge for each cavalry recruit would thus be "136*l.* 13*s.* 11*d.*, and for each infantry recruit 63*l.* 8*s.* 5*d.*" That was the second recommendation of the Committee; but practically the recommendations of this Committee never came into operation. They were superseded by the Committee, over which Mr. Bouverie presided, and the Bouverie rates have practically formed the basis, *mutatis mutandis*, ever since then.

12,651–2. How would you compare that charge of 63*l.* 8*s.* 5*d.* for infantry recruits, recommended by the Seccombe Committee, with the 21*l.* 5*s.* 2*d.* rate, which you adopted in the Northbrook Report?—Well, one extra item is this charge of one-third that was added on to cover desertions, deaths, inability of recruits to proceed to India. Recruits who are unable to proceed to India now are all absorbed in the Home battalion, and the expense is economised. We do make a charge now for desertions, but it is a very much smaller charge than that estimated in the former calculation, as I have stated before in discussion.

12,653. The charge for men who deserted, died, or were discharged with less than one year's service, is only 8,650*l.*?—Altogether.

12,654. That is a very different thing from a third of the whole cost of training?—Yes, that is a very different thing from a third, but those calculations 136*l.* 13*s.* 11*d.* and 63*l.* 8*s.* 5*d.* were never really in operation; they were the calculated charges as made out by this Committee, after the earlier sums that they calculated were rejected. For instance, the recruiting, and depôt battalion staff charges for the infantry were put down as 3*l.* 9*s.* in the earlier calculations which worked out to 27*l.* 7*s.* 11*d.* In the subsequent calculation the depôt charges worked out to 17*l.* 2*s.* for each infantry recruit; while the cavalry recruit was put down at 55*l.* 15*s.* 2*d.*, and the cavalry depôt charge was in the subsequent calculation put down as 44*l.* 4*s.* 8*d.*

12,655. But you see the Indian Government have relied upon that calculation of 63*l.* 8*s* 5*d.* for the soldier, in proof, I think, of the extravagance of the Imperial charge; but, if I understand you, at the present moment we need not go into that question, because the War Office do not intend to rely upon those figures?—Quite so. Similarly the Indian Government make it a great point in their arguments that 205*l.* was the cost per soldier in the earlier period while the 10*l.* capitation was in existence; but that figure is erroneous. In calculating the charge, the proper average was not taken, and that sum, instead of being 205*l.*, ought to be about 170*l.*; but a claim at that rate was never made against India. It was the calculated cost of the actual expense of these depôts to the Home Government during the time that the 10*l.* arrangement was in existence.

12,656. Therefore, as far as this note of Mr. Seccombe and General Jameson is concerned, inasmuch as the War Office did not adopt or ever act upon the very large cost per man which had been calculated by Mr. Seccombe's Committee, we need not take it into consideration?—I think not.

12,657. Then may we say that this charge of 26*l.* 7*s.* 5*d.*, which you call 30*l.*, ought really to be measured with the charge which you laid down in the Northbrook Committee?—Yes.

12,658. I do not know whether you have any remark to offer upon the report of the Parliamentary Committee of 1874 on Indian Finance? I think that report was rather of an indirect kind, was it not? in this sense, that it said that, whilst such changes were taking place in organisation, they could hardly make distinct recommendations, and they recommended that the Departmental Committee, then existing, should continue its labours, but under the presidency of a man of political standing?—Yes; that was the understanding come to, I believe.

12,659. The Committee only accompanied their report with the suggestion that, "Although the interests of "India must be subordinate, like those of any other "portion of the Empire, to the common interests of the "Empire as a whole, and that although the best infor-"mation upon almost every subject connected with "India may be generally obtained in this country, yet "that even the appearance of neglect may be mis-"understood and magnified by the natives of India, "some of whom take the most intense interest in the "minutest details of the policy adopted by this country

" towards its Indian possessions, and attach, perhaps, " exaggerated importance to points which may pass " unobserved by those who have to perform the arduous " task of governing a vast and varied empire?"—Yes.

12,660. They recommended the continuance of the inquiry, and expressed no opinion themselves upon the subject at issue, but gave a general caution that due consideration should be given to Indian interests in arriving at conclusions?—Yes, but it was following that that Mr. Bouverie's Committee sat; and then, when their recommendations were found not acceptable, this settlement was come to, under which the Treasury wiped off a certain amount; and then it was that Lord Northbrook's Commission was appointed to consider the charges.

12,661. Would you tell us the circumstances which led to the cessation of Mr. Bouverie's Committee and the recreation of it under Lord Northbrook?—They made their recommendations and the India Office adopted the usual course, and said it was too much; they did not like the total amount. I think they had failed to observe that the army consisted of 63,000 men at that time, and that that necessarily involved very large expenditure to keep it going; but then, after it was decided that a certain amount should be written off, there was a discussion between the India Office, the War Office, and the Treasury, and there seemed to be an inclination on the part of the Treasury to agree to a 6*l.* rate, I think, or a 6*l.* 10*s.* rate; and I am afraid I was the individual who disturbed that arrangement, or prevented its being come to, because I pointed out that it was recommended really upon a wrong understanding. It was based upon the expense of the recent years, and it assumed that the future would be as the past; whereas the fact was that, under the schemes which had been adopted for the organisation of the army, and the introduction of short service, the cost of raising the number of men that would be required would go up not per man, but in consequence of the increase of the increased number of men required; just as you have stated that in the old life service time, the recruits required were only 1,000 men for the Indian army, whereas, when you adopted a short service a very large increase in the number followed. The short service system at that time had not come fully into operation. The old and the new systems were running side by side, and we had not felt the full brunt of the demands of the new system I, therefore, pointed out, " If you " wish to follow the past and adopt that as your guide " to what will occur in future years, 6*l.* is all right; but, " if you are to look forward to what the future is cer- " tain to be, your 6*l.* is all wrong, and you ought to " make a higher charge." I pointed that out, and then it was decided that Lord Northbrook's Commission should be appointed.

12,662. The 6*l.* 10*s.* would have increased the loss with the increase in the force?—It would have varied with the force; but this was an increase of charge which arose from the development of the short service system. A larger number of men had to be recruited and maintained, and therefore a larger amount per man on the men serving in India would necessarily have to be charged, if the cost were to be covered.

12,663. If the old system had remained unchanged, 6*l.* 10*s.* might have done?—Certainly.

12,664. But under the new system it would have been very disadvantageous to the Imperial Government?—Quite so.

12,665. The result of Lord Northbrook's Committee, which sat for some time, was apparently to come to a conclusion that 7*l.* 10*s.* per man was a fair sum. Will you explain the method of calculation on which that 7*l.* 10*s.* rate is based?—We practically adopted the basis that Mr. Bouverie had recommended, *mutatis mutandis*.

12,666. Would you kindly repeat again what the basis adopted by Mr. Bouverie's Committee was?—There was a charge for the training establishment, what you would call the cost of the depôts, and then a price per man for each man who was shipped to India. The cost of the educational establishments was worked out very much in the same way, and, practically, all the details very much as they had been worked out by Mr. Bouverie's Committee; but then there came the question of rebate, and there I think that Lord Northbrook's Commission was excessively in favour of India; a larger rebate is given than the circumstances of the case warrant.

12,667. Up to that time there had been no rebate allowed for, had there?—No, practically no rebate.

12,668. Perhaps you might tell us what the rebate is?—It is based upon the assumption that the whole training that the soldier receives, taking the case of an infantry soldier, is this six months which the Indian Government are asked to pay for; and that, inasmuch as the man is enlisted for 12 years and gives six or seven years of that service in India, and, when he comes back, four years' service in the Reserve, that four years being one-third of the 12 years for which he has enlisted, therefore India should have a refund of one-third of the cost that has been charged against her for the six months' pay, &c. Well, inasmuch as we keep all these men in this country for an average period, as I have said, of something like 18 months, and pay the whole of the excess beyond the six months out of the Imperial pocket—that is to say, we pay for a year's training of the man and India pays for six months' training of the man—a rebate of one-third is too large a sum to give to the Indian Government; and in working out the details of that rebate I remember the representatives of the Indian Government were very *exigeant*, and I think that Lord Northbrook, who was very anxious to make some concessions to the Indian Government, accepted their view. It had happened that in times of pressure, especially under the separate depôt system which existed for artillery at that time in order to comply with the condition that the man should go out to India not earlier than his 20th year, it was found necessary to send out some men—not very large numbers, but some men—who were a little short of the full period of nine months, or six months, as the case might be. The instances were more those of the nine months' men than of the six months' men, but even in the latter case we sent some men who had not done their six months' training. A rebate was asked for on that account, because we had not spent our calculated sum upon the men. But, on the other hand, when we sent out a man with very much longer training, because we could not send the man exactly at the time when he had completed his six or nine months, India claimed a deduction on account of the fact that he had given service to England before he went abroad; and various deductions were made, in accordance with Lord Northbrook's view, from the Indian claim on that account. The War Office representative thought that the rebate was too great, seeing that we really paid the larger portion of the training expenses; and further, whenever the man varied a little bit short, or a little bit in excess, of the exact period, the Indian representatives claimed the rebate and got it. It appears to me that under that head India is exceptionally favoured; but, with the exception of that, I think that the basis that Lord Northbrook agreed upon, or recommended, is a very satisfactory one Of course, the question has been raised as to the value of these troops here in this country before they go to India. All the military authorities are agreed that a mere recruit, before he has gone through the necessary training in physical exercises, musketry, and gunnery, when he is an artillery-man, and riding, when he is a mounted man, is in no sense a soldier adding to the strength of the country. He is raised, as we know, and is in existence, simply because India wants him; and we know that they will not take him till he is 20 years of age, and in that way a very heavy charge is borne by the Home Government. I am, therefore, convinced that the charges which have been calculated out in those papers are the very minimum that can possibly be set down as the cost of recruiting and training these men. India makes the condition, it must be borne in mind, that these men shall go out fully trained, and that there shall be no man in India, who is not fit to take his place in the ranks. I know that, from time to time, some few men have gone out, of whom complaints have been made; but the military authorities, I am certain, have been working entirely in the direction of satisfying the demands of India, and as faults have been pointed out, every endeavour has been made to correct those faults, in order to secure for India that which India has asked for; and I do not believe there is anything which occupies the minds of the military authorities, and the civil authorities also, at the War Office more than their efforts to supply India with the best men that can be got, and at the cheapest possible price.

12,669. (*Sir Donald Stewart.*) But, beyond that, do you mean to maintain that you can get fully trained cavalry and artillery men in nine months?—I say not, and that is why I say the charge is the very minimum that can

Sir R. Knox, K.C.B.

15 July 1896.

possibly be set down. I think nine months, certainly according to recent experience, is far too low for any of the mounted services, considering what they have to learn; and I believe that there are very few men now who go out in these mounted services, who have not had something like 18 months to two years' service in this country before they go there. Schemes are under consideration now at the War Office at this very time owing to a failure at the cavalry depôt to produce the men so fully trained as they ought to be. I daresay it is known to the Commission that the late Inspector-General of Cavalry in India is now our Inspector-General here at home. His endeavours have been mainly directed to this difficulty; and plans are now under consideration which would make it an impossiblity that there should be any recurrence of sending out a man who has even had as little as nine months' training. If these changes are brought about, it may be that they would necessitate an alteration of the system, and, from the India Office point of view, I should not be at all surprised if they ask for the reduction of the cost; but, inasmuch as the organisation is made (if it is adopted) entirely in the interests of India, and with a view to keep the men here for a longer time and to more thoroughly complete their training, I do not think that the War Office would be at all inclined to make any concession under that head.

12,670. (*Chairman.*) You would say that the interests of India have been safeguarded in the introduction of reforms, having regard to depôt charges, deferred pay, and so on?—Yes, I do, but it is only in considering the whole subject together; the main set off as against all these heavier charges for sending out a larger number of men to India, both under the head of the recruiting charges and under the head of transport and so forth, would be under the head of pensions. The chief result of the adoption of the short service instead of the long service system is to reduce the charge for pensions. I cannot, however, say that, so far as the pensions of the men are concerned, the expense will fall below what India is now paying on this account, because India at present is paying a very small amount, since the capitalisation scheme was put an end to. They are only paying the comparatively small annuity created every year for the pension charge which is growing up very slowly; but the ultimate charge will not amount to anything like the sum which would have accrued, if the old system of extended service and pensions had gone on.

12,671. I am going to ask you some questions about that, when we come to the non-effective charge, which I think will bring out some interesting results?—But that is the main result. It was obvious from the very commencement, at least to all those who gave any thought to the thing, that the short service system must give rise to an increased charge for raising and training men; but, on the other hand, in due time the cost for pensions would fall very considerably. We are at present paying a very high charge for pensions of soldiers on the Army Estimates—something like 8*l.* 10*s.* a man, I think it amounts to. We expect in the future that it will fall down to something like 3*l.* or 4*l.* a man.

12,672. (*Sir Edward Hamilton.*) But you do not take into account, I suppose, the fact that India borrowed the money which she paid as capitalisation, and that she has still got to meet the charge in respect of the capital sum that she raised?—Oh, yes. She is actually paying out of pocket now a smaller sum, because she capitalised on very favourable terms the pensions created at that time.

12,673. But in addition to what she is actually paying now in the shape of the annuity, she has actually to pay the charge in respect of the money which she borrowed?—Quite so.

12,673*a*. (*Chairman.*) You mentioned to us the conditions made by the Indian Government in regard to the age and training of recruits. Do I understand that first of all, in accordance with the wish of the House of Commons, 20 years is the age at which you are required to send them out, and that you are required to give them six months' training?—Well, we say six months for the infantry; that is the basis of this calculation.

12,674. But that is required by India, is it not?—No. I think their view with regard to that was that six months was the basis upon which our claim was made out, and therefore they insisted upon the man having that amount of training. They would take a man if he were 20 years of age with the six months' training for an infantry soldier, and they will take a man of 20 with nine months' training as a cavalry soldier. Whether this training is sufficient to enable the men to take their position in the ranks I do not know—that is of course a military question; but I do not think that the Indian Government have ever proposed that the recruits should have a longer training—that is to say, not directly; but practically they do so by saying a man should not go out until he is 20 years of age. Since, therefore, the vast mass of our men are recruited at 18, by insisting upon the 20 years of age they very wisely avoid the necessity of insisting on a particular period of training, because they know they get the vast majority of their men trained for a much longer time. But then they ingeniously ask for a rebate because he has given so much service, as they call it, after the six months is completed to the Home Government.

12,675-6. Now would you turn to the calculations on which your 7*l.* 10*s.* rate is based. If you look at them, you will see that the charge, before the rebates come in, for recruits embarked, amounting to 12,000 men, was 677,074*l.* Farther, if we analyse the figures that make up the whole of the charge, and deduct five or six items for the maintenance of officers and educational establishments, which amount to about 48,000*l.*, the result is a charge of 629,000*l.*, representing the cost of the private soldier?—Yes.

12,677. Dividing that by 12,000, the number embarked, it leaves you with a figure of 52*l.* per man?—Quite so.

12,678. But from that you must take off the rebate?—The rebate, quite so.

12,679. Which amounts, being 156,000*l.*, to 13*l.* per man?—Yes.

12,680. Taking that 13*l.* from the 52*l.*, it leaves you with 39*l.*; therefore, does not that 39*l.* represent your net charge upon India for recruiting?—That is so.

12,681. And is not that the figure therefore which we may put against the Warley recruit which the India Office themselves put at 26*l.* odd, and which you put at 30*l.*?—Yes.

12,682. But you have pointed out that that 30*l.* does not include barrack accommodation, clothes, accoutrements, and arms?—Barrack accommodation, clothes, accoutrements, and arms, yes.

12,683. You have told us that barrack accommodation, according to your estimate, would come to over 7*l.*?—Over 7*l.* per annum per man.

12,684–5. And, therefore, the charge which you are now making to India, it appears to me, if you were to actually put item by item, is less than the charge of the recruit is at Warley?—Quite so; it is so. I am convinced that that is the case.

12,686. It is extremely important, inasmuch as so much stress has been laid on the expenses at Warley, that the War Office argument should be brought out very clearly on that point?—But the present charges include the whole of the mounted force. There was not a horse at Warley; the expense increases very much when men come to be mounted; horses cannot be put in charge of recruits that joined the day before. There must be a staff of men to look after those horses; the horses must be bought and fed, and stabled, and the constant maintenance of horses, able to train men in horse artillery, field artillery, and cavalry duties, involves a very great amount of work.

12,687. (*Sir James Peile.*) Was there no cavalry at Warley at all?—No, except in the last Indian Mutiny years, when they set to work to raise three cavalry regiments.

12,688. (*Sir Donald Stewart.*) The fact of the matter is that we are comparing two totally different things?—Oh, quite.

12,689. (*Chairman.*) Two different systems?—No, two different things altogether.

12,690. (*Chairman.*) What we want to come to is this: In the Warley days India got so many recruits, costing so much. On the other hand, now you have so many more recruits costing so much; surely out of those two figures you ought to be able to compare approximately the comparative dearness or cheapness of the two systems?—You can compare the charges.

(*Sir Donald Stewart.* As regards charge?

(*Chairman.*) As regards charge.

(*Sir Donald Stewart.*) But the article turned out is a totally different thing—that is my point.

(*Chairman.*) That I quite understand; but I want first of all to get the financial charge, and next the view of the War Office as to the article turned out; I think we have got both of them now.

(*Sir Donald Stewart.*) Oh, quite.

12,691-2. (*Sir Edward Hamilton.*) This 521,000*l.* in this middle page, page 3, of the paper before you, after the reduction of the rebate, is not the sum actually paid; as I understand, the sum actually paid was 548,000*l.* You see in the middle of page 2, last paragraph that the amount paid was 548,000*l.* I do not quite understand, therefore. Is that 521,000*l.* the sum which the War Office calculated ought to be paid, whether rightly or wrongly, and 548,000*l.* the actual sum paid? There is a considerable difference?—Between the 548,000*l.* and the 521,000*l.*?

(*Chairman.*) Does not that deal with the number?—Inasmuch as you have got 7*l.* 10*s.* per man, that sum varies—sometimes a little more, sometimes a little less according to the establishment.

(*Sir Edward Hamilton.*) But does not that rather lead to show that the capitation grant of 7*l.* 10*s.* does not work out fairly?

(*Sir James Peile.*) But observe that the figure 548,000*l.* is for 1895-6, and the figure 521,000*l.* for 1889-90?—That is for 1889-90. Our principle under the Lord Northbrook arrangement was to build this up every year, and we put these claims upon the ascertained number of recruits that had gone out. There was no 7*l.* 10*s.* in existence in the earlier times of Lord Northbrook. We had this claim worked out, went through it deliberately, item by item, with the figures accepted by the India Office as to the number of recruits sent out, the numbers that came home, the periods of service they all gave, and then this cost for the depôts and for the men were all revised according to the rates and the charges that were in existence in each year, and therefore they varied from year to year. That is what Lord Northbrook did, until ultimately the Indian Government said, "Well, we have "gone on now with this system for some time, and we "look as if we had come to a constant; the charge for "the last three years has been within some 5,000*l.* or "10,000*l.*, such and such a sum, and we think that this "ought to give us what we have always desired very "much, viz., a capitation rate." I myself never could quite see the reason for a capitation rate.

12,693. (*Sir Edward Hamilton.*) The Indian Government preferred a capitation rate, a given sum per head, to the sum worked out according to this elaborate calculation?—Of course, it is easier arrived at; but the 7*l.* 10*s.* is based upon this calculation, and it was in that sense that I admit it. This is a calculation which, if you like, I will regard as a fixed quantity. If you want a capitation rate, we divide that fixed quantity by the establishment of the army on the 1st April of each particular year, and that will give you a rate. But what I want is not the 7*l.* 10*s.* a head, but this money.

12,694. Quite so, but according to this figure it looks as if you got more?—But these sums are for different years; some years they might be less, some years they might be more.

12,695. (*Chairman.*) That depends. It is a rough rule at the best, the 7*l.* 10*s.* per man on the establishment; and that will vary; in some years you have a few more, in some years you have a few less?—What I wanted to point out was that it varied through Lord Northbrook's time; we took the actuals. We found out what number of men embarked in each year, and what number of men came home in each year, and prices were looked up and rates modified. We calculated the thing out, and during the sitting of Lord Northbrook's Commission, before the 7*l.* 10*s.* was recommended, all these claims varied yearly. Sir Edward Hamilton is comparing the figures of two different years.

12,696. But you are not going on with these calculations?—No longer. Then India said, "Let us have "something which will avoid these calculations; let "us have an approximate capitation grant."

12,697. (*Sir Edward Hamilton.*) What I wanted to get at was, how the 7*l.* 10*s.* was arrived at. Was it by dividing the sum of 521,000*l.* by the number of men on the Indian establishment, and that worked out to about 7*l.* 10*s.*?—We tried two or three sums upon the figures that had been actually ascertained for the last few years, and Lord Northbrook admitted that the charge would go on increasing a little further, and, when we calculated it, it worked out at 7*l.* 9*s.* or 7*l.* 8*s.*, or something of that kind, and I proposed 7*l.* 10*s.*, the other members of the Commission agreed, and we recommended the 7*l.* 10*s.*, and that has worked out at something like 540,000*l.* a year.

12,698. You do not test it each year?—No, we do not go into these calculations now. Since the 7*l.* 10*s.* has been accepted we have not tested it in any way with these calculations or taken account of any changes that have occurred in the direction of increase or decrease.

12,699. That may be more or less than you are charging to India?—Certainly, it may be, but that is the whole object of coming to a settlement of that kind—that both Governments accept those chances for any period which you may settle. We have not agreed to any period; this rate has been accepted year by year by the India Office and the War Office.

12,700. (*Chairman.*) The objection that Sir Edward Hamilton raises is this, that inasmuch as this is not an accurate calculation made every year upon the precise charge of the recruiting system and the educational system, but inasmuch as there is substituted for it a capitation grant based upon the actual number of men with the colours, there will be a variation in each year between the proper and the actual charges; and in that particular year, for instance, it looks as if the War Office was getting the better of the calculation by 24,000*l.*?—Yes, in that particular year, but the 7*l.* 10*s.* did not apply to that year; this was a year in which we got the actual—the 548,000*l.*

12,701. (*Sir Edward Hamilton.*) No, not the 548,000*l.*, but the 7*l.* 10*s.* on the Indian establishment of 73,125?—Yes, but that has not been calculated out; we have not tested it in any way.

12,702. (*Chairman.*) We must take it that in this instance the War Office have got rather the better of it by means of this rough and ready rule in which the Indian Government concurred?—Yes, but we do not admit that this calculation here is of universal application.

12,703. Is of universal application?—No, but it was admitted by Lord Northbrook in agreeing to this 7*l.* 10*s.* that the charges would go on increasing a little.

(*Sir Edward Hamilton.*) These figures are worked out for 1889-90, as well as 1895-6, because it depends upon the number embarked.

12,704. (*Sir James Peile.*) The number 72,387 was the strength in 1889-90?—There is no doubt, if you stereotype an arrangement to last a certain number of years, the two persons who come to that bargain take the chances one with the other.

12,705. (*Chairman.*) When is it to be re-considered? It has not been settled at all; it has only been accepted year by year, this 7*l.* 10*s.*

12,706. Do you look at all to this Commission to make any proposal in regard to this arrangement?—I think it will be well to come to a settlement as to what period it should extend over.

12,707. Do you consider, Sir James, that the India Office would like to have an opinion upon that point?—I understand that the 7*l.* 10*s.* is accepted.

(*Sir Donald Stewart.*) The Government of India thinks that this Commission will certainly make some recommendation on the subject; it is for that object India wished the Commission to assemble.

(*Sir Edward Hamilton.*) Would not the terms of the reference to the Commission permit of that coming in?

12,708. (*Chairman.*) I think so. I wish to inquire from the two parties concerned, the War Office and the India Office, whether they are agreed in wishing an expression of opinion upon this point?—I think so.

12,709. I presumed you were waiting for that opinion?—Yes, we were. At present we write to the Treasury and the India Office, asking that the 7*l.* 10*s.* should go on, stating that no change has occurred sufficient to alter the arrangement.

12,710. (*Chairman.*) At the commencement of this arrangement it was practically agreed that it should go on for a certain term without reconsideration, and during that time, of course, each side would take its chance. What has been the system of supplying the cavalry and artillery?—The system that has obtained for the longest time was that of having a separate depôt for the horse artillery and for the field artillery; and I think also for the garrison artillery. Those were separate depôts whose whole work was directed to

Sir R. Knox, K.C.B.

15 July 1896.

training the recruits that were sent to India; they were Indian depôts practically; on the old system, although men might be transferred from one portion of the artillery to another portion of it under the conditions of their enlistment, yet the work was done within the restricted area of the depôt. I am convinced from experience that that is an extravagant system, but that system of a separate and special depôt was the system which obtained both for the artillery and for the cavalry as well, which has been supported by many Indian authorities as an economical system. From my experience I believe it is the most costly system that could possibly be established, because it affords no opportunity for absorbing what I have described as the waste. In more recent years a new system has been established: although certain depôts are maintained, they are not maintained specially for Indian purposes, but the batteries have been strengthened and increased both in numbers of men and non-commissioned officers and officers, and these batteries are looked to now to supply the drafts to India, and, in order to secure the despatch of completely and thoroughly trained men, and also to save waste of men the adoption of a similar system in the cavalry is under consideration. This ought to redound very much to the advantage of India, but on the surface it would look as if it were a cheaper system, because the special depôts disappear; but the fact is that the whole establishment of these special depôts is distributed over the force of artillery, and would be so in the cavalry. Thus the same expense is incurred in that form instead of the old special depôt form; but the result will be the out-turn of more completely trained men; the men will be trained with the batteries or with the regiments.

12,711. (*Sir Donald Stewart.*) Will that tend to economy as well?—No, we shall not save any money over it; it will be no reduction of expense.

12,712. (*Chairman.*) It is to be maintained for the present?—No. It will be gradually introduced; it is almost completely introduced in the artillery; but in the cavalry it is only under consideration.

12,713. (*Chairman.*) Was any portion of the cost of the abolition of purchase charged to India?—No, none whatever. Special arrangements were made to avoid throwing any charge whatever upon the Indian Government, so much so that, even when the pension system was introduced subsequently to the abolition of purchase and a purchase officer was granted the new pension, before making any charge on that account against India the value of the officer's purchased commission was deducted, the balance only being divided between the Indian and the Home Governments; but, so far as any payment has ever been made to an officer retiring and receiving compensation under the purchase system, no charge whatever has been made against India. In fact, so far from that, when the bonuses of certain Indian corps were interfered with in consequence of the passing of the Act prohibiting any payments from their brother officers to an officer retiring, the Imperial Government took over the somewhat bankrupt funds which were in existence in these corps, and have compensated all the officers who have retired under the old Indian system out of the Imperial revenues.

12,714–5. Without charging India for the deficiency of those pensions?—Without charging India one halfpenny.

12,716. (*Sir Donald Stewart.*) That only referred to the officers of the artillery and engineers?—Of the artillery and engineers, yes.

12,717. But before the abolition of purchase, had you any pension system in the British army?—Yes; for the artillery and for the engineers and to a limited extent, for the rest of the army. We had what was called the retired full pay fund for the cavalry and infantry, and also the half-pay system which was a considerable charge, under the old régime; but there were not pensions of the same kind as exist now; the retired full pay fund was a limited amount distributable amongst those officers who had completed 30 years' service, which enabled an officer to retire upon what was called full pay—it was his full regimental pay. If an officer wished to retire, he generally had to wait some little time after he had completed his 30 years, before there was a vacancy to admit of his being pensioned upon those terms; those regulations were in existence, but, of course, there was nothing similar to the present pension system.

12,718. Did the Government of India contribute at all towards the retired pay of officers who had served in India?—Yes.

12,719. Officers of infantry and cavalry?—Yes, they had contributed since the year 1824, I think. Up to the year 1824 no payment was made by the Indian Government on account of the non-effective portion of the army expenditure, either for officers or men; but at that time the Government made a claim. The relative financial position of the two countries was under special consideration I think about that time, and a claim was then made against India, and an Act was passed that for such establishment as they had there should be a payment made on account of non-effective charges of 60,000*l.* a year. I believe that no data exist—none that I have been able to trace—upon which that 60,000*l.* a year was based; but the force at that time in India was something like 20,000, I think, and it was agreed that 60,000*l.* should be paid. That went on until the Indian Mutiny time, and then at the same time that the 10*l.* a year was fixed as the capitation rate to recoup the Home Government for the depôt charges, 3*l.* 10*s.* was adopted as a payment to be made on account of all non-effective charges, both for officers and men.

12,720. (*Chairman.*) As against 3*l.* on the 20,000 men employed before the Mutiny?—Against about 3*l.* on the 20,000 men.

12,721. (*Sir Donald Stewart.*) Was any charge made on account of purchase officers for the service they rendered to India?—Only such as was covered by this 3*l.* 10*s.*, and I do not think that, although there were a great number of calculations set down in those papers of Sir Alexander Tulloch's Committee dealing with non effective charges, there is anything in them which can be recognised as a basis for the 3*l.* 10*s.*; but this retired full pay which was given to purchase officers, and other charges of that kind—for instance, half pay—had been under consideration when the 3*l.* 10*s.* was fixed; and that amount was intended to cover some portion of that expenditure.

12,722. How could that affect the charge on account of purchase officers. A purchase officer, we will say, served in India for 15 or 20 years. It did not matter to the British Government whether he was there, or whether he was in Africa. The sum that he got for his commission was precisely the same?—Where an officer simply entered the army under the purchase system and bought his commissions, and then went out of the army by selling his commission, there was no charge whatever against Government, and it was not on that account that any charge was ever made; but there were, as I have stated, certain other charges, half-pay charges, retired full pay charges—which admitted, as I have stated, of officers retiring after 30 years service—and similar funds existing for the artillery and engineers; and it was on that account, so far as the officers were concerned, that the 3*l.* 10*s.* was charged.

12,723. But the abolition of purchase has practically imposed a very considerable charge upon the revenues of India, for pensions for instance?—And also on the Home Government.

12,724. But on the Government of India?—Yes, also on the Government of India; that is so. The pensions created under the new system are assessed in a precisely similar way to the pensions that are granted to the men; they are divided in proportion to the services which a man gives in the two countries.

12,725. (*Chairman.*) That is to say, no charge is made on account of the abolition of purchase; but, purchase having been abolished, India pays her share of the pensions which are granted to the new officers, who come in under the new system?—Yes, quite so. I should say that in assessing these charges against India, the service which is given in this country during the period of training on the part of the soldier, or of the officer, although they are in existence simply for Indian purposes, and with the view to being sent to India, is all charged as British service, in the case of his being ultimately pensioned.

12,726. When was deferred pay introduced, and for what reason was it granted?—It was introduced by Lord Cranbrook (then Mr. Hardy), and it was something like four or five years after the introduction of short service, and when certain modifications were being made. It was found that increases of establishment were necessary and that the home requirements in consequence of the large demand made for men to go to India, and the development practically of the short service system, demanded more men; and in order to get this larger number of men, it was decided that it was necessary to give a further increase of pay. An increase of pay had been given in the previous decade,

but there seemed to be some slight difficulty, at all events, in raising the men, and it was decided that some further attraction should be given to the army—but I will read here an extract from Mr. Hardy's speech which puts very briefly what he contemplated: "The first 18 regiments on the roster for "foreign service should be raised to the strength of "820 men each. At present we had only four regi- "ments of that strength. It had been proposed then "also that the next 18 regiments should consist of 700 "men; but, in fact, we had no regiment at all of that "strength, a few of them numbering 600, and the rest "520. He was not going so far as was originally pro- "jected by his noble friend; but he was taking only "those first 18 regiments, because, with the Guards, we "should have a very respectable Army Corps with full "equipment and ready for foreign service. Then came "the question, how were we to get the men? There "were two inducements that could be held out to men "to enlist in the Army. The first was that which had "been pressed upon his attention ever since he had "held office by the hon. and gallant member for "Galway, and which, had it not been for circumstances, "over which he had no control, he would have held "out last year namely, that of putting the non-com- "missioned officers in a better position, so as to induce "them to remain in the force, and so as to offer greater "prizes to well-connected men in the ranks. The second "inducement was to increase the pay of the men them- "selves. Nothing had done the Army greater injury than "one fact to which he would direct attention, namely, "that those who might have been very well off, or fairly "off, and who having squandered what they had were re- "duced to beggary, were pointed out as men neglected by "their country, and held out to young men as having "been left in a miserable condition after serving in the "Army. There were men who left the army who had "had but a small pay, and although he would not go so "far as to say that they could not save, still, they could "not save a great deal, but might put something by "day by day, if they chose to do so. There were mili- "tary savings banks in which they could place their "money; but possibly—that was a subject worth "consideration—it would be for the benefit, both of "the army and of the country, if those savings banks "were consolidated with the Post Office Savings "Banks. If that were done, he believed it would give "a greater feeling of security, and the soldiers would "feel that they were acting together with the whole "country when going out of the army, if they "could as *quasi* civilians, draw their money from "the Post Office Savings Bank like other people, "There might, however, be difficulties in such a "change which fuller information might disclose." He describes how the marines save money when on board ship, and they go home to their villages always with some money in their pocket, and on that account are looked up to and thought very much of; and he hoped that this same system in the army would have very much the same effect. However, those were the reasons that he gave for introducing deferred pay. I believe also that it was felt that from the introduction of the short service system a very large saving would accrue from the reduction of the charge for pensions, and that really, in the introduction of the new system, the soldier was hardly being fairly dealt with in being deprived almost altogether of anything in the shape of pension, and that out of this big saving, which had accrued, or would accrue, on account of pensions, that something should be given to him. At that time there was a very great discussion as to the way in which the money should be given; and, as may be gathered from the remarks made by Lord Cranbrook at the time, it was thought that the soldier really did not want much more in his pocket during his service, that everything was provided for him, that he had always had a fair balance to be spent at his own will at the end of the week, if he was a well-conducted man, and that it was better to give this money to him when he left the army than while he was serving with the colours. It was thought also by some that it would have the effect of checking desertion, and that it would be an extra hold upon the man if the payment were deferred until he completed his comparatively short period of service. When the deferred pay was introduced, it was only given for the time subsequent to the introduction of the warrant, so that it was a gradually increasing charge; that is to say, being introduced in 1876, a man who was discharged in 1877 only had one year's deferred pay. It was given to those men who were serving as well as to those men who were enlisted subsequently, so that the payment gradually increased. In the first year, only 3*l.* as a maximum would be payable to a man. The men who were discharged at the end of the second year after the warrant was issued, would receive 6*l.*, and 9*l.* after the third, and so on; but now we have practically, I think, come to the maximum charge.

12,727. Would you yourself reckon deferred pay as an effective or a non-effective head of pay?—Well, it is a moot point. Various people, according to the objects they have in view, have argued in different ways; but it was given distinctly as an addition of twopence to the man's daily pay for the time that he served. It depended so entirely, when originally granted, upon the actual number of days that the men served, that I think it was rightly considered as pay; but I think it might be converted into non-effective pay, and might be fairly considered as practically a form of pension.

12,728. Then, as far as India is concerned, that charge is now reckoned at something over 200,000*l.* a year?—Yes, somewhere about 200,000*l.* a year.

12,729. And that is distinctly an additional charge to India under the operation of a fresh scheme of organisation at home?—It was granted, as Lord Cranbrook described it, as an increase of pay to the army.

12,730. In cases of that kind is any intimation conveyed to India beforehand by the War Office that such changes are in contemplation?—Yes, the practice certainly is to communicate them to India.

12,731. And has the Viceroy and his council the opportunity, before it is finally adopted here, of remonstrating, if they think fit?—The practice has varied, I think, in that respect. The consent of the India Office has in many cases been accepted as practically the assent of the Indian Government; and I think in a good number of cases reference has not been made to India in the first instance. I do not know whether it was in this case.

12,732–3. You would consider in the War Office that, if you had consulted the Secretary of State for India, you had taken every necessary step towards consulting India?—Certainly. We should not refer to the Indian Government.

(*Sir Donald Stewart.*) I do not think that is a case, in which the Indian Government would have any voice—a question of pay.; India would be obliged to accept the men on the terms on which they are serving generally elsewhere.

(*Chairman.*) Of course, the decision of the Imperial Government must be valid; but there is another method, namely, while recognising that the final decision of the Imperial Government is a decisive one, the Indian Government might be given the opportunity first of all of expressing an opinion, or of pointing out any facts that make the new decision operate hardly on India.

(*Sir Donald Stewart.*) I do not think the Government of India would claim it in a case of this kind; the Secretary of State was in the Cabinet which settled the matter.

12,734. (*Sir James Peile.*) Did the Secretary of State agree on this occasion to accept the proposal?—He accepted the proposal; but whether it was done formally, on a formal report to him or not, I do not know.

12,735. He ought apparently to have had the vote of the majority of his council, because it is a charge on the Indian revenues?—No doubt; but it was distinctly a grant of pay, and I am rather inclined to agree with Sir Donald Stewart, that it is one of those cases in which the Indian Government could say, "Well, this "will cause a great increase of expenditure to us, "and it is very awkward for us," but they could hardly do any more. It was regarded here as the only condition upon which we could get the men, and I think that this last despatch, dated 1895, puts very well the position of the Indian Government with regard to such expenditure. It says with reference to certain charges of the same kind—"Inasmuch as War "Office warrants or circulars do not come into force "in India till they are made applicable in this country "by the Governor-General in Council, that rule is of "little practical use, as it is not possible for the Go- "vernment of India, without causing discontent, to "withhold from British officers and soldiers serving in "India, concessions granted to the army by royal "warrants in operation in England." But I know, as a matter of experience, that in every one of these cases where extra expenditure is contemplated, India is always

Sir R. Knox, K.C.B.

15 July 1896.

most carefully studied; and I think it must be accepted that the War Office has never made concessions of this kind, granting increased pay or emoluments either to officers or to men, except very grudgingly; I think they have got that character, and it is only when necessity drives, that these additional moneys are asked for under pressure of various kinds; and when they are conceded, it may be accepted as a matter of course that they are absolutely inevitable.

12,736. (*Chairman.*) You define the actual cost to the English Exchequer of raising and training the army in India as the cost of raising and maintaining in this country the force which would not be maintained if the army in India had not to be kept up; could you give us any idea as to what force that represents?—All things considered, I think that you cannot put it down as less—in fact it might be put down as very much more—than something like a couple of hundred men for every one of the regiments in India. It is now calculated that an annual draft for an Indian regiment amounts normally to 180 men. As has been explained here, those men are recruited at 18 years of age; a great number of them, some, of course, older, and some in excess of 20, but the younger men have to be kept here for two years in many instances. As the draft consists of 180, the very minimum that can be regarded as added to the regiment to produce that draft, is a couple of hundred men; and I think that that number of men must be regarded as having been added to every one of the regiments at home, simply for the purpose of raising and training the recruits for the battalions that are in India. Of course the number that we have of necessity to keep at the cavalry depôt—it has often surprised me, and it is an extraordinary fact—in order to produce a draft of something like 800 men for India is something like 1,500 or 1,600 men on pay. So with regard to the artillery and the other arms of the service, I roughly calculated some little time ago, putting it at the very minimum, that there are in existence constantly in this country something like 16,000 officers and men for this purpose.

12,737. And those you look upon as amounting to a normal force, which would not have to be maintained if there was no Indian Army?—Quite so.

12,738. Are there any other charges that you would add to that?—Well, reference has been made to the various papers and discussions. Even from the very earliest days it has been advanced that a very large number of other expenses are incurred in connexion with the Army in India, which have admittedly never been a matter of account as between us and India—that the Home Government was willing to make that concession to India because they did not wish to press her beyond what they thought was absolutely necessary. It has been argued, however, that if there was anything in the plea that the young soldiers, in the period of their actual recruit drill, were of any value to the British Government, as existing and clothed in England, these extra charges which were not claimed should be regarded as a set off against any claim of that kind. In calculating the cost of the recruits being trained and the officers and men who train them, there is nothing whatever charged against India for any of what we call the administrative departments. For the whole of the commissariat department, barrack department, store department, who do all the duties in connexion with supplying these forces, there is no charge whatever made. There is no charge whatever for chaplains, military police, veterinary department, all these departments attached to every one of those establishments. No charge is made for special prison establishments.

12,739. Now taking that contention, could you tell the Commission what the War Office would put forward as the cost of the Indian Army to the Imperial Exchequer, supposing India were to repay the whole?—Well, it is difficult to state a figure in which you could get anything like an universal concurrence; but I made out a calculation some years ago summing up the cost of these establishments as they were then, and dividing it *pro rata* over this number of 16,000 men. I made out roughly that it came to something like 190,000*l.*, including a portion of the cost of the War Office for the general administration.

12,740. For the general administration the Imperial Government are getting no allowance whatever now?—No.

17,741. Is that item included in that figure of the estimated cost to the British Exchequer of the maintenance of British troops in India under the head of effective charges, which I think you once calculated would amount to very nearly 1,100,000*l.* a year?—Yes.

12,742. Would you tell the Commission as shortly as you conveniently can the general heads on which you arrived at that 1,100,000*l.*?—It was based a good deal upon the same lines as these schemes that have been worked out from time to time. I took the 16,000 men and calculated out the cost of those men continuously as a constant body. Then there were the extra charges for the staff of depôts, including armament and so on for the horse artillery and field artillery depôts, and then the infantry depôts were charged as one-fifth, as I have already described. Then taking the other charges as similar to those which I have mentioned before, that worked up to a charge of 888,000*l.* Then if to this you add those administrative charges of 193,000*l.*, it made 1,081,000*l.*

12,743. Calling that 1,100,000*l.*, that is the sum that you think, if a precise amount were made out, might fairly be charged against India as extra cost?—Yes, accepting my data, namely, that 16,000 men are constantly maintained in this country simply because India wants them, and that the charge should be made for those various establishments which were in existence purely for India, the staff of the cavalry depôts, for instance, and the horse artillery depôts which existed, and all such establishments, taking those as necessarily in existence for India and only existing because India wanted those recruits trained. If they were dispensed with, that would practically be the saving that would arise.

12,744. And under the 7*l.* 10*s.* per head arrangement, I think you calculated that the sum India would actually pay would be a little over 600,000*l.*?—Yes, something like that.

12,745–6. Therefore, presenting the case as from the War Office point of view alone, the cost of the Indian Army to the Imperial exchequer you think amounts to very close upon 1,100,000*l.* and you get 600,000*l.* back?—Yes.

12,747. If you will turn to paragraph 14 and following paragraphs at page 7, of a paper handed in by the Financial Secretary of the India Office, headed "Payments on Account of Her Majesty's Forces "serving in India," you will see the summing up of the India Office view on the Indian claim. The India Office say:—"It is not desired on the part of the "India Office, to re-open the calculations upon which "the actual capitation rate was arrived at after ex-"amination in great detail by Lord Northbrook's "Commission. Nor does it appear necessary to "minutely inquire whether the establishment in India "has been maintained at the prescribed strength; it "must at one period of the year, after the reliefs have "been completed, be above strength, and six months "later below strength, in order to maintain the "average; and if it fell materially below the pre-"scribed number, the Government of India would "make representations." I take that to be an acceptance by the Government of India, subject to certain reservations mentioned hereafter, of the principle of the 7*l.* 10*s.*?—I think so; I take it as such.

12,748. But then the India Office enter upon some general considerations upon which I should like to ask whether you have any remarks to make; I will pass through them lightly?—Perhaps there will not be another opportunity. I should like to enlarge upon a remark that was made here as to the fluctuation of the numbers above and below the establishment, because it is a point as to which there was considerable discussion at one time. Under the arrangement which we have now, that is entirely disregarded, because the actual expenditure at the depôts at home for making up the deficiencies in India is not dependent in a direct ratio upon the fluctuations in numbers arising from casualties in India during the year. In fact, supposing an epidemic were to arise and a large number of men were to die of cholera, further expenses would be thrown upon the Home Government from the fact that there was a diminution of the force to be made up at extra expense. The Indian Government have proposed that we should ascertain what the numbers actually in existence in India were in order to get at the average number upon whom the capitation should be paid; but this capitation was fixed upon the actual establishment, our object being to get the full amount of money, which was spent in order to keep the army going. We could not admit that any fluctuations of the numbers in

India, after the force had been set up at its full establishment at the beginning of the year, could affect in any way the payment to be made by India to us; and therefore under the system which has now been accepted, 7*l.* 10*s.* is the calculated cost of all these items, which we have been going through to-day, divided by the establishment for the year. If on any other principle the numbers were to be cut down, we should have to ask for a higher amount than the 7*l.* 10*s.*, because the 7*l.* 10*s.* is accepted by the War Office as the means of getting back this full amount of expenditure, though the Indian Government like to express it by this amount of capitation payment upon each man. Another objection to the system of watching these ebbs and flows of numbers during the year was that, when that system did exist, we found that it took as long to obtain with accuracy the number of men who were serving throughout India on the first day of each month as it did to furnish the elaborate accounts which were in existence before; and, instead of coming to a settlement earlier as to the amount to be paid, a settlement was delayed.

12,749. Therefore you take the normal establishment as your guide?—Yes.

12,750. That, of course, assumes that you always do your best to keep up the normal establishment in India?—Quite so. We fill up the establishment on the 1st April.

12,751. Supposing you were for any reason to keep back some men, India under that arrangement might be a sufferer, might she not?—Quite so; and in that case it has been suggested in the paper I have referred to, that if we fall short at the end of the relief season of the establishment in India, we should suffer a deduction on that account.

12,752. Who made that proposal?—I did.

12,753. Is that adopted?—No; but the fact is that of recent years we have sent to India rather more than their numbers, and India has been complaining in consequence that we have been throwing an excess charge upon her; but it is immensely difficult to hit off the exact number of men that is required to make up the deficiencies, and at one time the Indian Government particularly pressed us that we should send out men in excess of their establishment, in order to fill up any casualties that might occur during the year.

12,754. Then the Financial Secretary goes on to say:—"But there are general principles of great importance "to which it is desired to invite the attention of the "Royal Commission, as militating against the equity "of a merely arithmetical division of the charges. In a "letter to the War Office of the 8th of September "1871, the Duke of Argyll said that he could not consider it either politic or just to lay upon the revenues "of India the entire cost of an organisation for "furnishing recruits to that country, which experience "has shown to be far beyond what is needed for that "particular purpose; and he added, 'The abolition of "'a local European army in India was a measure dic"'tated by considerations of Imperial policy; but it "'is questionable whether that measure could have "'been so easily carried, if it had been fully known "'how great would be the additional burden thrown "'upon the Government of India. Part of that addi"'tion was unavoidable, and may not be too great a "'price to pay for the expected advantages; but the "'Duke of Argyll is confident of Mr. Cardwell's sup"'port in his desire that this additional cost should "'be kept within the limits of real necessity, and "'should not be aggravated by the maintenance of a "'system of recruiting which appears to be extrava"'gant, and to have no reference to the exigencies of "'Indian Service.'" Now, on that, I would ask you whether there is not a great deal of exaggeration in the supposition that the old Indian method of recruiting was so very much cheaper than yours?—Quite so. I think that is a delusion. Under the new organisation we were at that time establishing, as is well-known, depôts all over the kingdom under the territorial system; and there were a great number of people who criticised the arrangement and regarded it as expensive and costly and so forth; but certainly, so far as India was concerned, I hope I have shown to-day that in the charges that we have levied against India, not only was there no additional expense thrown upon India, but there was a saving per man upon the number of men that were raised. It is admitted that there is an additional expense in raising the larger number of men sent out, but, man for man, the system now in existence is more economical than any system which has existed before.

12,755. I put the question rather in a leading form, not the least intending to express an opinion on my part, but merely because I am anxious to elicit your views as fully as possible?—Yes, of course.

12,756. Then next the Financial Secretary says:—"Although, when the system of short service was in"troduced by Lord Cardwell, he expressed his con"viction that it would not entail any additional charge "upon India; it has, in fact, imposed a heavy addi"tional charge for transport, as the reliefs have to be "effected at much shorter intervals." I gather from some remarks of yours that transport charges of late years have been reduced?—The actual payment for transport has been certainly very considerably reduced. Freights are much lower than they were in former times, and that fact has come very much in aid of the Indian Government; but it is equally true that, if long service had been maintained, there would have been fewer men transported between this country and India than there are now, and that the charge would have been lower than the charge which is now imposed.

12,757. You do not think that the fall in freights has compensated for it?—It has more than compensated for it; but the charge would have gone still lower, if the longer service, involving a much smaller number of recruits, had been adhered to. In this paper which the Commission has already before it there is a brief allusion to what was done, a sketch of the general measures adopted in order to diminish as far as possible the number of men who would be transported between this country and India, and also in regard to other measures adopted to relieve India. "On the 24th December 1880, the War Office "announced the conclusions at which they had arrived "with the view of meeting as far as possible the "objections of the India Office to the short service "system. The minimum age for enlistment was to be "raised from 18 to 19 unless the recruits' standard of "physical development was normal for a youth of 19; "no man was to embark for India till he had served "six months in the army, and was or looked 20 years "of age; all soldiers were in future to enlist for seven "years with the colours and five with the reserve, the "seven being extended to eight if the service were "completed while in India; the tour of service of an "infantry battalion was to be increased from 12 to 17 "years"—so reducing the number of battalions that would shift as between the two countries—"owing to "which only three battalions in India would be relieved "annually, and only one of them would be brought home "as a body, the relief in the case of the other two being "only of the head quarters and men who had less than "two years remaining with the colours." And all those measures were adopted in order to reduce as far as possible the number of men brought to and fro. The regiment now being relieved by its linked battalion, leaves the great mass of its men behind, which are taken up by the battalion which goes out comparatively weak; and also there is a power in the Act of Parliament, even where the regiments are not linked, for transferring men from the battalion which may come home to the battalion which relieves it. All these measures were adopted to reduce the number; but still there is no doubt that the number of men which passes now between the two countries is in excess of what it would have been under the long service system, I should think by something about 50 per cent.

12,758. In the calculation we made, we found that the difference was 50 per cent., I think. As compared with life service it is double?—Yes, life service, of course, is very different.

12,759. You think it is 50 per cent. now?—As compared with the 10 years' system with extension.

12,760. Then the Financial Secretary goes on to say:—"The principal advantage of the short service "system is that a reserve is provided by means of "which the battalions at home can be raised from "a low peace establishment to their full strength "for service in the field; but this advantage is not "shared by India, where the battalions are always "kept at their full strength. The system will, "therefore, only benefit India when she requires re"inforcements of British troops, provided that she is "then charged only with the cost of the transport to "India of the men sent from the reserve"?—This

Sir R. Knox, K.C.B.

15 July 1896.

reserve only benefits the home establishment when it wants reinforcements. India and England are in precisely similar positions. That is to say, supposing India wanted additional battalions to meet an emergency, the reserve would have to be used, in order to complete those battalions for Indian service. The battalions in India are about 50 short of the full establishment, so that leaves a very small margin; but that number, of course, could be supplied from the reserve. All the regiments that would be sent out from this country, made up to war strength, would necessarily be made up by a draft from the reserve.

12,761. Your contention is that it is a reserve for both countries?—For both countries, yes.

12,762. And practically, except as a matter of experiment, it is only on emergency that the reserve is called out?—Quite so, only on a great emergency.

12,763. The object of the adoption of the system was not merely to get the reserve, although it did effect that object?—The warning which was given by the Recruiting Commission of 1867, which I have already referred to, no doubt led to steps being taken to obtain a reserve; but the system was also adopted to obtain an army both cheaper and more efficient.

12,764. That is to say, it would reduce the non-effective charge?—Yes, and get an army of fighting age instead of an antique army of men who had served a long period in an enervating country as soldiers. Of course, there is a difference of opinion upon that point; but I have discussed it lately with a good number of of military officers, and they say that it is simply absurd to compare the European army now in India with anything they have had before, and that the army now is in an absolutely more efficient condition than it has ever been.

12,765. Then he goes on to point out, quoting the well-known cases in which troops have been borrowed by India from England, or by England from India, and deduces this conclusion, "that India is utilised as a "reserve for England in a much truer sense than "England is for India; England not merely freely "claims the services of British regiments for the time "stationed in India, but she frequently uses the native "regiments, towards the cost of which she has in no "way contributed; and it may, therefore, be reasonably "urged that England ought to assist in the maintenance in India of so large a force, upon which England "does not hesitate to draw"?—Of course, that is a very big question, and it is hardly for me to give an answer; but I believe the view of the Government has always been that those expeditions have not been Imperial expeditions alone; they have been Indian expeditions.

12,766. That really is a political question?—Yes, quite a political question.

12,767. It is a question that must be settled by the two Governments?—I have always imagined that the Governments intended to throw the duty of settling it on to this Commission, as Governments are apt to do.

12,768. In passing, there is one question occurs to me; is there not in these different instances which have been given in which troops have been borrowed reciprocally, the great case when India borrowed from England during the Mutiny; India then bore the whole charge of the large number of troops she borrowed, did she not?—The whole of the pay of the whole of the troops on arriving in India was charged to India; and a charge was made for the depôts, in accordance with the old system.

12,769-70. So far as the Secretary of State for War replaced these troops, as I think you told us he did to the extent of 20 battalions, the arrangement would come absolutely within the arrangement as it has existed, on the other side, between England and India. I have always understood the arrangement was that India paid only the sum estimated in her budget, but would not bear the cost of replacing one single man?—Well, I think the bargain was that we paid, if India did replace.

12,771. That is another way of putting it; that is what I mean. Therefore as far as those 20 battalions were replaced, the arrangement then made was exactly on all fours with that of which we have had the benefit, when we have borrowed troops from India?—Yes.

12,772. But as regards the other 20 who were not replaced, if the arrangement had been the same as is made in modern times with India, the Imperial Government would have paid the ordinary pay and expense of those battalions, India paying the extra charges; would not that have been the case?—That appears to have been the idea. It has been recently foreshadowed, but I do not think it was ever contemplated before.

12,773. At the time?—No.

12,774. You know that in the instances in which we have borrowed from India, India, so to speak, wanted to make a good thing of it. These troops were borne on her budget, and if her budget had been relieved of the charge, she would have made a good thing of it?—Yes.

12,775. In the case of the Mutiny that arrangement was not adopted, so far as concerns the battalions that were not replaced? The 20 battalions that were not replaced were transferred from the English to the Indian budget; whereas, if the arrangement now in force had been in force then, those battalions would have remained on the British establishment?—The whole force was raised as an additional force for India.

12,776. I thought I understood you to say that 40 battalions were sent to India, and you replaced 20; therefore you claimed for 20 for the time being?—If I remember right, we had the militia embodied, and we replaced them, practically, in that way.

12,777. I am asking you with reference to this statement of the Financial Secretary. I want to see how far you would accept that argument; but I understood you to argue that, not only were these 20 extra battalions raised, but also that a large portion of the other 20 battalions were replaced by militia embodied?—Yes, there was a large embodiment of militia during the Crimean time which lasted to the end of the Indian Mutiny.

12,778. And that you would maintain to be equivalent, or rather not contrary, to the arrangement that the Imperial Government makes with India in recent cases?—Quite so.

12,779. (*Sir Donald Stewart.*) But, I beg your pardon, that cannot apply to the regiments that were temporarily employed in India during the Mutiny. I refer to the troops intended for the China expedition, which were for a time diverted to India; no regiments were raised in the place of those?—You cannot say, regiment by regiment, that anything was done; but, when the whole country was denuded of troops by the despatch of this large force to the East, the militia was embodied. It was embodied during the Crimean War, and the embodiment was continued on subsequently, and the embodied militia replaced those regiments that were serving abroad; but also the new regiments were formed, in order to provide the permanent garrison for India. The double battalions were introduced—I do not remember the exact number of battalions, but something from 20 to 25 were raised and formed the new garrison for India.

12,780-1. Yes, I grant that, but I referred to the regiments that were diverted for a temporary purpose from the China expedition to India in the early days of the Mutiny; they were on their way to China when they were diverted to India before they reached their destination, and employed in the Mutiny until they were replaced by troops from England?—Well, of course, it cannot be said that, as each regiment was ordered abroad, another regiment was raised to replace it; but there was a general embodiment of the militia at that time, in addition to the raising of the additional battalions, in order to provide the forces in place of those that were serving out of the country. I do not know that you could earmark a particular regiment, as having been raised because certain troops were ordered to China; I do not suppose you could.

12,782. My point is, that India had nothing to do with the 25 regiments going to China?—No; but she had to do with them, if they landed in India and formed part of her forces.

12,783. But India paid the whole charge of these troops, though they were only required for a temporary purpose?—Yes.

12,784. (*Chairman.*) But, Sir Donald Stewart, I take what I understand to be Sir Ralph Knox's contention. He does not contend that more than 20 regiments, or something of that kind, were raised to replace the 40 that were sent to India; but he says that the large addition of forces that were kept up during the Crimean war, and as I understand the Indian Mutiny, a great number of militia regiments having been kept embodied

which would not otherwise have been embodied constituted a replacement of established troops. Sir Ralph would take every militia regiment embodied in support of his argument?—Yes.

12,785. Would you not admit that Sir Donald ?

(*Sir Donald Stewart.*) Oh, yes, I quite admit that, but India is expected now to lend her troops to England and pay all their ordinary charges, when they are required by Her Majesty's Government for a temporary purpose and men are not raised in their place. India is not treated in that way, as I have shown, when she borrows men for a temporary purpose.

12,786. (*Chairman.*) That is exactly the argument which the India Office in that memorandum puts down here, and I was reading it to Sir Ralph Knox in order to hear his answer. I suppose Sir Ralph Knox would be able to show that in ordinary times there are no militia regiments embodied?—No, none.

12,787. Supposing, then, he was able to show that there were 20 regiments raised, and that during all the time of the Mutiny 20 militia regiments were embodied, I think it would go a long way to show that the troops lent to India had been replaced—at all events it would be an argument in that direction.

(*Sir Donald Stewart.*) I admit that.

12,788. (*Chairman.*) Then Sir Henry Waterfield goes on to say: "Apart from the assistance rendered by "India in time of war, it affords the best training "ground for the British army during peace?—I demur to that entirely; that is not my view of the question at all. I think the man is trained, as has been shown, before he leaves England. He is kept here and made a soldier in his eighteen months' or two years' training, sometimes longer than that.

12,789. That is not Sir Henry Waterfield's position, I think, but this, that the Imperial troops out in India are being trained in warlike service, which make them all the more valuable to the country?—Yes, that is what he says. Well, I am one of those who believes in short service; and I believe it does not want eight years' service in India specially to make a man a good soldier.

12,790. You would admit, would you not, that the many expeditions which are now carried out in India are a good training ground for a soldier?—Oh. I think the actual active operations are, no doubt, the only thing which makes a veteran.

12,791. Then he goes on to say:—"Service in India "is attractive, and the liberal treatment induces both "officers and men to enter the army with the hope of "obtaining employment in India?"—I do not know; there is very little employment obtainable in India to be divided amongst so many.

12,792. I do not think that the Indian service is distasteful?—I think if it were distasteful to men we should not get the number of men to enlist in the army; and there is no doubt some soldiers prefer foreign service to home service.

12,793. Lastly, Sir Henry says.—"The revenues of "India have been charged with the cost of many "changes in organisation not specially necessary for "the efficiency of the army in that country, and with "the cost of troops employed on Imperial service "beyond the limits of India. Millions of money have "been spent on increasing the army of India, on "armaments, and on fortifications to provide for the "security of India, not against domestic enemies or to "prevent the incursions of the warlike people of "adjoining countries, but to maintain the supremacy "of British power in the East. The scope of all these "great and costly measures reaches far beyond Indian "limits, and the policy which dictates them is an "Imperial policy. We claim, therefore, that, in the "maintenance of the British forces in this country, a "just and even liberal view should be taken of the "charges which should be legitimately made against "Indian revenues." I am not quite certain that I ought to ask you a question about that, because it passes rather out of your sphere?—I think I may say that, in dealing with this matter, the War Office hold that it has taken a just and liberal view in settling these charges against India for the depôts.

12,794. But you interpret that into figures by saying that, according to your calculations, the cost of the Indian army to England is 1,100,000*l.*, out of which you ask 600,000*l.* back?—Yes.

12,795. (*Mr. Naoroji.*) We are at present at the second part of our reference, the apportionment of charge between the Governments of the United Kingdom and India for purposes in which both are interested I have a short extract, a few sentences from Lord Kimberley's speech, reported in *The Times* of the 13th June 1893:—"There is one point upon which I imagine, "whatever may be our party politics in this country, "we are all united; that we are resolutely determined "to maintain our supremacy over our Indian empire. "That I conceive is a matter about which we have "only one opinion, and let me tell you that that "supremacy rests upon three distinct bases. One of "those bases, and a very important one, is the loyalty "and goodwill of the native princes and population "over whom we rule. Next, and not less important, is "the maintenance of our European Civil Service, upon "which rests the foundation of our administration in "India. . . . . Last, not because it is the least, "but because I wish to give it the greatest pro-"minence, we rest also upon the magnificent European "force which we maintain in that country, and the "splendid army of native auxiliaries, by which that "force is supported. . . . . Let us firmly and "calmly maintain our position in that country; let us "be thoroughly armed as to our frontier defences, and "then, I believe, we may trust to the old vigour of "the people of this country, come what may, to "support our supremacy in that great empire." From this extract it is clear that Great Britain has an immense and vital interest in the keeping up of the European services, both in India and in this country, and not only of the European services but also of the native army. It bases its very existence upon these services. Well, I will put aside the natives employed in the native army, who would be required, under any circumstances, by the natives themselves; but taking only the European portion of it, it is clear that England has a distinct interest, granted that India also has a distinct interest, in keeping up these European services. Considering, therefore, such vital interests of Britain, I should like to know whether and what apportionment should take place between Britain and India on account of these European services, both in this country and in India?—It is a very big question to ask me, but if my opinion is of any value I should say that India ought to pay the very last halfpenny.

12,796. Even though we are now discussing this question, the apportionment of charge between the Governments of the United Kingdom and India, for purposes in which both are interested? Here is a purpose in which England is most vitally interested, the maintaining of its own very existence in the country, and yet I am to understand that England should contribute nothing towards its own benefit, and that India should be simply treated as a helot?—My own view is that England has made India what India is. That England has made India what she is by means, to a very great extent, of the residence of the European army in India. I believe that the condition in which India is, a condition which England has made, is a condition which is enormously to the advantage of the natives of India, and that her rule is exercised wholly and solely in the interests of the people of India.

12,797. It is entirely the reverse. The whole rule is conducted for the benefit of England; England has derived an immense, or many times greater, benefit from India than India has derived from the rule of England. That is a question that I could not, and that we could not enter into just now, but this is my simple question—wherever any purpose is for the interests of both should not there be an apportionment of charge. That is the subject just now before the Commission, and I ask that in this case where the purpose is one in which England is also very decidedly interested, that England should contribute its proper share, and you give the opinion that England should not. Then, with regard to the frontier wars, I may read one or two extracts. Mr. Fawcett pointed out in his speech on the subject of the Afghan war that it was a remarkable thing that every speech made in the House or out of it by ministers or their supporters on the subject showed that the war was a great Imperial enterprise. He said, "And, "fourthly, the most important question, as far as he "was able to judge, of who was to pay the expenses of "the war . . . . It seemed to be quite clear that "the expenses of the war should not be borne by "India, and he wished to explain that so far as "India was concerned this was not to be regarded "as a matter of generosity but of justice and

Sir R. Knox, K.C.B.

15 July 1896.

" legality. . . . . The matter must be decided " on grounds of strict justice and legality."—Hansard, Vol. 250, (p. 457). "It was a remarkable thing " that every speech made in that House or out " of it by ministers or their supporters on the " subject showed that the war was a great " Imperial enterprise, those who opposed the war " having always been taunted as being 'parochial' " politicians who could not appreciate the magnitude " and importance of great Imperial enterprises. . . . . " (p. 458). He would refer to the speeches of the " Viceroy of India, the Prime Minister, and the Secre- " tary of State for Foreign Affairs upon the subject " . . . . . In December 1878, the noble Earl— " the Prime Minister—warned the Peers that they " must extend their range of vision, and told them " that they were not to suppose that this was a war " which simply concerned some small cantonments at " Dakka and Jellalabad, but one undertaken to main- " tain the influence and character not of India, but of " England in Europe. Now, were they going to make " India pay the entire bill for maintaining the influ- " ence and character of England in Europe . . . . . " His Lordship, the Marquis of Salisbury, treated the " war as indissolubly connected with the Eastern " question . . . . . Therefore, it seemed to him " (Mr. Fawcett) that it was absolutely impossible for " the Government, unless they were prepared to cast " to the winds their declarations, to come down to the " House and regard the war as an Indian one . . . . . " All he desired was a declaration of principle, and he " would be perfectly satisfied if someone representing " the Government would get up and say that they had " always considered this war as an Imperial one, for " the expenses of which England and India were " jointly liable."

Lord Beaconsfield says:—" That the real question at " issue was whether England should possess the gates " of her own great Empire in India. . . . . We " resolved that the time has come when this country " should acquire the complete command and possession " of the gates of the Indian Empire. Let me, at least, " believe that the Peers of England are still determined " to uphold not only the Empire, but the honour of " this country." And I may read several other extracts of a similar character which show that all these frontier wars that are being carried on are not only as much but a great deal more in the interests of England in maintaining its rule in India against any European nation. Is it right or is it not just that England should take the proper share in the expenses of all these countries. I regard them as beneficial to India also?—As I said it is an extremely difficult question to answer, but my view generally in regard to frontier wars is, that they are the necessary advance of civilisation against barbarism, that a civilised country must advance over its frontier from time to time.

12,798. But then at whose expense—at the expense of both of those who are interested in it?—Well, it is generally at the expense of those who are on the frontier.

12,799. Who are the weakest, I suppose; that would be a proper answer, as we are entirely helpless. Well, the next question is: Have we any voice whatever in the disbursement of the revenues of India, in a single farthing of disbursement, or is it not entirely at the will, and completely despotic will, of the Indian authorities, or rather the British authorities ruling over India?—There is no systematic method that I know of consulting the wishes of the Indian people; but I believe that their best interests are considered in any policy that may be adopted.

12,800. However, we have no voice whatever, have we, in the spending of a single farthing of our own revenue. Then we will contrast the position of the Irish with that of the Indians. The Irish can occupy any position whatever in all the services all over the country. An Irishman may become a Viceroy, he may become a Commander-in-Chief, he may become a Prime Minister, he may become anything. He has a complete share in the Imperial benefits, if he contributes also to the Imperial expenditure or burdens. Has India any such position in the Imperial arrangement?

(*Sir James Peile.*) Has this anything to do with the Indian expenditure?

(*Mr. Naoroji.*) Yes; it is absolutely necessary for me to put these questions.

(*Sir James Peile.*) Is it connected with our Indian expenditure?

(*Mr. Naoroji.*) Yes.

(*Sir James Peile.*) Questions about the Irish?

(*Mr. Naoroji.*) Because the whole of the military expenditure is thrown on India. I maintain that the British Government and the British people, being vitally interested in it, should be charged with an apportionment of the charge that is incurred for the British service. That is all that I ask: and I want to point out the difference between the treatment—leaving alone the question of home rule for Ireland for which I am not here contending, but taking Irish as being in the same position as British subjects and Imperial subjects, and the constant and repeated declarations of a century, I maintain that the Indians are also to be treated as British subjects and equal to any other British subjects; are the Indians so treated?

(*Sir James Peile.*) We are dealing with the apportionment of the military expenditure.

(*Mr. Naoroji.*) That comes necessarily as an apportionment of the expense to India.

(*Chairman.*) I think we have to bear this in mind, that this question about the employment of the natives in India is hardly one which comes within the cognizance of Sir Ralph Knox. He is simply a War Office officer. You may put your questions, Mr. Naoroji, and I think probably we had better leave Sir Ralph to give his answers.

12,801. (*Mr. Naoroji.*) He may give any answer he thinks proper?—Well, I should think it was merely, to a great extent, a matter of time. It is only recently, in comparatively recent years, really within my memory, that Irishmen have been admitted to the highest posts in this Kingdom. They were excluded until comparatively recent years from very many positions within this century; but now we have considerably advanced. I should think the time will come when there will be a considerable advance also in regard to the position of many Indians in India too.

12,802. Yes, but at some time; therefore we come back to the same question, that in all those purposes in which Indian revenue is expended, if it is for the benefit of both, the English revenue ought to share its proper expenditure as a partner of the British Empire, as we are always told that we are partners in the British Empire, and that as Imperial citizens we must bear Imperial burdens. At the same time we ask that, as Imperial citizens, we should have a share in the Imperial services. Now we have no share in the army. No Indian can ever be appointed to a commission in the army?—But the native army is twice the size of the European army.

12,803. The native army is paid by the natives themselves, but the European army there is entirely for the purposes of British rule, not for the purposes of India?—Still there is plenty of military employment for the natives of India.

12,804. There must be a division of expenditure from both Governments where the necessity of any particular purpose is for the interests of both.

12,805. (*Sir James Peile.*) Might I take you back to the previous day's evidence to explain a point? The question I refer to is 11,751, and it related to the supply of stores to the Indian Government from the English factories. You said that India had an advantage in being charged no interest on capital sunk in the factories?—That is the present basis of the calculations now made.

12,806-7. My attention has been called to the fact that India makes a large advance or standing imprest of 150,000*l.*?—That is to meet what is called the current expenditure, but it is not the expenditure which is incurred upon the buildings or land. We accept that as representing what you call the floating capital; and the War Office and the Admiralty supply the factories with funds just in the same way to meet the floating capital; but there is no charge for interest on account of the sums that are spent upon buildings and machinery, which are constantly, as it were, being erected and have been erected.

12,808. And do you treat India differently from other Departments, or are they all on the same footing as regards that particular item of interest?—No, the Colonial Governments make a payment upon the

"vocabulary" prices in the demands they make from time to time.

12,809. That is to say, do they pay interest on the value of buildings?—Well, they pay practically the trade prices.

12,810. There is one other point I wanted to ask you. It arose in your examination of Sir Edwin Collen with reference to the effect of the short service system with regard to the mortality of the troops. It was shown that under the short service system the mortality had decreased, and not increased; and also the number of invalids leaving for home had decreased, and not increased. I have here the Sanitary Commissioners' Report for 1894, to which Sir Edwin Collen referred. I want to ask you a question with reference to a column headed "Constantly sick," which means, I suppose, the average number of men in hospital throughout the year?—Yes, I believe so.

12,811. It appears that the number of "constantly sick" men in the European army in India has increased very considerably?—As compared with what period?

12,812. From 1870 to 1879. The figure for 1870–9 is 60 per 1,000, in 1894 the figure is 92 per 1,000, and it rises pretty steadily between those two points?—Well, I believe the Indian authorities would say it was caused by venereal disease; it may be so; I have not gone into it myself.

12,813. Do you accept these figures from the Sanitary Commissioners' Report?—I know there has been some growth due to these causes. I have not examined the figures.

12,814. Then I ask you to compare those figures with the figures for the native army of India. Perhaps you have not got them?—No, I have not. *Sir R. Knox, K.C.B.* 15 July 1896.

12,815. Here is the table about them; you will see that in the native army the number of "constantly sick" has fallen from the comparatively low figure of 34 per 1,000, as the average in 1882 to 1891, to 31 per 1,000 in 1894?—Yes, that is so.

12,816. Which compares very favourably with the European army?—Yes, I have not recently analysed the "constantly sick," and I do not know to what causes the increase may be due; but I believe that the native army is differently supplied to the European army, and that may be the cause of the difference.

12,817. Still, it is a fair inference that the effective strength of the European army is lower now than it was 30 years ago?—Yes; well, is it the case that that "constantly sick" varies very much from what it was in the old times, before short service was introduced?

12,818. 1870 to 1879 is before the short service, is it not?—Oh, no, subsequently.

12,819. I thought short service came in in 1875?—1872.

12,820. But it would not, I suppose, take effect at once?—No, although a short service of a kind really not very different from what exists now, was in existence from 1847; that is to say, the men enlisted for 10 years, and a great number of men took their discharge at the end of 10 years, and were replaced by men of the same class; but, certainly, the age of the army in the earlier years was above what it was subsequently.

Adjourned to Wednesday next at 11 a.m.

At the India Office.

TWENTY-EIGHTH DAY.

Wednesday, 22nd July 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. W. L. JACKSON, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field Marshal Sir DONALD STEWART, Bart., G.C.B., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Mr. T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary*.

Sir RALPH KNOX, K.C.B., further examined. *Sir R. Knox, K.C.B.* 22 July 1896.

12,821. (*Chairman.*) Sir Ralph Knox, we heard from you last week an explanation of the grounds upon which the different capitation rates had been fixed. Could you give us any idea as to how those capitation rates compare, as applied to the total cost of the force?—Well, it is not very easily done, because different systems existed at different times for calculating the charge, but in order to satisfy myself, I have had some figures worked out in order to institute as far as possible a comparison. I cannot profess that it is an exact comparison, but it is an approximation. The Warley system, for instance, was a system which was never worked out as a capitation rate, and, as I showed at the last meeting, the expenditure which has been put down as that of Warley is by no means exhaustive, that several items and those important and large items must be added to what has been stated in the various reports the Commission has had before it in order to make up the proper charge. It should also be borne in mind that Warley trained no mounted forces at all; that there were no cavalry, no horse artillery, and no field artillery trained there, and those are the expensive forces that are raised. Luckily they are not the most numerous, but I have made a comparison, taking the figures of one of the claims that has been presented to the Indian Government upon the 7*l.* 10*s.* system, of what the charges are for mounted men as compared with dismounted men, and I find that our infantry charge did not amount, taking everything into consideration, to more than 33*l.* for every man trained, whereas for the cavalry the charge works up to 71*l.* 11*s.*

12,822. I understand you to say that your infantry charge at present is about 33*l.*?—Yes.

12,823. And that includes everything?—That includes everything—the charge for the training of the man at the depôts, the non-commissioned officers, and the whole staff that looks after him and recruits him.

12,824. Barrack accommodation and all?—Barrack accommodation and everything.

12,825. That supplements and makes complete that charge which in the papers we had before us is shown as the foundation of the 7*l.* 10*s.* and is put down at 25*l.*?—Quite so.

Sir R. Knox, K.C.B.

22 July 1896.

12,826. And you add to that 25*l.* those charges which were excluded?—Quite so; that is to say, it completes the charges for the men, excluding the charge for officers. But, including the charge for officers employed in training the men and looking after them and disciplining them, the cavalry charge amounts to 71*l.* 11*s.*; the field artillery charge works out to 81*l.* 3*s.*; and the horse artillery charge to 84*l.* 12*s.*; but, taking them altogether, in consequence of the smaller number of the mounted forces the charge works out to something like 44*l.* for all arms.

12,827. Do you mean by that the average of the whole force?—Yes, taking the whole. That is taken upon the calculation made in the year 1889–90. I bring in this comparison especially to show you that the Warley charge is below anything like what is charged now, because there is nothing included in it for the mounted services, which are very expensive; but, taking the Warley charge and adding merely such items as I showed last time had been excluded—such as barrack accommodation, equipment, arms, ammunition, and so forth—I think it may roughly be said that the Warley charge amounted to something like 4*l.* a head on the force maintained in India.

12,828. Yes; only I think you brought it out clearly last week that, though, no doubt, the charge per head of the men in India was as low as some such sum that you mentioned, at the same time it was only low per head of the established force, because the number of recruits sent out were few; you gave us figures which led us to think that the charge in fact was rather more expensive at Warley?—Quite so.

12,829. (*Sir James Peile.*) Might I interrupt one moment? Is it quite clear that no cavalry were ever trained at Warley?—There were cavalry raised at the time of the Indian Mutiny in the last three years, when they were raising some cavalry regiments; but previously there were only infantry and artillery in the earlier years.

12,830. That accounts for a statement in this paper that the "number of recruits sent to India from the depôt at "Warley between 1850 and 1859 amounted to 24,783." That includes 3,347 cavalry?—Yes, they raised some men for cavalry just in the same way as they raised infantry and artillerymen, but without giving them any cavalry training. The calculation, however, works out, taking the force in India at 12,000 men, it works out roughly at Warley at about 4*l.* a head.

12,831. (*Chairman.*) That is to say, you have added to that 3*l.* 3*s.* 9*d.*, certain charges which were not included?—Quite so, and they bring the cost up to the excess I mentioned. Then, as compared with that, I find, as near as I can make a comparison, that under the 10*l.* capitation system, after excluding from the 10*l.* those charges which, as I explained, are not included in the 7*l.* 10*s.* rates—that is to say, the colonel's pay and the furlough pay and various charges of that kind—and comparing like with like as near as can be, and taking the rates of pay that were then in existence, the charge came out at 6*l.* 7*s.* 6*d.* under the 10*l.* capitation system; that is, including the whole of the forces, the mounted forces as well as the dismounted forces.

12,832–3. The charge came to 6*l.* 7*s.* 6*d.* as against 4*l.*?—As against 4*l.* at Warley, yes. No, I beg your pardon, that 6*l.* 7*s.* 6*d.* is the rate for the period before the 10*l.* capitation grant.

12,834. That is for the Queen's troops?—That is for the Queen's troops. The Warley system was going on simultaneously, which cost the Indian Government, worked in the way in which it was, about 4*l.* a head; the Imperial Government system of having the separate depôts for the infantry and the cavalry, including the mounted services, cost about 6*l.* 7*s.* 6*d.*

12,835. That was represented in actual payment in India by 8*l.*, was it not?—By 8*l.*, yes, roughly; but they did not pay upon the capitation system as you know. We did not charge them 8*l.*; we used to send, as I explained last time, the actual bills in to them. That 8*l.* was arrived at by subsequent calculation, as a rough and ready way of getting at what the capitation payment would have been if the charge had been fixed by a capitation payment; but the capitation payment did not come in it until 1861–2.

12,836. (*Mr. Buchanan.*) Your bills amounted to 8*l.* a head?—Our bills amounted to 8*l.* a head.

12,837. (*Chairman.*) If you say your bills amounted to 8*l.* per head, how do you make it only 6*l.* 4*s.* 6*d.* in the statement you have just given us?—Because I am eliminating those items which are not included in the present arrangement; I am comparing like with like right through, as near as I can. Then I find that during the 10*l.* capitation system the charge works out as nearly as possible at 7*l.* 3*s.*

12,838. May I ask you with regard to the actual charge for the Queen's troops before the Mutiny, and again after the Mutiny; does the 10*l.* system include all arms?—It includes all arms, yes.

12,839. And therefore it is a more expensive system than that which is represented by the Warley charge, which only referred to infantry?—That is what I wished to insist upon. The charge during the 10*l.* capitation system I make out, taking like payments, amounted to 7*l.* 3*s.* per head. The present charge, adjusted similarly, but with a considerable increase on account of pay which has been given to the army since that time, works out as nearly as possible to 6*l.* 14*s.*; so that on the force that is now serving in India the payment per head for like services compares very favourably with the charges that have been made by the Imperial Government against India at any time for the Imperial forces; but, of course, it is in excess of the payment for the Warley depôt, which, as I have explained, was a very different thing from the depôts of the Imperial forces, where the men underwent training, and where a large portion of the force was a mounted force.

12,840. You have told us that the charge before the Mutiny for the Queen's troops was 6*l.* 7*s.* 6*d*, and you have calculated the present charge at 6*l.* 14*s.*; does that 6*l.* 14*s.* include the additional pay that has been given since that time?—It does; it includes it.

12,841. I suppose you could not tell us, as against the Warley charge, what would have been the charge of infantry alone in those later years?—No, I have not worked that out.

12,842. Of course the number of cavalry and engineers sent out is comparatively small and, therefore, you would probably not find the average of 6*l.* 7*s.* 6*d*, for the whole force very much diminished, would you?—The number is comparatively small, but I can give you for the year upon which these calculations, representing the 7*l.* 10*s.* system, have been made, that is to say for the year 1889–90, what the proportion was. There were 8,957 infantry sent out; 994 cavalry, 1,094 field artillery, and 281 horse artillery.

12,843–4. That is practically 2,500 against 9,000?—Yes; but taking them altogether, as I have explained, the infantry charge per man being 33*l.* 18*s.*, the charge works out to 43*l.* 14*s.* That shows the difference which arises by adding in those more expensive forces.

12,845. The cavalry I think you said cost 71*l.*?—71*l.*

12,846. And the artillery 81*l.*?—Field artillery 81*l.* and horse artillery 84*l.*

12,847. Therefore you may say that the cost to the Imperial Government of two infantry men is rather more than that of one cavalry man?—Yes.

12,848. And of course, the cost of an artillery man is still more than that. It seems to me that the infantry, if they were taken alone, would probably show a charge very much below that 6*l.* 14*s.*, because the force of the cavalry and the artillery is, as near as possible, one-fourth?—Yes, the 33*l.*, in fact, works out far below what the Warley charge was.

12,849. Well, I suppose you would expect to find that at the present time, when you have to keep up the recruits for so much larger a force, there should be increase of expenditure, would you not?—Yes.

12,850. Because you have to collect together so much larger a number of men?—And train so much larger a number of men in proportion; but, as it works out, the payment amounts to less really than it amounted to in the earlier years.

12,851. (*Mr. Buchanan.*) Do you say, taking the infantry separately, that the 33*l.* works out lower than the Warley charge?—The 33*l.* works out lower than the Warley charge corrected, as I pointed out at the last meeting.

12,852. (*Chairman.*) There were certain items in the Warley charge to which you called attention?—Yes.

12,853. (*Mr. Mowbray.*) How did the rate of pay in the Warley time compare with the present?—I cannot inform you authoritatively as to the pay given by the Indian Government to their British troops; but I believe that it corresponded very nearly with the pay which was given to the Imperial British troops.

12,853. If the pay of the Company's troops in that day was considerably less than the pay of the army at the present

time, would that affect your comparison?—No, because I am taking in the higher pay which is given to the army now; and the 33*l.* works out less even including the higher pay

12,854. (*Chairman.*) According to a paper put in by the India Office, the recruiting of the East India Company's European force at Warley, omitting the exceptional years of the Mutiny, amounted to 26*l.* 7*s.* 5*d.*; and that, you told us, excluded clothing, arms, accoutrements, and barrack accommodation, the last of which you put very high—I think at 6*l.* or 7*l.*?—We calculated the charge per man per annum for barrack accommodation at 7*l.* 14*s.*

12,855. That alone, without arms and accoutrements, added to the 26*l.* 7*s.* 5*d.*, would carry you over the sum which you said a recruit costs now, namely, 33*l.*?—Yes; but I object to the 26*l.* being taken as the charge for a recruit; as I explained at the last meeting, that sum was arrived at on an average of years, including the three years in which the Indian Government was raising three additional infantry regiments.

12,856. But this paper says, "Omitting the exceptional "years of the Mutiny"?—Yes, but this period is before the Mutiny, during the Crimean War. When the Crimean War was being waged, troops were withdrawn from India, and India, to replace them, raised three additional infantry regiments, and those were raised during those three years to which I refer, and the number of men raised then was quite exceptional, in fact, more than double the numbers that were raised in the normal years before; and what I have argued for is that the first three years' returns really must be taken as representing the normal expenditure incurred at Warley, when about 1,000 men were sent out to India every year.

12,857. Now, is not the training of Engineer officers a very expensive matter?—Extremely expensive. Every man who passes into the Royal Engineers, must go through the elementary stage of two years' education at the Military Academy; and then he passes to the School of Military Engineering, where he is made an engineer, and where he serves with that object for about 2½ to 2¾ years; and during all that time—that is to say, 4½ years altogether—he is being converted from the raw material of a boy of 17 into a completely educated and trained engineer; and the Indian Government indents upon us for a certain number of those officers every year, in order to maintain their establishment in India, which is a very considerable one—between 300 and 400 officers.

12,858. The Indian Government think that your charge is an extravagant one, do they not?—They look upon it as being a big charge; and they advance the extraordinary argument that these officers, after having got their commissions as Engineers, and while they are being instructed and made Engineers at Chatham, are of value to this country; and that, therefore, we should make some allowance to India on account of these young fellows, while they are at school being made into the article which the Indian Government demands.

12,859. That is to say, the Indian Government contend that these young officers might be useful while they are at school here, if a need arose for fortifying London, shall we say?—They might be used, semi-educated as they were, to do something of a military engineering character, supposing the emergency were to arise.

12,860. You do not yourself think that they have arrived at that amount of skill at that time, which would make them really useful?—My argument goes further than that; I say, that these men would not be in existence at all, except for the demand which the Indian Government makes.

12,861. Yes; but still, even though they would not be in existence except for the Indian Government's demand, it is quite possible that they might, during the time that they are in England, be available in case of emergency, might they not?—They would, certainly, exist; but they do not exist for our purposes, and we do not contemplate their existence in any arrangements which we make.

12,862. Perhaps I might put it in this way; supposing an emergency arose, do you suppose that you would call upon those lads to come out and assist the engineering forces?—I cannot say what would happen supposing a great emergency were to arise. I have no doubt that a large number of persons who had never seen an arm, might be called into requisition.

12,863. But you say they have two years' training; a man who has had one year's training must, of course, be advancing in the knowledge of his profession, and must be considerably better than a man taken out of the streets?—Oh, certainly.

12,864. I only want to bring out the extent to which the Indian argument may be held valid?—Yes.

12,865. (*Sir Andrew Scoble.*) I should like to ask one question about that. Are these Engineer officers, when they go out to India, exclusively allocated to Indian service or are they liable to be recalled and employed on general duty in other parts of the British dominions?—They are part of the corps of Royal Engineers, and that is what India specially wishes and desires, that they should be Royal Engineers. There are a certain number of them who elect for what is called continuous service in India and remain in India all their lives.

12,866. Can you say what proportion those who elect for continuous service bear to the general number?—I cannot say; it is very uncertain. The system was inaugurated of allowing them to serve in that way some 15 years ago, but it has not worked as satisfactorily as it was hoped it would at the time it was started, and at present an inquiry is going on about the working of it; but a certain proportion, I cannot say really what proportion, have elected for continuous service.

12,867. A less proportion than was expected have elected to take continuous service; is not that so?—Yes.

12,868. And so when you speak of the system as not being satisfactory you mean satisfactory to India?—It was India who desired that the continuous service should be introduced, that that should be the system; and I assume, if it has failed, that India has been disappointed,; but, as is usual when these changes are started, their direction falls into hands very different from those which design them, and they are not worked exactly in the way in which it was intended they should be worked; and instead of the officers being pressed to elect for continuous service, every inducement was offered to them to get out of such election, by postponing from time to time the date on which they were to elect whether they would go on in India or not.

12,869–70. By whom was that inducement not to elect for continuous service offered?—It was argued that there was no necessity, I think, for calling upon them to elect so soon, and an agreement was come to between the India Office and the War Office that they need not do so.

12,871. But did the suggestion come, in the first instance, from England or India?—I think rather from England, but I am not quite certain upon that point; I think so.

12,872. (*Mr. Buchanan.*) I suppose the Indian Government would contend that these engineers are really part of an Imperial force of engineers?—Yes, they are, certainly.

12,873. You stated just now that they would not exist at all except for the requirements of the Indian Government?—No, they would not; that is to say, the establishment of officers of Royal Engineers has been increased, in order to provide for this number of officers serving in India. The Indian Government employs none of our corps of engineers—that is to say, of the men; there are no men of the engineers employed in India, except some few forming a staff of non-commissioned officers. There is merely a staff of officers; and they are mainly employed in the Public Works Department of India, and it is thence that the great difficulty of working the system arises.

12,874. Those Royal Engineers are employed in the Public Works Department?—Yes.

12,875. (*Sir Andrew Scoble.*) There are a certain number of sappers and miners in each division of the Indian army, is there not?—But they are not our sappers and miners.

12,876. But those sappers and miners in India are officered by Royal Engineer officers?—Yes.

12,877. Who are sent out for the purpose?—Yes.

12,877*a*. (*Sir James Peile.*) I think we had it in evidence some time back that India was dealt with on the "most-favoured-country" terms in the matter of stores?—Yes.

12,878. There is a case which has been brought to my notice by the India Office of which I should like to ask an explanation. No doubt you will be able to explain it, but it is pointed out that in certain matters favourable terms are not accorded to the India Office. It was a case of some cartridge feeders, I do not know whether you recollect it?—I cannot remember the details of the store cases.

12,879. They were made over by India for the purposes of the Admiralty. The price named was 1*l.* 10*s.* each, but the feeders cost 3*l.* 3*s.* 9*d.*, and India thought that it was fair that they should get a higher price, and they were told in reply that an arrangement, "B," specified in a certain War Office letter applied to the case. The arrangement "B" is that stores not required by the

Sir R. Knox, K.C.B.

22 July 1896.

selling department, and which, but for the transfer, the buying department would be obliged to get elsewhere—are paid for at half vocabulary prices, so that the Admiralty paid India for the cartridge feeders half the vocabulary price. The particular transaction I want to call attention to is one where India bought certain articles, carbine barrels and other things, and expected to buy them at half price; but they were told that the rules agreed to between the War Office and the Admiralty are not meant to apply to transactions between the Home and Indian Governments, and that these articles would be issued at store vocabulary rates, unless demanded in such quantities as would represent a considerable sum of money; that is to say, instead of half, the full vocabulary rate was charged. Here are the papers?—Yes, I remember the transaction.

12,880. It seems to be not quite an equal one; India got half rates and paid whole rates?—Our position with the Admiralty as regards these warlike stores differs from the position in which we are placed with regard to any other department, inasmuch as comparatively recently the whole of the warlike stores for both the army and the navy were provided in Army Estimates; the guns and ammunition and everything pertaining to them formed an Army charge; and at one time, no doubt, that served a very useful purpose—the arms being absolutely the same were interchangeable, and economy arose from the fact that there was one general store, upon which the two departments indented. But recent developments have necessitated the division of these stores, and the army now provides only for the army stores, and the navy provides only for the navy stores; but in order that in some degree the same interchangeability of the stores between those two departments as existed under the old system might be maintained under which, so far as it could be maintained, no doubt economy would arise, special arrangements for the transfer of stores, as between those two departments, were made when the division took place, and the arrangement which has just now been quoted is that which has been come to. It has been regarded as very special between us and the Admiralty, and as not being applicable to any other departments. What I alluded to when I said that India had the advantage of the most-favoured-nation treatment was the treatment of her as regards the charges that are made for articles that are turned out in the factories to meet an Indian order. There we treat the India Office just in the same way as the War Office is treated and as the Admiralty is treated; and they are charged what the accounts show, according to the system upon which they are based, to have been the actual expenditure upon those articles which have been turned out, but without any charge for interest upon fixed capital.

12,881. (*Chairman.*) If, we will say, the Home Office wanted some of those stores, which you say are interchanged between the Admiralty and the War Office under this special arrangement, should you charge them a higher rate than that which you charge the Admiralty?—We should.

12,882. Therefore the Indian Government would be treated in the same as the Home Office?—Quite so; in the same way as any other department, except the Admiralty.

12,883. I think now, Sir Ralph, we might pass on to the non-effective branch of the subject. Can you tell us what was accepted for non-effective charges of the Royal troops during the time preceding the Mutiny?—At one time, before the year 1823 I think it was, or 1824, India paid nothing whatever for the non-effective charge. Of course the force varied; it had been, gradually growing, and when the force was comparatively small, I take it that it was regarded as a *quantité negligéable*; but the force of the Imperial troops in India increased, and it was in 1823–24, when that force consisted of about 20,000 men, that an agreement was come to between the Home Government and the East India Company that a charge should be made against India for the non-effective expenses of the force, including both officers and men; that charge was to be 60,000*l.* a year.

12,884–5. Do you know what that represented per head?—Roughly, at that time the force was 20,000.

12,886. 20,000 was the maximum, fixed by Act of Parliament, unless the Court of Directors asked for more?—Yes, but I took 20,000, roughly, as the basis of that charge and worked out the charge to come to 3*l.* per head.

12,887. And what was in the minds of the Government, when they fixed 3*l.* per head?—They did not fix 3*l.* per head; I do not know what was in their mind, but they took 60,000*l.* as a payment representing the non-effective charges. I have no doubt they were glad to get it as against the nothing that was paid before that.

12,888. But if the maximum force was 20,000, and they charged 60,000*l.* it was practically 3*l.* per head?—It was practically 3*l.* per head, yes.

12,889–90 And that lasted until what year?—Until the 10*l.* capitation rate was introduced, which was in 1861–2. At the same time as the 10*l.* rate was accepted—which I think, as I have explained, was only an approximation to the actual charges—a smaller payment was agreed upon for the non-effective charges. Sir Alexander Tulloch's Report shows that the committee went very elaborately into the items of what was called non-effective expenditure, and endeavoured to work out a figure which would be acceptable to the two Governments, but there was evidently great difficulty in coming to a conclusion as to what the charge should be, and ultimately the claim was fixed very much like the 10*l.* was fixed; an approximation, was made, and 3*l.* 10*s.* was accepted as a capitation rate upon the force maintained in India. That represented 10*s.* a head more than the previous payment, and it was paid upon a very much increased number of men. That was looked upon as a satisfactory settlement at the time, but it was only accepted with the reservation that the whole subject should be considered when opportunity presented itself, and that a more exact charge would be made against the Indian Government, that is to say, a charge more exactly representing the actual cost.

12,891. I see the average strength of British regiments in India from 1834 to 1857 was 24,000, and the 60,000*l.* was paid in respect of that force just as it had been paid before in respect of the 20,000?—Quite so.

12,892. And that works out at about 2*l.* 10*s.* per head does it not?—Quite so.

12,893. Therefore that sum of 60,000*l.* a year was held to be quite insufficient, was it not?—Oh, quite.

12,894. Do you think that at that time the 2*l.* 10*s.* was sufficient to cover the non-effective charge?—It was never supposed by the War Office that it covered it.

12,895 What did the War Office want?—It is not distinctly put down; but, as you can see from Sir Alexander Tulloch's report, I think they worked their charge up to something over 5*l.* in accordance with their view of what the charge should be.

12,896. And did the India Office put their estimate below 3*l.* 10*s.*?—No; I do not think that they really made any distinct proposal. They simply demurred I think to anything like the higher charges, and ultimately in order to come to some settlement the 3*l.* 10*s.* was accepted. The Committee say at page 71 of their Report:—"The Committee appointed by the Secretaries of State "for War and for India to report as to the measures "which it would be desirable to adopt, with the view of "fixing an average rate for the payments to be made "from the revenues of India to the British exchequer on "account of troops of the line serving in India, feel great "difficulty, owing to the complexity of the details, in "coming at present to a final conclusion as to the precise "average rates; but, considering that the authorities who "have nominated them to this duty have expressed a "desire that, pending a full and complete report on the "subject, some average rate should be named on which "provisional arrangements may be made for the year "commencing 1st April 1861, the Committee are of "opinion that if for every 1,000 men of all arms in India "the sum of 10,000*l.* per annum be assumed for the "effective, and 3,500*l.* per annum for the non-effective "charge, these rates will sufficiently approximate to the "real amount to warrant a temporary adjustment on that "basis until their further report, when they may be enabled "to specify the proper average and the rates for each arm "separately."

12,897. It was only a temporary arrangement that they recommended?—Quite so; but it remained in operation, of course, for some time.

12,898. Would you not say that a non-effective rate, which is based on so much per head of the effective forces, is not very correct in principle?—Certainly.

12,899. Because, supposing you double the force at any time, the payment by the debtor power is double, but of course the pensions do not increase for some time to come?—Quite so.

12,900. But I think that after the Mutiny for some time—until 1885—the force remained very stationary, did it not?—It did; it was maintained at about 60,000 for a good number of years.

12,901. That 3*l.* 10*s.* rate only lasted up to about 1870, did it not?—Yes, till 1870–1.

12,902. And what change was made then?—Then the system was introduced which was described as the capitalisation system. It was arranged that the Indian Government should pay down the present value of their share of each pension as it was granted—a capital sum calculated according to a life table, which was to be specially constructed, based upon the actual experience of pensioners' lives, and assuming the value of money to be 4 per cent.

12,903. Great objection was taken to that 4 per cent. over here, was it not, the rate of interest being thought to be considerably too high?—It was.

12,904. And therefore in its operation it told against the Imperial Government?—It did.

12,905. But nevertheless, during all the time that that arrangement was in existence that 4 per cent. rate was continued?—It was.

12,906. The argument on the two sides was that it was an unfair rate to charge England—for that was what it amounted to, because England could borrow so much cheaper than that; the argument on the other side being that that was certainly the lowest rate at which India could borrow?—Those were the arguments.

12,907. And practically it was carried in favour of India?—It was.

12,908. That went on for pretty nearly 20 years, I think, did it not?—Yes.

12,909. There were many objections to that system, were there not? First of all, the calculation of the value of the pension was based on the supposition that the capital sum would be paid down at once?—It was.

12,910. In reality, the accounts between the India Office and the War Office were never made to agree until months, sometimes years, after?—That was the case, yes.

12,911. The consequence was that England not only paid a very high rate of interest, but she lost the interest for certainly a considerable number of months?—Yes, but any sum that was deficient of the proper sum had to be paid.

12,912. There was a very great error made by the Treasury at that time into which we need not enter—it does not concern us, though we may mention it in passing—namely, that the whole of the capitalised sum was paid into the Exchequer and treated as yearly revenue?—That was so.

12,913. And it was only after the lapse of a very considerable time that that mistake, as I think it, and the fact that these terms were unduly onerous to England, led to the change of system, which is that now in force?—Yes.

12,914. Will you describe it?—It was decided that we should approximate the actual charge for these pensions more nearly, and that actual expense per annum should be claimed from the Indian Government; but, in order to avoid making the claim representing the actual payment that was made, it was thought to be a sufficiently near approximation to calculate the probability of the life of each person as he was put upon the pension list, and make a charge against India for the annuity that was thus created for the number of years that the annuitant was expected to live. That method avoided the rendering of claims based upon the actual payments in the accounts; it was looked upon as a very great convenience both to the War Office and to the India Office.

12,915. Are you satisfied with the working of that system? That is to say, do you think that the tables, upon which the lives are calculated fairly represent the result, or do you think it works out too favourably either to the one side or to the other?—I do not think it has been tested in any way. The table was very carefully calculated by the India Office and the War Office actuaries upon the actual experience of pensioners' lives; and this system is an application to the present day of the experience of the past. If it be the case that lives of pensioners are better lives than they were during the period from which the previous experience was gathered, of course it is against the War Office.

12,916. Considering the progress of sanitary science, is not that a result that you would anticipate? I suppose there would come a time at which you would reconsider the tables, would there not?—Generally the calculations that are based upon actuarial figures of that kind are tested from time to time to see whether they are in accordance with the calculated experience or not.

12,917. (*Sir Edward Hamilton.*) I understand that these actuarial tables are not ordinary actuarial tables which are used in insurance offices, but they are actuarial tables based on actual experience of the expectation of life of a man who has served in India?—Served in the army generally.

12,918. Including Indian service?—Yes.

12,919. And are these tables very different from the ordinary tables of expectation of life?—They are different, certainly; and they are very different from the table which was experimentally taken for the earlier periods of the capitalisation system. That was an old London life table, I think, which, I think, showed the lives as very bad indeed, compared with the actual experience.

12,920. (*Mr. Mowbray.*) Are these tables the same as the tables which you used in the later period of the capitalisation system?—Yes.

12,921. When were the existing tables introduced?—I cannot say exactly the date.

(*Sir Edward Hamilton.*) I think it must have been about 1884–5.

12,922–3. (*Chairman.*) They were introduced at the time of the change of system?—Oh, no; they were in existence before then. They were in existence during the capitalisation period.

12,924. (*Sir Edward Hamilton.*) They had nothing to do with the capitalisation?—Yes. The capitalisation was calculated on the lines derived from these tables.

12,925. (*Chairman.*) The change from the capitalisation system was not made at the instance of India? She was not likely to make the change, because the old system was very beneficial to her?—Well, India had something to do with the giving up of the capitalisation system.

12,926–7. But the Treasury moved first in the matter, and, I think, with the full assent of the War Office?—But I think also that the Indian Government found the pressure very considerable of making a capitalisation payment. They did not think that it would amount to anything like what it did amount to. I have here a series of tables which show the growth. This is taking the capitalised sum for the pensions of the men alone. In 1870–1 the charge against India was 211,000*l.*; the next year, 1871–2, was even less, but not much less, 204,000*l.*

12,928. (*Chairman.*) Those are the capitalisation payments?—The capitalisation payments for men.

12,929. (*Mr. Buchanan.*) The India Office tables show much larger payments?—They include the whole; that includes the whole, officers as well as men. I am taking simply the pensions of the men. I will read only the thousands—211,000*l.* in 1870–1; 204,000*l.* in 1871–2; 232,000*l.* in 1872–3; 298,000*l.* in 1873–4; 330,000*l.* in 1874–5; 467,000*l.* in 1875–6; 652,000*l.* in 1876–7; 507,000*l.* in 1877–8, and 733 000*l.* in 1878–9. That is the highest year. That is to say, it grew from 211,000*l.* in 1870–1 up to 733,000*l.* in 1878–9.

12,930. I see it stated here that the total from 1870–1 to 1878–9 was 8,824,561*l.*; that includes the officers?—Yes, very probably.

12,931. (*Chairman.*) Very well, then, the effect of this stopping of the capitalisation system was almost to annihilate for the time being the Indian charge for pensions?—It was so.

12,932. And it was as if you had started a new force with a right to pensions; the charge began to grow up again?—Well, not exactly a new force.

12,933–4. It has the same effect?—Not quite, because pensions became chargeable the very next year; that is to say, pensions for the men who had completed their service in that year. But it was as if no pensions at all were in existence for the men previously discharged; and that was the principle of all the payments that were made by the Indian Government from the commencement when they paid that 60,000*l.*; when they paid that 60,000*l.* it was supposed that they were paying down the pensions that had been created during that first year. That was the idea on which the scheme was supposed to be based.

12,935. (*Sir Edward Hamilton.*) But at the present moment the pension charge is not falling very heavily upon India?—No, it is not.

12,936. And, if it were the normal charge, it would be much greater than it is now?—Quite so; that is what I wanted to bring out.

12,937. (*Chairman.*) Perhaps you would give us now, if you have it, what has been the charge yearly from the time of the cessation of the capitalisation—that is to say, in 1884, I believe?—Yes; I have here the annuity that was created each year up to 1894–5. In 1884–5 it came to 15,262*l.*

Sir R. Knox, K.C.B.

22 July 1896.

12,938. (*Mr. Buchanan.*) Is that for the men only, too?—For the men only, yes.

12,939. (*Sir Edward Hamilton.*) Why do you not include officers?—Because I am advancing the argument as regards the men and the alteration of the system of service, the point of my argument being, that by the introduction of short service the charge for pensioners was reduced very considerably as compared with what it would have been, if long service system had been continued, that by that change a relief was given to India far outweighing anything which has been brought against her in the way of increased charges on the effective account, arising from the recruiting of men and shipping them to India. In 1884–5 the amount for pensions was 15,000*l.*

12,940. (*Sir James Peile.*) These are round figures, are they not?—Yes. In 1884–5 the amount was 15,000*l.*; in 1885–6, 38,000*l.*; in 1886–7, 64,000*l.*; in 1887–8, 84,000*l.*; in 1888–9, 111,000*l.*; in 1889–90, 105,000*l.*; in 1890–1, 156,000*l.*; in 1891–2, 174,000*l.*; 1892–3, 196,000*l.*; in 1893–4, 207,000*l.*; in 1894–5, 214,000*l.*

12,941. (*Sir Edward Hamilton.*) Those figures represent the charges in respect of men who have become pensionable since the year 1884?—Quite so.

12,942. (*Mr. Mowbray.*) And the reason why the charge is comparatively small now is that India had already paid before 1884–5 the bulk of the pensions which are now running?—Quite so; that is to say, India had paid, so far as the capitalisation represents the actual charge, and so far as the 3*l.* 10*s.* and the 60,000*l.* a year represents the actual charge, because we have men upon our books belonging to each one of those systems.

12,943. (*Mr. Buchanan.*) She has discharged her liability?—She has discharged her liability, but hardly borne her charge.

12,944. (*Chairman.*) Have you really men that came under the 60,000*l.* arrangement still on your books?—Perhaps that may be a little exaggeration; but we have some hundreds of men over 90 years of age on our books.

12,945. Have you any calculation of what you would expect to be the normal charge of the present force?

(*Sir Edward Hamilton.*) That is supposing there were no capitalisation?

12,946. (*Chairman.*) On the present system. You see Sir Ralph has worked that charge up to 214,000*l.*, and, owing to this disturbance of the system that took place in 1884, it is rather difficult to understand what may be allowed as a fair charge against India for pensions?—I have a table here, which has been circulated, I think, to the members of the Commission, showing in the form of an annuity calculated upon the same principles, the charges since the year 1878–9, that year being the last heavy year, which I quoted with the figures of the capitalisation period. The heaviest capitalisation charge was 733,976*l.* Bringing now these payments to a common system, I find that the charge against India since that date has greatly decreased. The charge for that year for the permanent pensions—I am excluding now the temporary pensions, which represent only a comparatively small charge—represented by that capitalised sum of 733,000*l.*, would have been against India 59,700; in the next year, 1879–80, it fell to 49,600*l.*; in 1880–1, to 42,200*l.*; in 1881–2, to 40,000*l.* Now I will read the consecutive years, showing how it decreased:—1882–3, 35,000*l.*; 1883–4, 23,000*l.*; 1884–5, 24,000*l.*; 1885–6, 27,000*l.*; 1886–7, 25,000*l.*; 1887–8, 25,000*l.*; 1888–9, 29,000*l.*; 1889–90, 28,000*l.*; 1890–1, 22,000*l.*; 1891–2, 22,000*l.*; 1892–3, 17,000*l.*; 1893–4, 16,000*l.*; 1894–5, 14,681*l.* So that comparing the charge created the last year with that in the heaviest year, the diminution is from 59,000*l.* down to 14,681*l*, showing the operation of a system, under which only a comparatively small number of pensions are given, as against a system, under which a large number of pensions are given.*

12,947. (*Sir Edward Hamilton.*) No; but that does not quite show it. I think what the chairman is really driving at is to find what would be the normal charge now in respect of the pensions had there been no capitalisation?—That is what I am coming to. That 59,000*l.* I have excepted as an abnormal year; it was about 20 or 21 years from the time when that very large force was raised for the Indian Mutiny and the Crimea, and it is calculated that in a normal year nothing like such a figure as 59,000*l.* would be reached, or even 49,000*l.* as in the subsequent year. But it is calculated that with the increased force—because the force has been increased by 10,000 men since the earlier periods that I have been mentioning here—the normal charge created would be 43,760*l.*; that is to say an annuity about similar to that which was created in 1880–1. As against that, it is calculated that the normal charge for permanent pensions, arising under the present system, will be 13,045*l.* (as against 43,760*l.*), and these actual figures show the probability of that being the case—that is to say, the last charge which was created was 14,681*l.* as against an estimated future charge, when we get completely into the normal, of 13,000*l* a year.

12,948. That does not meet my point quite. Surely the way of ascertaining what the charge now upon India would be in respect of pensions, is to take that sum which you gave us as 214,000*l.*, which represents the charge in respect of those who have been pensionable since the capitalisation system was done away with, and then to add the sums which you are now paying in respect of pensions which were capitalised, with which you and I are familiar enough. Is not that the way to get at the actual charge which would be falling upon India, if she simply paid her share every year?—Oh, quite so. I quite understand; that is quite a different point. India, no doubt, is paying in the fact that she paid a capital sum down before; she is paying what that represents at the present time, in addition to this annuity which has been created, which now has risen, as you say, to 214,000*l.*; but I have not those figures with me here.

(*Chairman.*) I think you recollect the War Office Actuary's Report of the 15th January 1889, on the non-effective saving to India, consequent upon the introduction of short service in 1891. That gives exactly the sketch for which Sir Edward Hamilton is asking.

(*Sir Edward Hamilton.*) No, those are not the figures; I have got them at the Treasury; I ought to have brought them over.

12,949. (*Chairman.*) Will you look at that paper, Sir Ralph. There you see on the top of this page a calculation made by the actuary in 1889, that the normal charge to India, to which she was working up at that time under the long service system, was 971,000*l.* a year?—Quite so.

12,950. Then there is shown what might be expected with the same force existing to be the normal charge under the short service system, viz., 302,000*l.*, so that, comparing the two systems working at normal rates, there would be a saving under the short service system in pensions alone of 669,000*l.*?—Quite so; that is what I was trying to bring out, when Sir Edward Hamilton asked me his question.

12,951. Do you see any reason from subsequent experience to modify what the actuary states there?—No; quite the reverse, because I think that actual experience, as shown in this paper which has been circulated, supports entirely the actuary's calculations; that is to say, in the earlier years the calculation of what the future payment would have been under the old system was about 979,000*l.*, or about the sum which represented an annuity created every year of 43,760*l.* Now the annuities that were treated in the early period, to which I have referred, were 59,000*l.*, 49,000*l.*, 42,000*l.*, 40,000*l.* and so on, before the new system began to tell; and the annuity has already diminished to 14,681*l.*, the calculated figure being 13,000*l.*, so that the actual facts entirely bear out the actuary's calculations.

12,952. (*Mr. Mowbray.*) Then I understand that the new system, which began at a figure you gave us as 15,000*l.* and has now worked up to 214,000*l.*, is likely to reach its maximum at a little over 300,000*l.*?—That is so.

12,953. That was the actuary's calculation, and that you agree with at the present time?—Quite so; to give an instance of the diminution in another form, I have here the number of men discharged from the army to whom pensions were given, and on whose account a claim was made against the Indian Government on account of their Indian service. I will read the earlier figures and wind up with the later ones, and that will bring out the contrast more clearly than if I were to go through them all. In 1876–7 the number of men pensioned who had Indian service was 5,200, the next year 3,800, the next year 5,700, the next year 4,600, the next year 3,800. For the last two years the number of men so pensioned was in 1893–4 957, and in 1894–5 846, showing that the effect of the introduction of the short service system has been enormously to reduce the future charge for pensions, as compared with what it would have been had the old system been maintained. That is what the War Office advanced in answer to the charge that the short service system has thrown enormous burdens upon India.

12,954. (*Chairman.*) But on the other hand you must set against that, must you not, the deferred pay?—That is a moot point; but at all events the War Office can

* *See* Appendix 59.

afford to put that in; the saving in pensions is so considerable, that to set off against it the 200,000*l.* odd does not diminish it by very much; and I think it is quite open to argument that this charge for deferred pay is, more or less, a substitution of a modified pension for the shorter service, as compared with the larger pension for the longer service.

12,955-6. (*Mr. Buchanan.*) The deferred pay is an increasing charge, is it not?—No, it has now reached about its normal charge. It will be for India about 210,000*l.* a year. That calculation is a maximum; in fact it cannot quite reach that. It amounts practically to 3*l.* a man per annum for the force maintained in India.

12,957. And do you look upon that as a constant charge for the future, as one that is not likely to decrease?—Fairly constant; the variations of army charges are somewhat puzzling at times, but this will hover about that; the charge on India has not amounted to 200,000*l.* in the last few years, and it has some years been above that, just as the charge for pensions, which I read out, was abnormally high in one year, and was met by an abnormally low year subsequently.

12,958. (*Chairman.*) Well now, assuming for the moment, as you said just now, that the deferred pay may be set against the non-effective charge, there is shown on these calculations somewhere between 400,000*l.* and 500,000*l.* of a saving to India by the short service system—that is to say, against the saving of 670,000*l.* on the pension charge you may set 211,000*l.* deferred pay, leaving a balance of 458,000*l.*?—There is, however, another charge, which India can claim as being in excess of what it would have been, if the system had not been changed; and that is the charge for transport of men to and from India. Of course a larger number of men have to be raised every year to replace those who are withdrawn from the service in India; and I find from the returns which have been compiled, that we may very fairly regard the increase due to the introduction of the short service—because the variation must be due to that—as about 50 per cent.; the number of men carried between the two countries has now increased by about that amount. That represents a charge for transport at the current rates of, as nearly as possible, 73,000*l.* a year.

12,959. (*Sir Edward Hamilton.*) Additional?—Well, not additional, because freights have gone down to such an extent that the charge for transport is considerably less than it was in the earlier years; but that 73,000*l.* represents what would be the saving on the part of India, if the drafts and men returning had been maintained at the old numbers as against the present numbers.

12,960. (*Chairman.*) But as a matter of policy you have increased the army since that time, have you not?—Quite so; and I have allowed for that.

12,961-2. I mean that is the natural effect of the policy of increasing the army; and you could hardly charge the system with that, could you?—Not that part which is due to the increase of the army. I have the figures, and I will show how they must be modified. In 1870-1, which we may take as representing the earlier period, the number of persons carried, including women and children, counting two children for one adult (which is the calculation which the Transport Department makes) the number of persons carried was 18,000. In the year 1894-5 the number of persons carried is shown in this return as 32,432, but this return must be corrected. A change has been introduced of recent years, which throws certain transport charges upon the Home Government. I refer to what are called inter-colonial reliefs. Now some regiments leave India earlier than they used to leave, to go to a neighbouring colony, and the regiment from that colony in the Eastern seas goes to India. The transport of those troops is chargeable to the Home Government by agreement; therefore, this 32,000 must be diminished by about 3,400 men, representing the number of men in the regiments that were so inter-colonially relieved in that year. That brings down that 32,000 in 1894-5 to 29,000 in round numbers. The 18,000, however, carried in 1870-1 must be increased by the increase that has been made in the force since that time; that is to say, to the extent of one-sixth, which is 3,000, and that would give 21,000 as the number representing the earlier year, as against 29,000 carried in 1894-5.

12,963. And is the reason of that increase of 8,000 men that you keep men in India a much shorter time?—Yes; it is entirely due to the short service system.

12,964-5. (*Sir Edward Hamilton.*) So you have to add about 8,000 on; 21,000 and 29,000 were the two figures?—Yes, quite so; and that represents the increased transport charge in respect of short service, which may be taken at present rates at 73,000*l.* a year.

12,966. (*Mr. Buchanan.*) 73,000*l.* is the charge for the extra 8,000 men?—Yes, for the extra 8,000 men.

12,967. (*Chairman.*) Taking this short service system with its results, would you say that the interests of India were safeguarded on the introduction of the system as regards financial result?—Of course, the normal charge has not been reached by this time; but when the normal charge arrives, assuming the maintenance of the present system, I make out roughly that for the force the Indian Government now maintains, about 400,000*l.* a year will be saved.

12,968. And that, of course, would justify you in saying that the financial interests of India, as well as of the Imperial Government, were safeguarded at the time of the introduction of the system?—Quite so.

12,969. That is to say, the new system itself in its essence safeguarded those financial interests?—Quite so.

12,970. (*Mr. Buchanan.*) The saving will be 400,000*l.* a year in the non-effective charges, after deducting this 73,000*l.*?—After deducting the increased charge for deferred pay and for transport.

12,971. (*Chairman.*) Now, passing on from the men to the officers. Has not the India Office made a complaint that a great change was made at the time of the abolition of purchase, which introduced, you may say, a very large increase of pension for officers in the future; and that, though the Home Government undertook the whole charge of compensating the purchase officers, yet, at the same time, in the future India would have to pay her share of pensions, which, if the purchase system had continued, would not have come into course of payment?—That is an actual fact. The abolition of purchase has necessitated, as it was always seen that it would necessitate, an increased charge for pensions of officers; but it may be almost said that, so far as the question of the abolition of purchase was concerned, it was not an act of the Government at home; it arose absolutely from the necessity of the case. Certain circumstances arose which compelled the abolition of purchase. Of course, as regards the forces that were not under the purchase system—that is to say, the Artillery the Engineers, the Medical Service, and so on—all, in fact, except the Cavalry and the Infantry—a pension system had always existed; and, as I explained the other day, such a system had existed also to a considerable extent even for the purchase corps, viz., the system of retired full pay, which gave a man, within certain limits, retired pay after 30 years' service, whatever his rank might be, and also the system of general officers, which was practically a pension system. Those two combined applied to the purchase system just as they did to the other system.

12,972. But I suppose your answer would be that Government and Parliament advisedly, and in order to make the army more effective, abolished the purchase system?—What abolished the purchase system was the abuses that arose out of the over-regulation payments; and, when they came to be inquired into and exposed, it was absolutely necessary that the system should come to an end.

12,973. The answer would be that it was an Act of Parliament for the general improvement of the army?—No, not quite an Act of Parliament. The Act of Parliament that was passed simply provided compensation for men that were serving under the system which had been disturbed: that was all.

12,974. (*Sir Donald Stewart.*) But the Government of the day brought a Bill for the abolition of purchase into Parliament and failed?—That is so; the House of Lords rejected the Act which gave compensation to officers.

12,975. Yes, but that was in point of fact the system of purchase?—The Act was passed simply to enable the Government to compensate officers, who had entered the army under the purchase system, for what they would otherwise have lost on their retirement by the abolition of the system under the warrant.

12,976-7. But surely the chief object of Mr. Cardwell's Army Regulation Bill was the abolition of purchase? When purchase was subsequently abolished by warrant, a compensating Act necessarily followed?—But that was not what carried it.

12,978-9. (*Chairman.*) The Act provided the terms upon which the compensation was to be given?—Quite so; that is all.

12,980. No doubt Parliament, when it provided that compensation, made itself liable for the measure itself?—Quite so.

12,981. But the India Office plea would go far, would it not, to say that a measure reforming the army, and for

Sir R. Knox, K.C.B.

22 July 1896.

the improvement of the army, is a grievance to India, inasmuch as it creates as extra charge, or might create an extra charge on India?—Yes, that would be the argument.

12,982. I suppose by this time it is pretty well accepted that the abolition of purchase was a benefit for the army generally, is it not?—I am afraid you would find some individuals still in existence who would argue differently, but they belong to the old school.

12,983. I am only thinking of the opinion of the generation in power?—Certainly.

12,984. I mean you must look upon public opinion as that of the active generation?—Well, Lord Cross in a despatch which he wrote to the Treasury speaks of the changes in this way (I am now quoting from a letter of the 3rd March 1883 to the Treasury): "Part of the increase "is due to the measures carried into effect by the British "Government for purposes unconnected with India, such "as the abolition of the purchase system and consequent "grant of pensions to officers, the compulsory retirement "of officers on attaining certain ages, the re-organisation "of the Army Medical Department and other steps of that "kind."

12,985. What would be the War Office reply to that?—That those measures were a portion of the system of the army; that it could not be admitted that the Indian Government could have anything whatever to say to them; that it was the principle upon which the army was practically raised and recruited. The War Office had come to the conclusion that the army could no longer go on upon the old system, and that it must be organised or raised on another system. The Indian Government, requiring the services of the British army, must take it with its system.

12,986. This is an extract from a letter from the Government of India. "It certainly appears to us exceedingly "unjust that the Indian revenues should be called upon to "bear any charge, in order to get rid of this peculiarly "English abuse." But the English abuse was one which had saved all liability for pension; when that abuse was abolished India was not called upon to bear any charge involved in the abolition, but the ordinary and natural state of things recurred, under which the officers would earn pensions?—That was the system that was started; and India would naturally have to bear the charge for those pensions, as she bore the charge for all other pensions that were created.

12,987. I say the natural state of things, because the officers of an army, except for some abnormal and unnatural state of things, would naturally earn pensions after a certain service?—Yes, and as I have said, a very large portion of the army did; all the artillery, and all the engineers, and all the medical officers, and even the purchase officers were under a pension system.

12,988. And, therefore, you would deny, I suppose, that the Indian revenues were charged in order to get rid of a peculiarly English abuse?—Certainly.

12,989. (*Sir Andrew Scoble.*) Could you give us the corresponding figures for officers' pensions to those you have given us for soldiers' pensions from 1884–5 to the present time?—I have not got them all arranged on the same system, but I have the capitalisation period and I have the period subsequent to that. They seem to correspond very closely. Under the capitalisation system for officers, the charge was in 1871–2, 77,000*l.* Then I will read them for consecutive years, 85,000*l.*, 49,000*l.*, 98,000*l.*, 76,000*l.*, 113,000*l.*, 223,000*l.*, 122,000*l.*, 274,000*l.*, 395,000*l.*, 405,000*l.*, then 262,000*l.*, then 253,000*l.* This fall was to some extent due to adjustments affecting former years. That is in the capitalisation period.

12,990. (*Sir James Peile.*) That is not the Indian share; that is the total, I suppose?—No, that is the Indian share; India paid those sums as the capitalised sums for the officers in those years. In 1884–5 the new system was introduced and the annuity only was recovered. In 1884–5 the charge was 21,000*l.*, and that has gone on increasing up to 1894–5 as follows; 38,000*l.*, 57,000*l.*, 84,000*l.*, 106,000*l.*, 124,000*l.*, 142,000*l.*, 169,000*l.*, 173,000*l.*, 189,000*l.*, 205,000*l.*

12,991. (*Sir Andrew Scoble.*) And what do you expect will be the normal amount?—I have not that figure. I think, probably, I should be able to put it in.

12,992. (*Chairman.*) Would you be able to put it in; it would be very useful?—I will see if any calculation has been made; I think it has.

12,993. Have you any idea of what that calculation was?—No, I have not; I do not recollect it. Of course these figures represent officers of all kinds; they represent the medical officers, whose pensions are very high, and the artillery and engineers and all the old pensionable forces, as well as the new.

12,994. Exactly, but those old pensions remain more or less constant?—Yes; but they have been increased and improved, because they all follow the same lines.

12,995. (*Sir Edward Hamilton.*) But the present system applies equally to officers as it does to men?—Oh, the present system of arrangement with India does.

12,996. (*Mr. Buchanan.*) We might have the normal figure both for men and for officers, or an estimate made of the normal charge that would come on India for men also. Could we have that for men and also for officers?—That I have given—about 300,000*l.* for men.

12,997. (*Mr. Mowbray.*) Are these officers' pensions calculated as annuities, and not followed out in the case of individual officers?—They are calculated as annuities, not followed out.

12,998–13,000. In the same way as the men's pensions?—In the same way as the men's.

13,001–2. (*Chairman.*) Do you not follow one of the ordinary life tables for the officers?—No; it is a special life table, based on the experience of officers' lives.

13,003. (*Sir Edward Hamilton.*) They make some allowance for service in India?—That is taken into account.

13,004. (*Chairman.*) Do you lay much stress upon the argument of the Indian Government, that India is not consulted when these great changes take place?—The desire of the War Office has always been to take the opinion of the Indian authorities on this matter; I think that they thought it sufficient to submit schemes to the India Office; and, if the India Office has accepted them, that has satisfied them. What steps the India Office should take to consult the Indian Government, they have left entirely to the India Office.

13,005. Quite so; when you consult the Secretary of State, you consult the Government of India practically?—Quite so; but there have from time to time been some small changes which, I think, from oversight more than anything else, have not been referred to the Indian Government. I do not know that it has been perceived at the time that the Indian Government would be affected; but there is no doubt that some few alterations have been made which the Indian Government represented that they had not been consulted about. Of course, it is a good card to play, when any increase of expense necessarily arises, to say, "We had no voice in it."

13,006. (*Sir Donald Stewart.*) I am not prepared to admit that. The India Office is usually prepared to accept changes which are inevitable regarding the army at large; but there are some very heavy charges imposed upon the Government of India by changes of organisation which have nothing in the world to do with the efficiency of the service, but are made for other reasons. I will give as an instance the re-organisation of the artillery. Majors were introduced as commanders of batteries, and a number of lieutenant-colonels were added to the artillery who were eventually found to be not necessary, and they were got rid of. These changes were made for the purpose of giving promotion, or for some other cause which I do not know anything about. The War Office made these changes without the previous concurrence of the Indian Government. The Government of India naturally complain about this. They say, "You gave us no warning about this. "We cannot make trustworthy estimates, if we do not "know what is coming"; and I think that their wish to be informed beforehand in all cases is a very reasonable one. It is true that India is to a certain extent safeguarded by the fact that new warrants have no effect in India, unless they are made applicable by the Indian authorities; and it must be allowed that India usually accepts changes having for their object the improvement of the army?—It is very difficult to see how the Indian Government, except in small matters, can avoid accepting such changes.

13,007. No?—I think the Indian Government will recognise that. No doubt changes are made from time to time in the organisation of the army, the necessity of which the Indian Government may not see very distinctly; but that very case to which you have just now referred, the re-organisation of the artillery and the creation of majors I remember to have been the result of most exhaustive inquiry, parliamentary and otherwise. I do not know how many parliamentary committees, presided over by different influential men, had not sat upon the question of promotion in the Royal Artillery and the Royal Engineers, and this alteration in the organisation was instituted really

to meet the complaints that were made on the part of the military authorities, that they were not getting the proper men to go into the service. That there was such disgust throughout the service at the slowness of the promotion of the Royal Artillery as compared with that of the line, that it was felt that something must be done; and a change was made. A battery was commanded by what was called a first captain, and the first captain's position was quite anomalous, and did not exist in any other branch of the service; a battery was, therefore, made a major's charge, and he was given a little increase of pay, and ultimately, under the new system, a little increase of pension.

13,008. (*Chairman.*) Would there be no advantage in the change of the organisation for effective purposes?—It was giving the rank of major to the man, who was formerly a first captain, in charge of a battery.

13,009. It was simply a method of giving promotion? That branch of the service did not require a major in the position?—I think it did.

13,010. (*Sir Donald Stewart.*) The efficiency of the service did not require it?—The efficiency of the service required a man of rank superior to that of an ordinary captain; and up to the introduction of the change there was such a rank, which was called "first captain."

13,011. Well, my experience is that you had precisely the same man under a new name with higher pay?—Yes, of course.

(*Chairman.*) I also understood that that was the result of it.

13,012. (*Sir Donald Stewart.*) And, what is more, the Government of India for years declined to pass the allowances of those gentlemen?—But I know this change was made after the most exhaustive inquiry and representations, you may say, on the part of the House of Commons. Mr. Childers presided over one of the committees, a parliamentary committee, which examined into this question of the promotion of the Royal Artillery and Royal Engineers.

13,013. The grievances as to slow promotion were admitted?—Yes.

(*Mr. Buchanan.*) But it was a considerable extra charge imposed without their consent upon the Government of India.

(*Sir Donald Stewart.*) Yes.

13,014. (*Mr. Buchanan.*) We have got the subject dealt with, Sir Ralph Knox, in the Twelfth Report of the Indian Home Charges Committee—the one that deals with the army—and at the end they give a list, reaching from 1864–65 to 1882–83, of instances in which the army expenditure, either in England or India, has been increased without the previous consent of the Government of India by the action of the War Office. The total annual increase which has been put upon the Indian exchequer by the War Office without the previous consent of the Government of India amounts to 884,100*l.* per annum?—Yes. I remember cross-examining Sir Edward Collen about those particular charges, and no doubt the sums are very considerable; the Indian Government, I suppose, was not consulted about the increase of 2*d.* a day which was granted in 1867–8 to the army, which cost a quarter of a million a year, but certainly the India Office was consulted about it, and it was understood that in order to get the men, it was necessary to make this increase in the pay of the army. It was the result of a Royal Commission on recruiting which made its report to General Peel, and he, in consequence of their recommendations, came to the conclusion that it was necessary to make this increase of pay, and it was so increased and no doubt threw a payment upon India. It was in consequence of that that the Indian Government remonstrated, and pointed out the very heavy charge this change was throwing upon them. They practically came to the conclusion that they must reduce their army and, as my questions to Sir Edward Collen went to show, they determined to send home certain regiments of infantry and cavalry from India; and then it was that the Home Government decided to considerably modify the organisation of the army, and they made reductions in the regiments, instead of bringing them home. They determined to reduce the number of companies in every regiment of infantry and of cavalry, and that scheme was accepted, and it effected a reduction of the army charges to India more than equivalent to that which had been thrown upon them by the increase of pay which had been granted only a few years before. Well, good conduct pay in the same way is represented here as an increased charge of 35,000*l.* a year. The fact is that instead of being an increased charge, the system that was introduced caused as a whole, a decreased charge. This modification of the good conduct pay regulations was introduced when short service was introduced. Short service put an end to the charges for such rates as 6*d.*, 5*d.*, and 4*d.* to the long service soldier, which rates he received if he had got 15, 16, or 18 years service, and thereby reduced considerably the charge for good conduct pay. At the same time the periods after which the men were granted their earlier rates of good conduct pay, were modified, and they were allowed to earn it after shorter periods; but the ultimate result was a considerable reduction of the charge for good conduct pay under the changed system.

13,015. Was it not possible to point that out to the Government of India and get their assent to it, seeing that it imposed upon them a very considerable charge?—No, the whole scheme was a reduction of charge: but the Indian Government here represent the scheme in an incomplete way, in order to support this argument, that the modification of the earlier periods threw upon them a charge of 35,000*l.*, ignoring the fact that the modification of the later period saved them more than that amount.

13,016. But their grievance that they are setting before us is that several of those charges entailed extra expense upon India, and that they were not consulted as to whether it was worth while for India to bear that charge?—Well, of course, the view of the Home Government was that that modification which was made in the good conduct regulations of the army generally, effected a saving, and that therefore there was nothing to consult the Indian Government about.

13,017. But there have been other grievances of the same sort. You see the letter of the Governor-General of February 27th, 1895, and the previous correspondence dealing with questions connected with the farriery establishment, I think it is?—The Indian Government has from time to time represented that they have not been, according to their views, sufficiently consulted; but I should not be at all surprised, with regard to this good conduct pay, if they had not been consulted at all, even the India Office, inasmuch as the change introduced then gave rise to a reduction of expenditure.

(*Sir Donald Stewart.*) Yes, but if the question had been put plainly to them, the Indian Government would admit that that is a change, which has only to be communicated to them to be accepted. All reasonable changes of that sort the Indian authorities must accept.

13,018. (*Mr. Buchanan.*) But when you make a change, whether it is a large one which, you believe, will produce saving, or whether it is a small one affecting captains or majors, which will cause increase of expenditure, is there no regular method of procedure in the War Office making it incumbent upon you to consult the Indian Government?—There is certainly; whenever a change is made which will affect the expenditure, even though not materially, the India Office is consulted. It is the rule of the office that the India Office should be so consulted; but this is a complaint that the Government of India was not consulted. We do not consult the Indian Government; we consult the India Office.

13,019. Certainly, the Indian statement, as you say, may be exaggerated; there may be more items put in than are justifiable; but at any rate the two combined show that there have been frequent occasions, upon which the Indian authorities have not been consulted?—I think the cases in which the India Office has not been consulted are very few.

13,020. Well, here we have details of one you see which is within the very last year; it is connected with farriery, because this is a correspondence with Sir Henry Fowler, and his complaint is that the India Office was not consulted?—I have no doubt that that is so, as here represented, and that it was an oversight. It was a very small matter, but the India Office should have been consulted about it, as it affected the charges in India no doubt.

13,021–2. (*Chairman.*) Do you think, Sir Ralph, taking this table in the 12th report of the Home Charges Committee, you could explain to us in how many cases the War Office did consult the Secretary of State?—Yes.

13,023. And also those cases in which there was a reduction, such as the good conduct pay?—Yes.

13,024. And you gave another reason for not having consulted the India Office, namely, that though the pay was increased it was accompanied by measures which made a saving?—I have no doubt that I can ascertain in which of those cases that was so.

13,025. The India Office recur to that grievance again and again, and, if the War Office do not consult them, I understand the force of their complaint?—Yes.

Sir R. Knox, K.C.B.

22 July 1896

13,026. (*Mr. Naoroji.*) I have to make a request to Sir Ralph Knox. If I want you will give me a short time next Wednesday because I think I require an explanation upon some statements made by you last Wednesday. I have to ask whether you will be good enough to give me a short time next Wednesday?—Yes, I shall be here.

(*The Witness.*) The Treasury have raised the question of the most-favoured-nation clause as regards interest in the manufacturing accounts. They wanted us to charge for interest and we have always objected; but they wish to have the matter referred to the Commission. At least that was the agreement we came to, that that question should be referred.

13,027–9. (*Chairman.*) The Secretary will communicate with Sir Edward Hamilton, and have the papers so that we may see them.

13,030. (*Chairman.*) Well now, what is your view of the claim which has been made against India on account of the cost of Chelsea and Kilmainham hospitals?—If reference is made to the report of Sir Alexander Tulloch's Committee, it will be seen that when that Committee were endeavouring to ascertain what the charge against India should be for non-effective services, which led ultimately to the 3*l.* 10*s.* rate, they took into consideration the expenditure at Chelsea and Kilmainham as an expenditure, on account of which a claim might be made against India; but, as I have explained, the 3*l.* 10*s.* was taken as a compromise for so long as it might be maintained, but subsequently when the new adjustment came into effect under the actual charge system, no cognisance was taken by the War Office of the charges for Chelsea and Kilmainham. They ignored them, as practically not of sufficient importance to bring into the calculation. The War Office would have been quite prepared to go on in that view, because they have never, as I have sought to explain, gone on the lines of exacting a charge on account of everything from India; they thought that this might fairly be disregarded; but it was the Comptroller and Auditor-General who raised the question, and drew attention to the fact that nothing was being recovered from India on account of Chelsea and Kilmainham Hospitals.

13,031. The sum is about 5,000*l.* a year?—We calculated, I think, that it may amount ultimately to about 5,000*l.* a year, and we represented that, at all events for a time, the balance of prize money which the Chelsea Commissioners hold arising from Indian wars, represented, to some extent, a fair payment on account of the extra expenditure on those places; but we had to admit that there was a charge upon the Imperial Exchequer on account of these two institutions, and that in time the interest upon this prize money would not suffice to bear what might be calculated as the Indian share. I think, however, it was only under pressure from the Audit Office and Treasury that the War Office raised the question at all, and that, so far as they are concerned, they would not wish to insist upon it. In strictness, no doubt, there is a fair claim against the Indian Government on account of this expenditure if actual charges on account of non-effective expenditure are to be paid.

13,032. We may take it that the War Office bring this question before us, do they not?—Well, we were directed to refer the case to the Commission.

13,033. I see it is stated in the War Office memorandum that the India Office has to a certain extent recognised the War Office claim against Indian revenues, inasmuch as the Secretary of State for India agreed in 1885 to make an additional payment of 1,000*l.* a year to the British Government towards the cost of the hospitals, as from the year 1851. This payment was, however, to be in the nature of a compromise, and was to be conditional upon the surrender to the Indian Government of the Indian share of the unclaimed army prize money held by the Commissioners of Chelsea Hospital. Such share was at the time believed to be about 50,000*l.* but has since been more accurately stated at 43,817*l.* 9*s.* 11*d.* The Treasury and the War Office were willing that the Indian share of the prize money should be thus surrendered, but only on the understanding that India should pay her full and increasing share of the cost of the hospitals. The India Office, however, declined to proceed with an arrangement which would thus have added considerably to the liabilities already incurred by her in respect of army pensioners. I do not quite understand on what ground India refused the proposal that you made at that time, because *primâ facie* the claim against her for the pensioners seems fairly clear. How did she justify the refusal except upon the general ground that it is disagreeable to have to pay more money?—That is the only ground, except that no definite claim on account of these institutions has ever been made against the Indian Government before.

13,034. Is it admitted on all hands that these pensioners, in strictness, ought to be a burden upon India?—Well, they form a part of the pension system. Of course, originally, there were none but what are called in-pensioners, that is to say, men who are kept in these asylums, and then that system was supplemented by this out-pension system. The in-pension charge represents the actual cost of keeping the men in this asylum, and they get their keep instead of their pension, which lapses.

13,035. And, therefore, to that extent India benefits by the fact of these men going into these hospitals?—No, she continues to pay her share of their pension. It is her share of an extra charge beyond the pension that is calculated at 5,000*l.* a year.

13,036. But, as it now stands, the Imperial Government pays that extra charge upon the Indian service of the men?—Quite so; India pays her share of what the ordinary pension would be, but a man costs two or three times as much in Chelsea as he would on the out pension list.

13,037. We may take it that the India Office find it inconvenient to pay?—I think so.

13,038. The charge has not been paid hitherto, and we ought not to claim it?—Yes.

13,039. (*Mr. Buchanan.*) The Indian Government, of course, would never think of providing any such in-pension system in this country for these men?—Well, I should doubt it. There are those, even in this country, who oppose the in-pension system altogether, and would like to see the Chelsea system abolished.

13,040. It is a renewal of an old system, for which the out-pension system is more or less a substitute?—Practically a substitute, but the number of men in Chelsea hospital, as compared with the number of pensioners, is a mere nothing.

13,041. India discharges all her liability for the out-pensions?—Yes.

13,042. (*Sir Donald Stewart.*) But the in-pensions are very popular in the army, are they not?—Well, there are different schools of thought on that matter, as there are upon everything else. Some people say they are very popular and some people say they are not. The Greenwich hospital system was abolished to the great satisfaction of the Greenwich pensioners; but I think that they got advantages, which were quite commensurate with what they derived from the Greenwich hospital system, out of the funds at the disposal of the Greenwich Hospital Commissioners. The army would not get much out of the abolition of the Chelsea system. That has been inquired into by committees only recently, and it was determined not to recommend any change.

13,043. I was referring to the popularity amongst the men; I was not talking of the public?—Well, it varies from time to time. At times I have known that there have been few applications for admission, at other times the applications are in excess of the supply; but, having regard to the fact that the number of pensioners on whom there is a charge against India, has dwindled from 5,000 down to 800, I think that the time will come when you will have no applications for Chelsea at all.

13,044. At the present moment, at any rate, there are hundreds?—Yes.

13,045. And the individuals who ask to go back to the condition of out-pensioners are extremely rare?—I believe so.

13,046. (*Chairman.*) Then you think this question may solve itself by disappearing?—I think that we make so many concessions of 5,000*l.* to the Indian Government, that this additional one would not hurt us.

13,047. That is not a very good exchequer argument?—But that is the principle. I quote it as an illustration of the principle on which the War Office claims to have always dealt with the Indian Government.

13,048. (*Mr. Buchanan.*) You think if you had exacted your pound of flesh, this is a pound that you might fairly have claimed?—Yes.

13,049. There is one question I want to put to you about the 7*l.* 10*s.* capitation rate; what is its position at the present moment? Does it go on from year to year?—It is going on from year to year, practically awaiting the recommendation of this Commission.

13,050. There is no fixed term of years?—No, there is not.

13,051. If a capitation grant were fixed, would you be in favour of having it revised at periods of 10 years or something like that?—I think that an arrangement of that kind should be renewed from time to time; but it must not be taken as an admission on my part that 7*l.* 10*s.* is enough. I think that, having regard to the extremely moderate charges made for producing the soldier for India, there should not be that rebate allowed to India in the assessment of the charges, at all events on the scale which is at present allowed.

13,052. (*Chairman.*) Your bill against India is, I think, a very formidable one. Put into figures, it is that India pays the War Office 600,000*l.* a year in liquidation of a bill, which you make out at 1,100,000*l.*?—Yes, but, as regards the rebate, my argument is this. I think it would be very fair, if India really paid the whole necessary charge of training the man; but India pays for the infantry soldier only for six months. As I sought to show the Commission two or three times, the actual period that a man is under training cannot be taken at less than 18 months, and the balance in excess of the six months is borne by the English exchequer.

13,053. And I suppose you might plead, might you not, that that represents very fully the possible value to England of these men being in training on her shores? I refer to the case that India is constantly bringing forward, namely, that these men while they are in training here, are of a certain value in case of necessity to us?—Yes.

13,054. I gather that you do not lay very much stress upon that argument; but, without conceding it, supposing it to be effective, you might answer that there is already a very considerable allowance made to India?—A very considerable allowance made to India. What I say is that these men are under military age; that they are not men that we can send out of the country at all; that they are practically under training; and that England pays the greater portion of the charge involved in their training; and, that being so, there is very little argument indeed in favour of giving India a rebate, representing a portion of the charge for training the man, when the man comes back. My argument is that the Home Government has already borne the larger portion of the cost of training that man, before he went to India.

13,055. (*Mr. Buchanan.*) He forms part of the Imperial army though?—Well, he is an enlisted soldier, but he is during that period really under training; of course the infantry soldier is made in a shorter time than a mounted soldier, but under our system of voluntary enlistment we can only get the man at 18 years of age, or even younger than 18 years of age, and those men are held not to be fit for campaigning until they are 20 years of age; and India will not take them until they are 20 years of age; they are, therefore, thrown upon the Imperial charge in excess of the numbers that the Imperial Government would otherwise maintain; but, assuming that they have been maintained, that England should have to pay for them over again when they come back and pass into the reserve is, I think, an exaggerated claim on the part of the Indian Government, even to the extent that it is allowed, because the bill against India is reduced by something like 150,000*l.* a year by this rebate that is allowed.

13,056. Do you claim that there should be no rebate at all, that, in theory at any rate, the very last sixpence of the cost of the British soldier sent to India should be charged to India; is that your theory?—No. I think that the general position that has been taken up by the Home Government is that there are many charges in connexion with this army, which are necessarily incurred in order to produce these men, which may fairly be remitted to India; even admitting the argument that these men are of some value in this country—and from the earliest times it will be seen that that has been advanced as an argument that no administration charges should be made, no charges for the different departments connected with the army for maintaining the supply and so forth—that there are heavy charges to set against that value; and it has been distinctly said that these charges may be fairly regarded as a set off to any value that the young soldier may have before he leaves our shores. But what I am addressing myself to mainly is the actual charge that is incurred, and necessarily incurred, by the Home Government for these men who only exist for Indian purposes, and I say that, inasmuch as the Home Government has to pay a year, out of 18 months' training, there should be no charge or little charge made against the Home Government on account of these men returned who pass into the reserve considering the very small period that is charged against India for the period of training. That is to say India is really now charged for six months for an infantry soldier; if that man comes back to the reserve, India is remitted one-third of that six months, so that for every soldier of that kind India has paid for only four months training. I think that the rebate is excessive. I do not say that the principle of rebate is not fair enough; if the charge for training were larger, I think that it would be a very reasonable charge, but practically the charge that is now made is a net charge.

13,057. But you do acknowledge that there should be some system of rebate of the actual charge for training of that soldier?—I do not think myself, as a matter of principle, that it is an unfair thing. It was based upon the idea that the man has to be trained as a young soldier, and that, when trained, his service is divided between the Home Government and the Indian Government; that the cost of that period of training should be spread over the period of service that the man gives, and that, therefore, it should be divided between the two Governments; and, assuming that the payment now charged against India is the full charge for training, the rebate should be in proportion; but my argument is that it is not the full charge but that it is a net charge that is made for the training; and that the rebate is too heavy considering the smallness of the charge.

13,058. (*Sir Donald Stewart.*) But would it not be very difficult to make an exact calculation as to what was due from both parties, because it is not an absolute certainty that every man has been six months in the service before he goes to India?—Well, it is almost a certainty. I had returns with me when I was examining Sir Edwin Collen, which showed the period of service that the men had who went out in the recent embarkations, and I think it was demonstrated by these returns that there was not a soldier that had not got six months, and that a large number of them had, as I said, over 12 months, over 18 months, and over two years before they were sent out.

13,059. Yes; but I have heard that recruits of less than six months' service are occasionally sent to India?—When a special demand has arisen. I can remember there were occasions during the last 10 or 20 years, at all events, of special demands by the Indian Government in excess of the normal demand, when there has always been a difficulty in complying with the demand on the conditions which the Indian Government makes as regards the training of the men and the ages of the men, and they have been really more particular as regards the age of the men than the training of the men. They say:—"We wish to have a "man of 20 years of age, and in no case under 20 years of "age," and men have been sent who have been 20 years of age who have not had the exact amount of training; but they have been comparatively few.

13,060. That is the point?—But they have been comparatively few, and they have now practically been reduced to *nil.*

Adjourned.

At the India Office.

TWENTY-NINTH DAY.

Wednesday, 29th July 1896.

PRESENT:

THE LORD WELBY, G.C.B. (CHAIRMAN, PRESIDING).

The Right Hon. W. L. JACKSON, M.P.
Sir WILLIAM WEDDERBURN, Bart., M.P.
Field Marshal Sir DONALD STEWART, Bart., G.B.C., G.C.S.I.
Sir E. W. HAMILTON, K.C.B.
Sir RALPH KNOX, K.C.B.
Sir JAMES PEILE, K.C.S.I.
Sir ANDREW SCOBLE, K.C.S.I., Q.C., M.P.
Sir T. R. BUCHANAN, M.P.
Mr. W. S. CAINE.
Mr. DADABHAI NAOROJI.
Mr. R. G. C. MOWBRAY.

Mr. COLIN G. CAMPBELL, *Secretary*.

Viscount Wolseley, K.P., &c.

29 July 1896.

Field Marshal VISCOUNT WOLSELEY, K.P., &c., &c., Commander-in-Chief of the British Army, called in and examined.

13,061. (*Chairman.*) You have seen a memorandum laid before the Commission by the Financial Secretary to the Secretary of State for India, upon payments in respect of services in which both the Imperial and Indian Governments are interested?—Yes.

13,062. That paper conveyed to us the views of the Secretary of State upon the arrangement under which the Government of India makes certain payments to the Imperial Government on account of (1) effective, and (2) non-effective charges of Her Majesty's forces serving in India. Taking first the effective charges, you are aware that the Indian Government pays to the Imperial Government 7*l.* 10*s.* per man of the Imperial service on the Indian establishment. Sir Ralph Knox has explained to us fully the data upon which that charge is based, and I need not trouble your Lordship with questions upon that point. You will see in paragraph 14 of the memorandum that the Secretary of State does not desire to reopen the calculations upon which the actual capitation rate of 7*l.* 10*s.* was arrived at by Lord Northbrook's Committee, nor does he think it necessary to inquire whether the establishment in India has been maintained at the prescribed strength. On these points therefore, the Secretary of State does not invite an expression of opinion by the Commission, and we may accept them as agreed, unless the War Office demur to them. On this point I shall have to ask your Lordship questions later when we deal with Sir Ralph Knox's evidence; I ought at the same time to say that the Commission is put into a position of some little difficulty in this matter, as Sir Edwin Collen, who came before us as a military witness on behalf of the Government of India, disputed the arithmetical basis of the capitation grant. To a certain extent, therefore, India speaks with two voices. In going through the evidence I shall have to allude to two or three points in Sir Edwin Collen's evidence. At the same time I think we must take as our guide the view expressed by the Secretary of State, that he is content to accept the 7*l.* 10*s.* In paragraph 15 the Secretary of State invites the attention of the Commission to general principles of great importance, as militating against the equity of a merely arithmetical division of the charges. The first of these principles is the necessity of keeping within the limits of real necessity the additional cost thrown upon the Government of India by the abolition of the local European army. Sir Henry Waterfield quotes a letter of the India Office to the War Office, dated 9th of September 1871, in which the Duke of Argyll stated that he did not consider it either politic or just to lay upon the revenues of India the entire cost of an organisation for furnishing recruits to that country, which experience had shown to be far beyond what is needed for that particular purpose. May I ask whether your Lordship is of opinion that the recruiting organisation is far beyond that which experience has shown to be required?—I do not think it is at all.

13,063. How are the numbers of the Imperial troops in India fixed?—By India.

13,064. And the Imperial Government merely consents to the finding of the troops?—We merely supply what they ask us for.

13,065. Therefore the present establishment is fixed with the assent of the Indian Government, and is not in excess of their requirements?—No; in fact, I might say that when they make additions, as they have done in recent years, to their numbers, it is an inconvenience to us, a very serious inconvenience to our military organisation throughout the world. The larger number we are called upon to supply adds to our great difficulty in recruiting, for India adds to the numbers of recruits that we have to enlist every year, and *pro tanto* increases our difficulties.

13,066. Therefore, it being fixed upon their initiative, the Indian Government is not in a position to plead that the army exceeds the requirements of India?—I should say, certainly not.

13,067. Would you consider a telegram of the Viceroy to the Secretary of State of May 14, 1896, with reference to the question of troops going to Suakin as supporting that view? He says, "Our army is scarcely sufficient "for our own purposes, and in now complying with "Imperial requirements, we undertake the risk of an "emergency coming upon us while our army is reduced "below the recognised minimum." And again, Lord George Hamilton's despatch of June 30, 1896, says:—"It "is perfectly true that the strength of the the Indian Army "has been fixed at what is no more than necessary to "meet certain emergencies which may suddenly arise." Those are expressions of very high opinion which put it beyond question that the Indian Government would not undertake the responsibility of reducing the present establishment in India?—I assent to that.

13,068-9. If the force of Imperial troops in India is not greater than India thinks necessary, an organisation at home to keep up that force to its normal strength must be maintained, must it not?—Yes.

13,070. And it would lie with the India Office to prove that that organisation is excessive, in order to justify the Secretary of State for India in saying, as quoted by Sir Henry Waterfield, that experience has shown that organisation to be far beyond what is needed for furnishing recruits?—Certainly, but I might add also that those at home who are accustomed to the questions arising from the administration of a large army all over the world, are the best people to give opinions upon those subjects. My experience of India is that it has produced a great number of the very ablest officers we have got in the army, but they know very little of the organisation of our home army, that is, of the Imperial army all over the world, and more especially they are very ignorant of the difficulties that we have in obtaining recruits, and in keeping up the strength of our army to the prescribed figures which are settled and established by Parliament year by year.

13,071. Are you satisfied with the present organisation, by which recruits are furnished to India?—Certainly, and I say that, because I can remember the old system, and am old enough to remember India in the days when India had its own European regiments; and I also had some experience of the drafts sent out from Warley and from our depôt at Chatham in those days to supply the

wants and fill up the vacancies in what were then called the Queen's regiments of infantry and cavalry in India.

13,072. As a matter of fact then you know from your personal knowledge, what we have heard, that the recruits sent out from Warley were recruits who had had very little training?—Oh, practically none. I remember a large draft arriving in Rangoon from Warley. When I was a young boy, I went out to India in 1852 with a large number of drafts for several Queen's regiments, and, sailing at the same time, were very large drafts for the European regiments of the Company's service then in Burma. When I arrived at Rangoon—it was during the war of 1852–53—there were the headquarters of two regiments of the European infantry of the Company's service quartered there, the first Bengal Fusiliers and the first Madras Fusiliers, both of them excellent regiments, fine fighting material; but their recruits were a most poor lot, I should say, picked up anyhow. They were of the same character that we then got for the Queen's regiments; but they were very inferior indeed to the quality of the men that we now obtain as recruits for the various regiments throughout the world. They arrived in Burmah without any training at all; they were useless for purposes of war; they were being trained during the whole time I was at Rangoon; and when I went up country and came back again, they were still being trained and drilled, and their officers were still engaged in turning them into soldiers. When I contrast that system with the men who go out now to join their regiments, who are soldiers before they leave this country, who are what we call first-class recruits, that is men prepared to take their places in the ranks, I can only say I am astonished how any one, who is able, as I am, to judge between the two systems, can hark back at all in any way whatever with affection or longing to the old system.

13,073. Were those recruits, that they got at Warley, young men?—Very young, picked up in a great hurry, because the system was, as well as I remember—I only know this from hearsay at the time from the officers who complained about the quality of their recruits—that after the recruits had gone out to India for the year, the India Office used to let down their recruiting establishments, and their energy in recruiting, as much as possible, for economical reasons.

13,074. (*Mr. Jackson.*) At Warley?—Yes. They had recruiting parties to supply Warley in England, in Scotland, and in Ireland; they recruited in all places; but after the annual drafts had gone out, they let down their recruiting energies, and only set to work in earnest again when the time for the drafts to go out to India came round again; they then redoubled their energy: they put on all their pressure and tried to enlist as many men as they posssibly could in the last three months before the transports sailed. These young lads were washed and cleaned, and put in red coats and sent out; some of them had been in Warley for some months, but the great majority of them had not been there for more than two.

13,075. (*Chairman.*) Then, I suppose that, on sanitary grounds, you would have deprecated that method of training them? Instead of training them here in a healthy climate, they were taken out and trained in an unhealthy climate as soldiers?—And consequently died like flies. I think there have never been any statistics in recent years to show the per-centage of deaths amongst those recruits who went out to join the European regiments of the Company's service and the Queen's regiments in those days; but it was appalling.

13,076. Now, confining your experience to the recruits then furnished to the Queen's regiments, is the present system of recruiting a superior one to that which then existed, do you consider?—Oh, infinitely; you cannot compare them.

13,077. That is an interesting point to learn, especially when we hear from Sir Ralph Knox's evidence—which up to the present has not been controverted—that the cost of training a recruit at that time was, if anything—allowance being made for charges included in one case, and excluded in another, higher than at the present time?—Yes, I have no doubt it was.

(*Sir Ralph Knox.*) May I interrupt you? I did not say that the cost was higher, but that the charge to India was more favourable. The cost is a very different thing.

(*Mr. Jackson.*) The charge to India now is more favourable?

(*Sir Ralph Knox.*) Yes, that is what I mean.

13,078. (*Chairman.*) The cost which is charged to India now?—I may add that I am certain we could not now obtain, nor could we then have obtained, the number of recruits now required for India yearly, upon that system. It gave you the numbers you then required, which were very small, but it could not under any circumstances supply us with the number we now annually require to send to India, which amount to between 11,000 and 12,000, generally 12,000, annually. In those days we sent out, as well as I can remember, about 60 men to each battalion in India of the Queen's troops.

13,079. (*Sir Donald Stewart.*) We may admit generally what Lord Wolseley says upon this subject; but there is one small point upon which perhaps I would not quite agree with him, and that is the age of the men; they were not quite so young as they are now, although, as you say, they were often young?—Yes.

13,080. They did not enlist them at 18?—Well, I cannot say about Warley, because I never was quartered there.

13,081. I am referring to Warley?—For the Queen's regiments they certainly did, and my experience of the batch of recruits for the Bengal and Madras Fusiliers that I saw in Rangoon in 1852—I saw them day by day, they were drilling in the same barrack square with me—was that they were to all intents and purposes practically the same as the recruits for the Queen's Regiments with whom I sailed for India that year; they were of the same character, the same age, and they were very young indeed.

13,082. There was a pressure at that particular moment, and they may have taken them a little younger than usual, but the regulations of the service were that they should not be enlisted under 20?—Yes, but in those days they took little trouble upon that point. A man came and said he was 20 and they took him; but if a man now says he is 20, he has to satisfy a physical equivalent which is laid down by our doctors. There are physical equivalents for whatever age a recruit says he is—for 17, 18, 19, and 20; and, unless a recruit comes up to the physical equivalent for 18, we do not take him; in those days they had no physical equivalent whatever, and they took the man as a recruit, and were glad to get him, if he was the proper height and said he was of the prescribed age. But I am tolerably certain the standard age was not 20 for the Queen's army.

(*Chairman.*) But now, Sir Donald, 20 is the age at which you require the recruits to be sent out, is it not?

(*Sir Donald Stewart.*) Yes.

(*Chairman.*) Therefore, even under those conditions, the recruit is of the same age as he was then.

13,083. (*Sir Donald Stewart.*) Yes, but my point was that the men were enlisted and after a short period, and with practically no training, they were merely, as Lord Wolseley says, put into uniforms, put on board ship, and sent out to India, where they were trained with their regiments?—Yes; and they were, therefore, exposed to all the dangers of a hot and bad climate during the time that they were being converted into soldiers.

(*Sir Donald Stewart.*) Yes.

13,084. (*Chairman.*) Sir Edwin Collen quoted to us Lord Salisbury, when Secretary of State for India, dwelling on the necessity for the troops sent out to India being seasoned troops, ready to take the field. I suppose from what you have told us that you would have no hesitation in endorsing that view?—None; and the object of the present arrangement is to fulfil that.

13,085. Certainly. You have seen Sir Ralph Knox's evidence comparing the cost of recruits at Warley with the present cost of recruits?—Yes.

13,086. And I gather from what you have been saying, without pressing you upon financial details, that you would be rather prepared to hear that the charge which is made now against India per recruit is higher than it was then?—Yes.

13,087. Because no doubt many and very onerous conditions have been imposed, adding to the cost of the recruit, in the meantime?—Certainly.

13,088. Therefore it would be satisfactory both to England and India, if it turned out that the charge of the recruit is not so very high as you might anticipate, and especially to India, if, as is put forward by Sir Ralph Knox, the actual charge made against India is less than it was in the time of Warley, though it is true that the English taxpayer has to pay a certain share inasmuch as the full charge is not made against India?—As far as I can understand all the figures that have been put forward. I agree with that; and, although I am not prepared to endorse all the figures, because I have not gone thoroughly into them, I am quite sure that the statement made by Sir Ralph Knox on this point is correct.

Viscount Wolseley, K.P., &c.

29 July 1896.

13,089. Taking two of the chief conditions that are now imposed (1) that a recruit shall not be sent out under 20 years of age, and (2) with less than six months training. Do you consider those conditions of importance for the purpose of keeping the army in India effective?—I think so certainly, if you wish to carry out the views expressed by Lord Salisbury, which you have quoted.

13,090. With what amount of training on the average are troops sent out? I suppose the training differs in various branches of the service, does it not?—Well it will differ in different branches; but not in the infantry, nor in the cavalry, nor in the artillery, within themselves. I should say that the majority of the soldiers who leave for India, have about 18 months' service when they leave here.

13,091-2. The minimum being six?—Yes; but we recruit very few men of 19½ years of age. We are obliged to take them when we can get them, and we get them generally about 18; and sometimes we take in many boys who say they are 18 and who possess the physical qualifications of 18; but we have good reason to suppose that they are not 18.

13,093. Do you think that, if India re-established her own European army and recruited it from her own training establishment, she could do it cheaper than you do, provided always she enforced on herself the conditions which she exacts from you, 20 years of age and six months' training?—No, I do not think so. She could not do it so effectively or so well.

13,094. And naturally an establishment which has to maintain a great force, would *ceteris paribus* be somewhat more economical than that which is required to maintain a small force?—Certainly; it is the same thing in all machinery.

13,095. It has been contended, although the argument is not prominently put forward in Sir Henry Waterfield's paper, that the recruits are available in case of emergency for service at home. To what extent would you admit that argument?—I think they would be a great nuisance to us in the case of emergency. The emergencies with regard to England are, first of all, internal riots. They would be useless to us in a riot in a town; we should never think of sending them into the streets to come into contact with mobs of any sort. In case of invasion they would be a detriment to us, because we should have to leave behind non-commissioned officers and some old soldiers to look after them, who would otherwise be of use to us in our own regiments.

13,096. But take a force, of which the men have had 18 months' training, would you not say that that part of the force, which has approached 18 months' training and is still here, would be useful in case of invasion?—When they had had even a years' training, they would be of use to us for home defence.

13,097. Without putting them on the level at that time of your fully-trained soldier, you would be able to put them, may I say, in line with your volunteers or your second line of defence?—Yes, we should put them into fortifications, to hold forts. I may explain myself a little more on that point, because I daresay those who do not know our organisation in England, will have difficulty in understanding it. In the event of any serious trouble, like the threatened invasion of this country, or a great war, or some war to which we should have to send a considerable force abroad, we should mobilise our army, that is, we call out all our 80,000 reserves; those men are then distributed according to their regiments in the various regiments in England, and they fill up our ranks; and the residue of young boys, those boys to whom you refer, we send to the depôts, or else into places like forts, or fortifications, garrison towns, where they would not be called upon to manœuvre in the field; but the men that we should fight with are the reserves, and the trained residuum in each line battalion; the other residuum, the young boys, that are intended to be sent to India every year, would be in our way in a great measure, and we could only dispose of them by sending them to the depôts, or to the various forts, such as I have referred to.

13,098. And that would apply to the boys whom you are training for the English service?—Quite so; yes.

13,099. You would only use all your recruits in training in the depôts in the case of emergency?—Yes.

13,100. The depôts must be occupied anyhow?—Oh, yes, because they are the sources from which our supply comes; they are our reservoir for troops, where we manufacture our soldiers.

13,101. But would their presence in the depôts enable you to relieve any fighting men? Would you put them into the ranks?—No.

13,102. (*Sir Donald Stewart.*) Would these men be temporarily removed from the colours?—Yes. The very young men, say of the Durham Light Infantry, would leave the colours and go to their depôt, and their battalion would be made up to a thousand strong from the reserve men of the Durham Light Infantry; the men of the Durham Light Infantry in the reserves would rejoin their regiment.

13,103. (*Chairman.*) Therefore we come to this as your opinion, Lord Wolseley, that young soldiers in training could not be held in case of emergency, which is the only case to which India refers, as a great addition to the fighting forces of the country?—Certainly not.

13,104. Looking at it from the financial side, you, I suppose, would not think that any serious rebate should be made from the charge against India on that account?—You mean when the men return home?

13,105. The argument of India is that you have got so many thousand boys being trained, made into soldiers; and that in case of emergency they would be useful; and that, therefore, in raising your charge against India you ought to take off a rebate representing that value?—I do not think so at all.

13,106. (*Mr. Buchanan.*) But may I ask a question; after how long service does a man become a good fighting soldier?—After 18 months he would be of use to us; and after two years he certainly is a good soldier.

13,107. Then, surely, if, owing to the fact that we have an army in India and hold India, you have double the number of men with a year's training and, as you say, 18 months' training, this is a source of strength to this country in time of war?—Not much.

13,108. Not if they are within a year's time of being good useful fighting material?—Yes; well, they would go into our forts; they would be of use there; they would take the place of volunteers; they would do exactly what our volunteers would do for us in a case of emergency.

13,109. Yes, but these are the men, as I understand, to whom you look for your fighting material within a year's time?—Yes.

13,110. Well, surely it is a source of strength to us that in time of emergency we should have double the number of this reserve material coming on, compared to what we would have if we had no Indian army?—For a long war you mean?

13,111. For a long war?—I thought you were talking of an extraordinary emergency. No doubt for a long war these men would come on, and before the war was over would be useful soldiers, and we would be very glad to have them. We would not send them out to India; naturally we should send them out to wherever the war was.

13,112. (*Chairman.*) I think the contention of India was that they are useful in case of emergency, because, I take it, that if there was a long war these recruits, whom you are raising simply for India, would still have to be sent out to India; therefore it can only be in the case of a sudden emergency that their value to England can be quoted?—Yes; I should presume that, because of course India would expect us to send her the same number of recruits during the year, whether we had a heavy war on or not.

13,113. (*Mr. Buchanan.*) Supposing we were in great emergency at home, and danger did not particularly threaten India. I suppose you would at once suspend sending out recruits to India, and use the material here for your own purposes?—I suppose, if we were really in a serious emergency, we would have to do that; but that would be a very life and death struggle for England.

13,114. (*Chairman.*) Would it not come to this, that putting the recruits that you have in training for India, on the same footing as those you have in training for English service, you might consider them all useful to the extent that volunteers are useful?—Yes; but I would like, as a commentary to all these remarks and questions, to say this, that these men, to whom you refer, are absolutely necessary as part of the machinery required to turn out the men that India asks us to supply her with every year. That without these men here, we could not supply India with the men to whom Lord Salisbury has referred, and that, therefore, they are part and parcel of the machinery that it is necessary to keep up, in order to supply the drafts required annually by India of the quality that Lord Salisbury has laid down in the letter that is quoted. I do not know whether I make myself perfectly clear

13,115-6. Perfectly so, Lord Wolseley. I do not understand India to dispute that. I only understand her to say, "But while you are doing this, while you are supplying "India with this material, which is absolutely necessary "for her army, it is material that is and might in case of "emergency be of use to you," and that, therefore supposing the training of the recruit to be represented by 100*l.* you might take off 5*l.* to represent that use. I think that is the outside to which the Indian argument goes?—Yes. I do not think that the argument is a good one.

13,117. (*Sir Andrew Scoble.*) Is not a partially trained man better than an absolutely untrained man?—Yes, he is. He would be able to shoot most probably.

13,118. And so far these boys would be better than a corresponding number of boys taken from the streets?—No doubt of it; still they would not be used in the army itself. It is the reserve that would be used. These men would be set aside so far as a sudden emergency is concerned.

13,119. (*Sir Ralph Knox.*) They would be of no use to us practically in the case of a sudden war?—Of a sudden war I mean, of course. The men who would do our fighting for us would be our reserve—our 80,000 men. These are the men who would come into our ranks to fill up our fighting regiments.

13,120. (*Mr. Buchanan.*) Have you not a larger force of reserves available for that purpose, owing to the fact that we have a large Indian army?—Certainly. Of course we do not get the same proportion from a battalion in India that we get from a battalion at home.

13,121. But you get a considerable proportion?—We get a proportion.

13,122. So that the recruiting for the Indian army and the number that you have for that purpose might at any rate strengthen the home force?—Quite so. It enables us to keep a force that we can send to India in case of emergency.

13,123. And also use for your own purposes in case of emergency?—Certainly, but our army, as at present constituted, is really a great reserve for the army in India. But when we have been asked to earmark a reserve of some 20,000 or 30,000 men for India on account of what you say, we have always said, "No, we could not do that, "but not only will we send you 20,000 or 30,000 men if "you require them, but we will send the whole army to "India if necessary for its safety."

13,124. Then, surely, were you not stretching the argument rather too far, when you said that your having to raise this extra number of recruits for Indian service was really a weakness to your home defence forces, or, as you said, a nuisance?—That is easily understood, because instead of having to recruit 30,000 to 40,000 men a year, we had only to recruit about 16,000 which would be about enough for our Army out of India, we should get a better stamp of men, we should get them more easily, we should not be obliged to spend the large sums of money we do at present upon our recruiting establishments throughout England. I hope I make myself clear.

13,125. Yes. Then we should not have the same defensive strength, should we?—Yes; I think we should, because we should not have India on our books which might demand men at any moment. During the greatest war that might befall us we might have a demand made by India for 10,000, 15,000, or 20,000 men to be sent to her immediately.

13,126. But I understood we were speaking with regard to home emergency?—Yes.

13,127. Is not the existence of this extra number of recruits, and also the extra force in the reserve which is due to the size of the army in India, an increase of our home strength in time of home emergency?—In the event of an invasion it would be. That is the only emergency I can see, where it would be of any real practical advantage to us; but we have to put against that very improbable event of an invasion the very large difficulties that arise from our having to supply this very largely increased number of recruits, which the possession of India entails upon us.

13,128. (*Chairman.*) There is force, is there not, in what Mr. Buchanan says, that the fact of our having one-third of our army in India increases the ultimate reserve? I mean that, supposing you have got an army in England and India, say, of 200,000 men, that supplies eventually a larger reserve here, does it not, than if the army was only 130,000 men?—Certainly.

13,129. And to that extent the army in India helps to strengthen our reserve?—Yes. But I should put it in a different way—I should say it helps to give us the power of sending that reserve to India when India requires it.

13,130. It also gives us the power of making use of it ourselves, if we want to make use of it for our own purposes?—Quite so; but, if India required it, we should have to send it to India. We can always raise troops in England, but you cannot do that in India, you cannot raise white troops in India.

13,131. We have all the reserve force here?—Yes; for England.

13,132. (*Mr. Mowbray.*) Would you consider a reserve soldier who has been trained in India, a more effective reserve man than a man who has been trained only at home?—For European warfare the soldier trained in India is not so good as the man trained at home.

13,133. (*Chairman.*) Well, on that point (in paragraph 23) Sir Henry Waterfield says that, apart from the assistance rendered by India in time of war, India affords the best training ground for the British Army in peace; the service is liberally paid, attractive and a large and valuable part of the reserve consists of men whose training has been almost entirely acquired in India. How far would you admit this argument, and perhaps I may ask you whether you would admit it as a ground for rebate?—I do not admit the argument at all; I do not think that India is a very good training ground for our soldiers for warfare out of India. It is an unhealthy climate, and in no way that I know is India as good a ground for the training of the British soldier for Enropean warfare as Aldershot, for instance.

13,134-5. Do not the warlike operations which take place in India make it a good training ground for soldiers?—The little wars there train our men admirably for Indian warfare. They are admirable; as they accustom our men to being shot at. These little wars are invaluable to our men, much better than home peace training; but the ordinary peace training in India which lasts for about three or four months in the year practically is not as good a training for European warfare as they get in England where they are training all the year round, and under the conditions that they would have to fight, if required, for warfare in any European country. In India they obtain, I think, and acquire false notions of what active service in Europe is like; they have servants to look after them, they have men to cook for them. They have men to perform all the work that is done by soldiers for themselves in England, and in the same way officers go into the field with a number of servants, and they have luxuries that are unknown in Europe where men would have to make long marches and to bivouac in all sorts of bad weather from one month to another.

13,136. In paragraphs 17 and 18 Sir Henry Waterfield says that, when the system of short service was introduced by Lord Cardwell, he expressed his conviction that it would not entail any additional charge on India; but that it has in fact imposed a heavy additional charge on India for transport. Sir Henry Waterfield speaks of the additional charge for transport, but he passes over the points on which economy has accrued to India from short service. Would you give us your opinion on the value of short service, (1) as making the Army more effective (2), and as an economical organisation?—Well, I think there can be no question about the increased efficiency of the army, which short service has brought about; and from my remembrance of the army in India, and my knowledge of what took place in campaigns that were a little before my time, I think I may say that almost invariably, when the battalion was ordered on active service in India, the old soldiers remained behind; the men who really fought your battles for you were the young soldiers of the battalion, and the old men remained in the cantonments to look after the women and children. The men who really fought for you in India and who won your great battles and who distinguished themselves were about from 21 to 28, or, perhaps, you may say 30, in those days of long service; but I do not believe that the private soldier of 30 and over did much fighting and marching for you in India. I have been assured by men who fought throughout the Sutlej campaign that the great bulk of the old soldiers were left behind, and certainly I saw it in Burma; they were left behind then. That was in 1852-3. As regards the merits of the short service, you must, first of all, look at it from a military aspect, and secondly from what I might call a purely civil administrative point of view. It is a mistake, as I think, to imagine—it is assumed in some evidence that has been given before this Commission—that short service was established in England solely and exclusively for the purpose of improving the

Viscount Wolseley, K.P., &c.

29 July 1896.

condition of the English army. The immediate reason why short service was established was that we could not obtain recruits to enlist on long service. Sir Ralph Knox knows that as well as I do; but at any rate anyone who knows much about the army knows that perfectly well. You hear a great deal of talk in newspapers, and in this evidence to which I have referred, of short service as if it had been merely established in England because people wished to imitate foreign nations and to establish a new order of things that would improve the army. The immediate cause of the establishment of short service in England was that our army had been for years under its establishment by about 10,000 men. We could not get men, they were impossible to get, and, as an illustration of how much easier it is to get men for short service than for long service, I will give you one little case which occurred not many years ago. Even after what we call short service now, namely, enlistment for seven years with the colours and five years in the reserve, we could not obtain the men that we wanted to fill the Footguards, and there was a great debate as to what should be done; the old-fashioned officers were in despair, and a great number of them said that the only thing was to go back to long service; that they could at least hold the men, keep them there, and that they would not require the same number of recruits every year. Well, the thing was debated, and I am glad to say that, instead of resorting to that mode of treatment, we went forward, and, instead of increasing the length of the period of service with the colours, we decreased it to three years; and I remember the Guards, who had been, before we established this new order of things, a whole battalion under strength, filled up their number within some months, and at the present moment, and ever since then, the ranks of the Guards have been full.

13,137. That was by actually reducing the time?—That was by reducing the time from seven years to three years, and that is the condition upon which the Footguards enlist at the present moment; they may either enlist for three years or for seven years, but the great bulk of them enlist for three; perhaps 20, 30, 40, or 50 per cent. extend their service to seven years; but the great bulk of them enlist for three years, and leave at the end of three years' service.

13,138. The really popular service is the short service?—The more popular service; whenever we have difficulties—which I am glad to say we have not at the present moment—in getting the 30,000 or 35,000 men a year, or whatever number of men we require annually, if those difficulties were extended beyond one year into several years, I think we should have to face the possibility of, and the advisability of, reducing the service with the colours from seven years to some number below it. That is as regards the necessity for short service, and as regards its advantages I believe myself that the men nowadays are more contented, because they are able to get rid of the service, if they dislike it, at seven years instead of being under the old system of 10 years' or 12 years' enlistment.

13,139. And I suppose, the great addition made to the Imperial forces in India after the mutiny was one of the reasons that made short service inevitable?—Certainly, short service would have been postponed for many a year, had it not been for the necessity that we had of sending out these 10,000 or 12,000 men annually to India.

13,140. The position really is that, where before the mutiny 36,000 European troops were required in India, taking the Queen's troops and the local forces, now there are about double that number, are there not?—A little over double.

13,141. You were speaking about the old soldiers in the older time not really being so efficient as the younger soldiers in India. In the evidence that Sir Edwin Collen gave us, he dwelt upon the desirability of having men of longer service. I think he was arguing in favour of a service of ten years in India, and he backed himself up by several opinions. Amongst others he quoted the opinion of Sir Henry Norman, that from 25 to 30 years of age was the time in which the soldier was most useful, as I understood it, the evidence referred to service in India. Sir Edwin also quoted Sir William Mansfield to the effect that young soldiers were invalided in much greater numbers than old soldiers. Taking that latter point first, we have had evidence before us to show that the younger soldiers are invalided in less proportion than the older ones; will your experience confirm that?—My experience would tell me that; but, besides that, I have the experience of having gone into this question very closely, when I was a member of the Council of India. I took the question up very carefully, and I came to the conclusion that after a man had been eight years in India, the sooner you get rid of him the better in the interests of India; and that was borne out not only by the opinions of the men whom I thought best calculated to give an opinion, but by the medical statistics which I studied. In the medical diagrams representing the private soldier's career in India, the death and invaliding rate went up and down, until you came to the eighth year, and then it went down suddenly like a precipice—the numbers that invalided and died after eight years were very large indeed. It is some time ago since I studied the question, but I remember the result very well.

13,142. I think your recollection tallies very closely with the figures brought out by Sir Ralph Knox during Sir Edwin Collen's examination. In the first instance, it was quoted to us that in 1872 the death-rate was 17·5 per 1,000, the invalided 43·6. In 1894 the death-rate was at 16 per 1,000 and the invalided very nearly 25½?—Yes.

13,143. Of course the difference in the invaliding is very great?—Yes, I believe that to have been due to the introduction of the short service system.

13,143*a*. (*Mr. Jackson.*) But is it not partly improved by the more sanitary conditions under which the men live?—I think that has a great deal to do with it also.

13,144. (*Sir James Peile.*) On the other hand, I found in the Sanitary Commissioners' Report of 1894 that there was a column headed "constantly sick;" and in that column the number of "constantly sick" in the British troops had increased very much between 1875 and 1894, from an average for 1870-79 of 60 per 1,000, to a rate in 1894 of 90 per 1,000?—The question of venereal disease, of course, has a great deal to do with that. Venereal disease has increased enormously in India, and is undermining the strength of our Indian army owing to the abolition of the system of safeguards that we formerly took to prevent it.

13,145. I suppose the youth of the soldier, the fact that a smaller proportion are married soldiers, would lead to that result, would it not?—Well, marriage in the old days was confined to old soldiers. I do not think it had much influence one way or another—not upon the subject of venereal disease, if you mean that.

(*Chairman.*) I think, Sir James, that those figures you brought forward showed that the real increase was due to venereal disease?

13,146. (*Sir James Peile.*) That was mentioned as one reason; and the other was the liability of the young soldiers to enteric fever; those two were put forward, not as positive facts, but as theories, probable reasons. On the other hand, in the return in that report for the native troops the "constantly sick" column showed a diminishing, instead of an increasing, figure?—They are not subject to venereal.

13,147. Exactly.

13,148. (*Chairman.*) Well, there was another figure also mentioned at that time, which is curious in the direction in which you have been speaking, namely this, that dividing the force in India into those under 25 and those over 25, 49 per cent. of the whole amount of invalids were under 25, and 51 per cent. over 25; but, whereas the force under 25 constituted two-thirds of the whole force, the result, if the figures are true, must show that there is less invaliding among the young men under 25 than among those over 25 years of age?—Naturally.

13,149. Given 100 soldiers invalided, 49 of those would be under 25, and 51 over?—Yes.

13,150. But, as the 49 would represent two-thirds of the whole force, it seems clear that, if these figures are correct, there is less invaliding in the younger men than there is in the old. That is what I wish to bring out?—Yes.

13,151. You have given us your view of the short service system in respect of making the army effective, do you think it an economical organisation also?—It is most economical for India certainly. It is economical all round I think, but especially economical for India, because they have, practically speaking, no pensions, except those for non-commissioned officers, to provide; but for the private soldier they have no longer the large sum to pay in pensions, which they formerly had.

13,152. You have looked at Sir Ralph Knox's evidence, have you not?—Yes, I have read it.

13,153. I would ask you generally whether you would concur in his conclusions? If you remember, the figures pointed, I think, in this direction, that the normal saving in pensions would be something like 600,000*l*. Against that he put 200,000*l*. deferred pay, and an increased charge on account of transport. The result is an economy upon the normal European force of some 300,000*l*. Would you

be prepared from your experience to expect such a result as that?—As far as I could judge, I thought his figures were incontrovertible. I remember his figures were 1,100,000*l.* and 600,000*l.*

13,154. That is the total charge, the total cost to England, of raising these recruits; but I am now speaking simply of the effect of the short service system, in regard to which he put on the one side the saving in pensions, and on the other side the increased charge for transport, which is rather difficult to arrive at, because the diminution of freights has decreased the total charge of the transports; but there is no doubt that the increased number of men sent out has caused a much larger comparative expense than would have been incurred if the old number of recruits only had been supplied. Further, deferred pay must be put against the saving?—Yes.

13,155. The result showed that it is a very considerable economy—over a quarter of a million pounds sterling certainly—to India upon her normal force?—I agree entirely.

13,156. The Indian witnesses show that the charge for recruits in the old local Indian army was less than the present charge, reckoned in the same manner, viz., as a capitation rate on the effective force maintained in India (though there appears to be good reason for thinking it was more expensive per recruit, as it turned out a less effective article at the same rate, or even at a higher rate than now, notwithstanding that indisputably in the interval the cost of administration has increased). Is not this apparent contradiction due to the fact that the old European local force was enlisted for life, and that that system, as compared with short service, made a smaller annual demand for recruits; and that although each recruit under the old system was more expensive relatively than now, yet, as fewer recruits annually were required per thousand men effective in India, the expense was actually less? Would you give us your view as to the result of the two systems of enlistment, for life and short service, and on the value of the army they each turned out?—Yes; they had a less effective army.

13,157. And they had not to send out so many recruits, proportionately, then as they have now?—Certainly not.

13,158. And you must take that into consideration in reckoning the economical result of short service?—Yes. I might say upon that and bearing upon my former evidence, that the regiment that I belonged to was the first regiment that landed in India for the mutiny in India, and it was a regiment composed of very young fellows indeed. We had lost enormously in the Crimea and we had been decimated at the Redan. It was a very young regiment, and, in common with nearly all my brother officers, I was very young, and I was inclined to make light of the value of those young soldiers; and amongst ourselves we often talked of the pleasure it would be to us to see some regiments of the old type when we got to India, and those regiments that had been in the colonies for a long time, and which were composed entirely of old soldiers. I think I may confidently say that I represent the feelings of all the officers with whom I was then associated, when I say that within a year from the time we landed we thanked God that our men were young, because they fought so much better than the old fellows. They marched much better, they fought much better, they never grumbled, whereas the old soldier was a continual grumbler. Our men, these young boys, were more easily managed, and were more amenable and followed their officers with much better *élan* and alacrity than the old soldier who had been accustomed all his life in India to drink rum, and was a beer drinker if he was anything at all. From that day up I myself and those who were thinking officers, came to the conclusion that the young soldier was a better man, and did better service for India than the old man.

13,159. (*Sir Donald Stewart.*) Had you any opportunity of comparing results between your own regiment and the regiment from the Cape, for instance?—Yes.

13,160. But how many of these men were alive after the second year's service during the mutiny?—The young men?

13,161-2. The old men of the Cape and Mauritius regiments?—In one regiment, I should say, that the really old men disappeared altogether.

13,163. Well, with regard to those regiments I can support your argument entirely, because an enormous number of them died from exposure on the field in the first two years of their service in India.

(*Chairman.*) And did you find the younger men bear the extraordinary fatigues of that time better than the old men?

(*Sir Donald Stewart.*) Yes, because they were often old and worn out.

(*Mr. Buchanan.*) What do you mean by old?

13,164. (*Sir Donald Stewart.*) Well, you had men in those days who were privates of 18 or 19 years' service; they were worn out?—A private soldier after 10 years' service soon fell off in value and became of little use to the British army.

13,165. (*Mr. Caine.*) You mean in India?—Yes, but he was not of much use after that length of service anywhere.

13,166. But you mean in India?—Well, even the men who then came from some of the colonies.

13,167. (*Chairman.*) We have had impressed upon us the desirability of extending Indian service, some say to eight years, some say to 10 years, and that evidence looks rather with regret to the disappearance of the old local force, that was enlisted for life; but, I presume, there is no question from what you have told us, that you would not approve such a proposition?—Not in the interests of India. I might add also, that, if we increased the length of time that we keep a man in India to eight, or nine years, you would take out of his life, practically, the whole of the best part of it, and I feel you would be bound to give him a pension for ever afterwards. If you keep a man beyond the seven years' service in the ranks, certainly beyond eight, you cut out such a large block of the most useful period of his life that, I think in honour you are bound to give him a pension, and keep him from poverty for the rest of his existence.

13,168-70. That is very interesting evidence to us; when it was represented to Sir Edwin Collen, when he was arguing for extended service, that that would inevitably entail a grant of pensions, he said he did not see it. Well, of course, the extended service does not exist, and we, therefore, cannot say what would be the cost. I should venture to think, looking to the effect of public opinion here, that in all probability for soldiers of long service of that kind you would have motions in the House of Commons for pensions?—And it would react upon our recruiting very largely, if there were scattered throughout England a large number of private soldiers who had been eight or ten years in India, and who had come home more or less broken down after a time, who had lost all connection with brothers and uncles, and people in England who could help them to employment, and who being, therefore, out of employment swarmed into the workhouses; there is no doubt of it whatever that it would seriously affect the recruiting market.

13,171. (*Mr. Buchanan.*) For the purpose of forming the good fighting reserve men, whom you mentioned before, what is the maximum time of service that you think a man should undergo in India?—I think seven years, but he is kept sometimes quite eight in urgent cases, and it is quite right that there should be power to do that; but I do not think that our men should serve longer in India than seven years—I think that six years would be a better period.

13,172. (*Mr. Mowbray.*) But now that soldiers are enlisted for seven years, if they cannot go out until the age of 20, they do not get seven years in India?—No, they do not.

13,173. Would you have any objection to having the time extended to seven years actually in India?—I should; for the reason that I have just given, namely that if you take all that is valuable out of a man's life—and I think that from 18 to 25 or 26 is the most valuable time of a man's life—you are bound to provide for him somehow or other.

13,174. And that, of course, would be extending practically his term of service to about eight and a half or nine years?—Yes.

13,175. (*Chairman.*) But is it not the case that the service of the man in India, if you were really to take the average, is considerably above five years? Sir Edwin Collen told us that the average which he took merely upon the men returning in a year was 5 years 4 months; but the figures which were put before us showed, I think, that out of the 72,000 or 74,000 men that are in India, certainly something approaching to one-third were men of over 25 years of age. If that is the case does not that point to a considerable number of men for one reason or another re-engaging, or remaining on voluntarily, a good bit in excess of the five years?—Well, of course, all the non-commissioned officers are in that category, and they are a large body of men. They are men as a rule over 25 years of age, and they

Viscount Wolseley, K.P., &c.

29 July 1896.

constitute a large number; but I have not seen the papers you refer to, and I do not know the statistics.

13,176. It was Sir Edwin Collen's evidence, answer 6273:—"A total of 1,544 out of 74,799 (under 20 years of age). "But then we come to the men of the regiments, and I find "that from 20 to 21 years of age there were 6,000 (I am "stating the round number); from 21 to 22, 9,400; from 22 "to 23, 10,200; from 23 to 24, 10,000; from 24 to 25, 9,000; "from 25 to 26, 8,000; from 26 to 27, 5,700; then 27 "to 29, 7,000, taking the two years together; and then "above that age, 29 to 30 and upwards, something like "5,000 men?"—Well, I should call that a very admirably constituted army as regards age. Perhaps there are too many men too old in it; but in other ways it is an admirably constituted army, I should say, looking at it as a fighting machine, as regards its age constitution.

13,177 You have had actual experience of the time when the old Indian local force was in existence; and I would ask you whether you could give us your experience, because you must naturally have seen the old local regiments in service alongside of the Queen's regiments?—I have very often. Of course, the whole artillery force of India belonged to the East India Company's service before the Queen took over the Indian army. As regards the fighting qualities of the artillery, I do not suppose any army could turn out better fighting material. The officers were first-rate, they could not be better, and the men fought magnificently wherever they were called upon to fight. I think their discipline—this may be a criticism that arises from prejudice, but I give it you for what it is worth—was not as good as the discipline in the Queen's service. I was associated, as I told you before, with two regiments of the Company's European troops, and I do not think you could have had in the army two finer battalions. They were splendidly turned out, beautifully equipped, beautifully drilled, remarkably well-officered, with officers of a very superior social position, and in every way they were quite equal, I think, to all appearance to our men. Still, I think there was a slight *nuance* of difference as regards the discipline of those two regiments when compared with the English regiments which were not local. I was afterwards associated with other local European regiments during the mutiny, and they were decidedly inferior to those two regiments, and, in my opinion, decidedly inferior in discipline to the Queen's regiments.

13,178. If I remember right, there was—I think it was after the mutiny, but somewhere about that time—a difficulty which went by the name, probably an exaggerated one, of the white mutiny, was there not?—Yes.

13,179. Did not that arise in the local force?—That arose in the Bengal Horse Artillery. Sir Donald Stewart knows more about it than I do. I think a gentleman's son was the man who was the principal culprit.

(*Sir Donald Stewart.*) It arose when the transfer of the East India Company's European troops to the Crown took place. The Government of the day refused, notwithstanding the urgent solicitation of the Commander-in-Chief, to give the men a small bounty on their transfer. The Government said "No; the law enables us to make this transfer "without giving them anything, and we will not do it." They were urged by those who knew the men and understood their habits and customs and thoughts; and, though it was usual on the transfer from one regiment to another, from one service to another, to give something in the way of bounty, the Government were obstinate and would not do it; the consequence was that the men declined the offer of Government, and were eventually sent home and discharged.

13,180. (*Chairman.*) That would not be any proof of laxity of discipline; it was a distinct grievance on the part of the men?—Yes, they considered it so, and Lord Clyde, I should like to add, took their part.

13,181. (*Sir Donald Stewart.*) Quite so; and the men had the sympathy of their officers?—And of the Commander-in-Chief in India.

13,182. Entirely; and it cost the country many hundreds of thousands of pounds to get these men back again into the ranks. That is what was called the white mutiny.

13,183. (*Chairman.*) The India Office argue that England has not treated India justly in the arrangement, under which the two powers borrow troops from one another. It is asserted that, when India borrowed from England troops for the mutiny, she had to pay all the charges of these troops, ordinary and extraordinary, whereas when England borrows troops from India, India has to pay the ordinary charges. Is it not the case that at the time of the mutiny England lent a large force to India, and, to fill up the vacancies then created, she had to raise new battalions and embody militia?—That is the case. The militia was called out. Most of them were, I think, embodied before the mutiny broke out, and were about being discharged, but they were kept on. I am not quite certain; but some of them certainly were.

13,184. (*Sir Ralph Knox.*) With reference to the question that was asked me on the same point, I have got some information as to how the militia stood during that time. I find that 47 regiments were embodied in September, October, and November, 1857, their strength on 1st December of that year being 30,149 rank and file. On 1st January 1858, 31,163. In April, May, June, and August 1858, 17 regiments were disembodied. Strength on 1st September 1858, 18,563, rank and file. Two more regiments were embodied in October 1858. Strength on 1st January 1859, 19,545, rank and file. Four regiments were disembodied in March, and eight embodied in April 1859. Strength on 1st July 1859, 20,457, rank and file. Strength on 1st January 1860, 22,033. The remaining regiments were disembodied during 1860 and the early part of 1861. Strength on 1st July 1860, 11,535 rank and file. Strength on 1st January 1861, 4,834.?—And we raised 26 new battalions to replace those regiments we sent abroad.

13,185. (*Chairman.*) And, of course, to whatever extent England replaced men she sent to India, she acted on the arrangement now in force; because under the arrangement now in force, if India raises a single man to replace the men she lends to England, then the whole charge passes on to England?—Yes, that is the understood thing.

13,186. In paragraph 21 of page 10, Sir Henry Waterfield's paper, the India Office say:—"The revenues of "India have been charged with the cost of many changes "in organisation, not specially necessary for the efficiency "of the army in this country, and with the cost of "troops employed on Imperial service beyond the limits "of India. Millions of money have been spent on "increasing the army of India, on armaments and on "fortifications to provide for the security of India, not "against domestic enemies or to prevent the incursions of "the warlike people of adjoining countries, but to maintain the supremacy of British power in the East. The "scope of all these great and costly measures reaches far "beyond Indian limits, and the policy which dictates "them is an Imperial policy. We claim, therefore, that "in the maintenance of the British forces in this country, "a just, and even liberal, view should be taken of the "charges which should legitimately be made against "Indian revenues." Would you consider that the changes in organisation intended to make the army more efficient have no interest for India? You will observe that this paragraph speaks of the changes in the organisation as having been made in the English army without reference to India. To many of us it would naturally appear that any change in organisation, which really made the army more efficient, was as advantageous to India as to England?—So I think. My idea, with regard to the charges generally for the troops in India, is that India should pay for everything connected with the army. Supposing we had not India, supposing India did not belong to us, the difference between the army establishment that you would have then and what we have now is the amount we should charge India for the English troops stationed there. As regards the cost of fortifications and batteries, and defences on the sea coast, if we had no India we should have no batteries, no defences, and therefore, as it is for India that these batteries are maintained, India should pay for them.

13,187. Then we should not have the British empire and British rule in India to be maintained?—No, I say supposing we had no British rule in India to be maintained, we should not have those batteries and these fortifications that are referred to in that extract but that, as we have India, and these batteries, India should pay for them.

13,188. (*Mr. Naoroji.*) But is it not for the sake of maintaining the British rule that all this British army and British fortifications and all these are there?—No; it is for the purpose——

13,189. If British rule were not there you would not care a straw for India and would not go there?—Quite.

13,190. And you would not impose a British army upon India?—We do not impose a British army upon India; India asks for it.

13,191. You have a large European army imposed upon India for the purpose of maintaining British rule?—Why do you use the word "imposed"?

13,192. Because it is not with our consent; we have no voice; India has no voice?—That is a point I cannot go into.

13,193. (*Mr. Caine.*) May I ask, on the principle that you have just laid down, do you think that India should pay for Aden?—I think that, if we had had no India, we should never have had an Aden.

13,194. Do you not think that Australia and the Cape are just as much interested in Aden as India?—I do not think so. I think it was originally established—I do not remember in what year it was established—before we had any very great interests in Australia; the East India Company had previously taken possession of Aden. Is not that the case, Sir Donald?

13,195. (*Sir Donald Stewart.*) Yes; of course it was to support our line of communications by the Red Sea?—Yes.

13,196. (*Mr. Caine.*) Yes, but our line of communications by the Red Sea, since the Suez Canal was made, is of interest to the whole of the British possessions east of the Atlantic?—Aden was occupied long before the canal was made.

13,197. (*Sir Donald Stewart.*) Oh, about 70 years ago?—That is what I say.

13,198. (*Mr. Caine.*) But Aden is surely no longer an exclusively Indian interest?—Aden is of use to English commerce, because our commerce could find a certain amount of protection under its batteries.

13,199. But India pays the whole cost of Aden?—I think that we pay part of the fortifications of Aden. I do not know. Is not that the case?

13,200. (*Mr. Buchanan.*) But would you recognise, Lord Wolseley, that Aden is an Imperial fortress?—It is Imperial and Indian.

13,201. And Indian; but it is not exclusively Indian?—No, I suppose you may say it is not exclusively Indian.

13,202. But it may have been exclusively Indian, when it was first taken possession of, before the Suez Canal was made?—Yes.

13,203. It may have been then, but it is not now?—I do not think that its position is altered.

13,204. But its position in relation to the Empire is altered?—In what way? Because, if Aden was established before the Suez Canal was made, which is practically before the Egyptian route to India was worked out, it was then considered to be of sufficient value to India to keep troops there. I do not see that the fact of the Suez Canal having been opened and being used by people going to Australia diminishes the value to India at all of Aden, although the value of it to other colonies may have extended.

13,205. It surely extends to the rest of the Empire? We have, of course, made large annexations in Eastern Africa, and in many other parts of the East beyond the Red Sea, beyond India, and surely Aden has become much more an Imperial fortress?—None of our transports to Africa go through the Suez Canal.

13,205*a*. (*Mr. Caine.*) But our trade does?—Oh, no, our trade goes round the Cape, round the west coast of Africa.

13,206. If you could conceive it possible that India were withdrawn from the British Empire, would you advocate the abandonment of Aden?—That is a difficult problem which would take a long time to solve.

13,207. (*Sir Andrew Scoble.*) But, while the value of Aden to India may remain the same, is not the value of Aden to the Empire at large very greatly increased by reason of the opening of the Suez Canal, and by the extension of our possessions in East Africa, and by the development of Australia?—I do not think that Africa has much to do with it, because the great trade with Africa does not go through the Suez Canal. What part of it goes?

(*Mr. Caine.*) The trade to Zanzibar.

13,208. (*Sir Andrew Scoble.*) And do not steamers go down through the Suez Canal and the Red Sea to the east coast of Africa and Mauritius?—I know, that part does; but the greatest part of our African trade goes round the west coast of Africa.

13,209. (*Mr. Caine.*) I am speaking of the trade to the east, not the west?—Yes.

13,210. (*Chairman.*) I see Aden was acquired by the East India Company in 1838 in the interests of shipping passing between India and the Red Sea, as a coaling station, and for purposes of protection in cases of shipwreck?—Yes, 1838.

13,211. But, when so much stress is laid upon the necessity of Aden as a fortress to the trade of Australia, ought we not, before expressing an opinion upon that, to form some opinion of what the real value of Aden is? I think, as it has been put to you, the increase of trade through the Suez Canal has added what I may call imperial importance to Aden; but Aden does not matter in times of peace. It is in times of war that the Imperial fortress would become necessary, and can one suppose that the trade with the east would go through the Suez Canal, if war broke out?—Oh no, certainly not.

13,212. Therefore Aden would be out of the question then?—As regards the Suez Canal in time of war, please do not base any calculations upon it, because it would probably be destroyed by either one or other of the belligerents.

13,213. (*Mr. Caine.*) But surely if we were at war with Russia under existing circumstances, we could use the Suez Canal with perfect safety?—Oh, quite so.

13,214. That is the very contingency you have to consider with regard to India?—Russia. Of course, those questions introduce very large calculations of policy, because I might immediately turn round and answer you by saying "We are not likely to go to war with Russia. "And Russia is not likely to go to war with us, unless "she had very strong naval allies."

13,215. We were very nearly going to war with Russia in regard to Penjdeh, for instance?—At that time but few thought that Russia intended to go to war with us.

13,216. We voted a large sum of money and made great preparations for a Russian war?—Yes, that opens a very large question. I do not believe Russia had the slightest intention of going to war, if you mean that. That opens up a very large question, which it is not for me to enter upon.

13,217. We spent five millions of money on the strength of it. You are aware that over 27 per cent. of the ships going to India stop at Aden?—I accept the statement from you.

13,218. And 33 per cent. go round the Cape to Hong Kong and with our eastern commerce?—Our ships do not go to the Cape through the Suez Canal.

13,219. They go to Zanzibar?—Not to the Cape though; there is no trade with South Africa at all through the canal.

13,220. They go to Mauritius; they go down that side of Africa to that extent?—Yes.

13,221. Do you think it is a fair adjustment of the expense of Aden that India should be charged 277,000 Rx. whilst Great Britain only pays 16,000 Rx.?—I think that is a fair division—I did not know we paid so much—India subscribes little to the cost of the English navy, and it is the English navy which practically defends Aden; you must depend upon the navy as the first great line of defence for Aden, and England pays for that navy; I imagine India's contribution towards the cost of the navy is a bagatelle.

13,222. 100,000*l*?—Well, that would not buy a gunboat.

13,223. (*Sir Ralph Knox.*) If it be fair that this question is to be raised by India as regards Aden, would it not be equally fair that the same question should be raised by the English Government as regards Gibraltar and Malta?—Oh, quite.

13,224. It is the same question, only from the other point of view?—Yes; I do not think it is a question that is worth considering myself.

13,225. (*Mr. Buchanan.*) That is going on the assumption that the two Empires, India and England, are practically two independent contracting Powers; and I understand that Lord Wolseley does take that line with regard to the Indian army, that you should deal with the Indian army and the cost of the Indian army just as you would over a counter?—No; I do not start from those premises, you do.

13,226. No; but perhaps you will recollect what you said during the discussion on the military charges on India. I think you said that India ought to pay every farthing of military cost, which this country would not have incurred if she had not India?—Which our possession of India entails; I think so still.

13,227. I may not have represented you quite fairly?—Oh, yes, you have quite fairly represented me.

13,228. Surely you recognise that the possession of India really constitutes the main part of our Imperial possessions; and that, if we did not hold India, we

Viscount Wolseley, K.P., &c.

29 July 1896.

would not be an Imperial power in the sense that we are at the present moment?—We should not be so great a power, certainly not.

13,229. Surely the up-keep of the force necessary to defend this, which is the chief of our Imperial possessions, is an obligation, to a certain extent, upon the whole Empire?—I do not think so.

13,230. You do not?—No, I do not, indeed.

13,230*a*. You deny, then, the Imperial nature of our possession of India?—No, I think it is a part of the Empire of England.

13,231. But, *quâ* our military obligations, would you deny that the home country has any Imperial obligation for the defence of India?—On the contrary, the whole tenour of my evidence—I am afraid I must have explained myself very badly—was meant to show that the whole of the English army, which we maintain in England as a reserve, would be sent to India whenever India requires, and for that reserve India pays nothing.

13,232. But, *quâ* compensation, you have laid down the proposition that India ought to pay every farthing of military expense?—And naval too, I would go so far as to say.

13,233. And naval too?—Yes.

13,234. Well, surely, that is, as far as expenditure goes, to relieve the home country of all obligation for expenditure for the defence of India?—No; I have tried to explain to you already that we keep a very large army in England for many purposes; and one of the many purposes, for which we maintain this large army in England, is that it should be available in any case of emergency for India to do what we did for her in 1857, which is, to send out a large army to put down anything like an *emeute* or a mutiny in the country, or to defend its shores or its frontiers.

13,235. May not the same thing be said about the Indian army with regard to English requirements. We are drawing upon the Indian army for Suakim at the present moment. We draw upon the Indian army for other purposes. The Indian army is as much a reserve for our purposes, as our army is for their purposes?—Surely your arithmetic will not carry that out; once in a way India sends one or two or three battalions to a place like Suakim for a few months, whereas we keep a large garrison of 72,000 or 73,000 English troops in India permanently.

13,236. But I was speaking of troops over and above and beyond those troops that we keep in India. You speak of the British army as a reserve force for Indian requirements. Surely the same thing may be said about the Indian army, that it is a reserve force for English requirements?—May I say that I should not like to put our Indian troops in front of European soldiers.

13,237. (*Mr. Caine.*) I think you might with perfect safety?—I should be very sorry to fight France or Germany with Indian troops.

13,238. (*Mr. Buchanan.*) That is not the question?—It is quite the question if you say the Indian army may be looked upon as a reserve to meet the European needs of England.

13,239. The question is with regard to expenditure?—That is quite another question—expenditure.

13,240-1. (*Mr. Caine.*) When you brought Indian troops to Malta, who were you going to confront them with? There were none but European troops for them to meet there?—I was not a Cabinet Minister; I cannot tell you what the reason of that was.

13,242. (*Mr. Mowbray.*) In that case I think England paid the whole of the expense?—The whole of the expense.

13,243. (*Mr. Naoroji.*) When you use the phrase that "India requires" or "when India's emergency takes place" what do you mean? It is not India that requires these troops annually; properly speaking is it not Great Britain that requires these troops there to maintain her own rule there; otherwise India would not require any troops from you?—I am afraid I cannot answer that question.

13,244. Is it not for British purposes?—I hope you will excuse me and pardon me, but that is a subject I cannot go into.

13,245. It is rather unfair that repeatedly the expression is used "India's wants and India's requirements," and that these things are required in India's interests, when in reality it is all British interests, British wants, British purposes, in order to maintain British rule in India and nothing from England can ever be required.

(*Mr. Jackson.*) But surely that assumes that the British rule in India is of no value to India.

(*Mr. Naoroji.*) It is of value to India, but it is of value to Great Britain also.

(*Mr. Jackson.*) Then, if it is of value to India, it is for India's requirements, India's interests, India's wants.

(*Mr. Naoroji.*) It is for Britain also. Whatever is necessary for British rule should be supplied by Britain just as well as India. Is there not equal benefit, is there not benefit to both? This is all upon the supposition that it is all for the benefit of India, and Britain has simply nothing but a Quixotic and philanthropic purpose for which it comes to India and saves India from Russian aggression.

13,246. (*Mr. Jackson.*) I do not understand the argument?—I cannot follow the argument. but I would merely say that my views are that India never existed as India at all until we went there. She was merely an agglomeration of small states, the Mohammedans cutting the throats of the Hindoos, with constant and continual internal troubles. India has been constituted an empire by us; everything that India has got at the present moment that is worth having has been derived from English rule. That is the only commentary I have to make, as regards what Mr. Naoroji has to say.

(*Mr. Naoroji.*) I had better say a few words afterwards.

(*Chairman.*) I think we must bear in mind that the English rule exists in India, and that it is not within the scope of our inquiry to go into the question of what would follow the removal of that rule, or what would happen if that rule had never existed.

(*Mr. Naoroji.*) That question arises from the kind of remarks that are made; otherwise I confine myself to expenditure when I come to it.

13,247. (*Chairman.*) As I understand the way in which you state the charge against India for army and navy, speaking from the War Office side, you say that the real charge to which India subjects England is that charge which would not be incurred if India did not exist?—That is my view.

13,248. And of course that is the outside charge, that is the cost of India to England?—Yes.

13,249. It then becomes a question whether every farthing of that charge should be exacted or whether there should be some rebate in the form of some contribution on account of Imperial obligations or otherwise; but you very naturally, speaking of it from the War Office side, state the case in full, and there can be no doubt that the cost to England is the cost which would not be incurred if India did not exist?—Certainly.

13,250. (*Sir Edward Hamilton.*) Is it not the case that, the number of troops that you maintain and keep up in this country is greater owing to the fact that we are in the possession of India?—Yes.

13,251. And therefore, to that extent, I suppose, we do fulfil our Imperial obligations towards India?—Yes, and also with regard to the very great navy we maintain.

13,252. Apart from that and with reference to the troops, is it not the fact that a smaller number of troops would be maintained in this country were it not for the possession of India?—Certainly; and the tenour of our correspondence with India on this subject has been that it would not be a question of 10,000 men, or 20,000 men in the case of an emergency, but we should be prepared to send the whole of our army there if she required it.

13,253. (*Mr. Buchanan.*) But you would make her pay for it?—From the moment they arrived there.

13,254. And from the moment they passed from our shores?—Oh, certainly.

13,255. (*Chairman.*) As I understand Lord Wolseley, he is stating what is the real charge of the Indian army to England, and it is perfectly clear that the real charge must be that which would not be incurred if the Indian Empire did not exist; it is necessary, is it not, to state the case in that way, because from India it is put very forcibly forward that "we claim that in the maintenance of the "British forces in this country, a just and even liberal "view should be taken of the charges which should "legitimately be made against the Indian revenues." The claim of India is that charges have been imposed which were not made in the Indian interests; that is her view, that England benefits by the presence of the army in India. These are all reasons for rebate; that is the extreme view put on the Indian side. It is quite right that this Commission should have before it, therefore, the

extreme view on the other side. It lies then with people who have to decide when they know the whole circumstances to say how far there should be a rebate?—That is all.

13,256. (*Mr. Mowbray.*) I should like to ask one question before you leave that point. Do you think that it would be possible materially to reduce the number of troops in England, having regard to possible foreign complications and our general Imperial obligations, putting India altogether out of the question?—If we had no India?

13,257. If we had no India?—We should reduce the army, certainly, *pro tanto;* we should reduce all the force that we have in India.

13,258. That I take for granted; but then you also said that we should take something from India for keeping up our home army at a figure which enables us, if necessary, to send large re-inforcements to India; that, I understood, to be your view?—No, I do not quite say that. I said we had the men here, and they were always available for India; but we do keep men in England, of course, that are exclusively used for the purpose of the army in India, that is at the depôts.

13,259. That I quite understand. Then I wanted to know whether you could tell me if you thought you could materially reduce the number of troops in England, supposing you had not to meet the possible call of 10,000, 20,000, or 30,000 men for India; because there would still remain other international complications on the continent and elsewhere?—I dare say there are many people who would say, by all means they would reduce them; but, if you wish for my personal opinion, my personal opinion would certainly be that we ought not to reduce the strength of men that we have in England.

13,260. And, therefore, it cannot be said that you are keeping up the strength which you have now in England, solely or materially even, as a possible reserve for India?—Not solely, but they are there as a reserve.

13,261. There is the reserve; but if that were not available?—It is always available for India.

13,262. But if you had not got them available for India, you still would, in your opinion, have to keep them for other purposes?—I would recommend it, but I do not think that my recommendation would carry others with me. I think the home force would in these circumstances be reduced considerably.

13,263. (*Sir Ralph Knox.*) But, at all events, you would get rid of the cost of raising these recruits for India?—Oh, yes.

13,264. That would disappear entirely?—Entirely, and we should get a better class of recruit; we should require fewer, and we should obtain them with much greater ease and at a much lower rate.

13,265. And our organisation generally would, in all probability, be different and cheaper?—And the machine would work much easier.

13,266–7. (*Sir Andrew Scoble.*) England would not be a first-rate power in that contingency, though the expense for the army would be less?—There are people who think now she is not a first-rate power.

13,268. (*Chairman.*) Do you not think the army of England is indirectly an advantage to India in general?—I think India would be in a very dangerous condition unless she had these reserves behind her.

13,269. (*Mr. Jackson.*) May I put the question in a different form; supposing these reserves were not available, surely India would have to keep a larger number of troops in some form or another?—She must; she would have to get a reserve for herself.

13,270. And, therefore, the very fact of these reserves being here is a source of great economy to India?—Certainly it is; and the best proof of the necessity of the reserve in India was the war of 1857. Supposing there had been no England to draw upon, and no English army to draw upon in 1857, what should we have done, where should we have been?

13,271. (*Mr. Buchanan.*) That applies, of course, to the whole Empire, does it not? And the difference of the position of India to any other part of the Empire in such an emergency is that, whereas, in the case of a military eventuality in South Africa, we make our whole military reserves available, and we pay the bulk of the charges, we do the same to India, and we make India pay the whole?—India pays nothing for our reserves at all.

13,272. But when they are sent out, we make India pay the whole?—Yes.

13,273. When we send out a military force in the case of an emergency in the colonies, we pay the bulk of the expense ourselves?—Yes.

13,274. One more question to bring out that you really apply a different theory to India to that which you apply to the military expenditure on other parts of our Empire?—We have very little expenditure on the other parts of our Empire.

13,275. Still, to whatever military expenditure there is on other parts of our Empire?—Certainly, we have Malta and Gibraltar which we practically keep up for India.

13,276. That raises up the question of Aden again. I mean to say those are serious questions. We must go further afield, Singapore and Hong Kong.

13,277. (*Sir Edward Hamilton.*) We incur considerable expenditure in South Africa?—We keep three battalions in South Africa.

13,278. I should rather say we have incurred great expenditure in South Africa. I am not referring to the present moment?—We acquired the country and require troops to protect our coaling station there.

(*Chairman.*) What would you put the cost at, Sir Edward? 5,000,000*l.*?

(*Sir Edward Hamilton.*) I should think it would be more than that.

(*Chairman.*) If you remember, we gave 5,000,000*l.* to India for Afghanistan; so far the cases are similar, are they not?

13,279. (*Mr. Buchanan.*) I could not admit that. Would not the theory be this, Lord Wolseley, that, with regard to other parts, Singapore and the Cape, we would bear the whole charges and we get from time to time contributions from the various colonies in aid of our military expenditure?—The colonies do support in some cases a very large force of their own.

13,280. (*Sir Andrew Scoble.*) And so does India?—Yes.

13,281. (*Mr. Buchanan.*) But is it not the fact that that is the way in which military expenditure is arranged in the Cape, and Singapore, and Hong Kong—that we bear the whole charges, and that Singapore and Hong Kong make a certain contribution?—Yes.

13,282. In fact whenever a place is rich enough, according to the richness of the place concerned so is the contribution paid?—India is supposed to be rich enough to pay the whole cost of her expenditure.

13,283. India is so very rich that we make her pay the whole; that is rather a different theory?—That is it; and the colonies in the same way, where they are rich, contribute towards the expense of the military establishments—they pay for their defences.

13,284. (*Chairman.*) Let us take a case close to India—Ceylon. It is certainly the argument of the Treasury, supported by the War Office, that Ceylon should pay all the ordinary charges of our garrison. There is always a question as to how far, just as in the case of India, she does pay, or whether the contribution is sufficient; but that has been the principle contended for by the Home Government and that is nearly the same principle that is contended for in the case of India?—Quite; Ceylon is on a par with India on those points.

13,285. (*Sir Ralph Knox.*) Practically, all the military stations abroad are coaling stations, are they not?—For the navy. That is the practical way of looking at it. If it were not for India, I do not believe we should have troops at the present moment in Egypt, and it is doubtful if we should have any in Malta.

13,286. But the force, even at the Cape, is not for the service of the Cape Government; it is there to protect the coaling stations, which are necessary for the trade and for the navy?—At Cape Town, yes; the garrison is only for the coaling station there.

13,287. (*Chairman.*) And was not a distinction admitted in those discussions which have taken place of late about the defences of the Empire? Did not the Home Government, to the best of their power, mark out certain places which they considered Imperial places, necessary for the coaling of the Imperial navy and so forth?—Yes.

13,288. In these cases the Imperial Government has taken a very large part—perhaps, in some cases, the whole, of the charge; but where it can be stated that expenditure is incurred purely for colonial defence, the contention of the Home Government is that the colonies should bear that charge?—Certainly; that is the principle we work on everywhere, India included. For example, at Esquimault,

Viscount Wolseley, K.P., &c.

29 July 1896.

on the west coast of the Pacific, we did a certain proportion of the work and the people of Canada did the other.

13,289. (*Mr. Buchanan.*) You never got the money out of Canada, did you?—They did the works; we did not ask for the money; we gave the guns and they made the works, if I remember rightly.

13,290. The truth is that they can refuse to pay, and India cannot?—Oh, I think the feeling of the colonies is to pay very largely for their own defences; there is a very strong national feeling in the colonies.

13,291. (*Mr. Caine.*) Esquimault is used almost exclusively for the Pacific fleet; there is no trade there?—Well, I would not say exactly that; because trade is the principal object of the place.

13,292. I doubt whether 5,000 tons of merchant shipping go there in the course of the year?—A trade will come.

(*Chairman.*) There used to be a large sealing fleet there, was there not?

13,293. (*Mr. Caine.*) It is some 8 or 10 miles from Victoria?—Yes; Esquimault is the defensible part of Victoria.

13,294. (*Sir Donald Stewart.*) It is close to Victoria, within a few miles?—It is the *point d'appui;* it is a strong harbour in the neighbourhood of Victoria in the event of a hostile fleet coming there.

(*Mr. Caine.*) Esquimault is 6 miles from Victoria by land, and 15 miles by sea, Victoria is in Vancouver Island.

(*Sir Donald Stewart.*) Your recollection of the distance is different to mine.

13,294*a*. (*Chairman.*) It has been urged by India that a heavy charge was imposed on India for the abolition of purchase; but was not the whole charge of compensation to the purchase officers undertaken by England alone?—Entirely.

13,295. And, so far, there is no ground for contending that the abolition of purchase imposed a charge upon India?—I do not know whether there is any item in that 7*l.* 10*s.* for the pensions of officers, is there?

13,296. (*Sir Ralph Knox.*) None at all?—None at all. Then the charge fell entirely upon England.

(*Sir Andrew Scoble.*) I do not think it is so. India does pay a proportion of officers' pensions. We have had it in Sir Ralph Knox's evidence.

13,297. (*Chairman.*) We are only speaking at the present moment of compensation for purchase. India paid nothing of that?—No.

13,298. May I ask whether, in your view, purchase is a good system?—A very bad system, an anachronism; but with regard to the question of purchase you may view it from two points. If I had been a taxpayer and not a soldier, I should have been in favour of purchase; but, being a soldier and wishing to have an efficient army in India and at home, I was very anxious for the abolition of purchase.

13,299. In your view the abolition of purchase was an essential step towards making the organisation of the army efficient?—Yes, and it was a question in which India was as much interested as England.

13,300. Every army which is not worked under such an anomalous system as that of purchase, has to provide pensions for the officers when they are no longer effective, has it not? That is the normal state of an efficient army?—Yes.

13,301. And, when purchase was abolished, the English and Indian army only reverted to what ought to be the normal condition of things?—Quite so, and which had always been the condition of the native army in India.

13,302. (*Sir Ralph Knox.*) And of the artillery?—And of the artillery and of the European regiments in India.

13,303. (*Chairman.*) Would you admit that a charge incurred in abolishing an abuse, and in substituting a healthy system of administration for a vicious one, can fairly be described as the imposition of a burden on India, which uses one-third of that army, and is, therefore, deeply interested in its efficiency?—No. I think that I began by saying in the earlier part of my evidence that India must allow us to use our discretion in laying down such rules and regulations for the establishment of our army, as will provide us with the best army possible. In order to do that, the abolition of purchase was a very prominent feature.

13,304. (*Mr. Buchanan.*) You said just now that, if you had been a taxpayer and not a soldier, you would have been in favour of purchase?—Yes, because the people, before the abolition of purchase, did not pay any pensions to the officers.

13,305. At any rate you would agree with this statement of the Indian Government, that in the introduction of this system the interests of the Indian taxpayer were left out of consideration?—No, indeed, I will not; because I think that the interests of the Indian taxpayer are most prominently concerned in having an efficient army, and in order to have an efficient army, I think you must——

13,306. That applies to the taxpayer at home too?—Yes, but then we are not in such danger always in England. We keep a very small force for police in England.

13,307. (*Chairman.*) When you say that as a taxpayer, you might have advocated the retention of the system of purchase, you are merely putting forward in another form the economical side against the efficiency side?—Yes, exclusively.

13,308. We must come to that in the end, that the taxpayer is interested in efficiency?—Yes.

13,309. Have you seen Sir Ralph Knox's calculation of the cost to this country of providing India with a European army? Putting it in round figures he reckons the charge to England as 1,100,000*l.*, of which India repays 600,000*l.*

(*Sir Ralph Knox.*) That is what it was proposed that she should pay; she never has paid 600,000*l.*; she has never paid more than 540,000*l.*

13,310. (*Chairman.*) If this is an approximate, or anything like an approximate, statement, would you contend on the part of the War Office that, in the words of paragraph 22, England is able to show that India cannot complain that an excessive military charge is demanded from her, in fact, can show that the bargain has been made in a spirit of justice and consideration to India?—I think so; and I do not think I stated this before, but, when I left the War Office to come to the India Office, I was under the impression that India was charged more than she should be for the English army. I came to the India Office and was here for nearly two years in the India Council; and this was a subject that was constantly before me, and was one that I paid the most special attention to, and I was then very *au courant* with all the figures, which I am not at the present moment. I studied the question very thoroughly at that time in the year 1878-9, and I came to the conclusion, after I had been here for some time and had thoroughly gone into the figures, which I had not done in the War Office, that India had a very good bargain indeed, and did not pay so much as she ought to pay; and that was without any prejudice, because I came here prejudiced the other way.

13,311. (*Mr. Jackson.*) The India Office had better have kept you at the War Office?—Well, it was a subject that never came before me for close investigation in the War Office.

13,312. (*Chairman.*) Is there any other point that you would like to call our attention to in connexion with effective service?—I think that you have touched all the points that I made notes of—they are not very many—on the evidence that I have read, and I have been asked upon them all.

13,313. In the evidence of Sir Edwin Collen a good deal was said to us about the expensiveness of the depôts. The line which he seemed to take was this, that it would be very much cheaper to India if the Indian depôts were concentrated; that for one or two depôts the charge should be much lighter that for the number of depôts that now exist. I think the Commission would like to have your view upon that point?—I could not answer the question from the financial point of view without going very closely into it, and putting down the scale of staff that you would require for these proposed concentrated depôts and comparing them with the present condition of things; but I can answer you in a broader way than from the exclusively financial point of view, namely, that, as I said before, those are points on which, I think, the people who have charge of the administration of the army in England and who have to provide this army for all parts of the world, India included, are the best judges; and that they must be trusted to do for India and the Colonies what they do at home; that is to give them the best army upon the cheapest possible terms. As regards the big question involved of having these large depôts instead of having small ones, I may say that we should not get the recruits; that you must have scattered throughout England, all over the surface of Great Britain and Ireland, recruiting centres, in order to be able to obtain this large

number of recruits, which sometimes goes up to 40,000 men, that we require annually for our army; that you cannot merely have a recruiting depôt in London, in Canterbury, in Edinburgh, and in Dublin; that you must have them scattered throughout the country to obtain the numbers we now require. And then the whole of our army system at the present moment, which has been, I think most successful, and which has enabled us to obtain this increased number of recruits, which we now require in addition to what we required formerly, has been the localisation of our forces; that is, we have in each county in England a recruiting centre, and we supply from one recruiting centre, as far as it is possible to do so, the soldiers for the regiments of the county. That is part of our system, which would be destroyed entirely if you were to establish one or two or three great recruiting centres, such as formerly existed at Warley or at Chatham; and then, I would go beyond that and say from my experience at the Chatham depôt, which was a very large depôt, much larger than Warley was, that it was an abomination and a sink of iniquity. It was a place that fathers and mothers had the greatest horror of sending their sons to as officers even, it was so bad. The men belonging to the depôts were composed mostly of untrained boys, with a sprinkling of old fellows who had come back from India, old drunken fellows who had survived the cholera and various other diseases in India, and had come back to form part of the depôts, invalided to England; and a greater abomination than our old depôts it is very difficult to imagine. I do not mean to say that, if we established again a large depôt, it would be as bad as that one was; but the tendency would be for it to degenerate into something of the sort, whereas at the present moment our depôts are kept up in a very healthy way. They are very small, and as they collect 50 or 60 men they send them to the battalion representing the regiment at home which is also represented by another battalion in India and it is in that home battalion that the men are trained for India. They are trained under the most healthy associations from a moral point of view; they are well looked after by a large body of officers; they are trained efficiently as soldiers, and they are sent out to India not only as good soldiers but, I may say, as good moral citizens, men who have been taught all the good qualities that go to make a good subject of the Queen in any part of the world. Now those are qualities and qualifications which certainly were neglected in the olden days in the big depôt that I was associated with at Chatham, and which, I think, to a very large extent would be more or less reproduced, if you formed those very large depôts that you mentioned.

13,314. But at all events the depôt system is one that the War Office has thought out, and they believe that the depôt system, as they have organised it, is most efficient for the British army as a whole?—Yes.

13,315. Therefore, if it is most efficient for the British army as a whole, according to the best of their judgment, it is the best system for the portion of the British army which belongs to India?—Certainly, that is the way of shortly putting it.

13,316. Sir Edward Collen, in furtherance of his wish to get long service, suggested localised Indian regiments, which, as I understand, would be regiments belonging to the Queen's service, which would have their depôts in India; and would bring their recruits out from England to India. He did not explain himself very fully, but that I understood to be the meaning?—Yes; like the old Bengal Artillery depôt at Dum-Dum; you, Sir Donald Stewart, know a great deal more about it than I do; but I should not think that would be very good system.

(*Sir Donald Stewart.*) No; it would be practically the restoration of the old East Indian Company's service.

(*Chairman.*) The argument, you remember, Sir Donald, was that these regiments would be under the control of the War Office, but would merely get their recruits upon their own system.

13,317. (*Sir Donald Stewart.*) The permanent headquarters of the regiments were to remain in India for ever? —The headquarters remain in India for ever? That would be a local army, to go back to that would be as bad as bad could be.

13,318. (*Chairman.*) You have mentioned to us the difficulty that recruiting fell into in England, when the old Indian army was abolished and a much larger Queen's force was sent out to India. You were put to greater difficulties in getting your recruits, and consequently greater expense in getting them; do you not remember shortly after that time the question of raising the soldier's pay arising?—Yes.

13,319. It was recommended by a Royal Commission in 1867 and adopted about a year later. Would you, in any shape, attribute the necessity of giving that greater pay to the much larger demand made upon the recruiting market?—I think it arose entirely from it. It was not given—in fact, we never give either officers or men of the British army emoluments except when we cannot possibly avoid doing so—and we gave the increase of pay to the British soldier you refer to because we could not obtain him upon the old terms. We were, therefore, obliged to increase his pay.

13,320. That is a point that ought to be borne in mind. I do not want to attach too great importance to it, but when one is considering these changes in organisation, of which the Indian Government complain a great deal, it is very desirable that we should ascertain whether, and to what extent, India may be a contributing cause to bring about these changes; and in that case that must have been a contributing cause?—It was, I think, one of the principal causes.

13,321. Then our attention has been called by Sir Ralph Knox, in mitigation of what Sir Edwin Collen said about the charges put upon India by the changes in organisation, to the fact that several causes have led to a diminution of charge on India, which Sir Edwin Collen did not mention. He referred to the reduction in the number of companies in the regiments, which took place about 1870, and from which, I think, he calculated there was a saving of something like 250,000*l.* a year to India. He also pointed out that the good conduct pay, which increased with length of service, fell very greatly when short service came in. That, he reckoned, amounted to a saving of several thousands a year. He also pointed out that the penny on re-engagement was abolished, making a saving of 50,000*l.* a year. Without troubling you with the financial details of these changes, I would like to ask you whether you remember the fact of such changes having taken place, and the effect that they had in relieving India to a certain extent of the charge?—Certainly, I remember them all.

13,322. I only bring them forward to you as proofs that attention has been paid at the War Office to fair grounds, upon which the India charge might be reduced?—I am aware of that, and I am aware of the actual desire, which exists in the War Office, to reduce the charges, wherever it is possible to do so with any fairness to the English taxpayer.

13,323. (*Mr. Buchanan.*) But you are aware of the *per contra* and the various items, which have been laid before us, in which military charges have been imposed upon the revenues of India by the War Office without the consent of the military authorities in India?—Would you mention any?

13,324–6. Here is a statement, inclosed in a letter from the Government of India of the 27th February 1895, giving a list of certain "charges imposed on the revenues of India, "in consequence of orders by the War Office, issued, in all "cases, without the concurrence of the Government of "India, and in some cases without that of the Secretary "of State for India in Council, having previously been "obtained."

(*Chairman.*) But if the Commission remember aright, Sir Ralph Knox was under the impression that in most of these cases there had been communication with the Secretary of State for India; and it is for the Commission to consider whether a communication with the Secretary of State for India is not a communication with the Indian Government.

(*Sir Donald Stewart.*) I think nobody will dispute that.

(*Mr. Buchanan.*) There is the question of majors' pay. I should like to know in how many of those cases a communication was made to the Secretary of State for India?

(*Sir Donald Stewart.*) Yes; if the Secretary of State for India was not communicated with, the Indian Government was not.

13,327. (*Mr. Buchanan.*) This statement is headed "And "in some cases without that of the Secretary of State for "India having been previously obtained"?—I have run my eye very rapidly over these items, and I must say that I think that not one is a case where India has any just cause of complaint. We must decide in England for the big army that we keep up, whether it is necessary to increase the pay of the medical officers. I remark that the largest item of the lot, and it amounts to 250,000 rupees a year, is, to my astonishment, "Increase to the annual "allowance of practice ammunition of British troops in "consequence of a similar increase having been authorised

Viscount Wolseley, K.P., &c.

29 July 1896.

"for the British troops at home." Well I cannot fancy anything more ridiculous than putting that in as a *per contra* against any charge made by England for the army in India. You might just as well say that the Indian Government should have the power of deciding that it was unnecessary to have any practice at all?

13,328. (*Sir Donald Stewart.*) I do not wish to interrupt you, but I do not think that they ever claimed that the expenditure on that account has been unnecessary?—Then why put it here as a *per contra?*

13,329. (*Mr. Buchanan.*) I gather that the substance of the complaint in that schedule is that this measure made a considerable change, and imposed a considerable charge upon the revenues of India, and that the India Office were not consulted about it before it was done?—I doubt whether the India Office is capable, practically, of giving any valuable opinion upon such a point. Of course, the India Office includes on its Council one of the greatest of our soldiers at the present moment; but barring himself, and practically taking the India Office as the India Office, it is not, as an office, calculated to go into the question as to whether the British soldier should fire 100 or 200 rounds of ammunition a year.

(*Sir Donald Stewart.*) Oh, no.

13,330. (*Sir Ralph Knox.*) Do you think it is a possible condition of affairs, that the Indian Government out in India should be consulted before we in this country lay down the number of rounds that the British soldier should fire in England?—No, I think the thing, if I may say so, is not worth while putting down on paper.

(*Sir Donald Stewart.*) I agree; it ought not to have been put down at all.

13,331. (*Mr. Buchanan.*) Then there are possibly other items which are more reasonable?—The next one is issue of extra ammunition to British corps for volley firing. I doubt whether the India Office understand what volley firing means.

13,332. Surely the point of the whole thing is that India employs one-half or one-third of the British forces, and if the military authorities here are going to make alterations which impose a large extra military charge, it is in the interest of good administration and management that they should consult this office which is responsible for one-half, or one-third, of the charge?—And do you think the India Office would be capable of giving an opinion as to the issue of extra ammunition to British corps for volley firing at extreme ranges and for field firing, in consequence of a revised scale having been laid down in the revised musketry regulations? The next item is increased allowance of practice ammunition to British troops in India owing to a representation from the Secretary of State for War to the Secretary of State for India, which comes to 70,000*l.*, and so on. Are those points that you yourself, as a man of business, would wish to have considered in the India Office, and not by the specialists who have to look after the army as a whole?

13,333. Not at all. I am not considering that at all. I know nothing about military matters myself, but what I say is this, that, in the interests of business and the good conduct and administration of the joint affairs of India and this country, surely it is desirable that the supreme military authorities in this country, when they are making an alteration which entails a charge upon the revenues of India, should consult the Secretary of State and his office here, which is responsible for the Government and the expenditure of India?—Well, I believe that is the rule, and I believe the exceptions must be very rare indeed where it is not carried out.

13,334. (*Chairman.*) Would you look at that account and say whether it is not somewhat misleading, as put before the Commission, for this reason, that it says "in some cases "without that of the Secretary of State." Surely, if the account purports to show where the Indian Government has been slighted, it ought to have made a separation, and marked those cases in which the Secretary of State had been consulted?—I think most business men would, certainly; this is not a business-like return, I think.

13,335. There are small matters in which the omission to consult India has occurred in the past two years; the return may not be absolutely correct all the way through, but the omission has occurred from time to time?—You are quite right, I suppose all offices make mistakes, and I suppose the War Office make mistakes like every other public office; and I have no doubt that the India Office has not been consulted in some cases that are mentioned in the return. I quite agree with you that it is wrong; I think in all cases the India Office ought to be communicated with. I do not mean to say we should consult them as to the number of rounds our soldiers should fire. You would not think of asking that as reasonable men. The last case I know of, where there has been a complaint brought forward to the War Office on this topic, was on the subject of farriers for cavalry regiments and artillery. We found ourselves obliged to offer some inducement to get better farriers; our farriers were bad—behind the time; the inducements to get good farriers were not sufficient: and, just as when we added 2*d.* a day to the pay of the British soldier, we had to do something for the farriers. And this increase—I cannot tell you what it was, I do not remember—was made without reference to the India Office. I am sorry that it was; it ought to have been referred here, but the India Office complained of it, and with some justice, because I think that they ought to have been told; but the question of supplying farriers, and seeing that farriers are good farriers and thoroughly up to the mark, surely must rest with the War Office.

13,336. Certainly?—And we cannot possibly give over to any office, the India Office or any other, a question of the education and the efficiency of the men whom we select to be farriers for the army generally; and I think the army in India would be the last people to wish to have inferior farriers. That is a question that we must decide for ourselves.

13,337. (*Mr. Buchanan.*) That is one of the cases which is set out in full in one of the papers which has been put before the Commission. There is only one general question upon the subject which I should like to ask you, Lord Wolseley. Is it within your knowledge that it has been a constant subject of complaint on the part of the Government of India that charges have been imposed upon them by the War Office without the consent of the India Office in some cases, and in many cases without the consent of the Government of India?—I was not aware of this.

13,338. You might assume that to be the case?—I assume it is because you say it; but I think it is a misconception.

13,339. Do you not think that that is a hardship upon India and a reflection upon our administration at home?—I do not know that India has suffered materially, but I think it is much better, it would facilitate the doing of public business, that when two offices are working together, they should keep one another absolutely informed as to what the other is doing. The last instance I was able to find, where we did make any important change that threw a money cost upon the revenues of India, was in consequence of the change of the system of colonial and Indian reliefs. I do not know whether you know that question. It is rather a complicated one. We had formerly two rosters for service abroad, one the colonial relief where the regiments made a tour in the colonies, and after some 10 or 12 years in the colonies, returned home. The other was that a regiment went to India for some 12 or more years' service there and then returned home. Now we have only one, each regiment going abroad for 17 years; the greater part of that period is in India, the remainder of it is in the colonies. We distribute the balance of payment between the colonies and India. I think that change took place in the year 1893–4. That was communicated to India, and India was consulted before it was done. I asked yesterday what was the last instance of any important change in our arrangements with India, and they told me that was the last important one.

13,340. (*Chairman.*) At all events you think India ought to be consulted?—Yes, and I think that India practically is.

13,341. Would you not say that a statement of that kind should not be put forward without first ascertaining the cases in which the India Office has been consulted?—I think the omission to do so makes the return of no value whatever.

13,342. The return as a ground for examination is not of much value until that has been done?—Quite so.

13,343. If in this case the Government of India had stated at the end of their return, that in 10 out of 12 of those cases they had no means of knowing whether the India Office had been consulted, really then the matter would lie between the Indian Government and the India Office, and it is not quite just to charge the War Office with a neglect of duty?—Quite so; the great theory we can go upon in working with the India Office is that the India Office has a Cabinet Minister of its own. Nothing can be done with regard to these charges, until the question is brought before the Cabinet; and the Secretary of State

for India, therefore, as a member of the Cabinet, knows of the proposal quite well; and I might say, as a rule—I do not say we always do it, for we sometimes make mistakes like other offices—we communicate all those proposed changes to the India Office; and perhaps the India Office in its turn makes a mistake occasionally, and does not communicate those facts and those circumstances to the Governor-General in India.

13,344. Does not this letter signed by Mr. Woodall, and dated 1894, put the question in a very fair way:—"In "reply, I am to inform you that, although, as stated "in the War Office letter of the 16th February, Mr. "Secretary Campbell-Bannerman regrets that no notification of these intended changes was made to the "India Office before the warrant was issued, he cannot accept the views expressed, that in publishing "any warrants or army orders which have a financial "bearing, it should be stated that they are not applicable "to India, and that no additional pay or allowances will, "under these provisions, accrue to officers or men serving "in that country. I am to point out that the members of "the Indian Government are not in a position to be aware "of the circumstances which render necessary reforms and "concessions in the British Army, and, as they are not "responsible for the recruiting of the army, nor for providing terms sufficient to secure the services of men, "the Secretary of State for War cannot leave it to the "Indian authorities to decide whether officers and men "serving in India should, or should not, have the advantage of alterations of pay, &c., which after full "consideration of all the circumstances have been adopted "by him, with the concurrence of the Commander-in-"Chief, for the army generally. It must be borne in mind "that the conditions on which the requisite number of "men can be procured are necessarily very much higher "than they would be if 70,000 men were not wanted for "service in India. The circumstances under which the "regulations in question have been issued were fully "explained in the War Office letter of the 16th February "above quoted, and the additional charge of 9,000*l.* a "year, which they entail upon the Indian Government, "is the only expense thrown upon Indian revenues as the "result of the recommendations of Lord Wantage's Committee; while a considerable saving, not far, if at all, "short of this extra charge, has accrued to Indian "revenues by the withdrawal of one battalion of infantry "from India without reducing the total force in that "country, a course which was adopted in deference to the "urgent recommendation of the same Committee, that it "was necessary to equalise the number of battalions "serving at home with those serving abroad. Care will "be taken in future to bring to the notice of the India "Office, as early as possible, any intended alterations "affecting the pay of the army generally, and Mr. Secretary Campbell-Bannerman hopes that the Secretary of "State for India in Council will take no steps to withhold "the issue of lance pay under the new regulations to the "British troops serving on the Indian establishment." Does not that represent fairly the position which should obtain as between the two Governments?—Entirely. To my mind that is an unanswerable letter.

13,345. (*Sir Donald Stewart.*) But, as a matter of fact, is it not the case that the officers of the British Medical Department at the present moment are not receiving the same pay, relatively, in India as they would in England?—That is quite true, and I think that is very wrong on the part of India.

13,346. (*Sir William Wedderburn.*) This is a question regarding the method of calculating the cost of the British army in India. I think you said that the test of the cost was the difference that would be made supposing that India did not exist, was altogether separate; the amount of saving supposing India were entirely separated?—Yes; supposing India did not belong to us.

13,347. Yes. That would show us what the actual cost of the British army in India is. But, I think, there is a separate question. Admitting that to be the mode of ascertaining the actual cost, there comes a separate question as to the apportionment of that cost, whether or not the United Kingdom should bear a portion of it. That is a separate question I think, and other considerations enter into that question?—Well, not according to my views. The whole cost should be borne by the country for which these establishments are created.

13,348. I understand that; and I have no objection to make as regards the mode of calculating the cost. But I should like to make some suggestions with regard to the second question, namely, whether the United Kingdom should bear some proportion of that cost, it having been ascertained in the way that you mention. The mode of ascertaining is by supposing a complete separation of India, and, if that separation existed, this country would have a large gain; it would save the whole cost of the army now in India, would it not? that is to say, it would no longer have to keep up that army. Of course there would be great losses, from the loss of the connexion with India, but there would be the relief of no longer having to keep up that army?—That would not be a direct financial loss; you refer, I presume, to the difficulties of recruiting. If the charges were all paid by India, of course, we should not lose anything by having India.

13,349. No, but the supposition would be that India would be altogether separated?—What I mean is supposing we did not own India.

13,350. That we did not own India?—Yes.

13,351. If we did not own India that would make a difference to India, would it not?—It would make a very great difference to India, because, I think, all the happiness and the greatness of India depend upon its connexion with England.

13,352. Yes; but for the purpose of Indian defence, she would no longer require British troops?—If she did not belong to us? Of course, we do not send troops to foreign countries. India would then be a foreign country.

13,353. And, for the purpose of defence, she would naturally employ her own subjects as her troops?—Well, you talk of a condition of things that never has existed, so it is difficult to follow you, because there never was an India until we made it. India never was a united empire under one rule. You talk of India as if it had been an united power of itself; it never was.

13,354. Under the Mogul emperors, I think it was?—There were still independent provinces.

13,355–6. But the point that I wish to see is, whether some principle can be laid down, by which we could distinguish between the army necessary for the home defence of India, and the army necessary to keep up the connexion with this country. For purposes of home defence, if India did not belong to this country, she would employ her own subjects as troops?—But what India are you speaking of?

13,357. I am taking your assumption, namely, that India should be quite separate?—But India would degenerate into a sort of bear garden.

13,358. But supposing that she remained as a country, as a self-governing nation, she would use Indian troops, that is to say, natives, for her own defence?—Against what?

13,359. For her own defence against any foreign aggression?—You call very largely upon my imagination, you know, with all this.

13,360. The assumption is not made by me. I think it was made when you took as a test the supposition of India not belonging to this country?—Mine was a very simple statement. It was that the expenses to be paid by India should be those which are incurred at the present moment for supplying India with an English army. That was my simple statement. I did not go into the question as to whether India was to stand alone, or to be an independent power or to be able to protect its frontier. I did not go into that question, because that is a very big matter, that would entail a very large amount of thought as regards the political condition of India.

13,361. Yes; but I am only wishing to illustrate the financial position, and my point is that the difference to India, the gain to India—of course, there would be great losses, I am not questioning that—would be the difference between the cost of native troops and the cost of British troops. That is the point that I wish to bring out?—I do not know what India would be. You are referring to an empire which never has existed, and never can exist.

13,362. But the whole assumption of the separation has not existed, and never can exist. It is only as a mode of distinguishing the financial position that I am referring to it. I am only following up your own illustration?—But you are creating a condition of things, or supposing a condition of things, that I cannot really follow.

13,363. I am only following up your own mode?—My own mode was a very simple one. If you withdraw the English garrison from India, the expense that would be saved by that measure would be the charges that ought

Viscount Wolseley, K.P., &c.

29 July 1896.

to be borne by India. In fact, the difference between the two establishments required in the case of our having no India to provide for, and in the case of our having India to provide for, would give you exactly what charges should be paid by India.

13,364. And I follow that up by asking what would be the cost to India, if India had no England to draw troops from?—That is impossible.

13,365. It is the same assumption?—Except that one is a constituted empire and always has been a constituted empire, that is the Empire of England.

13,366. The difference would be the difference between the cost of British officers and men, and the cost of native officers and men. That is the question I wish to put. That is the point, whether that is not the measure of the financial difference from the separation which you assume? —No, I do not follow you, I confess.

13,367. (*Sir James Peile.*) Could an Indian force perform for India the services that the British army performs for India?—No, it certainly could not; that is a very easily answered question.

13,368. (*Sir William Wedderburn.*) I may just sum up my point by saying that what I want to understand is the difference between the cost of the home military defence of India, and the cost of maintaining the connection with Great Britain. That is the point?—Well, I have been asked the question in another way which I can answer quite easily, namely, can an Indian army do for India what the English army does now? I say no.

13,369. What I wish to illustrate is the cost; what is fairly debitable to India for her own home defence and what is debitable to this country for maintaining India as part of the British Empire; that is the whole point; I am trying to get some test by which that may be judged?—Well, I think it is answered by saying that there is no possibility of creating a native army that would do the work for India that the English army does; and that, therefore, the position is an impossible one.

(*Mr. Caine.*) I think what you are trying to get out is this; that the difference in cost between the 76,000 British troops in India, and what a similar force would cost, if they were all native troops, ought to be debited to this country; that is the point.

13,370. (*Sir William Wedderburn.*) Something of that sort?—That could be very easily calculated though I do not know what the calculation would be; but my answer then comes in which I have already given here, namely, that there is no amount of native troops which would replace or make up for the British garrison.

13,371. (*Chairman.*) I suppose the real answer to that is the mutiny, is it not?—Yes.

(*Chairman.*) We have had it once and seen what came of it.

13,372. (*Mr. Naoroji.*) Yes, but the Punjab raised a large army at the time of the mutiny?—I am very anxious to understand your question, and that I did not do so is due to my own stupidity. I did not follow you. If you put it in that way, I can answer you that there is no possibility in numbers by which you could replace the British army by native troops.

13,373. (*Sir William Wedderburn.*) Not for our purpose; but it is simply as a method of gauging the financial interest in this large army to India proper and to ourselves, that is to say, so far as the interests of India individually are concerned, and so far as the interests of the British Empire are concerned?—My answer to that would be, that the great need of India, as I conceive, is to maintain an English army in India of the strength that our army in India is at the present moment, in order to keep the country in a profound state of peace.

13,374. (*Mr. Caine.*) May I ask you a question, Lord Wolseley; you have a high opinion of the efficiency of the Indian cavalry, I expect, have you not?—I have a high opinion of the efficiency of all the Indian troops.

13,375. Do you think the Indian cavalry are equal, force for force, to any other cavalry in the world?—No, certainly not.

13,376. For fighting qualities?—No.

13,377. Are they equal to our own?—No, certainly not; nor to the French cavalry, nor to the German cavalry; and, if they were, we should not be able to hold India.

13,378. I do not agree with you there. Do you think we could safely discontinue sending British cavalry to India?—I should be very sorry to see India without British cavalry.

13,379. (*Sir Donald Stewart.*) It is a question for the Indian Government?—Yes, I think so. I think the Indian military authorities, of course, are much better qualified to give you an opinion than I am.

13,380. (*Mr. Caine.*) You do not think it would be safe to give up sending British cavalry to India, even if you replaced British cavalry with British infantry—not diminishing, that is to say, the total number of British troops in India?—I think not; you have quite as small a force of British cavalry in India as you can do with.

13,381. It is an absolute requirement?—Yes.

13,382. Have you any opinion as to the value of Eurasian regiments in India, and whether they could take the place of British troops?—I saw one Eurasian regiment, and I never saw a more wretched, useless, or miserable body of men in my life.

13,383. Thank you; that is a very definite opinion?—I saw them during the mutiny; they would not fight, they were always grumbling, they did nothing.

13,384. (*Mr. Naoroji.*) Our object in this Commission is to ascertain what apportionment should be charged to each country in matters in which both are interested. You say England has done so much for India, but India must pay every farthing. Now let me read you a short statement?—I cannot answer anything connected with the political condition of India. I am here to give you purely military opinions and to answer purely military questions.

13,385. (*Sir Donald Stewart.*) May I ask one question about the army medical establishment? Have you got any views upon the subject of the amalgamation of the two branches of the army medical service, the Indian and the British?—Yes, I think that would be a saving for India; I think it is a pity it is not done.

13,386. (*Chairman.*) Amalgamation of the two services?—To have only one medical service for India would be a saving to India and it would not hurt us, according to my notions.

13,387. (*Sir Donald Stewart.*) It would not disturb the efficiency?—According to my notion it would not.

13,388. (*Chairman.*) Mr. Naoroji, you heard what Lord Wolseley said. Of course it is for you to consider whether your questions go outside the line, upon which you can expect him to give an answer.

(*Mr. Naoroji.*) I have to put questions within our Commission's reference, and I should have answers from Lord Wolseley just as he thinks proper; but my questions should be put, because the question has to be considered from the Indian point of view.

(*Chairman.*) I am speaking in consequence of what Lord Wolseley said to you. We must bear in mind that questions must come within the scope of our reference. You say their subject comes within that scope, but I think you have gone rather close upon the limits of our reference occasionally.

(*Mr. Naoroji.*) Yes; but there are several statements made by Lord Wolseley which require to be controverted and especially one which I would just take—Lord Wolseley urged very strongly that England made India. Now that is a point upon which there is another side of the picture also, and I must therefore have that side put in; and besides he said that India is not a whole nation; that is not a necessity. India is like Europe, you may say, a large continent, and there were several native powers instead of one native power. That does not answer in any way the question I want to put; I want to say—perhaps the question has been misunderstood and muddled up a good deal—that our object here in the Commission is to ascertain what apportionment should be charged to each country for purposes in which both are interested. I want therefore to bring out those purposes in which both England and India are interested, and what England ought to contribute towards the apportionment as well as India. I am not saying that the whole benefit is British. I grant that in whatever is done in the whole administration, India has its benefit; but England also has its benefit and therefore what portion should England pay for all that administration; and that is what I have to bring out, because that is the principal question for which the Commission is formed.

13,388. (*Chairman.*) Just bear in mind what the scope of our Commission is, and also bear in mind what Lord Wolseley's position is?—If I might say so, those all are questions of relative advantages, but upon those I cannot be expected to give evidence; I can only give you evidence upon facts.

13,389. (*Mr. Caine.*) Lord Wolseley is an expert witness upon specific points?—On facts.

(*Mr. Caine.*) He really ought only to be examined upon matters upon which he himself is an expert witness.

13,390. (*Chairman.*) Quite so?—And upon facts. I am not prepared to enter into problematical questions as to what would be in the future.

(*Mr. Naoroji.*) I am not putting problematical questions. I wish to give facts as they exist, and I want to ascertain them from Lord Wolseley; if he says he cannot answer those questions——

(*Mr. Jackson.*) May we not have this question?

(*Chairman.*) Time gets on; please put your question.

13,391. (*Mr. Naoroji.*) Lord Wolseley,—you may have read an extract from Lord Kimberley's speech that I gave at the time of the examination of Sir Ralph Knox?—Yes; I read all the questions that you put to Sir Ralph Knox, and I am not prepared to answer any of them.

13,392. Very well, then, of course, if you are not prepared and will not answer——?—It is not a question of "will not."

(*Mr. Jackson.*) I do not think it ought to be put—here we are in the presence of reporters—that Lord Wolseley "will not" answer the question. I do not think that responsibility ought to be put upon Lord Wolseley.

13,393. (*Mr. Naoroji.*) Having had this definite answer, I am not going to put those questions now. I only put a question which arises from Lord Wolseley's assumption as to what England has done for India; he bases all his argument upon the assertion that England has done so much for India that India must pay every farthing.

(*Mr. Jackson.*) Will you not put the question?

(*Witness.*) That is a historical question, into which I am not prepared to enter. I am quite prepared to answer you any questions that you will ask me bearing on the establishment of the army or the efficiency of the army, either in England or in India, or anything that comes within the scope of my own duties, but nothing else.

13,394. (*Mr. Naoroji.*) Then it is very unfortunate that you made the remark several times that India was made by England what it was, and therefore India must pay every farthing for whatever England has to spend or whatever England imposes upon it, and you even demur to the word "imposing." Well, therefore, unfortunately these remarks being made I was bound to ask questions?—I am much obliged to you for your commentary on my evidence.

13,395. Of course, if I am not to put this question or go into this matter I, of course, yield to the decision of the Chairman. I only wanted to ask these questions because these remarks were made.

(*Mr. Caine.*) We ought to discriminate a little in the questions. I do not attach any importance to what Lord Wolseley says on historical questions, but I attach the highest importance to what he says on military questions; and, when we come to report, I do not suppose that we shall be influenced in the drafting of our report by any opinion that Lord Wolseley gives either on political questions or on historical questions?—They will be of no value.

13,396. We only deal with what he says on military questions?—These are the only remarks of value in this inquiry.

(*Chairman.*) I think we ought to go farther than that. I do not think that questions simply involving policy ought to be put to a witness like Lord Wolseley, because it is rather hard upon a witness to have to reply "I shall not," or "I cannot answer that question." I think the questions ought not to be put to him.

(*Mr Naoroji.*) I demur to the statement that I have said one single word to him upon a question of policy. I ask to put questions to Lord Wolseley, and he can make any answer to them he chooses.

(*Mr. Jackson.*) We have not heard the question. Let us hear it put.

(*Chairman.*) Perhaps you will put your question; we quite understand what the position is.

13,397. (*Mr. Naoroji.*) Very well; with regard to what England has done for India for her benefit or for her injury, I will just read a short statement?—Might I beg you to ask me a question. I shall be very glad to answer it. I do not want an essay read to me about what has taken place at some previous period of history. If you will ask me a question I will do my best to answer it; but to hear you read out some essay upon some problem would be of no use to me, and I am afraid I could give you no valuable reply to it.

13,398. If I ask my question I must explain what I mean. I will put the question at once. You state that England made India. I say that India has made England the most powerful, the richest, and the greatest country in the world, while the British administration, under the British authorities—not by the British people ——

(*Mr. Jackson.*) I think that should be given as evidence; that is not a question, is it?

(*Mr. Naoroji.*) I want to ask this question; what England has done for India? I want to point out that England has done the greatest possible material injury to India. I ask the question; is it so, or not?

(*Chairman.*) Is not that a matter for you to give in evidence?

(*Mr. Naoroji.*) Yes, I will give evidence.

(*Chairman.*) That is, expressing your own views. We should be glad to hear them.

(*Mr. Naoroji.*) Yes.

(*Chairman.*) But would it not be better to hear that from you, if you went into the witness chair?

(*Mr. Naoroji.*) Certainly, but when any witness makes a statement which ought to be controverted at once, I am obliged to intervene; otherwise, if I did not intervene, it might be taken to be my view. However, if my view is to be taken from my own evidence I am satisfied.

(*Chairman.*) If you will come in and give us evidence upon these points we shall be very glad, because it really is expressing your own view.

(*Mr. Naoroji.*) I am asking whether Lord Wolseley's view is the same or not.

(*Mr. Caine.*) Lord Wolseley on the subject you refer to only expresses a generally accepted opinion to which you demur and to which I demur too.

(*Mr. Naoroji.*) It is a wrongly accepted opinion altogether and therefore it should not go without being contradicted.

(*Chairman.*) Quite so. I know, Mr. Naoroji, your views upon this point, and I think it may be very desirable that you should have the opportunity of expressing them to us, but I think they would be expressed better in evidence than in questions to witnesses, which the witnesses cannot answer.

(*Mr. Naoroji.*) I do not want to put any questions that the witness cannot answer; but I am quite willing to give it up.

(*Chairman.*) If you wish to give us evidence.

(*Mr. Naoroji.*) That I have already offered. I think it is a fair way to put it.

13,399. (*Sir Ralph Knox.*) It has been suggested by Sir Edwin Collen that there should be one general training depôt. Up to the present time we have had one general depôt for training cavalry. Has that been found to be a satisfactory arrangement?—Well, we are going to break it up.

13,400. And it has not been found an economical arrangement?—No, it is an expensive process.

13,401. And, so far, therefore, as the experience of cavalry depôts is concerned, the system of having a separate depôt for the training of recruits for India is unsatisfactory, both from the economical point of view and also from the efficiency point of view?—I think so. I would put it the other way, and say it would be more effective and better for all concerned if the training of recruits were divided amongst several depôts, instead of being in one large amalgamated depôt.

13,402. And the system in the infantry of absorbing the men who may be surplus to the actual requirements of India, into the home battalion, is an economical system as regards India?—Very much so.

Viscount Wolseley, K.P., &c.

29 July 1896.

13,403. It relieves India of all that charge for waste, which accumulates round a regiment?—And which was a very heavy charge, I fancy, in the old Chatham time.

13,404. (*Mr. Mowbray.*) You do not recruit of course at all specially for India; you recruit for the army generally?—We recruit for a particular regiment, of which there is one battalion in India.

13,405. And what is wanted in that battalion in India goes out to it, and what is not wanted in it is kept for the battalion at home?—Yes, we undoubtedly send out to India the best men out of the battalion that is in England.

13,406. There is no special ear-marking of recruits?—No, none at all.

13,407. (*Mr. Jackson.*) In order to try to avoid any misapprehension arising from what you said when you spoke about a certain basis for ascertaining the cost of the charge to be made to India for the troops sent to India, I would ask you whether you were not expressing rather a principle than a practice?—Certainly.

13,408. I want to make clear that, although you expressed your opinion that the method of charge and the extent of the charge should be measured by the increased cost put upon this country by reason of having to provide those troops for India, it is not to be understood that that is the actual method of making the charge?—By no means: we do not charge India nearly as much as she would have to be charged if my humble proposals were to prevail.

The witness withdrew.

(For the portion of the 30th Day's Evidence relating to Apportionment, *see* page 153.)

INDIAN EXPENDITURE COMMISSION.

VOL. II.

FIRST REPORT

OF THE

ROYAL COMMISSION

ON THE

ADMINISTRATION OF THE EXPENDITURE OF INDIA.

APPENDICES.

Presented to both Houses of Parliament by Command of Her Majesty.

LONDON:
PRINTED FOR HER MAJESTY'S STATIONERY OFFICE,
BY EYRE AND SPOTTISWOODE,
PRINTERS TO THE QUEEN'S MOST EXCELLENT MAJESTY.

And to be purchased, either directly or through any Bookseller, from
EYRE AND SPOTTISWOODE, East Harding Street, Fleet Street, E.C., and
32, Abingdon Street, Westminster, S.W.; or
JOHN MENZIES & Co., 12, Hanover Street, Edinburgh, and
90, West Nile Street, Glasgow; or
HODGES, FIGGIS, & Co., Limited, 104, Grafton Street, Dublin.

1896.

[C.—8259.] *Price* 3*s.* 3*d.*

SALE OF GOVERNMENT PUBLICATIONS.

The under-mentioned Firms have been appointed sole Agents for the sale of Government Publications, including Parliamentary Reports and Papers, Acts of Parliament, Record Office Publications, &c., &c., and all such works can be purchased from them either directly or through retail booksellers, who, under the provisions of the sale agency contracts, are entitled to a discount of 25 per cent. from the selling prices:—

IN ENGLAND:—

For all publications *excepting* Ordnance and Geological Maps, the Hydrographical Works of the Admiralty, and Patent Office Publications:—Messrs. Eyre and Spottiswoode, East Harding Street, E.C.

For Ordnance and Geological Maps:—Mr. E. Stanford, Cockspur Street, S.W.

For Hydrographical Works of the Admiralty:—Mr. J. D. Potter, 31, Poultry, E.C.

Patent Office Publications are sold at the Patent Office.

For all publications *excepting* the Hydrographical Works of the Admiralty and Patent Office Publications.

IN SCOTLAND:—Messrs. John Menzies & Co., 12, Hanover Street, Edinburgh, and 99, West Nile Street, Glasgow.

IN IRELAND:—Messrs. Hodges, Figgis, & Co., Limited, 104, Grafton Street, Dublin.

The following is a list of some of the more important Parliamentary and other Publications recently issued:—

Parliamentary:

Statutes—

Public General, Session 1895. With Index, Tables, &c., &c. Roy. 8vo. Cloth. Price 3s.

Second Revised Edition. By authority. Vol. I. A.D. 1235–1713. Vol. II. A.D. 1714–1800. Vol. III. A.D. 1801–1814. Vol. IV. A.D. 1814–1830. Vol. V. A.D. 1830–1836. Vol. VI. A.D. 1837–1842. Vol. VII. A.D. 1843–1846. Vol. VIII. A.D. 1847–1852. Vol. IX. A.D. 1852–1857. Vol. X. A.D. 1858–1862. Vol. XI. A.D. 1863–1867. Price 7s. 6d. each.

Revised Editions. Tables showing subsequent Repeals, effected by Acts of 58 & 59 Vict. 1895. Price 6d.

Statutes in Force. Chronological Table of and Index to. Thirteenth Edition. To the end of 58 & 59 Vict. 2 vols. Roy. 8vo. Price 10s. 6d.

Statutory Rules and Orders other than those of a Local, Personal, or Temporary Character. With a List of the more important Statutory Orders of a Local Character arranged in classes; and an Index. Roy. 8vo. Boards. Issued in the years 1890, 1891, 1892, 1893, 1894, and 1895. Price 10s. each.

Statutory Rules and Orders in force on 1st January 1893. Index to. Imp. 8vo. Cloth. Price 10s.

Statutory Rules and Orders, 1896. [illegible]n Act, 1893, are now in course of issue.

Acts of Parliament, Public and [illegible] course of issue.

[C. 7862 and 7862—I. to VIII.] Vols. I. to IX. ([illegible] with Evidence, Appendices, &c. Price 19s. 0½d.

[C. 7981.] Agriculture, Roy[illegible] [illegible]ioners. Price 6d.

[C. 8027.] Poor Law Schools. [illegible]lucation of Children in. Vol. I. Price 1s. 6d.

[C. 8032.] Ditto. Vol. II. [illegible] Price 6s. 8d.

[C. 8033.] Ditto. Vol. III. Price 3s. 3d.

[C. 8097.] Trade, Annual St[illegible] Price 4s. 2d.

[C. 8112.] Causes of Death in Colliery Explosions. Report on. Price 1s. 9d.

APPENDICES Nos. 1 to 8.

SECTION I.

FINANCIAL MACHINERY.

APPENDIX No. 1.

SYSTEM OF ACCOUNT IN INDIA.

Paper handed in by the Financial Secretary, India Office.

CIVIL ADMINISTRATION.

The Civil Administration of India is, for account purposes, divided into nine presidencies or provinces: Bengal, North-West Provinces and Oudh, Madras, Bombay, Punjab, Central Provinces, Burma, Assam, and India General (which includes various administrations and departments not under the Governors, Lieutenant-Governors, and Chief Commissioners, of the other provinces).

The following are the officers in the Civil Departments concerned in the estimates and accounts of expenditure in India:—

Financial Member of Council.
Financial Secretary.
Comptroller General.
Accountants-General of Provinces, or (in the smaller provinces) Comptrollers.
Treasury Officers.

to which must be added the Heads of Departments and the Local Governments.

System of revenue and expenditure.

The revenues are collected and held in local civil treasuries throughout the country, under the supervision of the Accountant-General in each province, acting under the general direction of the Comptroller-General. It is their duty to provide for the payments at those treasuries, and to move the money from one to another as required. The funds are not, as in England, remitted to one great central banking account, nor are the disbursements of the military, civil, public works, or other services met from one central source, but they are supplied from the civil treasuries.

Treasury officers.

The revenue officers who supervise the local treasuries are, in matters of account, in direct subordination to the Accountants-General of the provinces in which the treasuries are situated. The rules governing the preparation of the estimates and accounts, and the expenditure of money by civil officers, are contained in the Civil, Public Works, and Military Account Codes.

A treasury officer may not make any payment unauthorised by the code, unless under an express order *to himself* from the Government, and he must at once enforce any order from the Accountant-General disallowing a payment. If the local government overrules the Accountant-General, even temporarily, reference must at once be made to the Government of India.

Provincial finance.

Under the system of provincial finance, the local governments are permitted to retain for their own purposes a certain portion of the revenue which they collect, on condition that they meet therefrom a certain portion of the expenditure. According to the last quinquennial arrangement, made in 1892, the local governments may retain the whole of the provincial rates, three-fourths of the revenue from stamps, one-half of that from assessed taxes, forest, and registration, one-fourth of that from land revenue and excise, and most of the departmental receipts, (except those from railways, which are mainly imperial,) while, as a final adjustment, either a further portion of the land revenue is granted or a deduction is made therefrom, according to the circumstances of each province. On the other hand, they have to pay the cost of collection of the land revenue (including the charges of district administration, and, except in Bengal, of survey and settlement), and of the revenue from salt (in Bengal and Lower Burma, and partly in Madras), provincial rates, and customs (except in Bombay), three-fourths in the case of stamps, half in the case of assessed taxes, forest, and registration, one-fourth in connexion with excise, and nearly all the charges under the heads of general administration, law and justice, police, marine, education, medical, superannuation, stationery and printing, famine relief (unless very severe), irrigation, and civil works, besides a certain proportion of some other heads. If in any year the expenditure of a provincial government falls short of its revenue, the surplus is credited to its balance and debited as Imperial expenditure; if, on the other hand, the revenue falls short of the expenditure, the excess is taken out of the provincial balance and credited to the Imperial government in diminution of the total expenditure of the year. Each provincial government is bound to estimate for a certain minimum balance at the close of the year.

Powers of, and restrictions on, provincial governments.

Without the previous consent of the Government of India, a local government cannot sanction, even provisionally, any purely Imperial charge of a permanent nature. It may sanction an increase of charge in a fixed establishment, if it be met by an immediate equivalent reduction in the same establishment or a similar one in the same department,—petty increases, if there be sufficient budget provision under the same head of charge, but not any appointment with a salary exceeding Rs. 50 a month,—and revision of establishments under certain rules if the additional expense be met by reduction under the same major head. Certain powers are given to the heads of Imperial departments, that is, those whose operations extend over several provinces, and whose accounts are collected under a single officer,—such as the Survey of India, Northern India Salt Department, Meteorological Department, Civil Veterinary and Horse Breeding Department, Archæological Survey, Geological Survey, and Museums; but, except the first-mentioned, they cannot sanction permanent and unusual charges.

As regards provincial revenue and expenditure, the local governments are subject to the general supervision and control of the Government of India, whose powers they exercise. This includes the Imperial portion of such heads as are divided. But without the previous sanction of the Government of India—

(1) No additional taxation may be imposed, and no change made in any existing system of revenue management.
(2) No new general service or duty may be undertaken.
(3) No appointment may be created with a pay of more than Rs. 250 a month, and no addition made to the pay and allowances of an officer if they exceed or would thereby exceed that sum.
(4) No such appointment may be abolished or the pay reduced.
(5) No class or grade of officers may be created or abolished, nor may the pay be raised or reduced.
(6) The rates of discount upon the retail of stamps and court fees labels must not be altered.
(7) Nor the rates of duty on spirits and drugs, if the alteration would affect the excise arrangements of another province.
(8) No addition may be made to the pay of an officer or class, if it would lead to increase in the emoluments of others, and produce inconvenience in other provinces.
(9) No money may be removed from the public treasury for investment or deposit elsewhere.
(10) No alteration may be made in the form or procedure of the public accounts.
(11) No services rendered to or by departments not under the control of the local government may be diminished or increased.
(12) No line of through communication may be abandoned or allowed to fall out of repair.

A local government must exercise its powers according to the ordinary rules of the budget system; and must submit for the orders of the Government of India any representation by an audit officer which it does not promptly accept.

A local government cannot, without reference to the Government of India, sanction expenditure which will cause any excess over the budget grant for a major head which is wholly Imperial. It may, however, without reference to the Government of India, sanction expenditure in excess of the budget grant,

(*a*) Under any provincial or local major or minor heads, provided the increase does not cause the aggregate budget grant for provincial and local expenditure to be exceeded, specific re-appropriation being made;
(*b*) Under major heads divided in a fixed proportion between Imperial and provincial, and under minor heads (subordinate to other major heads) similarly divided, provided that specific re-appropriation from Imperial and provincial grants respectively is made.

Compensation for dearness of provisions may be given, when necessary, at the discretion of local governments, under certain rules. They may also prescribe the nature and limit of charges that may be incurred as contingent expenses.

Fortnightly and monthly returns.

Each local accountant-general receives from the various treasuries in his province accounts of their receipts once, and issues twice a month, which he classifies and records; he also receives in the middle of the month a statement of the balance in the treasury. An abstract of the Treasury accounts is sent, by post or telegraph, on the second of each month to the Accountant-General, who must test it by the balances, and telegraph the totals to the Comptroller-General by the 8th of the month. On the 15th of each month the Accountant-General telegraphs to the Comptroller-General the revenue and expenditure of the past month under the chief heads, the net monthly issues to the Military Department, and the Public Works Revenue and Expenditure, under various main heads.

Revised and Budget estimates.

In the preparation of the budget estimates by the Accountant-General, he will give advice to the local government, but the responsibility lies with the government, without whose authority he must not enter or alter any figures. The revision of the estimate for the current year, however, which is made concurrently with the Budget estimate, is on the sole responsibility of the Accountant-General. In the preparation of the estimates, every head of an office is to prepare a complete estimate, including salaries and all other charges of his establishment; otherwise, local governments may make such arrangements for the collection of details, &c., as they think best. If they propose to provide for any considerable expenditure out of accumulated balances, the proposals must be forwarded to the Government of India in advance of the estimates, for separate consideration.

The fact of a charge which requires special sanction having been included and passed in a budget is no authority for its payment.

Distribution of budget grants.

The grants as made by the supreme Government are for the service of a whole department, or for *major* heads. With the district distribution of the grant the supreme Government does not concern itself, nor does it interfere with the transfer of an ascertained saving on one section of a department to meet new wants of another; but a saving on a minor head is not available for redistribution if the grant for the major head is likely to be exceeded.

Additional expenditure.

Expenditure which cannot be met from the grant made at the beginning of the year for the service of the department to which it appertains, requires, *ipso facto*, and apart from all other rules, the sanction of the Government. Every application for such sanction should be accompanied by a statement showing how it is proposed to meet the expenditure.

Save for exceptional reasons, expenditure for which no provision has been made in the estimates of the current year should not be proposed, and cannot be sanctioned. In the absence of special arguments, the Government of India assumes that any expenditure proposed is to have effect from the beginning of the following financial year.

Unless the excess is trifling, or could not be foreseen, application for additional grants must be made, and sanction obtained, before any expenditure not provided for in the estimates is incurred.

The Accountant-General is bound to check any departure from orders, and to bring it to the notice of the local government and of the Government of India.

Audit.

Audit.

The duty of an auditor, as regards payments, is to see that the expenditure is warranted by orders of Government, special or general, and that it has been provided for in the sanctioned estimates; that the expenditure is necessary for the public service, and not greater than the occasion demands; that payment has been made to the proper person; and that it has been so acknowledged and recorded that a second claim against the Government on the same account is impossible; and, as regards receipts, to see that all sums due to be received are duly paid to the proper officer, and brought to credit by him. The greater part of the payments are made by Treasury officers, either before audit or upon an audit of a limited character by controlling departmental officers; and the payments are then accounted for to the Audit Department. For service payments at a chief provincial town, the vouchers are usually submitted to the Audit Department before payment, and the payment made only on audited bills. Besides the Civil Account Code, the Civil Service Regulations and numerous detached orders of the Government of India and of the local governments contain minute instructions about pay and allowances, leave and pension, and expenditure on supplies and services and contingencies; and these instructions are rigidly enforced in audit, no relaxation of any rule being permitted except under the express order of the authority competent to sanction it. If a local government authorises a charge which requires the sanction of the Government of India, it is placed under objection, which is not removed till such sanction is obtained by the local government. Similarly, if expenditure be authorised by the Government of India which requires the sanction of the Secretary of State, the auditor refuses to pass it until that sanction is obtained.

Dist[illegible] audit.

One clerk in the Accountant-General's office, known as the district auditor, is primarily responsible for the audit of all the accounts of a district. When the first list of payments is received, the audit should at once commence, so that any error may be notified to the officer immediately concerned, or, through the objection statement, to the Treasury officer, before the next month's payments are made. The audit of every voucher must be reviewed by a gazetted officer or superintendent attached to the Accountant-General's office, and all objections entered in a book, to which the Accountant-General is directed to pay special attention. The audit clerk, or district auditor, is responsible for watching the adjustment of objections raised on vouchers passed by him; and the gazetted officer in charge, when passing a new bill, should see what objections are still outstanding. The district auditor is responsible for following up an objection and watching the recovery. Constant care and attention are bestowed on the audit work by the gazetted officers in immediate charge, and by the head of the Account Office himself; all doubtful matters are brought to their notice, and are either decided by them or referred for the orders of the Government. The objections receive their continuous attention, and are formally reviewed once a quarter; and, when the officers immediately concerned are slow to comply with the directions of the Audit Office, the matter is brought to the notice of the controlling authorities, or of the Government in case of necessity.

Audit [illegible] receip[illegible]

Efficient audit of expenditure ensures that money which has once entered the treasury shall not leave it without sufficient authority; but it is the duty of the Accountant-General to watch receipts also, and, as far as possible, to see that under every head Government receives all its dues. In the case of departmental revenue the detailed check is entrusted to the revenue-controlling authorities, the Accountant-General's functions being confined to reporting to these authorities the amounts brought to account, which they compare with the departmental returns of demands and realisations.

Comptroller and Auditor-General.

Functions of the Comptroller-General.

Besides being the authority on all questions affecting classification and adjustment in the public accounts, the Comptroller-General compiles for the Government of India a complete monthly account of the receipts and expenditure of the whole empire of India, from the accounts submitted to him by the civil accountants-general and comptrollers, the accountants-general in the Military and Public Works Departments, and the comptroller of the Post Office. But, before the complete accounts are ready, he reports (by telegraph, if necessary,) to the Finance Department the approximate receipts and issues from treasuries, in detail of departments, on the 9th of the following month, and fuller details of the chief heads of civil revenue and expenditure on the 16th of the following month. He also publishes on the 9th the approximate cash balances at the treasuries, of which a revised edition is published on the 16th on the receipt of more accurate information. On the 25th of every month he submits to the Government an estimate of the probable receipts and payments, and the cash balances of that month and the two following months. He makes, for comparison with the budget prepared in the Financial Department of the Government of India, an independent compilation of the estimates of the various Accountants General (civil, military, and public works), and submits it to that department with his own estimate of the debt heads, interest, exchange, and ways and means; reviewing the other estimates with special reference to the state of the cash balances. At the end of the year he prepares the finance and revenue accounts for submission to Parliament, and draws up an Appropriation Report for the whole of India, including the Military and Public Works Departments, in which the variations of the

actual revenue and expenditure from the estimates and from the actuals of the preceding year are explained. He also reviews the balances of the public accounts annually, and satisfies himself how far these represent the admitted assets and liabilities of the Government.

Inspection and Test Audit.

As Auditor-General, he, through his deputies, inspects and conducts a test audit of all offices of account, so as to satisfy the Government that the detailed audit conducted by the local and departmental account offices is efficient, that the regulations and orders of the Government are duly enforced, and that the procedure in those offices is in accordance with the Codes and suitable for the efficient performance of their duties.

Appropriation Report, Revision of Estimates, &c.

Appropriation report.

The accounting officers are required to submit to the Government of India, through the local government, by the 5th of October, a statement showing the aggregate budget grants and the actual expenditure for the year ending on the preceding 31st of March, divided into Imperial, provincial, and local, with special reference to any excess of expenditure, and a copy of the appropriation report.

Revision of estimates.

A revision of the estimates for the current year must be sent by the 20th of November, based, if possible, on a consideration of the six-months' actuals. It is a very important part of an Accountant-General's duty to warn the local government immediately of the first appearance of any excessive *proportionate* outlay under any grant. Any large differences that are likely to arise, as compared with the budget or the six-months' estimate, should be reported as soon as reason is seen for expecting them; this is especially required in connexion with the accounts for November and January. Transactions affecting the cash balance are of equal importance, though not technically revenue or charge. The revision of the estimate for the current year and the preparation of the budget for the coming year have been mentioned above.

Quarterly returns.

A quarterly statement of fresh charges in Imperial departments sanctioned by the local governments is to be submitted to the Government of India within one month of the end of each quarter; quarterly statements are also required of assets and liabilities.

Annual returns.

Annual returns are required for the accounts submitted to Parliament, with particulars under numerous heads. A return of expenditure on stores is also prepared, distinguishing those procured through the Secretary of State from those purchased locally.

PUBLIC WORKS DEPARTMENT.

Public Works' Department.

Funds are supplied to the Public Works Department by means of letters of credit on the local treasuries, showing the limit up to which the officers named therein may draw cheques. The Treasury officer is to settle with the executive engineer monthly. In the case of open lines of State railway, remittances of cash to the Treasury are made by the accounts officer of the railway daily, as far as possible.

The general principles laid down in the Public Works are similar to those of the Civil Account Code, but there are special regulations as to the power of the controlling authority to transfer or re-appropriate grants. Money unspent at the end of the year lapses, and has to be again granted for the new year.

Sanction of projects.

The limit of power to sanction an ordinary Imperial project is as follows:—By the Government of India, 10 lakhs; Madras and Bombay, 2 lakhs; Bengal, North-West Provinces, and the Punjab, and the Director General of Military Works, Rs 50,000; Chief Commissioners, Resident at Hyderabad, and Governor General's Agents in Rajputana, Central India, and Baluchistan, Rs. 20,000; Superintendent of Port Blair, Rs. 5,000. In each case the limit is raised by 25 per cent., to include establishment and tools and plant. Works exceeding 12½ lakhs, or attended with unusual engineering difficulties, require the Secretary of State's sanction. Local governments can sanction provincial works up to 12½ lakhs.

Proposals for expenditure on buildings occupied by the heads of local governments or administrations must be submitted to the Government of India, if involving outlay above Rs. 15,000 in any one year.

MILITARY DEPARTMENT.

The following officers in the Military Department are concerned in the estimates and accounts of the military expenditure of India:—

The Military Member of Council.
The Military Secretary.
The Military Accountant-General.
The Military Controllers in the three Presidencies.
The Military Examiners.
The Military Disbursers.

Disbursing officers.

Funds are placed at the disposal of military disbursing officers by annual assignment estimates in their favour, issued to treasury officers by the local Accountant-General, on the application of the Controller of Military Accounts.

Payments are made by Treasury officers against these assignments, provided that the disbursements do not exceed the amount for which provision has been made up to that period in the annual estimate.

In case of emergency, military disbursing officers in need of funds may obtain an additional credit on a civil treasury on the authority of a station or district order. In time of war a civil officer may be directed to incur expenditure for the Military Department in procuring or collecting baggage animals, or supplies, or in other ways; he should at once report to the Controller of Military Accounts the best estimate he can form of the amount he will expend, and the probable time during which his payments will be made, thus forming a check on the complete estimate furnished to the Military Department by the authority requiring the supplies.

Before the officer commanding the station gives an order for such extra funds, he must satisfy himself of the propriety of the advance for which application is made. The disbursement ordered is at once reported to the head of the department concerned, and to the Controller of Military Accounts, by the officer authorising the advance, as well as by the officer receiving the money.

Examiners of accounts.

Disbursing officers submit their cash and store accounts monthly to the examiners of accounts, whose duty it is to check the expenditure in military departments in detail, and to compile the accounts. The estimate and regulations are the basis of their audit; in cases of doubt they will refer to the Controller of Military Accounts, but otherwise they act independently. They are required to check effectually outstanding balances of money or stores, as well as all excesses in stock, reserves, or allotments. All new contracts must, before being sanctioned, be scrutinised by the examiners, and the prices tested and compared with rates paid for like supplies. A report is to be submitted quarterly on the economy with which direct purchases are effected by departments at the several stations, or in districts.

Controllers.

Controllers of military accounts have immediate charge of the arrangements for the annual departmental estimates of cash requirements; and letters of credit or assignments on civil treasuries, for such cash as may be required for military services, are issued on their application by the Civil Accountants-General. The check of the Controllers upon the aggregate expenditure is maintained by scrutiny of the estimates and a clear record of all details, by watching the application of the sanctioned grants, and observing the measures of the year which affect military expenditure, and by reviewing the actual expenditure at the time it is incurred, and again at the end of the year, in close connexion with the sanctioned estimates. Immediately on its being ascertained that the total provision under any grant is likely to be exceeded, the controllers are required to report the fact to the Government of India, showing the amount and cause of such excess, and whether it can be met by savings under any other grant.

The controllers must telegraph to the Accountant-General in the Military Department on the 20th of each month the total military expenditure by military-disbursing or civil officers in the previous month; and on the 26th, the total debits for military expenditure incurred in other departments as received through the central adjusting accounts. These accounts may, especially in war time, contain very important transactions; and controllers should use their best endeavours to ascertain their value at the earliest possible date; to obtain information regarding what is likely to be incurred, in anticipation of payments; and to keep the Accountant-General informed at once regarding such probable expenditure.

They are not to rest satisfied with information coming to them in the usual course, but to place themselves in communication, officially or demi-officially, with heads of the spending departments, whether in India or in the field, and with the general officers

charged with operations, so as to be able by independent inquiry to supplement and complete the information obtained from disbursing officers.

Whilst a careful scrutiny of the financial results of executive departmental administration is most essential, great care must be exercised that the limits of the duty are not exceeded, and a strict observance must be maintained of the broad distinction between financial and administrative control.

With a view to diminish references to the Military Department of the Government of India, controllers are empowered to finally sanction expenditure not provided for by regulation, up to a limit of Rs. 500 in each case, but not exceeding Rs. 1,000 in any month.

Controllers will examine and control all the offices of examination, account, disbursement, or issue, attached to the command; and will arrange for the periodical inspection locally of the accounts of such regiments and departments in their commands as they may select. They are responsible for accounting for all money or stores obtained for the military service.

Accountant-General in the Military Department.

The Accountant-General is the head of the Military Accounts Department, and is in charge of the head office of army accounts; the estimates are collected by him, and, after revision, submitted to the Department of Finance, through the Military Department of the Government of India. He corresponds with the controllers, and he assists the Government with his opinion upon every question relating to military expenditure which may be referred to him. He prepares and forwards to the Comptroller and Auditor-General each year an appropriation audit report on the expenditure of the department.

The Accountant-General is ex-officio Deputy Secretary for Finance in the Military Department, in which capacity it is his business to deal with all matters that arise in connexion with military finance or with the Military Accounts Department. It is his duty to obtain the fullest information, from the controllers especially, but from other officers also, for purposes of check or early information, regarding military receipts or outgoings, and to keep the Government informed regarding their progress.

He is responsible for submitting monthly to the Military Department the total preliminary figures of military expenditure as furnished by the controllers, and for bringing to notice any difference between these figures and the reports of cash issues from treasuries, or the figures of the Civil Accountants-General, or any other circumstances which lead him to doubt the substantial accuracy of the compilation of the preliminary figures. He is also responsible for explaining any serious discrepancy between them and the final figures recorded in the military accounts.

While the Comptroller and Auditor-General is responsible for compiling the general figures of all accounts rendered to him, and keeping the Government of India in the Department of Finance informed regarding the receipts and expenditure on military account, it is the duty of the military account officers to maintain the more detailed accounts and statements necessary for the information of the Government of India and the effective financial control over military expenditure.

Powers of the Military Department.

No order involving an abandonment of revenue, or for expenditure not provided for in the budget, or not specially sanctioned, may issue without previous reference to the Department of Finance. But in cases requiring great secrecy or despatch the Military Department may act at once, making the reference subsequently, and in the meantime informing the Finance Department that extra expenditure will arise, and an estimate will follow in due course. The Military Department may also sanction expenditure not involving outlay in excess of its total budget grant, or a transfer from one grant to another. Savings under one grant cannot be appropriated to another without the previous sanction of the Department of Finance, but the Military Department may make transfers from one command to another under the same grant.

The responsibility for the sufficiency and moderation of the military estimates, and for the control of the current expenditure, rests with the Military Department.

Powers of the Commander-in-Chief and Lieutenant Generals Commanding.

The Commander-in-Chief in India can finally sanction expenditure not provided for, but not beyond the power of sanction of the Military Department, up to a limit of Rs. 2,500 in each case, and not exceeding Rs. 10,000 in any month, provided that the amount can be met from the sum allotted under the particular head of the grant affected. The lieutenant-generals commanding have similar powers up to Rs. 1,000 in each case, and Rs. 2,500 in a month. Even if there are no funds available, according to the budget or by transfer, the commander-in-chief may give such sanction up to Rs. 50 in each case, and Rs. 500 in a month, and the lieutenant-generals half that amount.

H. WATERFIELD.

2nd August, 1895.

No. 1.

DESPATCH to the GOVERNMENT OF INDIA, January 27th, 1881, No. 46.

My Lord Marquis,

Para. 1. At the conclusion of my despatch of the 4th of November, No. 368, I informed your Excellency that I had appointed a Committee in this country to inquire, with reference to the recent error in the estimates of the cost of the war in Afghanistan, into the system of military account and estimate in India, and as to the relations existing between the Military Account Department and the Comptroller General, and to report whether any defects exist therein, and, if so, the best mode of remedying them.

2. I now forward, for the information of your Excellency, a copy of the report of that Committee, dated the 22nd ultimo, and of the evidence taken by them.*

3. The Committee observe that the system of treating the audited charges only as the expenditure of the year,

* *See* Parliamentary Paper 86, of 1881.

though one which works well in time of peace, must be misleading in a period of war, when the true measure of the financial position is only to be found in the issues from the Civil Treasuries. While, therefore, they consider that the Government of India had at hand the means of readily ascertaining its position, the Committee consider it necessary that, with the view of preventing the recurrence of such an error as occurred last year, measures should be introduced which are calculated to inform the Government automatically and accurately of the aggregate receipts and issues of the expired portion of the year, as compared with the Budget Estimate, and also of the balances available at any time.

4. They further consider it necessary to define more clearly the duties of the Comptroller General and of the Military Accountant General, and they make certain specific recommendations, which are detailed in the 23rd paragraph of their report, and of which I approve.

5. I have, accordingly, to request that instructions may be given for the preparation, in the manner therein explained, of a monthly statement showing the cash transactions of the expired portion of the official year compared with the results of the previous year, and with the Budget estimate for the current year, to be regularly submitted to the members of your Government and (in triplicate) to the Secretary of State.

6. The Committee suggest that, in the finance accounts, the issues from the Civil Treasuries for military and other services shall be treated as expenditure, and forms are appended to their report for the purpose. In these forms the revenues are inserted exclusive of Army receipts, and the issues alone are entered as the expenditure. For the proposed monthly statements these forms appear to be well adapted, although the treasurers will apparently have no military receipts to bring to account unless from exceptional sources. In the finance account, however, some modification seems necessary. The effect of eliminating the Army receipts would be that the expenditure would be stated net, in opposition to the practice of the Indian accounts. It will, therefore, be necessary, in the series of finance accounts, to include the receipts on the revenue side, and on the expenditure side to show the amount of the issues from the Civil Treasuries, including the cash receipts which have passed into the disbursers' hands. It is not, however, requisite to include many of the remittance and other transactions which are at present shown on both sides of the account, and which do not affect the true expenditure on the Army.

7. The monthly abstracts of audited accounts will continue to be sent by each Accountant General, and will be consolidated by the Comptroller General, and forwarded to your Government and to the Secretary of State.

8. The final accounts of audited military expenditure should be prepared in the manner suggested in the Committee's third recommendation. The total amount of the charges shown in the Form No. 7 would be very nearly the same as the aggregate in Form No. 5 of the issues to the Army including the Army receipts. Any discrepancy arising from the expenditure of money taken from the deposits or otherwise should be explained.

9. While I do not wish to enjoin too strictly adherence to the precise forms of account thus sketched out, I request that the general principles may be accepted and acted on.

10. I concur in the views expressed in the fourth recommendation of the Committee as to the duties of the Comptroller General and of the Military Accountant General, and desire that orders may be given for carrying them into effect.

11. I have also to request that the Comptroller General may be instructed to prepare annually a report comparing the accounts of the last year with the Budget for that year, and with the accounts of the preceding year, with explanations of any important variations; and that, after this report has been considered by your Government, it may be transmitted to me with your observations at as early a date as possible.

12. Although I have not had the opportunity of learning the views of your Excellency on the proposed changes in the system of military accounts, I am glad to perceive from the papers which accompanied the letter from your Government, dated the 3rd of August, No. 249, and the letter from the President in Council, dated the 9th November, No. 379, that there is a general harmony between the recommendations of the Committee, and the proposals which had suggested themselves to the financial authorities in India.

13. I shall be glad to learn the views of your Excellency on the point, regarding which the members of the Committee differed in opinion, whether it is desirable that the duty of conducting the appropriation audit should be delegated to the Comptroller General, or to another officer, free from all administrative functions.

14. In conclusion, I have to express my entire concurrence in the opinion expressed by the Committee, that the importance of obtaining accurate information regarding the issues from the Civil Treasuries for military services during the war, ought not to have been overlooked by the many high authorities concerned in the preparation or acceptance of the estimate, and that the adoption of the measures indicated in the Committee's report will not suffice to prevent irregularities, unless constant watchfulness is exercised by the financial department, under the direction of the financial member of your council.

I have, &c.
HARTINGTON.

No. 2.

LETTER from the GOVERNMENT OF INDIA, March 14, 1881, No. 67.

MY LORD MARQUESS,

WE have the honour to acknowledge the receipt of your Lordship's despatch, No. 46 (Financial) of the 27th January 1881, enclosing the Report of a Committee appointed by your Lordship to enquire into the system of Military Accounts and Estimates in India. Our thanks are due to the Committee for the valuable Report which they have compiled.

2. We propose to deal separately with each of the important points raised by the despatch now under reply. For the present, we confine our attention to the first of the proposals contained in the 23rd para. of the Report of the Committee. This proposal deals with the necessity of obtaining, for the purposes of current finance, information in respect to the receipts and issues of the several treasuries, at a much earlier period than that at which accounts of audited expenditure could under any circumstances be rendered.

3. Before proceeding to explain the steps which we have taken to carry out your Lordship's instructions, it will be well to advert briefly to the actual condition of affairs.

4. Mainly owing to the energy and intelligence displayed by Mr. Westland, the present Comptroller General, of whose services we cannot speak too highly the information now at our command is, in many respects, far more perfect than that which alone was obtainable when the events occurred which gave rise to the appointment of the Committee.

5. The information on which we can at present rely in respect to our current finances is as a follows:—

(1.) We have perfectly accurate and complete information of our receipts and disbursements, prepared and classified in the form in which they will ultimately figure in the Accounts. This information is generally obtainable six or seven weeks after the close of the month. We enclose a copy of the monthly consolidated account as it is now prepared up to the end of December 1880. Your Lordship will observe that this return was ready by the 21st of February. Copies of this return will in future be sent every month to your Lordship.

(2.) We have an estimate prepared at the end of each month, or even before the month has expired, of the Treasury transactions of the month. Under ordinary circumstances reliable material exists for framing this estimate, and the monthly statement of the closing cash balances affords a means for testing its accuracy.

(3.) We have the closing cash balance of most of the treasuries. Except in the case of a few of the most distant treasuries, this information is generally available by the 9th of the month.

(4.) We have by the 16th of each month a statement collected from the Civil Accountants General of the receipts and issues of the civil treasuries upon military account, and from the 20th to the 24th of the month we receive statements,

from each province, also based upon the actual treasury accounts, of the receipts under the chief heads of revenue (land revenue, salt, customs, opium, stamps, &c.). For some of these we also, independently, get telegraphic information from departmental officers.

6. The information now at our command, although far more perfect than that which existed a year ago, does not, in our opinion, preclude the necessity of adopting some such measure as that proposed by the Committee. Orders have accordingly been issued to the officers in charge of the several treasuries to classify roughly their receipts and expenditure, and to send them with the least possible delay to the Accountant General at the close of each month. We enclose a copy of the circular (No. 2255 of the 12th February, 1881) which has been issued by the Comptroller General to the several Accountants General.

7. In the exercise of the discretion left us by para. 9 of your Lordship's despatch, we have departed to some slight extent from the precise forms recommended by the Committee.

First, we have directed the Treasury officers to send their returns to Provincial Accountants General, instead of directly to the Comptroller General. This step involves no delay in the final compilation of the figures by the Comptroller General, inasmuch as the Accountants General are all in telegraphic communication with Calcutta, and it gives us a security for the correctness of the returns which otherwise we should not have. For the Comptroller General has not, while the Accountant General has, the detailed knowledge necessary to enable him to criticise and question the returns when first received, and to examine them afterwards in the light of completed account, with a view to tracing and correcting errors of compilation.

Second, we have found it necessary to add a separate figure for Post Office receipts and issues, and also for guaranteed railway transactions. The Post Office has recently become a very large remitting department, as it now has the management of the money order business; and the Treasury Officers have no means of distinguishing between the issues and receipts on account of the department which are connected with revenue and expenditure, and those which are connected with purely remittance operations. The transactions of guaranteed railways are also large and altogether peculiar, and they affect a very few treasuries only. We accordingly considered that there would be much less risk of mixing up revenue and expenditure with pure debt and remittance, if we caused these figures to be separately reported.

8. We have thought it advisable to prescribe the 15th of each month, at first, as the date of the compilation. The Committee considered it might be ready by the 9th; but, while we have it in contemplation to bring forward the fixed date as soon as we can, we thought that to expect too much at the outset would be to endanger the success of the measure.

We have, &c.
RIPON.
F. P. HAINES.
RIVERS THOMPSON.

Enclosure 2 in No. 2.

From the COMPTROLLER GENERAL to each ACCOUNTANT GENERAL, February 12, 1881, No. 2255.

SIR,

THE Government of India having desired me to establish a system of gathering (by direct returns from the treasuries, in anticipation of the regular accounts) the main facts concerning the revenue and expenditure of each month, I have the honour to explain to you the intended system, and to request you take immediate measures to bring it into operation.

2. The first business of each treasury at the close of a month is the ascertainment of its cash balance, which, under present rules, has to be immediately communicated to you. Thereafter comes the compilation of the cash account, with its final list of payments; and the system of treasury account is so regulated that the cash account can be made ready within the first day after the close of the month. The cash account affords the Treasury officer the means of ascertaining every figure that is required for the proposed returns.

3. Taking the figures in order of ascertainment, the first will be the total of receipts and issues on account of the Military Department. As these are in every treasury shown in separate schedules and separately totalled, they can be stated without difficulty.

4. The next are the receipts and issues on account of the Public Works Department, which includes State railways, but not guaranteed railways (*N.B.*—the East Indian is a State railway, and not a guaranteed one). The issues are all made on cheques, and are separately scheduled. The receipts also are usually scheduled; and, if they are not so at present, schedules should be introduced, so that the Treasury officer may be able, upon his cash account, to show separately the *whole* of the Public Works transactions.

5. The next figures to be taken out are those of the Post Office. This head is represented on the receipt side by the separate schedule of Post Office receipts, including postage-stamps; and on the expenditure side, either by a separate schedule or by items in the body of the list of payments, for which now a separate register and schedule should be introduced, so that the items may readily be taken out.

6. Guaranteed railways.—Very few treasuries have anything to do with these, but there is no difficulty in stating the receipts and issues, and the Accountant General in each case will give special instructions to the treasuries concerned.

7. After the above figures are taken out, the remaining ones belong to the purely Civil section of the accounts, and are either revenue and expenditure, or debt and remittance.

8. Revenue and expenditure are for the most part well understood, but it must be remembered that they include a few items which are dealt with in the treasury accounts in a special manner with reference to subsequent procedure in the account offices. Such are interest upon Government paper, Simla payments (in the Punjab), Presidency payments (in Bengal), and, in some places, the payment of particular pensions. In the following cases receipts and issues are not, strictly speaking, revenue and expenditure; but, as they are receipts from special officers of the revenue which they receive, and issues to them of funds for expenditure, and as, for the purpose of these preliminary returns, we are to look to the treasuries, and cannot wait for the further information to be gathered from the separate accounts of the officers concerned, the Treasury officers must regard them as revenue and expenditure. The receipts and issues so to be dealt with are—

From and to officers of the Forest Department;
" officers of the Opium Department;
" officers of the Telegraph Department;
" collectors of sea customs;
" Commissioner of Opium (Bombay);
" officers of the Inland Customs Department in Northern India, and the Salt Departments in Madras and Bombay;
" superintendents of stamps;
" officers of the Marine Departments (*i.e.*, payments on account of sea-going vessels and dockyards, made under advices from the Bengal Controller of Military accounts);

and other officers whom each Accountant General can name.

9. The receipts and issues of incorporated local funds must be dealt with on the same principle. They are for the most part revenue and expenditure, and the Treasury officers have not always the information that would enable them to separate out the few items of incorporated local funds that are not revenue and expenditure; it is better in such cases to assume the whole to be revenue and expenditure. As excluded local funds are not to be treated as revenue and expenditure, each Accountant General will carefully indicate to the Treasury officers which of the local funds, of which he is authorised to keep account, are incorporated, and which are excluded.

10. The debt and remittance items, which complete the account, are those—

(1) in which the receipt of money involves a liability to subsequently repay it (such as Imperial or provincial loans, savings bank deposits, excluded local funds, municipal funds deposits, receipts for bills issued on other treasuries); or

(2) in which the payment of the money is discharged by a subsequent receipt or recovery, such as advances, loans, remittances to other treasuries (remittances of other kinds are already provided for).

(3) Repayments of items of the first kind, and recoveries of items of the second kind.

11. In the forms of cash account and lists of payments supplied for Treasury use there are almost always two columns, and, where there are not, a second column can, for the present, be ruled by hand. The Treasury officer, in posting his cash account, should enter in the first of the two columns the items which he is above instructed to classify as civil revenue and expenditure; and the other items should go into the second column. The two columns should then be totalled separately, thus:—

	Rs. A. P.	Rs. A. P.
Total - - - -	2,734 1 10	3,672 2 5
Add first column - - - -	- -	2,734 1 10
Total of both - -	- -	6,406 4 3

He will thus obtain at once, in the total of the first column, the figures that are to be shown as civil revenue and expenditure; and when he has deducted from the total of the second column, the figures of military, Public Works, and Post Office, the remainder will be the total of the debt and remittance items.

12. It is hoped that there will be no difficulty in doing this at every treasury upon the second day of the month, so that the figures may be despatched to the Accountant General the day following the cash account. Each Accountant General will issue instructions indicating from what treasuries the report may be sent in by post and from what treasuries it should be sent by telegram. The postal form will be the following, the figures being stated only in even hundreds of rupees:—

ABSTRACT ACCOUNT of the Month of TREASURY for the 188 .

Receipts.	Rs.	Outgoings.	Rs.
(1.) Civil revenue - -	32,700	(7.) Civil expenditure	63,200
(2.) Civil debt and remittance.	63,400	(8.) Civil debt and remittance.	14,700
(3.) Post Office - -	12,600	(9.) Post office - -	13,500
(4.) Military Department	3,600	(10.) Military Department.	64,900
(5.) Public Works Department.	24,200	(11.) Public Works Department.	53,300
(6.) Opening balance -	1,27,200	(12.) Closing balance -	54,100
	2,63,700		2,63,700

The telegraphic form corresponding to the above would be—

327 634 126 36 242 1272 632 147
135 649 533 541.

13. On receipt of each statement, the Accountant General will at once test it (1) by comparing the balances (6th and 12th figures) with those already known to him, and (2) by seeing that the two sides produce equal totals. He will take the earliest measures to post the figures and make a total for the whole province, and, when he has compiled the whole, will telegraph the 12 figures, *in thousands*, to me.

[illegible] a date for the [illegible] I shall have all the figures by the latest on the 15th of the month, and the Accountant General must not delay the return of his province by waiting for the precise figures of an outlying or distant treasury, but should substitute for the actual figures such estimate as he can make. They will be, from the nature of the case, comparatively unimportant treasuries.

15. There may be a little difficulty at first in getting returns which accurately anticipate the final outturn of the regular compilation of accounts; but it is hoped that the issue of careful instructions in the first place will aid the Treasury officers in understanding precisely what is required, and that a comparison of their returns with the compilations made from their cash accounts will enable the Accountant General to see exactly where difficulties or misapprehensions arise, and thus gradually to develop a system of preliminary returns which will put the Government in very early possession of the actual facts of its accounts. The experience of the first two or three months will enable us to see how early the information can be given; but, as just explained, I think it best at first simply to say that it should be sent us early as possible, and not later than the 15th.

16. To give time for the issue of the necessary instructions, the accounts of April will be the first ones for which the proposed Treasury returns will be required.

I have, &c.
J. WESTLAND,
Comptroller General.

ABSTRACT ACCOUNT of the Month of TREASURY for the 188 .

No. 3.

DESPATCH to the GOVERNMENT OF INDIA, May 26, 1881, No. 167.

MY LORD MARQUIS,

PARA. 1. I have considered in Council your Excellency's letter, dated the 14th of March, No. 67, reporting the measures adopted for the reform of the Military Accounts and Estimates up to the date of your letter.

2. I observe with pleasure the testimony borne by you to the energy and intelligence of the officiating Comptroller General, Mr. Westland, who has been able to compile, by the 21st of February, an abstract statement of account of the receipts and disbursements of the Civil Treasuries throughout India to the 31st of December preceding, that is, within a little more than seven weeks of the latest date to which the transactions refer.

3. As regards the form of this account, it is doubtless useful for the Financial Department in India to have in one statement the particulars for each of the various provinces. I think, however, that for the information of your Government, and for the transmission to this office, it would be desirable to prepare an abstract omitting these provincial details, and showing, side by side, the total receipts and expenditure, and the net receipts for the period recorded, the corresponding figures for the previous year (when time has elapsed for such a record), and the Budget Estimates for the 12 months. The return in the fuller form, with provincial details, might, however, be also forwarded for reference, if needed.

4. You state that you have directed the Treasury officers to send their returns to the Accountants General, instead of directly to the Comptroller General, a step which, however, will involve no delay in the final compilation of the figures by the latter officer, while it will afford an opportunity for the Accountants General to criticise the accuracy of the returns. You have also allowed these returns to be furnished by the 15th of the month, instead of the 9th, as the Committee which sat in this country recommended.

5. I do not question the judgment of your Excellency in issuing these orders in the first instance; but, as much importance was attached by the Committee to the early receipt of the Treasury returns by the Comptroller General, I await with interest your report on the result of these instructions, and I shall be glad, when time has been afforded for their working, to learn whether you consider that further steps can be usefully taken in the direction aimed at by the Committee.

6. The separation of the transactions of the Post Office and Guaranteed Railways from the other figures appears to be judicious.

I have, &c.
HARTINGTON.

No. 4.

LETTER from the GOVERNMENT OF INDIA, October 1, 1881, No. 249.

MY LORD MARQUIS,

WE have the honour to reply to that portion of your Lordship's Despatch No. 46 (Financial) of 27th January 1881, which deals with the question of establishing in India an independent appropriation audit to supplement the present departmental audit. We regret the delay that has occurred in answering this despatch. The subject, however, is one of considerable difficulty and importance, and requires very careful study and deliberation.

2. With a view to arriving at a sound conclusion upon the point on which your Lordship has invited our opinion, we have thought it desirable to study the systems in force, not only in England, but in France, Germany, Austria, &c. We find that, in respect to certain main features, the organisation for the proper control of State expenditure is very similar in the principal States of Europe. In every case the accounts of the disbursing officers are subject to examination and verification. They are obliged to prove to the satisfaction of the auditing authority that the money which they have disbursed has been spent on the service of the State, and in accordance with certain prescribed regulations. In countries where parliamentary institutions have taken deep root, the auditing authority is rendered wholly independent of the Executive. In other countries where parliamentary institutions are less deeply rooted, the degree of subordination of the auditing authority to the Executive Government is greater; but even in these cases great precautions appear to have been taken to prevent any undue exercise of authority on the part of the Executive. Such precautions take the form of investing the auditing authority with judicial powers, of rendering the auditors irremovable save under certain specified conditions, or of placing them in direct subordination to the highest authority in the State, such as the Emperors of Germany and Austria, rather than to the ministerial head of any department. In every case the auditors are precluded from exercising any other functions under the State than those appertaining to their peculiar office of audit. Lastly, it appears to be almost universally held that the functions of audit are those of verification, and not of control; that is to say, that the duty of the auditors is to see that the money has been spent in accordance with the manner prescribed by competent authority, and that it is no part of their duty to discuss whether the money so spent has been well spent, or the reverse. The limit to the power of the auditing authority in this respect is most sharply drawn in countries like England, where, in view of the large powers possessed by Parliament, it is thought necessary to preserve against encroachments on the power of the Executive. It is less sharply

drawn in countries like Austria, where the powers of the Executive are wider, less clearly defined, and less under the control of popular institutions.

3. The Indian system differs materially from those of which we have given a general description above.

4. The whole of the accounts of the Government are eventually centred in the hands of the Comptroller General. He receives nine civil accounts from the Accountants General and Comptrollers of the different provinces, four Public Works Accounts from the Accountant General of the Public Works Department, three Military Accounts from the Controllers of Military Accounts, and three Postal, Telegraph, and Marine Accounts from their respective comptrollers. He does not personally conduct any administrative audit. Indeed, in dealing with such vast and varied transactions, it would be quite impossible that he should conduct any such audit. The administrative audit, by which we mean the verification by vouchers that the money issued from treasuries has been spent in the manner in which it is entered in the accounts, and in accordance with existing regulations, is conducted, in the case of the civil expenditure by the Accountants General, in the case of the military expenditure by the examiners of Military Accounts acting under the military controllers, in the case of Public Works expenditure by the examiners of Public Works Accounts acting under the Accountant General of the Public Works Department, and in the case of the Postal, Marine, and Telegraph Departments by the three Comptrollers of those departments. It is to be borne in mind that the Accountants General in India occupy a position which differs essentially from that of the Accountant General of the War Office, for instance, in England. The latter, if we understand rightly, is a departmental officer of the War Office. He is in constant communication with the Treasury; but he is not an officer of the Treasury. He takes his orders from the Secretary of State for War. The Accountants General in India, on the other hand, are officers of the Financial Department. They are wholly dissociated from the departments whose accounts they audit. The Military Controllers and Public Works Examiners are not Financial Department officers. They owe allegiance to the Military and Public Works Departments respectively. It results from this condition of things that the control of the Financial Department over Civil expenditure is more effective than it is over Military or Public Works expenditure.

5. It appears to us that the principle that the whole of the accounts of the State should, so far as is possible, undergo examination by some officer more or less independent of the Executive Government, is sound and of general application, and that the present Indian system does not adequately provide for an examination of this description. The question of how best to improve this system is one of considerable difficulty. We think that we must discard altogether any attempt to institute a close analogy between India and England or other countries possessing parliamentary institutions, and that we must therefore take as a point of departure the principle that the auditing authority should report to the Executive Government.

6. The dissenting members of the India Office Committee say "that, if an officer other than the Comptroller General be appointed to the duty" (*i.e.*, the duty of conducting an independent audit), "he should "be subordinate to the Governor General in Council, "but to him only." We are not quite clear as to what is meant in this passage. We are not sure whether it was intended to convey that the auditing authority should report to the Governor General individually, or to the Governor General in Council in his collective capacity. The report should certainly not be made to the member of council in charge of the Financial Department. Whether it should be made to the Governor General or to the Governor General in Council is, we think, a matter of less importance. We incline to the opinion that it should be made to the Governor General in Council. It is not usual to separate the Governor General from his Council; and we think, on the whole, that in this particular case the arguments tend against any such separation. We think, therefore, that the auditing authority should report to the Governor General in Council, and not to the Governor General.

7. Some further measures may, we think, be adopted, in order to confer dignity and independence on the auditing authority, without encroaching on the powers of the Executive Government to a degree which would be politically objectionable.

8. In the first [illegible] authority may be m[illegible] public. We are [illegible] the report of the pa[illegible] year should not [illegible] lished before the financial statement made at the close of the subsequent year is either discussed in the Legislative Council or published in the "Gazette of India." This would practically afford members of the Legislative Council and the press the means for using the information contained in that report when the budget discussion, if there is one, comes on. At the same time, it would, of course, be competent for the Government of India to publish any explanatory observations on the report. The report should state whether in all cases the orders of the Secretary of State and of the Government of India have been obeyed. A further special point, to which, we think, attention should be directed, is whether the proceeds of any special funds included in the accounts have been devoted to the objects prescribed by law.

9. Further, in order that personal considerations shall, to the least degree possible, shackle the auditing officer in the free expression of his opinions, he might, we think, be made irremovable, save with the sanction of the Secretary of State in Council; and, in order that any independent expression of opinion should not injure his chances of promotion, he might be made to rise to the pay of a secretary to Government after 20 years' service.

10. Further, we might advantageously adopt the portion of the English practice which is described by Mr. Welby (Q. 350) as a *test audit*; that is to say, we think that the auditing authority, either himself or by one of his deputies, might examine in detail the accounts of any one department or a portion of them whenever he shall think fit to do so. This proposal would of necessity lead to an increase of establishment, and, therefore, of expenditure. But to this we should have no objection.

11. Lastly, the authority of law might be given to the increased powers and higher position of the auditor, which would result from these proposals, by passing an Act through the Legislative Council rather than proceeding by a resolution of Government.

12. The next point to be decided is whether a separate auditor general should be appointed, or whether the duty of conducting the appropriation audit may be performed by the Comptroller General. The dissenting members of the India Office Committee were of opinion that the executive functions performed by the Comptroller General would interfere with his duties as Auditor General. The organisation would certainly be far more perfect if the Auditor General and his subordinates exercised no executive or administrative functions whatsoever. The question is mainly one of money. It is obvious that, if the Auditor General and his subordinates were to carry out annually in detail an administrative audit of the whole of the accounts in all departments, a very large establishment would be required. The expense of such an organisation would be so great that we think the idea may be at once set aside. But, if the duties of the Auditor General were confined to (1) appropriation audit, (2) a general supervision of the system of administrative audit, (3) a test audit, applied every year to some one or more departments or branches of departments, the following establishment would, we think, be sufficient:—

Appointment.	Salary per Mensem.			Annual Cost.
	Minimum.	Maximum.	Average.	
	Rs.	Rs.	Rs.	Rs.
1 Auditor General	3,500	4,000	3,833	45,996
1 Auditor	1,750	2,000	1,916	22,992
1 Auditor	1,250	1,500	1,416	16,992
1 Auditor	1,000	1,250	1,166	13,992
1 Auditor	800	1,000	935	11,196
		Cost per annum		1,11,168
Clerks and establishment				20,000
Office rent and contingencies				10,000
Travelling allowance				12,000
		Total		1,53,168

The increase is, no doubt, considerable; but, on the whole, we think that it would be worth spending Rs. 1,53,000 a year in order to improve our financial organisation in the manner proposed.

13. Your Lordship will observe that the pay which we propose to assign to the auditors is the same as that given to the officers in the 1st, 2nd, 3rd, and 4th classes, respectively, of the Financial Department. We think that, on the whole, the best plan will be to add one officer to each of these classes. If an entirely separate service of auditors were created, promotion would probably be very slow, and there might be a difficulty in getting officers to remain at their posts. On the other hand, frequent changes would be exceedingly undesirable. Moreover, the work of account and audit is sufficiently allied to render interchanges amongst the accounting and auditing staff unobjectionable. An officer well trained in the Account Branch would find but little difficulty in making himself acquainted with the work of audit, and *vice versâ*. It would, however, be difficult to provide four qualified auditors at once without crippling our Account Branch. Moreover, we are not as yet satisfied that so large a staff as that proposed above will be required. Whilst, therefore, we ask your Lordship's general sanction to the scheme now proposed, we would at the same time request that a discretionary power be left to us as to the time and manner of bringing it fully into operation. We propose, in the first instance, to appoint the Auditor General, who would be requested to submit to us, as soon as possible after his appointment, a report showing what portion of the establishment now proposed is immediately required. The establishment might then be increased up to the full numbers for which sanction is now requested, as further experience would appear to render necessary.

14. The amount we have entered in our estimate for "clerks and establishment" (Rs. 20,000) is relatively small. We consider it in the essence of the scheme now proposed that the work should be done by the Auditor General and the auditors themselves, and that no facility should be offered for its being passed on to a highly-paid subordinate staff.

15. We think that the Auditor General should be entrusted with the duties of head commissioner of currency.

16. We observe that the dissenting members of the Committee (Sir George Kellner, Mr. Welby, and Mr. White) proposed that there should be "a final "review of the Indian accounts in England under the "direction of the Secretary of State for India in "Council, by a committee composed in great part of "members of the Indian Council or officers of the "India Department, supplemented by one or two "persons altogether independent of India."

17. If the proposals we now make are adopted, your Lordship will no doubt consider that any further audit in England will not be necessary. We need not, therefore, at present discuss the proposal in question; but we wish to remark that, in our opinion, the appointment of any such committee as that proposed is open to many objections.

18. In the course of our deliberations on the subject raised in your Lordship's despatch now under reply, some collateral points have come under our consideration.

19. We are not altogether satisfied with the system under which our treasuries undergo periodical inspection. We have not as yet, however, matured our plans for the introduction of any reformed system. Should we eventually decide on the adoption of any changes of sufficient importance to require reference to your Lordship, we shall deal with the matter in a separate despatch. We mention this point at present, as it is not impossible that we may eventually think it desirable to utilise the services of the auditors in the work of Treasury inspection.

20. A further point which we have considered is the degree of control now exercised by our Financial Department over the expenditure of public money. In the exercise of the powers conferred on him by section VIII. of the Indian Councils Act, 1861, his Excellency the Viceroy and Governor General is about to frame a rule under which the control of the Financial Department will be strengthened by an arrangement which will prevent the spending departments from exceeding the aggregate sum allotted to them, or transferring the amount sanctioned under one main head of account to another without reference to the Financial Department.

21. We should be glad, if possible, to receive an answer to this despatch not later than the middle or end of December. This will enable us, should our proposals be adopted, to pass a Bill through the Legislative Council in the course of the month of January, before the heavy work involved in the preparation of the budget begins.

We have, &c.

No. 5.

LETTER from the GOVERNMENT OF INDIA, Nov. 12, 1881, No. 292.

My Lord Marquis,

We beg to acknowledge the receipt of your Lordship's despatch, No. 167, dated the 26th of May last, on the subject of obtaining information regarding the receipts and disbursements of the civil treasuries throughout India at an earlier date than formerly.

2. We have now had eight months' experience of the new form of monthly account, which was introduced in consequence of the suggestion contained in paragraph 25 of the Report of the Committee on Military Accounts in India, and are glad to say that it is now found possible to furnish it to us by the 9th or 10th of the month succeeding that to which it relates. We are satisfied, however, that no material gain in time, but some additional risk of error, would result from the Treasury officers communicating directly with the Comptroller General instead of through the local accountants general. With regard to accuracy, we find that, although errors have on a few occasions found a place in this account in the first instance, they have within a few days been detected either by the Comptroller General or the Financial Secretary, and they have in no case been of such magnitude as to cause serious inconvenience, or of a nature to have escaped detection for any length of time. With regard to utility, we find that though, through the operation of adjustments of various kinds, the figures usually differ to some extent from those received six weeks later in the "Civil Accounts," they are, notwithstanding, very valuable as a check upon the progress of our finances, and as a guide to expenditure on administrative measures. We enclose a statement showing these differences for the first five months of the year.

3. We have found it desirable to add another column to the form, showing Forest, Telegraph, and Marine, separately from other civil revenue and expenditure, and also, at the foot, a summary showing the progress of the receipts and expenditure from the beginning of the year, contrasted with the Budget Estimate for the same period. Considering the whole to be suitable for general information, we have caused it to be published regularly in the "Gazette of India" since August last.

4. Of the statement thus amended, and also of another statement (indicated as W) which the Comptroller General also submits to us, we now enclose copies, and shall be glad to know whether either or both of them will meet your Lordship's requirements as expressed in paragraph 3 of the despatch under reply.

5. We take this opportunity of informing your Lordship that the whole system of financial and other returns and information furnished to this Department has undergone a thorough revision at the hands of our Financial Secretary, Mr. T. C. Hope, the nature of which will be fully apparent from the note by that gentleman which we enclose.

We have, &c.
W. STOKES.
J. GIBBS.
E. BARING.

Enclosure 2 in No. 5.

Periodical Returns for the Financial Secretary's Office.

ON receiving charge of the office of Financial Secretary to the Government of India, my first care was to ascertain what means were at my command for maintaining a constant and effective supervision over the various branches of financial administration for which this Department is more or less directly responsible, and for keeping the honourable financial member duly informed, both of the general progress of the finances and of features requiring a remedial action which might at any time be developed.

2. The responsibility of this Department may be defined as embracing, first, the finances proper, that is, the final control (subject to the Executive Council and the Secretary of State) of the revenues and expenditure of India, the framing and maintaining observance of the annual budget, and the keeping of the accounts; secondly, the direct administration of the mints, with the metallic and paper currency, of the Post Office, the Salt Department, the Opium Revenue, the Savings Banks, and the Public Debt (including the balances with the Presidency banks or elsewhere); thirdly, there is the statistical branch of the office, which prepares the Monthly and Annual Trade and Navigation Statements, and the extensive executive responsibilities connected generally with questions relating to Commerce, Customs, Stamps, and Excise. This third head is beyond the scope of the present note.

3. In connexion with the first and second of the above matters only, I found that this office received 32 periodical returns from the Comptroller General, and 56 more from other officers and departments, and kept up 39 registers of information received. The Comptroller General's returns, moreover, were undergoing considerable revision at the hands of the recently appointed incumbent, Mr. J. Westland, who had addressed himself energetically to reforms even before the failure of the War Estimates of 1880-81 had become fully known. At the same time it seemed to me that this abundance of information did not result in abundance of light, but the reverse. Most of the returns received were simply filed. There was no organisation in the office told off for, or even capable of, their regular and intelligent scrutiny; and, though much regarding any particular point might, no doubt, be extracted by a person deliberately and patiently sitting down for the express purpose, neither the Financial Secretary nor any one else had any practical "touch" of the daily passing situation.

4. To effect a change in this respect I at once addressed myself, with the co-operation of the Comptroller General, which has been very cordially given, and our arrangements are now so far matured that a description of them may be useful, and will enable the Honourable Financial Member to decide whether any further improvements are necessary.

5. After modifying or discontinuing numerous returns, statements, and registers, and instituting some new ones, the whole are now divided into two series—the financial, or lettered, and the administrative, or numbered. Three principles have governed the reorganisation—(1) that it is the business of the Comptroller General or other officers, as the case may be, to supply, and to be responsible for, all facts and figures which the Financial Department may require; (2) that the latter must digest and compile from day to day the information thus supplied, in such form as it may deem suitable for maintaining "touch" of the whole; and (3) that nothing shall be supplied to it which it does not intend regularly to scrutinise, check, and apply to some practical use. In pursuance of the second and third principle, the financial series has been assigned to one clerk in this office, and the administrative series has been apportioned between three others, one of whom (belonging to the first grade) has also a general supervision over and responsibility for the whole. It is to be hoped that, after a reasonable amount of training, they will all become efficient in their novel duties and helpful.

6. For a complete description of the two series, I must refer to the schedules appended to this note; but a general sketch of them in this place may be useful.

7. The Financial Series may be divided into three groups, namely, estimates, accounts, and checks. The "estimates" are principally intended to insure due provision of ways and means, and embrace the current month when half has elapsed, the coming month, and the second month ahead. The "accounts" are principally of two kinds—"preliminary," which are obtained in outline within nine days, and in rather more detail in from 16 to 18 days, after the close of the month; and "final," which are obtained in very sufficient fulness six weeks after date, and are completed, by the addition of the detail of the departmental accounts, after a lapse of about three months. The "checks" consist of—(1) two statements prepared by the Comptroller General, which test by distinct methods and contrast with the Budget Estimate the receipts and outgoings of the year, and the monthly progress of the accounts from estimate to actual; (2) three statements concentrating the information received by the Financial Secretary, and working up to the final cash balance on the one hand, and the Budget surplus on the other; (3) two apportionments or rearrangements of the Budget Estimate, in new forms to suit the check statements just described.

8. The general result of the Financial Series thus constituted is threefold. The entire receipts, outgoings, and balances of British India are known with pretty close accuracy in nine days after the close of each month. Taking the 25th of any month as a standpoint, an examiner looking backward knows the approximate accounts of the current month, the "preliminary actual" figures (with amplifications H) of the past month, the "final actuals," or "civil accounts," of the second month back, and the same, in greater detail as regards certain departments, for the third. Looking forward, he has an approximate estimate in some detail for the coming month, a rough forecast with revised balance for the second month ahead, and a general monthly estimate up to the end of the year. Lastly, the Financial Secretary's X, Y, and Z register the progress of the accounts and estimate of all kinds up to date, and offer the nearest approach of which the circumstances will admit, to either the actual cash balance or the actual surplus at the end of the year.

9. The Administrative Series consists of such returns from outside, and such registers compiled in the Financial Secretary's office, as are necessary for the direct control or the general supervision of the departments and other matters respectively, which are within the responsibility of the Financial Department. Of these, salt and opium demand the most constant attention; the rest usually need only regular observation of a general nature, with special action under certain circumstances. The number of returns and registers connected with some of these branches has been materially reduced, in accordance with the principles already explained in paragraph 5; but it is believed that everything really necessary is now provided.

T. C. HOPE.

Simla, the 20th October 1881.

SCHEDULE I. in Enclosure 2, in No. 5.

FINANCIAL SERIES.

Letters.* New.	Letters.* Original.	Name of Statement.	Description.	By whom supplied.	Date fixed for Despatch.†
		Estimates.			
A	B.	First Approximation.	A rough estimate of the probable receipts and outgoings in all India during the coming month, intended primarily for resource (or "ways and means") purposes.	Comptroller General.	25th.
B	B	Second Approximation.	A pretty close estimate, in the same form as the above, of the receipts and outgoings of the current month, prepared from statements sent by the Accountants General to the Comptroller General when about half of the month has elapsed, and intended primarily to show how resources are holding out.	Ditto - -	25th.
C	C	Resource Forecast	A review of the condition of the resources, based on the second approximation for the current month, the first approximation for the coming month, and on other rough materials for the second month ahead, and also forecasting the probable cash balance at the end of each.	Ditto - -	25th.
		Accounts.			
E	A	Cash balances -	A statement of the cash balances in the public treasuries and at credit of Government in the Presidency banks and their branches at the end of the month in each province in India, together with, for the purpose of comparison, the figures of preceding months of the current and four past years. This is compiled from telegrams sent by the Accountants General to the Comptroller General on the 8th of the succeeding month.	Ditto - -	9th.
F	V	Preliminary Actuals	This statement is in two portions. The upper portion shows for each province separately and under seven groups the receipts and outgoings, as also the opening and closing balances and the remittance adjustments, for the month just expired. It is compiled from telegrams received from the several Accountants General by the Comptroller General, which are based on accounts or telegrams sent to them on the 1st of the succeeding month from each public treasury under their control. This is the statement suggested in paragraph 23 of the Report of the Military Accounts Committee of 1880, and referred to in paragraph 25 of the Honourable Major Baring's Financial statement for 1881-82. The lower portion is a very brief summary of the accounts, actual and preliminary, from the commencement of the current year to date, and a comparison of the total with the Budget Estimate for the same period. The statement is published in the "Gazette of India" next following the date of its despatch.	Ditto - -	9th.‡
G	A	Cash Balances, Revised.	A statement similar to E, but revised according to reports posted to the Comptroller General by the Accountants General about the 12th of the month, after scrutiny of the detailed balance reports received from Treasury officers	Ditto -	18th.

* Certain letters have been now omitted, so that returns may hereafter be inserted in any group without deranging the series.

† When the Government of India is at Calcutta, the statements from the Comptroller General are due in the Financial Secretary's Office on the evening of the above dates; when at Simla, on the third day following.

‡ When the Government of India is at Simla, the totals of this statement under each head are telegraphed to the Financial Secretary as soon as they are ascertained.

FINANCIAL SERIES—*continued.*

Letters. New.	Letters. Original.	Name of Statement.	Description.	By whom supplied	Date fixed for Despatch.
		Accounts—cont.			
H*a*	F*a*	Land Revenue -	These eight returns are all "expansions" of the first column, headed "Civil Revenue," in the "Preliminary Actuals," statement F, and are framed from telegrams sent by the Accountants General, which are based upon the actual cash accounts received by them from the treasuries. They severally give the receipts under the eight main heads of revenue in each province during the preceding month; in both the monthly and the progressive form. The figures of the preceding six years are added for comparison. When sending in the return, the figures for the second preceding month are converted from "Preliminary Actual" into "Actual" from statement L, which has by that time been prepared.	Comptroller General.	18th.
H*b*	F*b*	Excise Revenue.			
H	F*c*	Assessed Taxes.			
H	F*d*	Provincial Rates.			
	F*e*	Customs Revenue.			
H*f*	F*f*	Salt Revenue.			
H*g*	F*g*	Opium Revenue.			
H*h*	F*h*	Stamp Revenue.			
I*a*	G*a*	Opium Expenditure	This return is framed on the same system as the eight revenue returns just referred to, and is an excerpt of opium out of the "Civil Expenditure" total in statement F. Under the head of "Bengal," the Behar and Benares agencies are distinguished from Calcutta.	Ditto - -	18th.
I*b*	G*b*	Military Expenditure.	This return is in two parts - - - Part A shows the net "military issues," or disbursements (including postal and telegraph debits), so far as known, from all civil treasuries in India to the agents of, or on account of, the military department; as also the military balances. Part B shows the net classified and audited expenditure in India upon the army according to the departmental accounts of the controller of military accounts. It is necessarily behind Part A, about four months behind at present. Both parts are given in progressive as well as in monthly form.	Ditto - -	16th.
K	H	Council Bills -	This is in two parts—the first giving the allotments in rupees and sterling, and a comparison of the actual loss by exchange with the Budget Estimate; the second showing the bills advised by India Office letter and paid or otherwise. The return is issued every Monday, so as to contain the latest mail advices, but is otherwise posted up to date by telegraph.	Ditto - -	Every Monday.
L	L	Final Actuals -	This statement, otherwise called the "Civil Accounts," is made up about six weeks after the close of the month to which it relates, and is for ordinary purposes a "Final Actual" account, though its figures are eventually subject to various corrections and adjustments, especially at the end of March. It comprises one main account of civil revenue and expenditure, another of civil debt heads, and five minor accounts, viz., for civil departments, guaranteed railways, military and the public works, railway and ordinary branches. The figures are progressive, and the receipts and outgoings, with opening and closing balances, are summarised on the first page.	Ditto -	18th.
M*a*	—	Forest Account -	These seven accounts are "expansions" of the corresponding heads in the "Final Actuals," and are made up and furnished to the Comptroller General by the Departments to which they severally relate. They are progressive like the "Final Actuals." They come in irregularly, from two to four months after date.	Ditto, from the Departments concerned.	Uncertain.
M*b*	N	Post Office Actuals.			
M*c*	P	Telegraph Actuals.			
M*d*	Q	Marine Actuals.			
M*e*	R	Military Actuals.			
M*f*	S	Public Works Actuals.			
M*g*	M	Guaranteed Railways Actuals.			
M*h*	T	Index Sheet to the preceding six.			

FINANCIAL SERIES—*continued.*

Letters. New.	Letters. Original.	Name of Statement.	Description.	By whom supplied.	Date fixed for Despatch.
		Accounts—cont.			
N	--	Home Treasury Account.	An account, framed on the progressive system, of the receipts and disbursements of the Home Treasury. Copies are sent by the Financial Secretary to the Military and Public Works Departments.	Under Secretary of State for India.	A month after the end of the month to which it relates.
O	None	Home Railway Account.	This shows quarterly the capital accounts of guaranteed railway companies. It is sent by the Under-Secretary of State for India to the Public Works Department, who send a copy to the Financial Secretary. A register, condensing the return, is kept up in this office.	Public Works Department.	About a month after the end of the quarter to which it relates.
		Checks.			
S	None	Budget Estimate -	This contains the figures of the Budget Estimate for the year, entirely recast and expanded into the form adopted for the "Final Actuals" and their expansions. It affords to the Comptroller General a standard up to which the latter should gradually work from month to month.	Comptroller General.	Annually on the 1st May.
T	Original E.	Monthly Apportioned Budget Estimate.	This statement contains the figures of the Budget Estimate for the year, with a few authorised alterations made by the Comptroller General in view of what he expects to be the actual transactions of the year, including debt heads, and the actual closing balance, irrespective of outstanding demands upon it provided for in the Budget. The figures are shown for each month, first separately and afterwards progressively, in a form more condensed than that of statement S. The amounts of the more complicated heads are shown nett. The statement is used by the Comptroller General as a standard of reference, and its figures are transferred into statements X and Y prepared in the Financial Secretary's Office.	Ditto - -	Annually on the 20th April.
V	Revised E.	Progressive Account Estimate.	This gives the same heads as statement T, but shows the ever-progressing transition from estimate to actual which goes on throughout the year. Thus, in any month the first approximation, second approximation, preliminary actuals, and final actuals, in turns replace each other, while the forward balances, as first estimated, come in time under the influence both of the Resource Forecast (C) and of improvements, or the reverse, in the receipts and outgoings. Information as to both past and future is thus presented at one view, at the period of the month when it is both most complete, and, on the whole, most recent.	Ditto - -	26th.
W	W	Comparative Account Estimate.	This statement provides a means of checking the actual receipts and outgoings of the year totally distinct from that afforded by statement V. Two processes are adopted on the two opposite pages. On the left hand, the figures of the last month but one, in the same classification as that of V, are taken from statement L and contrasted with the figures of the same month of the last year on one hand, and with the monthly portion of the Budget Estimate (taken from T) on the other. The same is next repeated progressively. Lastly, the "Preliminary Actuals" of the last preceding month (taken from F) are given, and supplemented by the details which H and I afford. On the right-hand page, the process is to augment each monthly figure (from L) by those of the eleven months preceding it, and to contrast the total with that of the "regular" estimate, and the actuals, when obtained, of the past financial year on one side, and of the Budget Estimate of the current year on the other. There is thus presented, for contrast with the two, a year ever-progressing from the former to the latter.	Ditto - -	20th.

Letters. New.	Letters. Original.	Name of Statement.	Description.	By whom supplied.	Date fixed for Despatch.
		Checks—cont.			
X	Y	Monthly Estimate —Actual Comparison.	This statement, as also Y and Z which follow, is compiled in the Financial Secretary's Office, and embraces the whole year, the several columns being filled in from time to time whenever the returns to which they relate come in. The classification of headings adopted is a condensed one based upon, and harmonising with, the Comptroller General's returns F (Preliminary Actuals), L (Final Actuals), T (Monthly Apportioned Budget Estimate), V (Progressive Account Estimate), and W (Comparative Account Estimate). The statement presents side by side (1) the Comptroller General's estimates for the whole year taken from S; (2) the month's apportionment *not* of the same, but of the probable real receipts, from T; (3) the first approximation, A; (4) the second approximation, B; (5) the "Preliminary Actuals" from F, supplemented from K, and a week later, from the eight parts of H and from I*a*; and (6) the "Final Actuals" from L. It will be understood that, as this statement is an abstract and comparison of others which deal with the entire transactions of the year of all kinds, it comprises net items and debt heads, and works up to the probable cash in hand at the close of the year, not to the surplus in the Budget Estimate. It is, in fact, a simple banking account ignoring unliquidated claims and liabilities.	Financial Secretary's Office.	O.
Y	Z	Progressive Estimate — Actual Comparison.	This statement is similar to X in classification and principle, and differs from it only in that (1) the figures are progressive; (2) the approximations are omitted; and (3) columns are added showing the amounts by which the preliminary and final actuals are better or worse than the month's portion of the estimate. The balances in this statement are necessarily progressive in a different sense from the receipts and disbursements; they are therefore placed outside and cannot be totalled with them.	Ditto - -	O.
Z	None	Progressive Budget —Actual Comparison.	This statement differs from X and Y in that it works up to, and compares throughout with, the gross figures and *surplus* of the Budget Estimate, whereas those statements work up to the Comptroller General's estimates (T) of the probable transactions of all kinds and ultimate *cash balance*, and therefore contain net items and debt heads on both sides. The comparison, moreover, extends only to the "Final Actuals," supplemented from the seven parts of statement M. 2. The apportionment of the Budget totals between the several months is necessarily the foundation of any monthly comparison, and on the mode in which it is framed the aspect, for better or worse, of every entry depends. In this statement, the monthly apportionment of the heads named in the margin is taken from the Comptroller General's statement T, dated 18th July 1881; that relating to the Telegraph and Public Works Departments has been supplied by the Accountant General, Public Works Department; while that for the remaining heads has been framed in this office on the basis of the monthly actuals of past years. *Revenue.* II.—Tributes. IV.—Excise. V.—Assessed Taxes. VI.—Provincial Rates. VII.—Customs. VIII.—Salt. X.—Stamps. XI.—Registration. *Expenditure.* 3. Refunds. 4. Land Revenue. 11. Opium. 27. Allowances and Assignments.	Ditto - -	O.

FINANCIAL SERIES—*continued.*

Letters. New.	Letters. Original.	Name of Statement.	Description.	By whom supplied.	Date fixed for Despatch.
		Checks—cont.	3. For the reasons above explained, the monthly apportionments in this statement differ from those in X and Y in the following instance:— 4. *Land revenue.*—Here taken from the actuals of 1879–80 instead of 1880–81. IX. *Opium.*—Here calculated (1) for Bengal, by multiplying the number of chests to be sold by the Budget estimated rate of Rs. 1,000; (2) for Malwa, by applying the rate of duty to the average number of chests which passed the scales at Indore from month to month for the last 13 years; (3) for excise opium, from the monthly receipts of each province in past years. 1. *Interest.*—Here the figures are taken from statement T, except that 13·40 have been added in April on account of outstandings, and deducted in March 1882. 37. *Loss by exchange.*—Up to the end of September (when the statement was started), the monthly portions are the actual drawings taken at the Budget estimated rate of 1s. 8*d.* per rupee; for the remaining months, the losses estimated in T have been adopted, with the difference added in March to make up the Budget total. The actual losses will be substituted for the T figures from month to month in future.		

SCHEDULE II.

ADMINISTRATIVE SERIES

Numbers. New.	Numbers. Original.	Name of Statement.	Description.	By whom supplied.	Date fixed for Despatch.
		Postal Department.			
1	None	Postal Operations	A new statement affording, for administrative purposes, a general view of the progress of the department in each of the principal branches comprised in its operations.	Director General of Post Office.	20th.
2	Ditto	Correspondence Returns.	A new statement, showing the number of letters, post-cards, parcels, books, and patterns, passing through the Post Office, and other information.	Ditto	Half-yearly.
		Salt.			
3		Indian Salt Revenue.	This statement shows progressively the quantity of salt which paid duty and the amount realised in each of the six great salt divisions —viz., Bengal, Northern India, Madras, Bombay, Sind, and British Burma. It excludes miscellaneous items, but otherwise tallies approximately with statement H*f*, supplied by the Comptroller General about a week earlier. It is published regularly in the "Gazette of India." A register is compiled from it, having two parts—1st, a copy of the statement; 2nd, an abstract of the monthly amounts.	Statistical Branch of the Financial Department.	26th.

ADMINISTRATIVE SERIES—*continued.*

Numbers. New.	Numbers. Original	Name of Statement.	Description.	By whom supplied.	Date fixed for Despatch.
		Salt—cont.			
4	5	Northern India Salt Revenue.	This statement shows progressively the receipts under the eight minor heads of the estimates, as also the quantity and the kinds of salt disposed of, and a contrast with the figures of the Budget and the realisations of the past five years. It is made up to the 7th, 15th, 22nd, and last days of each month, and despatched from the Commissioner's Head Office at Agra. At the foot of the return are monthly details for Lower Bengal and Orissa supplied by the Bengal Board of Revenue. A register, showing the revenue under the eight minor heads, is posted up weekly from the above.	Commissioner, Inland Customs	About a week after date.
* 5	None	Calcutta Salt Prices	A register of these prices is posted up from Messrs. Mullick and Co.'s "Salt Price Current."	Mullick and Co. -	Weekly.
		Mints and Currency.			
6	19	Mint Operations -	The Calcutta and Bombay Mints each send a return—the former in two parts, the latter in three—showing the bullion received and coined during the month, the mint operations, including particulars of charges, and the balance on the last day. The value of coin and bullion received, and of silver coined, are excerpted and communicated to the Financial Secretary, India Office, and the Press Commissioner. A register, in two parts, for Calcutta and Bombay, and showing the principal points in these returns, is compiled regularly.	Mint Masters -	Monthly.
7	22	Movements of Gold and Silver.	This shows the monthly imports of gold and silver. A copy is sent to the Financial Secretary, India Office, and the Press Commissioner. A register of the contents of the above is compiled regularly in the Financial Secretary's Office.	Statistical Branch of the Financial Department.	Ditto.
8	18	Currency Note Administration.	This shows the notes in circulation, the coin and bullion in reserve, and the investment of Government securities. From it four registers are compiled, as under:— Register *a*, posted weekly, in two parts—1st, note circulation, and reserves against it; 2nd, distribution among the circles of the coin in reserve. Register *b*, posted weekly, showing in detail the circulation in each circle. Register *c*, in eight parts, giving for each of the seven circles the circulation on the last day of each month of the current year and of preceding years since 1862–63, and the total of all circles. Register *d*, giving the same information as Register *c*, but arranged in a different form. An extract from concluding return of each month is published in the "Gazette of India."	Head Commissioner of Currency.	Weekly.
9	—	Currency Note and Coin Distribution.	- - - - - -	Comptroller General.	—
10	29	Money Market -	A register giving a variety of useful details connected with the money market, compiled in the Financial Secretary's Office daily, or on occasion, from newspapers and other sources.	—	—
		Public Debt.			
11	28	Promissory Note Enfacement.	This includes Madras and Bombay, and shows fortnightly, in considerable detail, the enfacement of promissory notes to and from London for payment of interest there. A register, in two parts, giving the chief particulars in the above, is compiled in the Financial Secretary's Office.	Bank of Bengal -	About three or four days after date.

ADMINISTRATIVE SERIES—*continued.*

Numbers. New.	Numbers. Original.	Name of Statement.	Description.	By whom supplied.	Date fixed for Despatch.
		Banks.			
12	25	Presidency Bank Assets and Liabilities.	These show the affairs of the banks in the form usually employed by banks generally for the purpose. From them are compiled three registers, viz.:— Register *a*, giving the same particulars as the returns for each bank separately. Register *b*, the same more condensed, with totals of the three banks together. Register *c*, a compilation of principal statistics weekly, compared with the same week for ten years past.	Each Presidency Bank.	Weekly.
13	26	Presidency Bank Profits and Dividends.	These are the ordinary half-yearly reports which the banks issue to their shareholders and the public. A running statement is compiled from these reports, and comprises the principal figures since 1859.	Ditto	Half-yearly.
14	27	Savings Banks	This is a running statement compiled in the Financial Secretary's Office from the "Final Actuals." It gives the net deposits in all savings banks during the month and to the end of the month; is progressive from the beginning of the year, and closes with the total balance of deposits.	Financial Secretary's Office.	Monthly.
		Opium.			
15	33	Poppy Cultivation	These show the area of land sown, the area on which the crop may have failed, and the estimated produce. A register of the above is kept up.	Opium Agents, Behar and Benares.	Weekly during the season.
16	32	Central India and Rajputana Passes.	These show weekly the number of chests which pass the scales at Ahmedabad and Ajmere.	Deputy Collector, Ahmedabad. Commissioner, Ajmere.	Weekly.
			This return shows the chests passing the seven scales at Indore, Rutlam, Dhar, Ujjain, Udaipur, Jaora, and Bhopal. A register is compiled in the Financial Secretary's Office showing the whole of the above figures.	Deputy Opium Agent, Indore.	Ditto.
17	32	Malwa Opium Passes.	This shows the number of chests for which passes have been granted at the Malwa scales for either export to China or consumption in the several provinces of India, and the duty levied thereon.	Deputy Opium Agent, Indore.	Last day of the month.
18	35	Opium Revenue	Shows the result of the monthly sales at Calcutta.	Secretary, Bengal Board of Revenue.	Monthly.
			Shows the amount credited in Bombay on account of opium revenue, and the portion of it transferred to other Governments or Native States, or to "Excise" for home consumption. A register is kept up showing the chief figures in Nos. 16, 17, and 18.	Accountant General, Bombay.	Last day of each month.
19	34	Market Prices	This gives the daily prices per chest in Calcutta of Behar and Benares opium, and the time bargain prices for the next sale.	Secretary, Bengal Board of Revenue.	Weekly.
			This shows the daily price of old and new opium in Bombay, and at Hong Kong and Shanghai by the latest advices. A register is kept up showing the prices in India from the above, and in China from the "China Overland Trade Report," received in the Financial Secretary's Office fortnightly.	Commissioner of Customs, Opium, and Abkari, Bombay.	Ditto.
20	36	Opium Trade	These two returns show the number of chests exported to China from Calcutta and Bombay, with name of vessel, &c.	Secretary of Bengal Revenue Board and Commissioner of Customs, Opium, and Abkari, Bombay.	Monthly.

—	39	Ditto -	This shows merely the number of chests imported and their value.	Consul General, Siam	Annually.
—	41	Ditto -	This gives the quantity and value of both imports and exports between New South Wales and other countries.	Colonial Secretary, Sydney.	Ditto.
—	41	Ditto -	Ditto for Victoria - -	Colonial Secretary, Victoria.	Ditto.

No. 6.

DESPATCH to the GOVERNMENT OF INDIA, January 19, 1882, No. 23.

MY LORD MARQUIS,

Para. 1. I have considered in Council your Excellency's letter, dated the 12th of November last, No. 292, stating that, after eight months' experience of the new form of monthly account, showing the receipts and disbursements at the Civil treasuries, you find it possible to obtain the record of each month within nine or ten days of its close.

2. I consider this to be satisfactory, and do not desire further to press the suggestion of the Committee on Military Accounts, that the information should be communicated directly by the Treasury Officers to the Comptroller General, instead of through the Local Accountants General. I refrain from doing so all the more, because, in the view of your Government, some additional risk of error would be caused, with no material gain in time.

3. I am glad to observe how slight have been the discrepancies between the preliminary returns and the figures shown in the accounts, notwithstanding the various adjustments which have to be made in the preparation of the latter.

4. The Statement V. (or new F) is, in my opinion, well adapted to bring to view the progress of the receipts and expenditure compared with the Budget Estimate. I notice with pleasure the care and labour which have been bestowed by your Financial Secretary and Comptroller General in reorganising the system of the periodical returns required for use in the office of the former, and I request that I may continue to be supplied with such of the revised forms as show the progress of the revenue and expenditure, the state of the cash balances, and other information not too detailed for practical use in this country.

I have, &c.
HARTINGTON.

No. 7.

DESPATCH to the GOVERNMENT OF INDIA, March 23, 1882, No. 103.

MY LORD MARQUIS,

Para. 1. I have considered in Council your Excellency's letter, dated the 1st of October 1881, No. 249, on the subject of the establishment in India of an independent appropriation audit to supplement the existing departmental audit.

2. This question was discussed by the Committee which was appointed by me in 1880 to report on the system of Military Accounts. They were unanimous in recommending that the detailed audit with vouchers, which is effected by the local Accountants General, and the results which are monthly reported to the Comptroller General, should be supplemented by an appropriation audit, which would be embodied in a comparison and report for the year, analogous to that made by the Auditor General in this country to the House of Commons. The members of the Committee differed, however, as to the officer by whom the appropriation report should be prepared; the one half of the Committee considered that the proper officer was the Comptroller General, who would review the reports of his subordinate officers, without incurring the expense that would ensue from the creation of another appointment; the other half of the Committee held that the Comptroller General, if entrusted with this duty, or, as they proposed to term him, the Auditor General of India, should be divested of all executive functions, and be subordinate to the Governor General alone.

3. Your Excellency has given your careful attention to the subject, and the following are the conclusions to which you have come, after a review of the systems of audit in force in the principal countries of Europe:—

1. The whole of the accounts of the State should, so far as is possible, undergo examination by some officer more or less independent of the Executive Government, and the present Indian system does not adequately provide for such an examination.
2. The auditing authority should report to the Executive Government, that is, to the Governor General in Council.
3. The report should be published, previously to the discussion or publication of the financial statement made about a twelvemonth later than the close of the year to which the report relates; the Government of India publishing with it any observations they desire. It should state whether in all cases the orders of the Government have been obeyed, and whether the proceeds of any special funds included in the accounts have been devoted to the objects prescribed by law.
4. The auditor should be irremovable, save with the sanction of the Secretary of State in Council, and his pay should, after 20 years' service, be made equal to that of a Secretary to Government.
5. He should have the power of, either himself or by deputy, examining in detail the whole or a portion of the accounts of any Department.
6. An Act should be passed through the Legislative Council, in order to give the authority of law to the auditor's increased position and powers.
7. The Auditor General should be an officer distinct from the Comptroller General, should have no executive or administrative functions whatsoever, and should have a staff under him, the strength and cost of which would be hereafter determined, but which is now estimated, as a maximum, at

four auditors with a small body of clerks and establishment, the salaries of the whole, including the Auditor General himself, being reckoned at Rs. 1,53,168 per annum.

8. The Auditor General should be entrusted with the duties of Head Commissioner of Currency.

4. After a very careful consideration of the reasons given for removing all executive functions from the officer charged with the duty of appropriation audit, I am of opinion that the case of India is not to be governed by the rules laid down in European countries. In the United Kingdom the supplies are annually voted by Parliament, which exercises a very jealous control over the Executive Government in the disposal of those supplies, and requires that an officer independent of the Government shall report to it whether the law has been in all cases observed, and the moneys distributed according to the intention of the House of Commons. In India the case is different; although the taxes are only imposed by the authority of the Council for making laws and regulations, the allotment of the supplies is made by the Governor General in Council; and it is, therefore, primarily for his satisfaction that an appropriation audit is needed, in order that he may have brought before him in a clear and precise manner any deviations which have occurred in the expenditure of the year from the original intentions of the Budget.

5. In saying this, I do not mean to imply that the auditor's report is not to be sent to the Secretary of State, which I consider essential, or that it is not to be published, which seems highly desirable; but I think that the object to be attained may be effected without the expense of instituting an independent office of very high standing in addition to the existing establishment.

6. In my opinion, the Comptroller General is the proper officer to conduct the appropriation audit. His position in the service is so high as to render him a thoroughly independent officer, who can be trusted to do his duty conscientiously and fearlessly. Receiving the detailed reports of his subordinate officers, the various Accountants General, which have been audited with vouchers, he is in a position to satisfy himself, and, if necessary, to call for further information, regarding the extent and cause of every variation from the Budget grants, and how far any deviation has been covered by subsequent sanction; and he has at his command a competent staff which can in no other way be supplied without very great expense. The Accountants General, in which term I include those of the Military and Public Works Departments, should prepare the appropriation audit for their respective provinces and departments, and forward them to the Comptroller General by a certain date; and it would be his duty to consolidate the reports, and submit them to your Government with such comments as are needful, regarding any divergence from the original allotment, or from the legitimate application of special funds. It would probably be more convenient that he should be bound to report in what cases the orders of the Government of India have been disregarded, or not fully complied with, than that they have in all cases been obeyed.

7. As to the time of the publication of the Report, it is of more importance that it should be a careful and complete summary of the year's transactions than that it should be issued at an early date; and, since the accounts are not closed till nearly the end of the calendar year, it is doubtful whether it could always be considered by your Government in time for publication before the Budget of the ensuing year.

8. The Comptroller General, under such an arrangement, might properly be designated Comptroller and Auditor General, in order to give prominence to his special duties of audit. But he should continue, as heretofore, to be charged with the task of consolidating the estimates and accounts of the empire, of controlling the Accounts Department generally, and of managing the cash balances and the Currency Department. It would doubtless be necessary to afford him all requisite assistance for the discharge of his various functions, and he should be relieved of any executive duties he now performs in his capacity of Accountant General to the Government of India, for which purpose it may be necessary to appoint a comparatively minor officer to supervise the accounts of Ajmere and Coorg, and any similar work.

9. For the application of a check of test audit, whenever he deems it desirable, he should depute the Inspector of Accounts or some similar officer; and for the attainment of this object I should make no objection to a moderate addition to the staff of the Financial Department.

10. The higher salary proposed by your Excellency after 20 years' service seems inapplicable under the arrangement above described; that period is shorter than has been usually passed by an officer selected to be Financial Secretary, and the pay assigned to the Comptroller General is, in my opinion, sufficient, even with the duties of Auditor General attached to his office.

11. Your Excellency will probably concur with me in thinking that, under the arrangement I would recommend, no necessity exists for special legislation.

12. I trust that, after considering the points to which I have thus drawn your attention, you will find no difficulty in devising a scheme by which the essential objects will be secured, at considerably less cost than by the plan which you have proposed.

I have, &c.
HARTINGTON.

No. 8.

LETTER from the GOVERNMENT OF INDIA, September 8, 1882, No. 278.

My Lord Marquis,

In accordance with your Lordship's Despatch No. 103 (Financial), dated 23rd March 1882, on the subject of the establishment in India of an independent appropriation audit, we have the honour to submit revised proposals based on a consideration of the suggestions made by your Lordship.

2. In our Despatch No. 249, dated 1st October 1881, we made proposals for the appointment of a separate Auditor General for India, with a staff of auditors, at a total cost of Rs. 1,53,168 per annum. Your Lordship has not accepted these proposals, and has suggested the adoption of another scheme under which the appropriation audit will be made by the Comptroller General, and consequently the total additional expenditure will not be so great.

This scheme is briefly as follows:—

(1.) The Comptroller General should be relieved of any executive duties he now performs in his capacity of Accountant General to the Government of India.

(2.) He would continue, as at present, to be charged with the task of consolidating the estimates and accounts of the Empire, of controlling the Accounts Department generally, and of managing the cash balances and the Currency Department.

(3.) The various Accountants General (in which term are included those of the Military and Public Works Departments) should prepare the appropriation audit for their respective departments and provinces, and forward them to the Comptroller General, who should consolidate the reports and forward them to the Government of India, with such comments as might seem needful regarding any divergence from the original allotment, or from the legitimate application of special funds.

(4.) A moderate addition would be made to the staff of the Financial Department, in order to allow of an officer being occasionally deputed to perform a test audit.

3. Although we regret that we are unable to agree with the view which has been taken by your Lordship on the question of the appointment of a separate officer as Auditor General, we are of opinion that a very considerable and beneficial reform can be made in the existing system of audit by a scheme based on the proposals made by your Lordship. We estimate that such a scheme would cost about Rs. 55,500 per annum, and may thus be expected to result in a saving of nearly a lakh of rupees a year as compared with our former proposals.

4. The most important of your Lordship's proposals is that which is contained in the 8th paragraph of your despatch, to the effect that the Comptroller General should be relieved of the executive functions which he now performs in his capacity of Accountant General to the Government of India. In this proposal we entirely agree; we have no doubt that the Comptroller General is very much overworked; and, even if we had received no proposal from your Lordship on this special branch

of the question, we should probably have deemed it necessary to adopt some measure with a view to relieving him of some portion of his work, as we believe it would not be possible, even without the addition of an appropriation audit, to delay much longer the relief of the Comptroller General, either by an independent or a senior quasi-independent officer being placed in charge of the accounts of the India Treasuries.

5. The amount of work which the Comptroller General in his capacity as Accountant General to the Government of India has heretofore performed appears; however, to have been under-estimated. In your Lordship's despatch it is stated that, in order to relieve the Comptroller General of these executive duties, "it "may be necessary to appoint a comparatively minor "officer to supervise the accounts of Ajmere and "Coorg, and any similar work." The supervision of the accounts of Ajmere and Coorg is but a very small portion of the Comptroller General's work in this respect, and we deem it desirable to enumerate some of the principal executive duties of the Comptroller General which, as an essential part of your Lordship's scheme, it appears to us should be placed under a separate officer.

These duties are—

(1.) The direction of the payments at, and the audit and compilation of the accounts rendered by, 16 Treasuries under the administration of the Government of India, including Ajmere and Coorg, as well as Bhopal, Gwalior, Indore, Port Blair, and other political treasuries.

(2.) The examination and audit of the daily account rendered by the Bank of Bengal of the cash transactions of the Government of India with the Bank at Calcutta, including all the remittance transactions of the Government.

(3.) The compilation of the accounts of all expenditure at Head-quarters, Calcutta and Simla, on account of officers and establishments serving directly under the Government of India, including the Civil Administrative Departments of the Supreme Government.

(4.) The supply of funds to, and the compilation of the accounts of, the following Departments, which deal directly with treasuries in all the Provinces in India:—

The Northern India Salt Department.
The Survey of India.
The Geological and Archæological Surveys.
The Meteorological Department, Horse-Breeding Department, Thuggee and Dacoity Department, and some others.

(5.) The compilation of the accounts of interest on the Public Debt.

6. In dealing with such a variety of accounts, much work necessarily devolves on the Comptroller General in connexion with the preparation and the disposal of the accounts-current rendered by or to him in his capacity as an accounting officer of the first stage; but this work also, under the arrangement we now propose, would be removed from him and placed under a separate officer. In considering the position and standing necessary in the officer to whom these duties are to be entrusted, it has to be borne in mind that he will have to deal with political officers and a number of heads of departments, in respect to whom the exercise of financial control is a work of considerable difficulty, and should be carried out by an officer of high authority; and the transactions included in the accounts which it is proposed to place under him are frequently of an intricate nature, and involve much more labour, care, and scrutiny, than the ordinary transactions of Treasury accounts. For these reasons we are of opinion that the officer should be of the status of an Accountant General, acting, as other Accountants General do, under the Comptroller General; but we consider that the designation "Accountant "General to the Government of India" would convey an erroneous idea of the nature of the functions of the office, and we would recommend that the officer be styled "Accountant General, India Treasuries." We propose to assign to the office a fixed pay of Rs. 2,000 a month, and we are of opinion that, owing to the special and technical nature of the work, differing as it does in many respects from that of Provincial Accountants General, it is very desirable that frequent changes in the incumbency of the office should be avoided.

7. The new office appears to be one of those which should under the statute be ordinarily reserved for the Covenanted Civil Service, though this would not, of course, preclude the nomination to it of a distinguished uncovenanted officer of the enrolled list of the Account Department. We think, however, that it would be detrimental to the public service that the officer holding this appointment should look for promotion in the ordinary course, under the existing organisation of the Financial Department, as sanctioned in your Lordship's despatch, No. 233, dated 15th July 1880, to the more highly paid appointments of Provincial Accountants General; and we accordingly recommend that, in the event of a covenanted civil servant being appointed to be Accountant General, India Treasuries, the pay of the appointment should in such case be interchangeable with that of the Provincial Accountants General, so that the officer holding it might obtain promotion to higher pay without a change in office being necessary, and in this way we would hope to prevent the inconvenience resulting from frequent changes of officers.

8. With regard to the additional staff required for the application of a test audit—a matter of great importance, and to which allusion is made in paragraph 9 of your Lordship's despatch—we would recommend that an additional Deputy Comptroller General should be appointed; and, on a careful consideration of the nature and extent of the work which must be entrusted to him, we are of opinion that he should occupy a position in the Financial Department equal to that of either of the present Deputy Comptrollers General (one of whom holds the office formerly styled Inspector of Local Account Offices), and we propose that his salary should be Rs. 1,750, rising by five equal annual increments to Rs. 2,000 a month. This is the pay of the first class of the enrolled officers of the Department, by which class the two deputy comptroller generalships are ordinarily held at present; and our proposal, therefore, is that an appointment be added to that class. The mean cost of the appointment will be Rs. 22,500 a year.

9. We do not anticipate that any extra establishment will at present be needed for the Accountant General, India Treasuries, as the change will merely involve the transfer to him of a portion of the Comptroller General's existing establishment; but it has been represented to us that the existing clerical establishment is insufficient to cope with the enormous increase in the work of the India Treasuries that has taken place of recent years, and we are advised that before long some increase will be needed. But for the additional Deputy Comptroller General, who will be required to assist in making the appropriation audit, and to visit personally various account offices throughout the country, some clerical assistance will be required; and on this account we estimate an expenditure of about Rs. 6,000 a year.

10. We are also of opinion that steps should be taken to place the office of Comptroller General on a slightly different footing. The duties of this officer have greatly increased both in magnitude and complexity of late years. The proper working of the system of Indian accounts depends upon the zeal and ability of the Comptroller General; and a wide experience of the Indian administrative systems, as well as a thorough knowledge of technical details, are becoming more and more necessary every day for the proper discharge of the duties of the office. The offices and accounts of the Military Controllers and of the Examiners of Public Works Accounts are open to inspection by the Comptroller General and his inspecting officers; and it is our wish and intention that the responsibility of the Comptroller General for the proper working of our whole system of accounts shall be more strictly enforced in future than has hitherto been the case. Although we have made proposals for relieving the Comptroller General of a portion of the work of account which at present falls to him, we are of opinion that the extension of responsibility which we now desire to enforce, and the addition of the duties of making an appropriation audit, will, so far as the personal responsibility of the Comptroller General is concerned, do more than counterbalance any relief which may be afforded in this way. There are few, if any, of our officers on whose personal efficiency so much depends as on our Comptroller General; and not merely is it desirable that we should be able to attract to the Civil Account Department the highest talent at our disposal for this branch of the public service, but it is of even greater importance that the officer who is

the head of the Account Department should be placed in a position which will remove any inducement to seek for advancement to more highly paid offices. For this purpose it is necessary that the salary of the office should not be less than that which is attached to the highest office to which any officer of the Indian service can ordinarily look forward. The salary of the Comptroller General is at present less than that of a Chief Secretary to the Government of Madras or Bombay, or of a member of the Board of Revenue in the Lower Provinces, or of the Civil Secretaries to the Government of India. We cannot hope to attract to the Account Department, or to retain in it permanently in contentment, the officers who are most competent to fill the position of Head of the Department, unless the emoluments of the Comptroller General are ultimately made equal to those of the offices just enumerated. The lowest salary which will suffice for this purpose is a salary of Rs. 3,500 rising after completion of 20 years' service to Rs. 4,000 by annual increments of Rs. 100 a year; and for the reasons now stated we would ask for a reconsideration of the decision contained in paragraph 10 of your Lordship's Despatch No. 103, dated 23rd March 1882, and we beg strongly to recommend that the pay of the appointment be fixed on the scale which we now propose.

11. Our proposals, therefore, involve a total expenditure of Rs. 55,500 per annum, namely,—

	Rs.
Salary of an officer to be styled Accountant General, India Treasuries	24,000
Salary of an additional Deputy Comptroller General - - -	22,500
Clerks for appropriation audit work under the Deputy Comptroller General - - - - -	6,000
Addition to salary of Comptroller General - - - - - -	3,000
Total - - -	55,500

This expenditure is very nearly one lakh of rupees a year less than the amount previously proposed. We hope that, by the scheme which we now submit for your Lordship's approval, the essential objects of an appropriation audit will be secured, and the office of Comptroller General finally placed on a sound footing, and we trust that our proposals may receive your Lordship's sanction.

12. For your Lordship's information, we give below a list of the principal departments of work which will remain to the Comptroller General, besides the duty of supervising and directing the work of the Accountants General and Controllers:—

(1.) Appropriation Audit.
(2.) Control of *personnel* of Civil Account Department.
(3.) Inspection of all Offices of Account.
(4.) Management of the Currency Department.
(5.) Compilation of the Central Accounts, both monthly and yearly.
(6.) Compilation of Estimates and comparison of current facts therewith.
(7.) Resource—that is, the providing of money, both by increasing the balances as a whole, and by transferring them to the points where they are required.
(8.) Management of the Public Debt, now including Stock Notes.
(9.) Accounts of District Savings Banks.
(10.) Adjustment of Accounts of Guaranteed Railways.
(11.) Account with London, and probably also those with the Colonies.
12.) Management of the Reserve Treasuries and Bank Balances.
(13.) Central Accounts and custody of Securities held in trust by Government officers.
(14.) General direction of Coinage and Mint operations.
(15.) Verification of Deposit, Advance, and other Debt Balances.
(16.) Collection of Mutual Accounts of Accounting Officers.
(17.) Audit of such Accounts as Administrator General's and other Law Officers', Emigration Agencies of Colonies, &c.
(18.) The Accounts of the Forest Department.
(19.) Examination of Accounts of Service Funds.

13. This despatch was drafted before affairs in Egypt had assumed their present aspect. The reforms which we propose are so desirable that we should be unwilling to postpone them. At the same time the uncertainty of the charge which will eventually be thrown on the Indian treasury by reason of Egyptian war expenditure is such, that it may become necessary for a while to avoid any increase of expenditure, even to attain so desirable an object as that involved in our present proposals. In requesting your Lordship's sanction to these proposals, we would, therefore, desire to be left a discretionary power as to the time when effect shall be given to them.

We have, &c.
RIPON.

No. 9.

DESPATCH to the GOVERNMENT OF INDIA, December 21, 1882, No. 401.

My Lord Marquis,

Para. 1. Your Excellency's letter, dated the 8th of September, No. 278, submitting revised proposals regarding the establishment in India of a system of appropriation audit, has been considered in Council.

2. The first of your recommendations is the relief of the Comptroller General, by removing from him the duties connected with the treasuries under the Government of India, with the examination and audit of the daily cash transactions of the Government with the Bank of Bengal at Calcutta, including the remittance transactions of the Government, with the accounts of expenditure by officers and establishments serving directly under your Government, with the Northern India Salt Department, the Survey Department, the Meteorological, Horse Breeding, Thuggee, and Dacoity, and other minor departments, and with the accounts of interest on the public debt. These duties you would entrust to an officer of the status of an accountant general, acting under the Comptroller General, to whom you propose to assign the designation of "Accountant General, India Treasuries," with a fixed pay of Rs. 2,000 a month. You consider that the new office should, under the statute, be ordinarily reserved for the Covenanted Civil Service, though this would not preclude the nomination to it of a distinguished uncovenanted officer of the enrolled list of the Financial Department. As, however, it would be detrimental to the public service that this officer should look for promotion, in ordinary course, to the more highly paid appointments of provincial accountants general, and as it is desirable to avoid frequent changes in the incumbency of the new office, you recommend that, if it be held by a covenanted civil servant, the pay of the appointment should be interchangeable with that of the provincial accountants general.

3. I approve of your Excellency's proposal to place the duties mentioned in the charge of an officer subordinate to the Comptroller General. The work to be assigned to him differs, however, considerably from that of the provincial accountants general, who are, to a great extent, the financial advisers of the several local governments. In the case under consideration, the duties are much more strictly those of an accountant, and do not appear specially to need the qualifications of a member of the covenanted civil service for their due discharge. The appointment should, apparently, be added to the first class of the enrolled officers of the department, the salary of which is Rs. 1,750, rising to Rs. 2,000, and the designation of the officer should be that of Deputy Comptroller General. The officer selected should be the one who, in the opinion of your Government, is best fitted for the appointment, whether he be a covenanted or an uncovenanted officer of the Financial Department.

4. Your next propositions refer to the application of a test audit, for which purpose you recommend the appointment of an additional deputy comptroller general, in the first class of the enrolled officers, with

a clerical staff of which the cost is estimated at Rs. 6,000 a year.

5. I sanction these recommendations.

6. The last proposal refers to the salary of the Comptroller General, whose responsibility for the proper working of the whole system of accounts you desire more strictly to enforce, and whose duties will, in your opinion, be enhanced thereby, when coupled with the appropriation audit which he is henceforth to conduct, in a greater degree than he will be relieved by the foregoing propositions; and you strongly recommend that the salary of the appointment be fixed at Rs. 3,500, rising after the completion of 20 years' service to Rs. 4,000, by annual increments of Rs. 100 a month.

7. In my predecessor's despatch of the 23rd of March last, No. 103, he expressed his opinion that the pay of the Comptroller General was sufficient for the office, even with the duties of Auditor General attached thereto; and I regret that I am compelled to adhere to that view. In consideration, however, of your Excellency's strong recommendation, and in recognition of the zeal shown by Mr. Westland in the discharge of the additional duties entrusted to him since he was nominated to the appointment, I am prepared to sanction such a personal allowance, commencing from the date of the receipt of this despatch, as you may think fit to recommend.

8. The mean annual cost of these proposals will be Rs. 51,000, in addition to Mr. Westland's personal allowance; and I trust that by this increased expenditure the system of account and audit will be placed on a satisfactory footing.

I have, &c.
KIMBERLEY.

No. 10.

EXTRACT from DESPATCH to INDIA, dated July 26, 1888, No. 190 (Financial), paragraph 32.

32. There is one other point on which I wish to remark, namely, the importance of increasing in every possible way the power of the control of your Financial Department over the expenditure. So strongly do I feel on this point, that I should be prepared to sanction any addition to the cost of that secretariat which may be found really necessary for the purpose. It is the standing order, as embodied in the Civil Account Code, that, "save for exceptional reasons, expenditure for "which no provision has been made in the estimates "of the current year should not be proposed, and "cannot be sanctioned." I am of opinion that this rule should be enforced much more strictly than seems to be the practice, in dealing with applications for an increase of expenditure during the current year; that, in the really exceptional cases where it has to be incurred, the Financial Department, if able to do so, should specially report that the expenditure can be met by savings in other directions, or from the surplus provided in the Budget; and that, if this is impracticable, your Government should, before authorising the expenditure, consider the question of the manner in which the cost is to be defrayed, before submitting the proposals to the Home Government for sanction.

No. 11.

LETTER from the GOVERNMENT OF INDIA, August 11, 1888, No. 209.

MY LORD,

WE have the honour to address your Lordship regarding the necessity which exists for strengthening our finance secretariat.

2. The gazetted staff of this office consists now, as it has consisted for 16 years, of one secretary (Rs. 4,000), one under secretary (Rs. 1,300), and one assistant secretary on varying pay according to the standing in the enrolled list of the Finance Department. In 1879, on the abolition of the Department of Revenue, Agriculture, and Commerce, the whole of the "Commerce" section, with the statistical branch, was transferred to the Finance Department without any increase being made to the gazetted staff of that Department. The duties thus transferred comprise all matters affecting merchant shipping, native passenger ships, ports, port dues and lights, pilots, port trusts, statistics, salt, customs, and trade generally. A very large share of the assistant secretary's time is claimed by these duties. This transfer of business was accompanied by a saving of Rs. 1,000 a month, that being Mr. O'Conor's pay in the abolished appointment of assistant secretary in the Department of Revenue, Agriculture, and Commerce.

The sanctioned pay of the appointment was Rs. 700 rising to Rs. 1,000; but Mr. O'Conor was drawing Rs. 1,000 in 1879, when his services were transferred to this Department; and, had the appointment not been abolished, he would of course have continued to receive at least that salary.

3. As your Lordship is aware, the duties devolving on our Finance Department are of such a nature that mere statistics of work can only convey a very imperfect idea of the labour involved in discharging them. The preparation of the Budget, the disposal of current accounts and statistics bearing on them, the consideration and treatment of fiscal measures, and the correspondence that arises on them with your Lordship, are of a special character, and involve a great deal besides that which is ordinarily implied by secretariat work. A statistical branch is also included in the business of the Department which is employed in collecting, tabulating, and publishing, the returns of customs, trade, and navigation, for the whole of India.

4. We abstain from displaying any comparative statistics of the work of the various departments of the Government, because mere comparisons of figures would require very much explanation before conclusions could be based upon them. But we may point at once to the main distinction in the organisation of the Financial and the other departments, out of which arise the difficulties which by our present proposals we seek to obviate. In the Public Works and Military Departments, and, in some of their branches, also the Home and the Revenue Departments, the secretaries have the direct assistance of deputy secretaries, or of heads of departments attached to the secretariat. These officers either themselves dispose of a large amount of routine work, or at least they prepare it for the secretary, so as to relieve him to a large extent of the demand which would otherwise be made upon his time. The Financial Secretary has no assistance of this character; and thus not only has a larger share of the current work of the Department to pass through his hands than is the case with other secretaries, but the member in charge is also affected by the necessity of independently studying that not inconsiderable class of cases in which the concurrence of two officers of the experience of a secretary and deputy secretary would in practice be taken as almost conclusive of the proper consideration to apply to the circumstances.

5. The increase in the ordinary work discharged by the Finance and Commerce Department has been as follows,—1879 being taken as the starting point, because in that year the Commerce Section was transferred from the old Revenue, Agriculture, and Commerce Department:—

Year.	Total Cases for Disposal.	Cases referred by other Departments of the Government of India.
1879	11,927	4,847
1880	14,669	4,579
1881	15,698	5,206
1882	16,114	5,593
1883	16,037	5,293
1884	16,229	5,596
1885	15,467	4,918
1886	16,828	5,912
1887	18,474	7,445

For the current year the receipts are at the rate of about 20,000 a year; and, having regard to the fact that April is a light month owing to the tours of members of Government, it is probable that the actual receipts will considerably exceed that figure. We particularly invite your Lordship's attention to the figures in the third column, which represent what are known as "unofficial receipts"—that is, cases referred under the Rules of Business for the consideration of our Finance Department by the other Departments of the Government. Proposals involving either revenue or expenditure are in the ordinary course of business first discussed by the administrative department concerned, and afterwards transferred by it to the Financial Department. Almost every important proposal that comes before the Government in any of

its Departments has a financial side, which necessitates its consideration in the Financial Department; and, although the points to which that Department has to look may not be the most important factors which the Government, as a whole, has to take into consideration, this circumstance does not necessarily diminish the amount of time and study which has to be given to the case by the Financial Secretary. It thus results that the increase of business in any department of the Government directly reacts on the Financial Department by presenting to it more and more important work for preparation and disposal.

6. The duties falling upon our Financial Secretary have long been acknowledged to be beyond the capacity of any one officer to discharge properly and efficiently; and all the officers responsible for the finance administration during recent years have expressed their views to this effect. The burthen of ordinary work is such that the Financial Secretary is without any leisure to give proper attention to finance in its more important branches. It is with the greatest difficulty, and only by incessant application, that the work is overtaken at all; and, in view of its extreme importance, both generally and especially at the present juncture, and of the fact that the general financial administration of the Government is more open to the eyes of the public and subjected to a closer and more detailed public criticism than any other branch of its work, we have come to the conclusion that some relief has become a matter of pressing necessity. We have considered the present to be an opportune time for bringing forward the question, because it has been especially urged upon us by two* officers whose experience in the appointment gives special value to their opinions, and who have no longer any direct personal interest in the relief which they consider it necessary should be given to the Financial Secretary.

7. The interest with which all our financial measures are watched in this country and in England is becoming every day more marked; and, in view of the keen criticism to which they are subjected, it is of imperative importance that matters of this character should be dealt with with more care and deliberation than is possible under the severe physical and mental strain under which our Financial Secretary is obliged to work. We have fully considered whether relief from this pressure might be found in a revision of the conditions under which the Government of India conducts its business. This, it may be said, could be secured by the Government of India throwing off more and more of its responsibilities on the Local Governments; in other words, by a further development of decentralisation; and also by the Finance Department interfering less than at present with proposals discussed and decisions taken in other Departments of the Government of India itself. As regards the former, we have to state that we are now considering schemes for the further development of local and provincial finance, which we hope to report to your Lordship presently. We shall never relax our efforts to surrender extended responsibilities and powers to Local Governments, so far as the conditions of administration permit. It is, however, obvious that our capacity for transferring business to Local Governments is limited in the end by the fact that there can be no complete devolution of responsibility for the general finances of the Empire. The final and general responsibility and the multitudinous and onerous duties attending it must always remain with the Central Government; and our efforts to transfer further responsibilities to Local Governments are, therefore, limited by the conditions of the mutual relations between them and the Supreme Government, which are such that we are either immediately or ultimately responsible for finding the money for expenditure admitted on the provincial responsibility of Local Governments. This condition must continue in a greater or less degree until and unless the constitution of Government is changed. The history of the past 18 years is a record of continuous progress in the direction of extending the authority of subordinate Governments; but the statistics given in paragraph 5 show clearly enough that whatever relief has been secured by these measures has been more than lost by the ever-increasing mass of public business. That the work, both of the Supreme and of Local Governments, must increase, and continue to increase, is a natural and necessary result of improving administration and of growing intelligence and demands of the people, and of the development of business and enterprise in every direction. We also wish to point out that the preparation of these schemes of decentralisation entails very heavy work in itself; and the questions that arise out of them impose, for some time at any rate after their adoption, a greater burthen than they remove. While, therefore, giving our attention to further measures of this class, we cannot, in view of the record of the past, hope to ever diminish the pressure of work thereby, or even to maintain it at its present standard. On the contrary, we must be prepared for a systematic increase, as the machinery of Government becomes more complicated, and the intelligence of the governed more cultivated.

8. As regards the second suggestion, *i.e.*, that greater latitude should be allowed to the spending and administrative departments of the Government of India in the matter of public expenditure, the proposal opens up a question to which your Lordship has recently invited attention. It is unnecessary to further allude to the subject here than to say that, whatever may be the result of further discussions on the subject, it is at least sufficiently certain that no immediate relief can be looked for, and that our working arrangements should be based on the assumption that the present system of financial control and responsibility will not, for some time at least, be radically altered.

9. Your Lordship is, of course, aware of the very severe crisis through which Indian finance is passing. Unless relief comes to us from some unexpected quarter, it is possible that a great portion of the time of one superior officer will be required to investigate the means of sustaining equilibrium during the next few years. We need not dwell further on this branch of the subject here, as the circumstances are as well known to your Lordship as to ourselves.

10. We are fully sensible that the objection to incurring any extra expenditure on the Central Government is one entitled to grave consideration. We are not without hope that we shall be able eventually to recover at least the expenditure involved in our present proposals by economies in other Departments of the Government. Our honourable colleague, Sir Charles Elliott, holds out hopes that we may be able to reduce one at least of the higher appointments in the Public Works Department as soon as a vacancy occurs. Other reductions may be possible; but we have not yet considered this part of the question systematically.

11. The proposal, therefore, to strengthen the Department whose consent is necessary to the expenditure, or continuing expenditure, of public money will, we trust, prove to be a measure of true economy; and it is in this light that we ask your Lordship to deal with it.

The most economical method that presents itself to us of providing for the difficulties we have thus explained lies in the addition of a Deputy Secretary to the establishment of the Financial Secretariat. A Deputy Secretary's duties are mainly those of disposing, with the same authority as the Secretary, of the routine and less important part of the work which otherwise would fall on the Secretary; for it is practically impossible so to arrange any system of business that only important work shall come up for disposal by the Government of India, and the routine work be altogether shut off at an earlier stage.

12. To secure an officer of sufficient experience and standing for this post, we consider that the emoluments of the proposed office should ordinarily be the same as those of the Junior Accountant-General, viz., Rs. 2,250. Our experience convinces us more and more of the necessity of a close connexion between our Account Service and our Financial Secretariat; so that it is almost a necessary qualification for employment in the latter that the officer shall have acquired some training in the former. We therefore propose to add a second appointment to the 3rd class of Accountants General, to be ordinarily held by the officer holding the office of Deputy Secretary. The increase of cost will be Rs. 2,250 a month; and we ask your Lordship's early sanction to the creation of this appointment.

13. A minute of dissent by our colleague the Honourable Sir Charles Aitchison is enclosed.

We have, &c.

* Messrs. Barbour and Westland.

Enclosure in No. 11.

MINUTE of DISSENT recorded by Sir CHARLES AITCHISON, under No. XXX. of the Rules of Business.

I regret to be obliged to dissent from the proposal to add a Deputy Secretary to the Financial Department of the Government of India at an additional cost of Rs. 27,000 a year.

In the present condition of the finances of India, when we have been reluctantly compelled to impose new taxes, and when we have been very properly enjoined by the Secretary of State to incur no avoidable expenditure, I do not think it is possible to justify to the country the addition of a permanent charge of Rs. 27,000 a year to the Secretariat of the Government of India, which already costs the enormous sum of Rs. 6,23,000 a year for the gazetted staff alone, exclusive of the salaries of Members of Council. The expenditure is certainly avoidable, and the despatch to the Secretary of State shows no reason for it that might not have been shown last year or the year before.

As regards work, all the Departments (not the Finance Department alone) are overworked. But the evil lies with the Government of India itself; and the arrangement proposed in the Financial Department, so far from bringing permanent relief from the load of trifling business with which the Government of India is overwhelmed, will in the long run only increase the burden. It is a step towards even greater centralization than we now groan under, and in a direction the reverse of that to which the signs of the times unmistakeably point.

The causes of the pressure under which the Financial Department, in common with others, is suffering, are, in my opinion, twofold: 1st, over-centralization, by which an immense mass of work is drawn to the Government of India which should never come before it at all; 2nd, waste of power in dealing with the work when it comes. And the results are felt, not by the Government of India alone, but by the subordinate Governments and Administrations, in increase of useless work and correspondence, overgrown and costly establishments, and diminished sense of responsibility. The causes above mentioned will only be aggravated by an increase in the secretariat staff. The proper remedies for them are decentralization and improved rules of business.

This is really an old, old story. I find Mr. Laing, the Finance Minister, complaining of petty work in 1861. I find Sir Henry Maine, in 1868, pointing out that the time was at hand when either the duties of the Government of India must be ill discharged, or their sphere must be contracted. There are on record, I know, many other opinions to the same effect, if I had time to look for them. But they were voices in the wilderness. No one heeded. For my own part, since I joined the Government, I have drawn attention again and again, till I have made myself tiresome, to the petty nature of much of the work that comes before us, and to the waste of money and time caused by doing the work twice and thrice over, and by the harmful inter-departmental controversies that take place.

Instead of increasing the Secretariat, which will only aggravate the present evils, the Government of India ought, I venture once again to urge, to set itself earnestly to consider how not the Financial Department only, but all Departments, can be relieved of petty work, how far inter-departmental procedure can be simplified, and what economies can be effected by the reduction of its own establishments and the diminution of its work. This question has not yet received the consideration which its importance demands. I hold a very strong opinion that, if the matter were only taken up earnestly and thoroughly, we should, while rendering the administration of public affairs more efficient and more expeditious, at the same time effect economies sufficient to adjust the establishments of the different departments to the work they have to do, without increase to the public expenditure, and possibly with actual saving.

C. U. AITCHISON,
Ordinary Member of the Council of the Govenor General of India.

Simla,
11th August 1888.

No. 12.

EXTRACT from DESPATCH to the GOVERNMENT OF INDIA, September 27, 1888, No. 247.

YOUR Excellency has become aware that the Secretary of State in Council has for a long time had under consideration the question whether it would be possible to adopt measures for ensuring that any serious irregularity or departure from established financial rules shall be brought, with as little delay as possible, to the notice of the Government of India and of the Secretary of State.

2. There is, I need hardly say, no reason to suppose that the high authorities in India, and the officers of account and audit working under them, would intentionally violate, or allow others to depart from, the standing rules which have been laid down for their guidance. Yet it cannot be doubted that occasionally expenditure is incurred without proper authority, and that the circumstance is not brought to light until it is too late to retrieve the error.

3. In some cases which have come under my notice the amount in question has been small; an allowance has been granted which was not sanctioned by the rules, or one that has been authorized for a time has been continued beyond the date for which the sanction was given; a temporary appointment has not been reported until some time after the date from which it took effect, or an increase of establishments has been sanctioned without the authority of the Secretary of State.

4. It is possible that in all these cases the sanction would have been given, and the expenditure have been incurred, if the regulations had been strictly followed; but, apart altogether from the question whether any of the outlay might have been avoided, your Excellency will agree with me in the conclusion that it is a matter of the highest importance that financial regularity should be observed.

5. In this country there is adequate machinery for securing such regularity. It is, as you are aware, the duty of the Auditor General to examine all the Appropriation Accounts on behalf of the House of Commons, ascertaining whether the payments are supported by proper vouchers, and whether the money expended has been applied to the purposes for which the grant was intended to provide; and, in his reports to the House of Commons, to call attention to every case in which it may appear to him that a grant has been exceeded, or that money has not been applied according to the directions of Parliament, or that a charge is not supported by proof, or a payment not properly chargeable.

6, It has been found, as a matter of experience, that most important public advantages have been secured by the operation of the system which I have described. The independent Auditor, far from encroaching upon or hampering the action of the Chancellor of the Exchequer, has become his most valuable ally. Through the Auditor alone he learns that his own regulations are observed, and by the aid of the Auditor alone he is able to enforce the financial order for which he is responsible to Parliament.

7. It is a question, as to which at present I give no opinion, but on which I desire to learn your views, after mature consideration, whether a system of this nature could with advantage be introduced into India. But it is certain that some means must be found of ensuring that the regulations laid down in matters of expenditure, whether by the Secretary of State or by the Government of India, are duly observed, and that all irregular or unauthorized expenditure is brought under the notice of the Secretary of State in Council, to whom the control of the finances of India is committed by law.

8. I am of opinion that it would conduce to the prevention of such irregular expenditure at the outset, if the Finance Department of your Excellency's Government is strengthened; and, with this view, I sanction the proposal made in your Letter of the 11th of August, No. 209, to add to the 3rd Class of Accountants General a second appointment on a salary of Rs. 2,250 a month, to be held by the officer discharging the duties of Deputy Secretary to the Government of India. I shall also be ready to give favourable consideration to any further proposals which your Excellency may submit to me, for securing, by means of a reasonable addition to the establishment, a more efficient control over the details of expenditure. It is to be understood that these measures are sanctioned in order to enable the Department to exercise a closer supervision over the expenditure incurred or controlled by your Government,

and to maintain a constant comparison between the expenditure and the Budget Estimates, with a view to preventing all excesses over the sanctioned grants; and that this strengthening of the Department, though it will no doubt tend to secure greater regularity in financial matters, must not be regarded as having any bearing on the question whether an independent audit is or is not required.

9. With regard to the system of audit now in force in India, it appears to me that a change might with advantage be made. At present, I believe that the Auditors, as a general rule, are satisfied if expenditure is covered by the orders of the Governor General in Council, and do not inquire whether the Government of India had been authorized to issue orders on the subject without special reference to the Secretary of State, or had referred to him and received his sanction. For the future, however, I desire that the additional duty should be imposed on the Auditors in all Departments of seeing that all expenditure which requires the separate and special sanction of the Secretary of State in Council has been so sanctioned; and that they should be directed not to pass any item of expenditure of this nature until the fact of sanction by the Secretary of State in Council has been duly certified to them. In the case of such expenditure, if the sanction of the Secretary of State has not been communicated to the Auditor, the Audit Office should at once report the fact to your Government. It would then rest with your Excellency's Government to forward such sanction to the Audit Office if it had been already received, or to apply to the Secretary of State for sanction.

10. I am also of opinion that measures should be taken in the Finance Department of your Excellency's Government to ensure that, in all cases of proposed outlay, due attention shall invariably be given to the question whether such outlay does or does not require the special sanction of the Secretary of State. This object would be secured by directing that, in regard to every proposal to incur additional expenditure, a competent officer must certify that it does, or does not, require the previous sanction of the Secretary of State, before such proposal is finally dealt with by your Government. It is also necessary that steps should be taken to insure that any instructions which may have been given by the Secretary of State in particular cases shall not be overlooked; and, when these instructions are of such a nature that they cannot be properly or promptly enforced by the action of the officers of audit, the Finance Department of your Excellency's Government should be required to make such arrangements as will ensure that the orders shall not be liable to be overlooked, owing to lapse of time or changes in the *personnel* of the Finance or other Departments.

11. I request also that it may be regarded as part of the duty of the Auditors to see that the rules prohibiting expenditure without, or in excess of, properly sanctioned estimates are duly observed, and to call attention in their reports to all cases in which they are broken.

12. It should likewise be established, as a rule, that all cases of irregular or unauthorized expenditure which come under the notice of the Auditors, should be reported, from time to time, in a suitable form for the information of the Secretary of State in Council. In any case where your Excellency's Government should decide that an objection has been unnecessarily raised by the Auditor, and that the expenditure in question does not require the separate and special sanction of the Secretary of State, a copy of the correspondence on the subject should be at once forwarded for my information.

13. I trust that these measures may, at least, go some way towards accomplishing the object in view, without impairing your power to take immediate action in cases of emergency. I rely upon the support and co-operation of your Excellency's Government in this important matter, and I shall be glad to receive, at the earliest opportunity, information as to the orders which you propose to issue in consequence of the receipt of this Despatch.

No. 13.

EXTRACT from LETTER from INDIA, April 23, 1889, No. 126.

2. We have the honour to explain that hitherto officers of audit have, as a general rule, passed expenditure on the authority of the Government of India, and without requiring the formal sanction of the Secretary of State even in cases in which it is acknowledged that such sanction is necessary. Recently, in paragraph 9 of Financial Despatch, No 247, dated the 27th September 1888, your Lordship pointed out that this had been the practice hitherto, but directed that the duties of audit officers in this respect should be extended, and that in future an audit officer should require the sanction of the Secretary of State before admitting any expenditure not within the competence of the Government of India to sanction. In pursuance of these orders, we have issued a Resolution,* summarising the established financial rules in regard to the control exercised by the Secretary of State in Council in the matter of sanctioning expenditure, and making it incumbent upon the audit officers to point out any infringement of these rules in future.

No. 14.

DESPATCH to INDIA, dated June 20, 1889, No. 131.

MY LORD MARQUIS,

I HAVE considered in Council your Excellency's Letter, dated the 23rd of April, No. 126, forwarding a Resolution which you have issued, giving a summary of the established rules in regard to the control exercised by the Secretary of State in Council over expenditure in India, and making it incumbent upon your officers of audit to point out any instances in which his sanction, when required, has not been obtained.

2. So far as they go, the Regulations appear to be well adapted for the purpose in view. There seems, however, to be some ambiguity in the last clause, in which it is stated that, "in the cases where an Auditor "raises an objection to expenditure under the instructions now issued, which is not accepted by the "Government of India, the correspondence will be "forwarded for information to the Secretary of State "for India." The duty of Auditor, as such, does not begin till expenditure has already been incurred; and any objection which he may raise under the present instructions must, therefore, be to the fact that it appears to him to have been incurred without the authority, specific or general, of the Secretary of State in Council. As it is important that I should be informed of the working of the machinery now established in its entirety, the fact of the acceptance by your Government of the Auditor's objection does not remove the necessity for a report being made to me. I request, therefore, that it may be made clear that, in all cases where the Auditor has raised such an objection, the correspondence must be forwarded for my information.

3. This leads me to the consideration of the extent to which it is possible to obtain the Secretary of State's sanction formally where it is strictly required by the Acts of Parliament regulating financial responsibility. In a very large class of cases, such as the expenditure on the Army commissariat, the engagement of transport vessels, the payments for transport by land, and numerous other services in which expenditure must be incurred for the daily requirements of the administration, it is impossible to comply literally with the terms of the Act of Parliament,† which says that "the "expenditure of the revenues of India, both in India "and elsewhere, shall be subject to the control of the "Secretary of State in Council." In these cases his control can only be exercised, as hitherto, in a very general manner, by the annual review of the expenditure of the past year, and of that which it is proposed to incur in the current year.

4. At the same time, it is desirable that the Secretary of State's sanction should in each case be formally given to the Government of India's incurring such expenditure without his detailed supervision; and I therefore request your Excellency to consider how far it may be possible to formulate rules for the purpose. Speaking generally, it seems desirable that, whenever delay in the incurring of the expenditure will not be prejudicial, it should be reserved for the Secretary of State's sanction, and that, whenever any body of rules is codified, the code should be also submitted for his approval, care being taken to point out any regulations which have not already been authorized by him.

I have &c.,
CROSS.

No. 15.

LETTER from the GOVERNMENT OF INDIA, August 3, 1889, No. 229.

MY LORD,

WE have the honour to reply to your Lordship's Despatch, No. 247 (Financial), dated the 27th September, 1888, regarding the adoption of measures to ensure the due observance of financial rules, and the prompt report to the Government of India and the Secretary of State of any irregularity or departure from those rules.

2. Your Lordship describes the system in force in the United Kingdom for securing financial regularity by means of the independent examination by the Auditor General, on behalf of the House of Commons, of all the appropriation accounts, and enquires whether a system of that nature could with advantage be introduced into India. Your Lordship also in the latter portion of the despatch gives instructions regarding the procedure to be observed in certain matters connected with the system of audit now in force in India.

3. Before dealing with the despatch under reply, we invite attention to the fact that the question whether it is desirable to introduce into India a system of independent audit, similar to that applied by the Auditor General in the United Kingdom, came under the consideration of the Government of India and the Secretary of State some years ago. It was suggested in 1880 that arrangements for an appropriation audit in India should be made on the model of the system in force in England to which your Lordship refers. This proposal was discussed in the despatches* quoted in the footnote. The result of these discussions was the adoption of the following conclusions as stated in the Despatch from the Secretary of State, No. 103, dated 23rd March, 1882:—

(*a*) that an appropriation audit should be introduced;
(*b*) that test audits should also from time to time be applied to the audits of the original audit officers;
(*c*) that the case of India could not be governed by the rules laid down in European countries, because in India supplies were not voted by Parliament, but were allotted by the Government of India, and that consequently the officer appointed to conduct the appropriation audits must make his reports to the Government of India, the authority primarily interested in seeing that its own orders were duly obeyed, and should not be independent of that authority; and
(*d*) that the proper officer to conduct these audits was the Comptroller General, his position in the service being so high as to render him a thoroughly independent officer, who could be trusted to do his duty independently and fearlessly.

4. Arrangements were made in accordance with these conclusions, the designation of the Comptroller General being altered to "Comptroller and Auditor General," and additions to the Financial Department, costing about Rs. 50,000 a year, being sanctioned to enable that officer to perform efficiently the new duties laid upon him. These arrangements are still in force.

5. We have again, as directed by your Lordship, very carefully considered this important question, and now report the conclusions at which we have arrived.

6. An efficient system of audit must be such as to ensure—

(1) Audit against vouchers;
(2) audit against Budget grant;
(3) audit against application of grant;
(4) audit against sanction;
(5) audit against the powers of sanction of the sanctioning authority;
(6) that all irregular and unauthorised expenditure is brought to notice.

We infer from the terms of your Lordship's despatch that you are under the impression that it may prove beyond our power to secure these objects to the full extent, unless we have recourse to a system of audit described by your Lordship as "independent," and differing from that at present in force in so far as it would be entrusted to officers more completely separated from the administration than those by whom the audit of our accounts is at present conducted.

7. We may, however, before going further, point out that the system of audit which is now in force in India certainly aims at the attainment of all these objects, and that the audit instructions, formulated in the Codes in which the duties of audit officers are stated, are founded upon the six principles which we have just enumerated. It is true that, before the receipt of your Lordship's despatch under reply, the audit in India did not, as a rule, question the authority of the Government of India to sanction expenditure. The supplementary instructions issued in accordance with your Lordship's recent orders have, however, altered the system in this respect, and the audit officers will now require the sanction of the Secretary of State in cases in which the Government of India does not possess powers of final sanction. We shall have occasion to explain the nature of these instructions hereafter.

8. The Indian system of audit has, since 1882, provided—

(*a*) for a regular and systematic audit by the original audit officers of every payment with reference to the principles stated above, subject to the exception stated in paragraph 7: as we have already explained, this exception to the general rule no longer exists;
(*b*) for inspections of audit officers and test audits by Comptroller and Auditor General, the object of which is to ascertain by detailed investigation that the original audit officers have, as a matter of fact, subjected their accounts to the detailed audit (*a*); and
(*c*) for an appropriation audit by the Comptroller and Auditor General.

9. The establishments maintained for the work of audit and account are costly. The number of officers and clerks employed and the annual cost are shown in the following table:—

Department.	Number of Officers.	Number of Clerks.	Annual Cost.
			Rs.
Civil Department - -	52	1,225	18,36,786
Post Office - -	3	514	3,05,956
Military Department -	33	999	15,03,706
Public Works and Telegraph Departments -	73	2,106	23,39,474
Total - -	161	4,844	59,85,922

10. From what we have written above, it will be apparent to your Lordship that provision has already been made for the adequate performance of those duties of audit which you regard as indispensable. We have now to consider whether the officials to whom those duties are entrusted can be fairly described as lacking that independence which, in your Lordship's opinion, has added so greatly to the usefulness of the system of audit carried on in Great Britain on behalf of the House of Commons by the Auditor General.

11. It may be convenient at this stage that we should endeavour to determine the significance which properly attaches to the word "independence" in this connection. Independence in the Department of Audit is, no doubt, to be found in the completest shape wherever the auditing authority is entirely external, not only to the spending department, but to every authority other than that which passes the estimates, and is the ultimate source of sanction to expenditure. Thus the complete "independence" of the English Auditor General, who is absolutely dissociated from the whole of the spending departments, and who is responsible, not to the Government of the day, but to the House of Commons, cannot be questioned. In India the Governor General in Council in the Finance Department takes the place of the House of Commons in respect of the allotment of supplies, and we submit, therefore, that that portion of the Indian Audit Establishment which is directly responsible to our Finance Department is in a position of independence analogous to that of the English Auditor General. There are, however, many degrees of independence—not, perhaps, so complete as that which we have just described, but sufficiently so—to render most unlikely any connivance by the Auditing Department at irregularities on the part of the Department in which expenditure is incurred. It is, we apprehend, with the object of avoiding such connivance,

* Despatch from the Secretary of State, No. 46, dated 27th January 1881. Despatch to the Secretary of State, No. 249, dated 1st October 1881. Despatch from the Secretary of State, No. 103, dated 23rd March 1882. Despatch to the Secretary of State, No. 278, dated 8th September 1882. Despatch from the Secretary of State, No. 401, dated 21st December 1882.

of placing the persons upon whom is thrown the responsibility of checking the expenditure of others in a position relieving them of all obligation to these, and of enabling them to discharge, without fear of consequences on the one hand, or expectations of advantage on the other, the difficult and important task entrusted to them, that the superiority of an entirely independent audit has been so urgently insisted upon.

12. We conceive that the system of audit now in force in India secures, if not with absolute completeness, at all events in a sufficient degree, this element of independence and externality. It is true that the original audit officers of the Post Office, the Military Department, and the Public Works Department are entertained departmentally. But these audit officers are organised in separate departments quite distinct from the spending departments, and are subordinate only to the Director-General of the Post Office and the Government of India in the Military and Public Works Departments respectively. Moreover, the appropriation and test audits of the expenditure of those departments are conducted by the Comptroller and Auditor General, who is in no way subordinate to the executive departments. The audit officers of the Civil Department, who conduct the audit of the general expenditure —that is, of all expenditure which is not incurred in the special departments named above—are absolutely independent of all the various departments whose expenditure they audit, and owe allegiance only to the Finance Department of the Government of India. They are, therefore, in the essential point in which independence in an auditor—that is to say, independence of the executive disbursing authorities—is required, as independent as the Auditor General in England. It should also be borne in mind that, in addition to the appropriation and test audits for which he is responsible, the Comptroller General exercises a general supervision over the whole of the departmental auditors; and, if any irregularity comes under his notice, he reports it to the Finance Department of the Government of India.

13. We believe that the system described above is sufficient to ensure that the orders of the Government of India in regard to expenditure shall be carried out; and that, if the Government of India was the only authority with reference to whose orders audit was required, there would be no hesitation in arriving at the conclusion that the system in force up to the date of your Lordship's despatch of 27th September last was both effective and complete. Your Lordship has, however, pointed out that the Government of India is not the only authority whose orders have to be considered. The control of the finances of India is entrusted by Parliament to the Secretary of State in Council, and all financial authority exercised by the Government of India is derived from him in virtue of either express or implied sanction.

14. Till recently it has been the recognised practice for the audit officers as a general rule, though not invariably, to accept the authority of the Government of India as final in matters of expenditure, and to leave to the Government of India the responsibility of obtaining the sanction of the Secretary of State when necessary, and of conforming to his orders. We have now, in accordance with the instructions contained in paragraph 9 of your Lordship's despatch, issued orders that audit officers shall require the sanction of the Secretary of State before admitting any expenditure which is not within the competence of the Government of India to sanction. The Resolution containing these orders, and defining the nature of the expenditure in question, forms one of the enclosures* of this despatch.

15. We have also issued instructions in our Finance Department, in accordance with paragraph 10 of your Lordship's despatch, that special attention shall be given in all cases of proposed outlay to the question whether such outlay does or does not require the sanction of the Secretary of State. The Deputy Secretary, Under Secretary, or Assistant Secretary, in the Finance Department is now required to certify in every such case whether the sanction of the Secretary of State is required. The entry of this certificate in the papers submitted for the orders of the Government practically precludes the possibility of the point being overlooked in passing orders.

16. These changes are in our opinion sufficient to secure compliance with your Lordship's recent orders, and to render the existing audit system as efficient for the purpose of ensuring compliance with the instructions of the Secretary of State as it previously was for ensuring that the orders of the Government of India were enforced.

17. We are therefore of opinion that the introduction into India of a system of the nature described by your Lordship is not necessary. The existing system of audit is, we consider, well adapted to secure all the objects for which it is suggested that the appointment of an independent auditor might be advantageous. Such an officer would merely do over again the same work which the existing audit officers perform; he would conduct his audit on the same principles as are prescribed for the audit now carried out, and he would audit with reference to the orders of the same authorities as those to whom the existing audit officers are, by the rules now in force, required to look for final authority in matters of expenditure—namely, the Government of India and the Secretary of State. No principle could be laid down or instruction issued for the guidance of the independent auditor which would not be equally applicable to the audits carried out under the system now in force. The original audits under that system are, with the exceptions stated in paragraph 12 above, completely independent in the essential point in which independence is necessary; and the test and appropriation audits are, in the same sense, independent without any exception. If the independent auditor, regarding whose appointment your Lordship asks for our views, were required to audit all the accounts in the same detail as the original auditors, the cost of the arrangement would be very large, as a reference to the figures in paragraph 9 above will show; and he would merely be repeating the process which the original auditors of the existing system carry out. If, on the other hand, the intention is that he should merely perform test and appropriation audits, the cost would be less, but still considerable; and he would in this case merely be repeating a duty which is now discharged by the Comptroller and Auditor General. No doubt there will be less risk of any error remaining undetected if two establishments, working independently of each other, are required to audit the same accounts. But the increased cost involved in such an arrangement would be out of all proportion to the advantage gained, and the financial position of India is not such that we can recommend the undertaking of a service of which the usefulness is doubtful. Apart from the question of cost, we feel bound to deprecate the proposal as being, for the reasons already stated, unnecessary.

18. We now proceed to state the action we have taken on the latter portion of your Lordship's despatch.

19. The instructions contained in paragraph 9 and in the first part of paragraph 10 of your Lordship's despatch regarding the necessity of the sanction of the Secretary of State in certain cases have been carried into effect in the way described in paragraphs 14 and 15 above.

20. To secure the observance of the instructions given in the latter part of paragraph 10 of your Lordship's despatch, we have opened a register in the office of the Finance Department in which are entered special orders of the Secretary of State connected with expenditure, when the orders are of such a nature that they cannot be properly or promptly enforced by the audit officers. The orders regarding this register prescribe a procedure under which every despatch of the Secretary of State for India containing a special order is re-submitted for the orders of the Government of India, either (*a*) on a particular date, if the order is one which can be carried out by a fixed date, or (*b*) periodically, usually twice a year, if the order is one the execution of which depends on some contingency.

21. In paragraph 11 of your Lordship's despatch, it is requested that "it may be regarded as part of the "duty of the auditors to see that the rules prohibiting "expenditure without or in excess of properly sanc- "tioned estimates are duly observed, and to call "attention in their reports to all cases in which they "are broken." We have understood the words "properly sanctioned estimates" in this paragraph to include both sanctioned Budget grants and sanctioned estimates for a particular work. The second of these practically occurs only in the Public Works Department and the Military Works Department.

22. We have carefully examined the existing rules in this matter, and find that in all Departments the duties which your Lordship directs that auditors shall be required to discharge have been very distinctly laid upon them by the rules in force. We annex as an

* For a revised copy of this Resolution, see No. 21.

enclosure* a short abstract of the very numerous rules on the subject in force in the Civil Department, the Military Department, and the Public Works Department.

23. In order to secure more careful observance of the general rule, which has been long in force, that, save for exceptional reasons, no expenditure should be proposed or sanctioned unless provision has been made for it in the estimates of the year, we have issued a Resolution requiring every proposal for increased expenditure to be accompanied by a statement showing how the expenditure is to be provided for with reference to the Budget grant of the year. A copy of that Resolution† is enclosed.

24. With reference to paragraph 12 of your Lordship's despatch regarding the report of cases of irregular or unauthorised expenditure to the Secretary of State in Council, we invite attention to the last paragraph of the Resolution of 25th March mentioned in paragraph 14 above. In accordance with your Lordship's instructions, we shall report every case in which an auditor challenges the authority of the Government of India to sanction any expenditure if his objection is not accepted by us as valid. Your Lordship will have observed that we have already carried these instructions into effect in some instances. We may refer to our Despatches No. 174, dated 15th June, and No. 182, dated 22nd June, as examples of the effect of your Lordship's orders.

25. After a careful consideration of the whole question, we are of opinion that the existing establishments, working in accordance with the audit rules contained in the Account Codes of the several Departments, supplemented by the instructions issued in pursuance of your Lordship's recent orders and explained in this despatch, are sufficient to secure an efficient and satisfactory system of audit; and we trust that your Lordship will be able to express concurrence in this opinion.

Enclosure 1 in No. 15.

See revised rules in No. 21.

Enclosure 2 in No. 15.

AUDIT RULES regarding EXPENDITURE without or in excess of SANCTIONED ESTIMATES.

A.— Civil Department.

The Civil Account Code contains the following among other rules :—

(*a*) "The duty of an auditor is shortly as follows :—
I.—'As regards payments, to see (*a*) that the expenditure . . . . has been provided for in the annual estimates.'"

(*b*) "Expenditure which cannot be met from the grant made at the beginning of the year for the service of the Department to which it appertains requires *ipso facto*, and apart from all other rules, the sanction of the Government."

(*c*) "The want of provision in the annual grants for any sanctioned expenditure should be promptly represented to the Government of India or the Provincial Government, as the case may be."

(*d*) In regard to contingent expenditure, the rules of the Civil Account Code require a monthly examination of the rate of expenditure, and a report of the fact if that rate indicates a probability that there will be an excess over the grant for the year.

(*e*) It is also laid down that—
"It is a very important part of an Accountant General's duty to warn the Local Government immediately of the first appearance of any excessive proportionate outlay under any grant; and when the monthly abstract exhibits such excess, the Government of India expects always to receive a specific assurance that the fact has not escaped the notice of the Accountant General, and that he has informed and warned the Local Government or the Department concerned if the Administration be Imperial."

B.—Military Department.

The rules in force provide that—

(*a*) The estimate is the basis of the Examiner's audit, and it is their duty to disallow any charge not provided for in the estimate, so that no expenditure may be authorised in excess of that allotted to the several services specified in the estimate.

(*b*) The Controllers are required to review the actual expenditure at the time it is incurred, at the end of the half year, and again at the end of the year, with reference to the sanctioned estimates. They are prohibited from passing in audit any expenditure which is not provided for in the Budget Estimates without the special orders of Government. They are also required, as soon as it is ascertained that the total provision under any grant of the Military Budget Estimate is likely to be exceeded, to report the fact to the Government, showing the amount and the cause of such excess, and whether it can be met from savings under any other grant.

(*c*) Under rules issued in 1879, the Military Department of the Government of India had power to sanction during the year expenditure in excess of the grant for the particular service, provided the total Military grant was not exceeded; but this authority has now been curtailed, and the sanction of the Finance Department is required to any excess over grant in the case of any of the minor heads of the Military estimates for all India.

(*d*) It is laid down that the sanctioned estimates form the limits within which Military expenditure may be incurred; that these limits are absolute, and may not be overpassed under any circumstances without the previous sanction of the Government of India. These orders apply not only to the estimate as a whole, but to the grant for each minor head in each local estimate.

(*e*) It is also laid down, in the words of the rule of the Civil Department, that "expenditure " which cannot be met from the grant made " at the beginning of the year for the service " of the Department to which it appertains " requires *ipso facto*, and apart from all other " rules, the sanction of the Government of " India."

C.—Public Works Department.

The following rules are in force :—

(*a*) Examiners are required to regulate the issue of letters of credit (on which alone Public Works officers can obtain funds for expenditure), so as to prevent the total grant and, as far as possible, the grant for each particular service being exceeded.

(*b*) Examiners are forbidden to pass in audit any expenditure for which provision has not been made in the Budget grant of the year, and are required to report excesses over the Budget grant to the Local Government. Specific appropriation from the Budget grant is required to be made for each original work or repair.

(*c*) Examiners are required also to audit expenditure on any particular work against the duly sanctioned estimate (as distinguished from the Budget grant of the year) for that work, and to report any excess when of a greater amount than Rs. 500 in some cases, or of a greater amount than 5 per cent. of the original estimate in others. All tendency to excess over estimate is brought to notice of the superintending executive authorities as it occurs.

Resolution.—By the Government of India, Department of Finance and Commerce.

Read again—

Resolutions in this Department, Nos. 1959 and 1661, dated, respectively, the 31st July 1873 and 18th June 1884.

Read also the following extracts from recent Despatches of the Secretary of State for India:—

Paragraph 8 of Despatch No. 115 (Military), dated May 17, 1888.

Your Government will, I am sure, agree with me in holding it to be a principle of the first importance that, except under the stress of quite exceptional or unforeseen circumstances, no expenditure shall be made during any year which has not been already provided for in the regular estimates for that year; and accordingly, even had the need of the proposed general increase to the Department been more conclusively established than I hold it to be, I should have been unable to accord my sanction to the introduction of a supplementary estimate for the purpose.

Paragraph 32 of Despatch No. 190 (Financial), dated July 26, 1888.

It is the standing order, as embodied in the Civil Account Code, that "save for exceptional reasons, "expenditure for which no provision has been "made in the estimates of the current year should "not be proposed, and cannot be sanctioned." I am of opinion that this rule should be enforced much more strictly than seems to be the practice in dealing with applications for an increase of expenditure during the current year; that, in the really exceptional cases where it has to be incurred, the Financial Department, if able to do so, should especially report that the expenditure can be met by savings in other directions, or from the surplus provided in the Budget; and that, if this is impracticable, your Government should, before authorising the expenditure, consider the question of the manner in which the cost is to be defrayed, before submitting the proposals to the Home Government for sanction.

RESOLUTION.—In the Resolutions read above, it was decided that, save for exceptional reasons, no expenditure should be proposed or sanctioned unless provision had been made for it in the estimates of the year; and Local Governments and Heads of Departments were requested to state distinctly, in all applications for sanction to expenditure, whether provision for the proposed charge had or had not been made in the Budget Estimate of the year, and, if not, whether it could be met from savings in the existing grants. The Secretary of State for India has drawn attention to these instructions in the extracts from the Despatches quoted above; and, in view of the necessity for their strict application, the Governor General in Council directs that these extracts shall be communicated to, and the instructions in them carefully observed by, Local Governments and Heads of Departments.

ORDER.—Ordered, that the Resolution be communicated to the several Departments of the Government of India; to the several Local Governments and Administrations; to the Heads of Departments under the Department of Finance and Commerce; to the Comptroller and Auditor General; and to the Accountants General and Comptrollers for information and guidance.

RESOLUTION.—The Governor General in Council now directs that every proposal for increased expenditure, which is submitted for the sanction of the Government of India, shall be accompanied by a statement in the following form:—

Major and Minor Heads of Account under which the proposed expenditure will fall.	Sanctioned grants for Major and Minor Heads.	Recorded outlay against those grants by latest available accounts.	Proposed reductions in sanctioned grants from which the expenditure will be met.	Explanation, if no re-appropriation is considered possible. In such cases the urgency and necessity for the outlay must also be explained.

Note.—In sanctioning, the reduced grants from which transfers are made will be stated for the information of the Audit Officers.

ORDER.—That this Resolution be communicated, for information and guidance, to all Departments of the Government of India, to all Local Governments and Administrations, to the Commissioner of Northern India Salt Revenue, the Director General of the Post Office of India, the Head Commissioner of Paper Currency, the Mint Masters, Calcutta and Bombay, the Comptroller and Auditor General, and to all Accountants General and Comptrollers.

L. P. SHIRRES,
Officiating Under-Secretary to the Government of India.

No. 16.

LETTER from the GOVERNMENT OF INDIA, September 7, 1889, No. 279.

MY LORD,

WE have the honour to acknowledge receipt of your Lordship's Despatch, No. 131, dated 20th June, 1889, on the subject of the control over expenditure in India to be exercised by the Secretary of State for India in Council.

2. In paragraph 2 of the Despatch, your Lordship requests that the papers shall be sent to you in all cases in which the auditor raises an objection to expenditure sanctioned by us, and not merely, as provided in the rules, in those cases in which we do not admit the soundness of the objection. In respect to this matter there appears to be some misapprehension. If we admit the soundness of the objection, the correspondence will be forwarded to your Lordship as a matter of course in order to obtain the necessary sanction; if we do not admit the soundness of the objection, the papers must, under the rules, be forwarded for your Lordship's information. Consequently the papers must be sent to your Lordship in every case in which the auditor raises an objection of the nature indicated, and in this way your Lordship's wishes will be completely met.

3. In paragraphs 3 and 4 of the Despatch, your Lordship requests us to consider how far it may be possible to frame rules under which the Secretary of State may formally give his sanction to expenditure being incurred by the Government of India without his "detailed supervision," in the large class of cases in which his control over the expenditure of the revenues in India can, owing to the impossibility of a literal compliance with the terms of the Act of Parliament (21 and 22 Vict., cap. 106, section 41), only be of a general nature.

4. In deciding whether or not the sanction of the Secretary of State in Council is required to any expenditure of public money in India, the presumption hitherto acted on has been that the Secretary of State has delegated the authority entrusted to him over expenditure in India to the Government of India, except in cases where he has, by special order or by established practice, reserved to himself the exercise of that authority; all the proceedings of the Government of India under this delegated authority are, of course, subject to the general control of the Secretary of State in Council; and cases of an unusual nature, involving considerable expenditure, in regard to which no precedents exist, are also referred for the previous sanction of the Secretary of State in Council. In other words, the statutory control has been understood to be general, except in the cases where the Secretary of State has decided that it must be special. There is no difficulty under this system in deciding what cases should be referred to the Secretary of State in Council. The proposal now made seems to be that this presumption shall be reversed, and that the Government of India shall be required to obtain the previous sanction of the Secretary of State to any expenditure which does not fall into a class in regard to which the Secretary of State has specifically delegated his authority. We have given our careful consideration to this proposal, and we have come to the conclusion that it will not be practicable to frame rules to give effect to it, without giving rise to grave inconvenience, and in some cases altogether preventing the Government of India from adequately discharging its duties. On the other hand, the system hitherto in force, which is the outcome of long experience, has in our opinion worked satisfactorily. If it is open to criticism, it is, we think, only because it sometimes necessitates references to the Secretary of State in trivial and unimportant matters, such as questions relating to pensions of insignificant amount not strictly admissible under rule, which might well be left to the discretion of the Government of India or of Local Governments.

5. We desire, moreover, to observe that the test which it is suggested should be applied in order to determine whether the previous sanction of the Secretary of State in Council should be required to any expenditure, namely, the urgency of the expenditure in point of time, would not, if applied alone, prove satisfactory. There are other factors to be taken into account, such as the importance of the question at issue, the extent to which local knowledge is required to ensure a proper decision, and the advantages which are secured by the increase of local responsibility in financial matters. The policy of the Government of India has for many years been to confer extended financial responsibilities on local bodies and Local Governments, mainly with the object of securing economy; and the experience of the last twenty years justifies the belief that it has been successful in this important respect. The limitation of the powers entrusted to Local Governments to expenditure in respect of which delay would not be prejudicial would involve an almost complete abandonment of all the reforms that have their foundation in decentralisation, and the reversal of the financial policy which has, with practically complete unanimity, been pronounced to be the most suitable for the circumstances of India.

6. For these reasons we are altogether opposed to any change in the principle hitherto adopted for the purpose of determining whether or not the previous sanction of the Secretary of State in Council is required in any particular case. Our resolution of the 25th March was designed to give effect to that principle. The rules on the subject contained in that resolution may probably be found to require modification and addition after some experience of their application; and, if so, we shall be careful to inform your Lordship from time to time. But we trust that your Lordship will allow the general character of the rules, and the presumption on which they proceed, to remain unaltered.

7. With reference to the concluding sentence of the Despatch under reply, we have the honour to say that we shall always forward to your Lordship any authoritative Code of Rules which we may issue, and point out any rule which requires your Lordship's sanction. It has, in fact, been our practice to obtain sanction to any such rule before inserting it in any of our Codes; and if in any case this has not been done, the omission has been due to oversight. As an instance of the procedure usually adopted, we invite your Lordship's attention to our Despatch, No. 251, dated 17th August, 1889.

We have, &c.

No. 17.

DESPATCH to the GOVERNMENT OF INDIA,

November 7, 1889, No. 250.

My Lord Marquis,

Your Excellency's letters dated the 3rd of August and the 7th of September last, Nos. 229 and 279, relating to the due observance of financial rules, and the exercise by the Secretary of State in Council of control over expenditure in India, have been considered by me in Council.

2. You say that hitherto the presumption acted on has been that the Secretary of State has delegated the authority entrusted to him over expenditure in India to the Governor General in Council, except in cases where he has, by special order or by established practice, reserved to himself the exercise of that authority; and, while all the proceedings of your Government are under the Secretary of State's general control, cases of an unusual nature, involving considerable expenditure, in regard to which no precedents exist, are referred to this country for previous sanction. Your Excellency is opposed to any change of this system, and you trust that the practice will remain unaltered, and that it will not be deemed necessary to appoint an Auditor independent of your Government.

3. In order to judge whether such a course is consistent with the terms of Act 21 & 22 Vict., c. 106, s. 41, by which "the expenditure of the revenues of "India, both in India and elsewhere," is declared to "be subject to the control of the Secretary of State in Council," I have referred to the enactments in force prior to 1858; and I find that, so long ago as 1793, the Board of Commissioners for the Affairs of India was, by the Act 33 George III., c. 52, s. 9, "invested with "full power and authority to superintend, direct, and "controul all acts, operations, and concerns, which in "anywise relate to or concern the civil or military "government or revenues" of the British territories in India. At that time the interval that necessarily elapsed between the report of proceedings in India and the receipt of the orders issued in England in consequence thereof, made it impossible that the control to be exercised could have been otherwise than general. Since then, the position has been materially changed by the improvement of communications with India; but I see no reason to think that the intention of Parliament in enacting the clause of the Act of 1858, was to render that control necessarily specific as regarded expenditure in India. I am, therefore, willing to accept the construction placed by your Excellency on the meaning of the Act; and I proceed to consider whether the practice existing gives the Secretary of State sufficient control.

4. The creation of a fresh salary, or the increase of that which is already attached to an appointment, if exceeding specified limits, must receive the Secretary of State's sanction; the rules under which pensions can be granted, leave is permitted, and acting allowances are regulated, have been for many years collected into Codes, and more recently those relating to travelling allowances have been amalgamated; and the whole have been lately re-arranged in a single volume, entitled the Civil Service Regulations. Similarly, those relating to the army are comprised in the Army Regulations. You state that, when any alteration of these rules is requisite, it is always transmitted to me for sanction, unless the omission has occurred through oversight.

5. In the expenditure on Public Works there are special limits within which outlay may be sanctioned by the Local Governments and Administrations, and more extended limits applicable to your Government; and, if it be desired to exceed the latter, the previous sanction of the Secretary of State in Council must be obtained.

6. In order to enforce the careful adherence to these rules, they have recently been summarized, for the information of the officers of audit, in a Resolution of your Government, dated the 25th of March last, which accompanied your letter of the 3rd of August, No. 229.* These officers are specially instructed to point out any case in which expenditure may have been incurred, for which the sanction of the Secretary of State should have been obtained; provision has been made for the registration of all special orders relating to expenditure; and it has been laid down that, with any proposal for an increase of charge, it shall be shown how it is intended to meet the cost with reference to the Budget grants. These orders appear well calculated to attain the object of financial regularity; and I request that instructions may be given for their careful observance in all Departments of the Government.

7. It is with much pleasure that I express my sense of the cordial efforts made by your Excellency's Government to meet my wishes in the direction of enforcing proper control over the expenditure; and, in the hope that the more stringent rules now laid down will, to a great extent, obviate laxity, and that, if errors should occur, they will be promptly brought to the notice of the Government, both in India and in England, through the report of the Comptroller and Auditor General, I concur in your Excellency's view that it will be better, for the present, at any rate, to allow the existing system, as recently modified, to continue, in order that I may learn by experience whether the orders that I have given are sufficient to secure to the Secretary of State in Council the power of efficient control which it was intended by Parliament that he should exercise.

I have, &c.

LETTER from the GOVERNMENT OF INDIA.
May 13, 1890, No 136.

My Lord,

In paragraph 6 of our Despatch, No. 279, dated the 7th September 1889, we stated that, if the rules contained in our Financial Resolution, No. 1579, dated the 25th of March 1889,† should be found, after experience of their working, to require modification or alteration, your Lordship would be duly informed.

2. Since the rules came into operation, certain points in which they were defective have been brought to our notice, and we have now issued revised rules in Resolution No. 2232, dated 7th May 1890, of which a copy is enclosed.‡

3. We have not included in the Resolution any alteration of existing practice, but have merely defined more clearly what the existing orders are. But with our Despatch, No. 124, dated the 29th April 1890, we forwarded for approval, a set of rules on the subject of the grant of fees, rewards, and honoraria to Government servants. Should the proposals in that Despatch receive your Lordship's sanction, it will be necessary to make an addition to the rules contained in the Resolution now forwarded.

We have, &c.

No. 19.

DESPATCH to the GOVERNMENT OF INDIA,
July 3, 1890, No. 132.

My Lord Marquis,

I have considered in Council your letter dated the 13th of May, No. 136, forwarding a copy of a Resolution, dated the 7th of May 1890, No. 2232, in which are laid down revised rules for the guidance of audit officers in India.

2. I request that you will issue such instructions as may appear to you to be necessary to ensure that no modification of, or addition to, the Regulations and Codes referred to in Clause V. of the Rules, which is of a nature to require my sanction, shall be made without previous reference to me.

3. In my Despatch of the 26th ultimo, No. 124, I sanctioned the rules for the grant of fees, rewards, and honoraria to Government servants, which were forwarded with your Letter of the 29th of April, No. 124; and you will therefore make such additions as may be necessary to the Rules transmitted with your Letter under reply.

I have, &c.

No. 20.

DESPATCH to the GOVERNMENT OF INDIA,
July 14, 1892, No. 127.

My Lord Marquis,

With reference to the recent correspondence, under which an annual charge of Rs. 25,000 has been fixed as the limit up to which a revision of establishments may be sanctioned by your Government without the authority of the Secretary of State in Council, your Excellency, in a letter dated the 7th of June, No. 124, asks for an assurance that cases in which the scale and remuneration of the establishment are determined, subject to your sanction, by the Courts of Law, may be viewed as not falling within the general regulation.

2. I am not disposed to think that the mere fact that the High Courts are empowered, by an Act of the Indian Legislature, to make rules under which expenditure may arise if approved by your Government, is sufficient to withdraw such cases from the standing rule requiring submission to the Home Government; but, whn the burden falling on the Indian revenues, after allowing for the receipt of fees, does not exceed the specified limit, I have no objection to your Excellency's proposal being adopted.

I have, &c.
CROSS.

No. 21.

Resolution by the Government of India, Finance and Commerce Department, dated 4th March, 1893, No. 916.

The Governor General in Council is pleased to lay down the following revised rules in supersession of the rules in the Resolution of 7th May, 1890:—

I. An audit officer, before admitting in audit any charge against the public revenues which requires the sanction of the Secretary of State, must satisfy himself that that sanction has been accorded either by general or by special order of the Secretary of State. The cases in which that sanction is necessary are stated in the following rules: for the admission of any charges which are not stated in these rules to require the sanction of the Secretary of State, the authority of the Government of India (or, in classes of cases for which the Government of India has delegated its powers to Local Governments,) is sufficient.

II. In these rules the word salary includes all payments to officers from general revenues or from local funds administered by Government, whether in the nature of fixed allowances, or of fees, rewards, or honoraria.

III. The sanction of the Secretary of State is required to the following :—

(1.) The creation of an appointment of which the salary exceeds Rs. 3,000 a year, whether permanently or temporarily. But in the case of a temporary appointment the sanction need not necessarily be obtained previous to the appointment taking effect.

(2.) The raising of the salary of an officer or of a sanctioned appointment to an amount in excess of Rs. 5,000 a year, or increasing a salary which is already in excess of that amount, whether by the grant of increased fixed allowances, or temporarily by the grant of fees, rewards, or honoraria.

(3.) All orders involving expenditure for which the Civil Service Regulations or other authorised Code specifically declare that the sanction of the Secretary of State is necessary.

(4.) Revisions of establishment which involve additional expenditure of more than Rs. 25,000 a year. In the case of establishments such as process-serving establishments, the scale and remuneration of which are determined by Courts of Law under rules having the force of law, the sanction of the Secretary of State is not required under this clause, unless the net extra expenditure involved, after allowing for the receipt of fees, exceeds Rs. 25,000 a year.

IV. The following are exceptions to the preceding rule; for them the sanction of the Government of India is sufficient.

(1.) The grant of travelling and conveyance allowances.

(2.) The grant of deputation allowances, that is of allowances in addition to other emoluments to officers placed on deputation, as defined in Chapter IV. of the Civil Service Regulations.

(3.) The grant of house-rent allowances or of free quarters.

(4.) The grant of allowances to Civil surgeons for charge of railway employés.

V. In applying these rules, audit officers may assume that all the provisions of the Civil Service Regulations, the Indian Army Regulations, the Public Works Code, the Forest Code, and any other authorised Code have received the sanction of the Secretary of State in all cases in which that sanction is necessary. They may, therefore, admit without requiring the sanction of the Secretary of State any pensions, acting allowances, or other allowances, which are admissible under the rules of those Codes. Any allowances which are in excess of those admissible under those Codes will require the sanction of the Secretary of State if they come within the terms of Rule III. above.

VI. Audit officers may also assume that any general sanctions issued before 1889 (such, for example, as the orders granting personal allowances to military officers in the police in some provinces and the rules under which rewards are granted to officers for passing language examinations) had duly received the Secretary of State's sanction when that is necessary, although under the procedure in force up to that year the orders were communicated to audit officers on the authority of the Government of India only.

VII. The following Rules are special for the Public Works Department:—

(1.) No outlay shall be charged to loan funds unless the Secretary of State has sanctioned the work as one which may be constructed from such funds.

(2.) In the case of construction of works charged to revenue, the sanction of the Secretary of State is required to any work of which the estimate of cost exceeds—

(*a.*) Rs. 10,00,000 when provision for establishment and tools and plant is not included; and

(*b.*) Rs. 12,50,000 when it is included.

(3.) When the estimate for construction of a work either from loan funds or revenue has been sanctioned by the Secretary of State, the Government of India can sanction outlay in excess of original sanctioned estimate up to an amount 10 per cent. in excess of the estimate, or Rs. 12,50,000, including establishment and tools and plant, whichever is less; but any excess over a revised estimate sanctioned by the Secretary of State can be sanctioned only by the latter authority.

(4.) For the purpose of determining whether the sanction of the Secretary of State is necessary under clauses (2) and (3) of this rule, a group of works which form one project shall be considered as one work, and the necessity for obtaining sanction to a project is not avoided by reason of the fact that the cost of each particular work in the project is within the powers of sanction of the Government of India.

The foregoing clause does not apply in the case of railway or irrigation projects, the construction estimates of which have been closed, and further capital outlay on which is being incurred under the Rules for open capital expenditure (*vide* Public Works Department Code, Volume II.—xv.—156 and 181 B. and Volume IV.—iii.—5). The Secretary of State's sanction is not required in cases where the aggregate sanctions accorded under the open capital rules exceed 12½ lakhs, but only when the estimated cost of any one work exceeds the limit laid down in Rule VII. (2).)

(5.) In the case of railways the Government of India can only sanction, when the estimated cost is less than Rs. 12,50,000 and charged to Revenue, a short addition to or extension of an existing line plainly required to supply needful convenience to a traffic already established on a local feeder line, which is not likely to form a portion of any scheme of through communication. The sanction of the Secretary of State is necessary when the line to be constructed, however short, involves a possible extension, the general policy of which is a matter for the deliberation of the Secretary of State in Council.

VIII. Any objection raised under these Rules to any order issued by the Government of India will be reported to the Secretary of State for information if the objection is overruled by the Government of India, and for the required sanction if the objection is not overruled. The Military and Public Works Departments of the Government of India must, therefore, refer any such objection to the Finance Department before disposing of it.

ORDER.—Ordered, that this Resolution be communicated to all Local Governments and Administrations; to all Departments of the Government of India; to the heads of Departments subordinate to this Department; to the Comptroller and Auditor General; and to all Accountants General and Comptrollers.

PROVINCIAL FINANCE.

APPENDIX No. 3.

Paper handed in by the Financial Secretary, India Office.

By "Local Governments" is meant the Governments of the respective Provinces of India, e.g., the Governor of Bombay in Council, the Lieutenant Governor of the North-Western Provinces and Oudh, the Chief Commissioner of Burma. The term "Province" includes the Presidencies of Madras and Bombay.

1. In the annual accounts of the Government of India, the income and expenditure under most of the main heads are divided into two portions, viz., "Imperial" and "Provincial and Local." This division does not indicate that the revenue raised, and the work done, by the Government of India and the Local Governments respectively are distinct and separate from one another in the same way, as, for example, the revenue and the work of local authorities in England are distinct from, and independent of, the Imperial Government. There are, indeed, in India, as in England, local bodies, such as port trusts and municipalities, which are not included in the Imperial financial and administrative system. But the detailed accounts of these bodies are omitted from the Indian Budgets and Accounts of Revenue and Expenditure, being merely mentioned in subsidiary statements. The "Provincial" income and expenditure shown in the yearly statements of the Government of India are not separate from, they are a specified part of, the Imperial resources, set aside to be realised by the same authority as realises the Imperial income, and under the same system, and to be devoted, though under different control, to similar purposes, and, in many cases, towards the maintenance of the same establishments.

2. The system under which the Government of India now transfers to the Local Governments the responsibility for collecting, and the right of spending, a large proportion of its own revenues, was first inaugurated by Lord Mayo's Government in 1871. Before that time the Government of India had exercised sole control over the entire Imperial revenues, and had been alone liable for all the demands that could be made thereon. The Local Governments, with the exception of Bombay, which raised a considerable revenue for local purposes, had to appeal to the Government of India for the means wherewith to satisfy any local needs that might arise, and had for their guidance in the preparation of their budgets no authoritative ruling as to the limits within which the expenditure on each department in each province must be kept, and each one asked for the sums that it thought, might be expended so as to improve administration. The Government of India, on the other hand, which was "not in a position to understand fully local requirements," and did not have "the "knowledge necessary for the successful development "of local resources," had to apportion its resources as best it might to meet the demands of the Local Governments. The Local Governments were thus "liable, in their anxiety for administrative progress, "to allow too little weight to fiscal considerations;" while the Government of India was not always able, as it admitted, "to distribute satisfactorily the resources actually available."

See Lord Mayo's Minute, presented to Parliament 15th February 1871. Lord Mayo's Minute, para. 6.

Lord Mayo's Minute, para. 5.

Lord Mayo's Minute, para. 2.

3. Lord Mayo's Government, therefore, determined, in order to remove the necessity for the annual grant by the Government of India of an assignment for each department of administration in each Province, to hand over to the Local Governments the financial responsibility for those services in the discharge of which they were especially interested, and the expenses of which were especially liable to increase. With this object in view, it entrusted to each Local Government the responsibility of meeting, from a fixed permanent grant, the expenses of the services included under the heads of Jails, Registration, Police, Education, Medical Services, Printing, Roads, Miscellaneous Public Improvements, and Civil Buildings. The amount of the permanent grants was Rx. 4,688,711, or about 7 per cent. less for the whole of India than the assignments that had been made for these purposes in the last year of the old system.

Lord Mayo's Minute, para. 11.

Financial Statement for 1877-78, p. 135.

The Government of India undertook to maintain the grants at the same amount, unless there should occur "some fiscal misfortune, such as a heavy loss in the "opium revenue, or national disaster, such as war or "severe famine," and, "in any case, not to reduce "them without previous consultation with the Local "Governments."

Lord Mayo's Minute, para. 17.

Lord Mayo's Minute, para. 18.

Each Local Government was allowed to distribute at its discretion its own share of the permanent grant among the different departments for which it was made responsible; and any portion of a grant that was not spent in any year did not lapse to the Government of India, but remained at the disposal of the Local Government that had economised it. The method of carrying on each department, so far as it was not prescribed by laws, despatches from the Secretary of State, or rules of the Government of India, was left generally to the Local Governments. It was provided that they were to maintain existing lines of through communications; and restrictions were placed on their powers in respect of the creation of appointments and of grades of officers, the alteration of scales of salary, and certain other matters.

Lord Mayo's Minute, para. 21.

4. In the financial statement for 1877–78, the first delivered in the Council after the introduction of the new system, the Finance Minister, Sir John Strachey, in describing the changes that had been made, claimed that they had been extremely successful both as financial and administrative measures;* and announced that the Government intended to carry them farther, and to transfer to the Local Governments the financial responsibility for other services, the cost of which had hitherto been met from general revenues. The services so transferred were those connected with Land Revenue, Excise, Stamps, General Administration, Stationery, and Law and Justice, all, in fact, except those for which the Supreme Government was prevented by some special reason from transferring the financial responsibility.

Financial Statement for 1877-78 p. 13*.

5. The Local Governments did not receive for the performance of these newly transferred services, as they had for the services imposed on them by Lord Mayo, merely a lump sum from Imperial revenues. The opportunity was seized to make them responsible for the efficient collection of revenue as well as for its economical disbursement. The only source of revenue that had been transferred to the management of the Local Governments by Lord Mayo, was the departmental receipts of the departments that they managed; for the rest of the money that they spent, they depended on the permanent grants assigned to them. Thus, while a direct interest had been given to them in distributing their resources well, and in spending them economically, they had no such interest in the collection of the revenue; and, meanwhile, the Excise and Stamp duties were notoriously evaded, and the Government suffered, through careless collection of revenue, a loss of which the amount was, of course, unknown, but which was, in the opinion of the Finance Minister, "very large."

Financial Statement for 1877-78 p. 137.

The Government of India, therefore, determined to give to the Local Governments, the servants of which had always had the duty of collecting the revenue, an interest in seeing that that duty was well discharged, and that the revenue was collected in full. This determination it carried out by assigning to the Local Governments, for the discharge of the services newly imposed on them, not an increase in their permanent grants, but a share in the revenue realised under certain heads in their respective provinces. To the North-Western Provinces, for example, they assigned the revenues derived from Excise, Stamps, Law and Justice, collections from certain estates, and some miscellaneous items, on condition that the Supreme Government should take half of any surplus that might be realised over the specified amount that these sources were estimated to yield, and should bear half of any deficit. The Local Governments, however, were not invested with any power of imposing fresh taxation, of undertaking any new general service, of

* The following figures show the fluctuations in the charges on account of the transferred services:—

	Rx.	
1863-64	5,112,000	
1868-69	6,030,000	
1870-71 (last year of old system)	5,197,000	(reduction effected after determined efforts).
1875-76	5,305,000	

Financial Statement for 1877-78, *p.* 135.

The growth of expenditure under the new system took place entirely in Educational and Medical Services (*Ibid.*, p. 136).

abolishing or reducing the pay and allowances of any appointment with a salary of more than Rs. 250 a month, or of making any change in the system of revenue management, or in the form or procedure of the public accounts, without the sanction of the Government of India. They were required to keep the Governor General in Council, in the several departments, fully informed of their executive and financial proceedings. The position that the Government of India intended to take up with regard to the details of provincial finance was expressed in the following words:—"The Governor General in Council will not "relinquish his general powers of supervision and "control in any department, but his Excellency will, "as far as possible, avoid interference with the details "of the administration of the transferred revenues "and services, and any embarrassment of the provincial "finances."

Proceedings of the Government of India Financial Department, Accounts and Finance, April 1877, pp. 257-260. Resolution No. 1,709 of 22nd March 1877.

6. Besides transferring to the Local Governments the responsibility for the realisation of a portion of the revenue, the Government of India also began to transfer to them in 1877–78 the control of a branch of expenditure which, on the introduction of Lord Mayo's scheme, it had reserved to itself, viz., the expenditure on Extraordinary Public Works. This transfer was suggested by the same considerations as had induced Lord Mayo's Government to make its first great experiment in decentralisation in 1870–71. The Government of the North-Western Provinces and Oudh was the first of the Local Governments to undertake the financial responsibility for Extraordinary Public Works, and the method in which the transfer was carried out was as follows:—

	Rx.
The canals of the province yielded (over and above working expenses) a direct revenue of	164,000
And an indirect revenue (included in Land Revenue) of	92,300
Total	Rx. 256,300
The interest charge on the capital expenditure was	244,000
The profit on the whole system was therefore	Rx. 12,300
The profit on the completed canals was, excluding indirect revenue	23,350
From indirect revenue	92,300
Total	Rx. 115,650

The Government of India handed over the whole system of canals to the Local Government, reserving to itself the indirect revenue of Rx. 92,300, and the Local Government had to bear the whole interest charge, Rx. 244,000, and to pay to the Government Rx. 20,000 as a rough equivalent of the profits on completed canals, apart from the Rx. 92,300 included in Land Revenue and retained by the Supreme Government. Thus the Provincial Government had to meet a yearly charge of Rx. 264,000, while the revenue at its command from canals was only Rx. 164,000. The additional charge of Rx. 100,000 was to be provided for by a modification of the Local Rates Act, by the imposition of a licence tax, by economy in canal management, and by an increase, if possible, in the income from canals. The Government of India was to borrow and advance to the Local Government, year by year, the money for the completion of the unfinished canals; the Local Government would, it was expected, be able to meet the increased charge for interest from the growth of its canal revenue. If it could reduce below Rx. 100,000 the charge for canals that it had to meet from other sources than canal revenue, then it was to retain half the saving and to give half to the Supreme Government.

7. The following letter addressed to the Government of India expresses the opinion of the Government of Bengal on the new system, at a time when it had been recently introduced, and when, therefore, the difference between its effects on administration and the effects of the old decentralising system was sharply felt:—

"The Lieutenant Governor has found that the general effect of the extension of the decentralisation system, in respect to the facilities which it has given to provincial administration, has been even more satisfactory than he anticipated. In making the Local Government responsible for expenditure, and giving them a direct interest in the development of various branches of the revenue, it has secured a careful scrutiny over the expenditure of all departments, and a deep interest in all improvable heads of revenue, which has extended to all grades of the services. District officers understand that the Local Government can sanction no new schemes, and few new works, unless it has a constantly improving revenue; and they have shown an earnest desire to assist the Government by the adoption of every measure which their local experience suggests as likely to have a beneficial effect on the revenues. At the same time the Local Government has, since the inauguration of the system of Provincial Finance in 1870–71, been in a position to carry out many works and many measures of improvement on its own responsibility, which would, under the old system, have possibly been delayed for an indefinite period. All friction with the Imperial Government has been obviated, and much useless and unsatisfactory correspondence avoided."

Financial Statement for 1878-79 p. 278, Appendix E., *ad fin*

8. The arrangements for 1877–78 left room for a further increase of provincial responsibility, inasmuch as a large proportion of the yearly income of each province was drawn, not from revenue for the collection of which the Local Government was responsible, but in a lump sum from the Supreme Government. But the settlements made with Burma and Assam in 1879 made no provision for a permanent grant. With the exception of certain services* which could not but remain wholly under the responsible charge of the Government of India, almost all the heads of revenue and expenditure were made in these two Provinces, either jointly Imperial and Provincial (*i.e.*, divided in a fixed proportion between the Government of India and the Local Governments) or wholly Provincial. Such a transfer of services and revenue to the Local Government could be carried out in Burma to an extent which was impossible in other provinces, because the salt and customs revenues collected in Burma could be treated as due to the consumption of that province, whereas it was impossible to assign to the various provinces the shares borne by the consumers all over India of the salt and customs collections in Bombay, Calcutta, and the other places of receipt in Northern India.†

Financial Statement for 1879-80. p. 299.

In 1882 the system that had been applied in 1879 to Burma and Assam was extended as far as possible to the whole of India. A fixed permanent grant was no longer assigned to the Local Governments as a part of their resources, but, instead, they were granted the whole product of some sources of revenue, and a share in the product of others, including land revenue.

Gazette of India, Part I., for 1st October 1881.

The general result of the arrangements of 1882 was that the revenue of the Local Governments was for the five years from that time made up of—

	Rx.
The whole of the revenue under heads producing about	4,000,000
Half of the revenue under heads producing	8,000,000
A larger or smaller proportion under heads (chiefly land revenue) producing	23,000,000
An almost nominal share under heads producing	7,000,000
Thus the Local Governments had a direct interest in the collection of revenue to the amount of	Rx. 42,000,000

while they administered the expenditure wholly under heads for which the grants at the time of making the agreements amounted to Rx. 15,000,000, and to a very small extent under heads for which the grants amounted to Rx. 4,000,000.

Financial Statement for 1882-3, § 40.

The Government of India expressed its intention of allowing to Local Governments the same rights over divided revenues, and the same power to sanction new expenditure under divided heads, as they possessed in the case of heads which were wholly provincial.

Gazette of India, 21st January 1882, p. 19.

9. In calculating the exact proportion of these various sources of revenue to be assigned to the Local Governments for the quinquennium 1882–3 to 1886–7, the Supreme Government "wished to approach the question "in a liberal spirit, and not to make any revision "which would be favourable to the Imperial at the "expense of the Provincial Revenues, except in cases "where this course could be adopted without em"barrassing Provincial Finance, or checking the "growth of the material prosperity of the Province." The Local Governments were, at the end of the quinquennium which closed in 1881–2, in possession of

Financial Statement for 1882-3, § 43.

* Such as Army, Post Office, Telegraphs, Account Offices, Political Services, Movement of Funds.

† Salt and customs are still almost entirely Imperial heads of revenue.

revenue which, it was estimated, exceeded by Rx. 470,000 the annual cost of the services for which they were responsible. This amount the Supreme Government might have reserved and used for its own purposes, but, instead, it left it in the hands of the Local Governments, and gave them a further assignment of Rx. 26,000 a year, thus providing them with a surplus of Rx. 496,000 a year, of which Rx. 316,000 was to be devoted to the remission of taxation in the North-Western Provinces, Rx. 20,000 to Provincial Public Works in Madras, Rx. 78,000 to various purposes, of which the most important was the improvement of the position of the Subordinate Civil Service in several Provinces, Rx. 10,000 to the increase of the staff of Kanungoes in Oudh, and Rx. 72,000 to meet temporary needs in Bengal, Burma, and the North-Western Provinces and Oudh.

10. Another measure, affecting the relations between the Supreme Government and the Local Governments, which was adopted in 1882, was the introduction of new conditions to regulate the grant of help by the Supreme Government to the Local Governments, and the demand of help from them in times of need. Under the agreements made in 1877, a Local Government was not entitled to help from the Supreme Government till all its own resources were exhausted. By the arrangement of 1882 the Local Governments were declared to be entitled to help from the Government of India in case of severe famine, but they were not to receive help until—

(1) their current income during the period of distress was exhausted; and

(2) two-thirds of the excess of the accumulated savings of past years over the ordinary "working balance" had been spent.

It was further provided that;

(3) the margin of provincialised income over expenditure in normal years should be applied to supplement the ordinary Public Works Grant to meet the cost of completing the Famine Relief Works, and also might be drawn on, to the extent of one-fourth, for interest payable on Imperial loans raised for famine purposes in the respective provinces.

Gazette of India 1st of October, 1881, p. 450 (Resolution of the Government of India, § 8).

The Government of India undertook not to make any demands on the Local Governments, except in the case of disaster so abnormal as to exhaust the Imperial reserves and resources.

Financial Statement for 1882-83, § 41.

Thus the Local Governments were placed in a position to enjoy, in the management of the resources entrusted to them for the administration and internal development of their respective provinces, a security such as is unknown to the Government of India. As Major Baring remarked, one result of the provincial arrangement concluded in 1882 was, that of the four peculiar dangers to which the finances of India are exposed, viz., war, a diminution of the opium revenue, fall of exchange, and famine, the first three had to be met by the Government of India alone, and only the fourth was felt by the Local Governments. This remark must now be qualified to a very slight extent, in so far as those Governments have now to take a share in the cost of exchange compensation.

Financial Statement for 1883-84, § 121.

On three occasions since 1882–83, has the Government of India called on the Local Governments for help in its financial difficulties. In 1886-87, when a deficit was threatened, in consequence of the fall in the gold value of silver and of the expense of operations in Burma, it received from them special contributions amounting to Rx. 400,000: in 1890–91, when a deficit was again threatened, it received Rx. 490,000; in 1894–95, owing to the fall in exchange, it received Rx. 405,000.

11. The extension of the powers of the Local Governments of the respective Provinces, which was carried out in 1882–83 by means of the decentralisation of the finances, was accompanied by an improvement in the position of the local boards and committees which already existed in each Province, and discharged functions similar to those of the smaller local bodies in England. Just as the Government of India had handed over a further portion of its own revenues for provincial management, so it invited the Local Governments to hand over to the local boards and committees, such items of revenue and expenditure as might appear most suited to give them a real interest in the administration of the revenues at their command.

Financial Statement for 1882-83, §§ 65–67.

12. The next alteration in the system of provincial finance was made in 1884. In the three years preceding that year the Local Governments had been spending the large balances that had accumulated during the Afghan war, when the Government of India had temporarily checked provincial expenditure, and also the Rx. 670,000 which the Government of India had withdrawn from them during the war, and had subsequently refunded. This abnormal expenditure suggested the adoption of a measure to prevent excessive fluctuations in the finances of the Local Governments, and, with effect from the 1st of April in that year, a minimum was prescribed, below which the balance to the credit of each government was not to be allowed to fall, according to the Budget estimate.

13. The administrative results of the system were described as follows in 1885 by Sir Auckland Colvin, then Financial Member of the Viceroy's Council:—

"The system inaugurated by Lord Mayo, which has now fully taken root and become part of our system of local administration in India, has continued during the last three years to work greatly to the advantage of the several governments which share in it. Friction has been reduced to a minimum; and if, as was inevitable, questions have from time to time arisen regarding the amount of assistance to be afforded by the Government of India to this or that Local Government in regard to some particular project, or some reform involving an increased outlay of funds, they have given evidence of the existence of a spirit of mutual concession, which is in marked contrast to the relations existing in former times between the Supreme and the Provincial Governments under the centralised system of finance."

Financial Statement for 1885-86, p. 77.

14. In 1887, when the term of the agreements made in 1882 came to an end, it was found that during the quinquennium the revenues assigned to the Local Government, which were originally calculated at Rx. 16,376,020, had yielded on an average Rx. 17,352,966 a year, while the average yearly cost of the services paid for by the Local Governments, which had been calculated at Rx. 16,812,340, had really been Rx. 17,399,398. There had thus been an average annual deficit of Rx. 46,432, which was met from the balances held by the Local Governments at the opening of the quinquennium.

The Government of India was compelled, on account of its own financial position, to use the right which it had always expressly reserved to itself, and which had already to a certain extent used in [illegible] the arrangements to its own advant[illegible] object in view, it appointed a Finance [illegible] first duty of which was to investigate [illegible] administration of each province, and to [illegible] tions for the framing of the agreements that to be made for the quinquennium, 1887–88 to 1891–92. The Committee proposed numerous alterations and economies, and drew up an estimate showing what the revenue and expenditure of each province might be expected to be if the existing agreements were continued and the proposed economies were effected. The estimate was, with modifications, adopted by the Government of India, and an abstract of it, showing province by province the revenue and expenditure to be anticipated in the years 1887–88 to 1891–92 on the basis of the old settlement is in the following table put side by side with the average actual revenue and expenditure for the five years 1882–83 to 1886–87:

—	Average Annual Revenue and Expenditure during the Five Years 1882-83 to 1886-87 inclusive.		Estimated Future Revenue and Expenditure from 1887-88 on the basis of the Old Agreements.	
	Revenue.	Expenditure.	Revenue.	Expenditure.
Punjab	1,505,227	1,554,016	1,583,300	1,580,200
North-Western Provinces and Oudh.	3,070,188	3,077,904	3,059,900	2,928,800
Central Provinces	759,499	751,996	806,400	790,800
Bombay	3,796,266	3,749,210	3,984,500	3,762,000
Madras	2,397,658	2,349,441	2,483,400	2,309,000
Bengal	4,154,595	4,241,468	4,319,500	4,203,900
Assam	449,959	399,280	481,500	456,000
Burma (Lower)	1,219,574	1,276,083	1,189,800	1,240,3[illegible]
Total	17,352,966	17,399,398	17,908,300	17,272,[illegible]

It appears from the last two columns of the f[illegible] going table that the estimated revenue of the L[illegible]

Governments was in excess of their estimated expenditure by Rx. 635,800. This surplus the Government of India took from the Local Governments and added to its own revenue.

The resumption was effected by a general readjustment of the terms of the provincial agreements, the anticipated financial efforts of which are shown in the following figures, side by side with the estimated surplus of each province:

	Estimated Surplus.	Amount estimated to be resumed by Government of India.
	Rx.	Rx.
Punjab	3,100	—
North-Western Provinces and Oudh	131,100	103,100*
Central Provinces	15,600	15,600
Bombay	221,900	221,900
Madras	174,400	174,400
Bengal	115,600	115,600†
Assam	24,600	24,600
Burma	—50,500	—
Total	635,800	655,200

For details of the shares of various heads of revenue assigned to the Local Governments in 1887, *see* Financial Statement for 1887–88, § 52.

* The figure given in the Financial Statement for 1887–88 is Rx. 100,000 (page 25), but the estimated surplus, erroneously taken at Rx. 128,000, was really Rx. 131,100 (Finance and Accounts Proceedings, April 1887, page 494, note A). The surplus left to the Local Government after revision was Rx. 28,000 (*see* Finance and Accounts Proceedings, April 1887, pp. 494–497, and Financial Statement, 1892–93, p. 38). The amount resumed must therefore have been Rx. 103,100.

† The Financial Statement for 1887–88 gives Rx. 103,600, but see Accounts and Finance Proceedings of the Government of India for April 1887, pp. 446–449, from which it appears that the whole of the estimated surplus of Rx. 115,600 is resumed.

Thus, in dealing with five out of the eight provinces, the Government of India so revised their agreements as to leave the Local Governments with revenues which were estimated to be just equal for the time being to the liabilities that had to be met from them, but which were growing, and might be expected to provide not only the means of meeting the natural growth of provincial expenditure, but also a surplus which, at the next period of revision, could be appropriated by the Government of India, from whose temporarily alienated resources it arose. In three provinces only was there a difference between the estimated provincial revenue and the estimated provincial expenditure, viz.:—in the North-Western Provinces, where a surplus was left for the Local Government to use towards the completion of railway works which it had undertaken, and in Burma and the Punjab, where for special reasons, the agreements were not revised in 1887.

15. The working of the agreements made in 1887 was similar to that of those made in 1882. At the end of the quinquennium during which they were in force it was found that the average provincialised revenues had exceeded the estimate by Rx. 1,553,106, while the average provincialised expenditure had exceeded the estimate by Rx. 1,374,725; the average revenue had exceeded the average expenditure by Rx. 216,181. It was estimated, on a comparison of the agreements made in 1887 with the revised estimates for 1891–92 (the latest statement of income and expenditure available at the time when the arrangements for 1892–93 to 1896–97 were under consideration), that the sources of revenue assigned to the Local Governments in 1887 had during the quinquenninm increased in value by Rx. 2,042,700, and that equilibrium would be re-established in the finances of the Local Governments if the Government of India so re-arranged the provincial agreements as to diminish the revenues, or increase the expenditure, assigned to the Provincial Governments, and so make their position worse, and its own better, by a net sum of Rx. 466,300, distributed as follows:—

	Increase of Provincial Revenue.	Amount withdrawn from the Provincial Governments.
	Rx.	Rx.
Punjab	195,400	41,000
North-Western Provinces and Oudh.	63,300	56,900
Central Provinces	119,200	22,700
Bombay	399,200	131,100
Madras	313,200	103,800
Bengal	517,700	51,900
Assam	99,800	—
Burma	334,900	58,900
Total Rx.	2,042,700	466,300

It was estimated that, when these deductions were made, they would leave the Local Governments, at the the beginning of the new quinquennium, in a state of equilibrium, as indicated in the following table:—

	Revenue.	Expenditure.
	Rx.	Rx.
Punjab	1,718,900	1,718,900
North-Western Provinces and Oudh.	3,152,900	3,152,900
Central Provinces	788,100	788,100
Bombay	3,895,300	3,895,300
Madras	2,804,700	2,804,700
Bengal	4,105,400	4,105,400
Assam	545,000	545,000
Burma	1,841,800	1,841,800
Total Rx.	18,852,100	18,852,100

30th July 1895.

B.L.A.
HENRY WATERFIELD.

TABLE I.—PROVINCIAL AGREEMENTS, 1882–83 to 1886–87.

The Assignments made in 1882 were altered in various ways during the currency of the agreement. They are, however, given in this Table, as offering a convenient basis of comparison.

	1.	2.	5.	6.	7.	8.	9.	10.	11.	12.	13.	14.	15.	16.

APPENDIX No. 4.

COST OF TREASURIES IN INDIA.

(*Handed in by Mr. Stephen Jacob, C.S.I., with reference to Questions* 161, 162, *and* 2865.)

The appended Table gives the total cost of Treasury and Sub-Treasury Establishments in India as follows:—

	Rs.
Treasury Establishments - -	16,21,267
Sub-Treasury Establishments -	9,40,627
Total - - -	25,61,894

Details by Provinces are given in the Table, and further details by Treasuries are available, if required.

The cost as given in this Table does not include the charge for the salaries of Treasury officers and Sub-Treasury officers themselves. Treasury officers, as already stated (*see* answer 137), are on the general district staff, and perform various revenue and magisterial duties, in addition to their purely Treasury duties. The proportion of their time given to Treasury work varies in each district, and no unvarying proportion of a Treasury officer's pay can be assigned as chargeable against the Treasury. An attempt has been made, however, in India to determine, after local inquiry from each district, the proportion of the Treasury officer's time which is in each case devoted to Treasury work, and the results of this attempt are given below. It must be borne in mind that the estimate in each case, where the whole time is not devoted to Treasury work, must partake more or less of the nature of a guess; and in most cases it is possible that different officers might disagree as to the exact proportion to be taken. The figures below are, however, based on the best information available, and are given for what they are worth.

Province.	Treasury Officers.		
	No.	Whole Pay.	Proportion of Pay chargeable to Treasury Work.
		Rs.	Rs.
India - - -	5	23,880	23,880
Central Provinces -	18	78,250	37,125
Lower Burma - -	15	29,820	24,670
Upper Burma - -	19	45,437	37,774
Assam - - -	11	50,400	17,687
Bengal - - -	44	2,06,400	1,03,350
North-Western Provinces and Oudh.	47	1,93,800	1,20,000
Punjab - - -	32	1,11,826	58,318
Madras - - -	22	1,06,400	85,300
Bombay - -	22	99,000	70,100
Total - -	235	9,45,213	5,78,204

According to this calculation the general proportion of the time of Treasury officers given to Treasury work is just over 60 per cent.; but the proportion varies largely in different provinces.

The above figures take no account of numerous petty political Treasuries, which are worked by political officers.

An attempt was made to obtain similar figures as regards Sub-Treasury officers, but the figures sent are obviously so incomplete that it is impossible to frame any general table based upon them.

STEPHEN JACOB.

January 25, 1896.

APPENDIX No. 6.

Paper handed in by Sir Henry Waterfield (with reference to Questions 562, et seq.).

SOME INSTANCES OF DISSENTS BY THE FINANCIAL MEMBER OF COUNCIL.

Date of Letter from India.	Subject.	Date of Letter from India.	Subject.
1885, August 14, No. 135, M.	Sir Auckland Colvin and Mr. Ilbert dissented from the increase proposed to the strength of the Army.	1893, March 15, No. 99, F.	Sir David Barbour and Sir Charles Pritchard dissented from the proposal to accept in the Budget an increased amount for Military Expenditure, and Sir D. Barbour also objected to give exchange compensation allowance without waiting for the Secretary of State's decision on the Currency question.
1886, June 19, No. 185, F.	Sir Auckland Colvin dissented from the proposal to construct the Bengal-Nagpur Railway, regardless of the financial burden caused by the fall in exchange. (In this case the Viceroy was disposed to concur with his financial advisers.)	1893, November 1, No. 357, F.	Sir David Barbour dissented from the proposed extension of the limit up to which money might be spent in the coming year on the construction of railways and irrigation works.

MINOR CASES, WHERE NO DISSENT WAS WRITTEN.

Date of Letter from India.	Subject.
1892, October 26, No. 22, F. -	Sir David Barbour dissented from the proposal to obtain recruits for the police in England.
1894, June 19, No. 161, F. -	Sir James Westland dissented from the grounds on which the amount of furlough pay for a certain officer was to be fixed, though on other grounds he did not object to the proposed pay.
1894, June 26, No. 171, F. -	Sir James Westland objected to a certain pension recommended, because he considered it not to be authorised by the regulations.

APPENDIX No. 7.

[redacted]handed in by Sir Henry Waterfield and Mr. Stephen Jacob (with reference to Question 641).

DISTRIBUTION of REVENUE and EXPENDITURE between IMPERIAL and PROVINCIAL.

HEADS OF REVENUE.

—	Imperial.	Provincial.	Special Exceptions.	—	Imperial.	Provincial.	Special Exceptions.
I.—Land revenue	¾	¼	Distributed under a special arrangement in Assam. 12 per cent. collections from Government Estates—Provincial (Bengal). Collections from Tarai, Bhabar, and Dhudhi Government Estates—Provincial (N.-W. P. and Oudh). Miscellaneous — Rents of water mills and stone quarries—Provincial (N.-W. P. and Oudh). Assessment of alienated lands, less quit-rent—Provincial (Bombay). Recoveries from the zemindars and ryots on account of survey and settlement operations in Behar—Imperial (Bengal).	IV.—Stamps -	¾	¼	——
				V.—Excise -	¾	¼	——
				VI.—Provincial rates -	—	1	——
				VII.—Customs -	1	—	Warehouse and wharf rents, and miscellaneous, Provincial, except in Bombay, where only such miscellaneous receipts are provincial as were provincial in 1891-92. Sea customs—Miscellaneous (Bengal)—Provincial.
				VIII.—Assessed taxes	½	½	Tax on surplus profits of railway companies — Imperial (Bombay).

APPENDICES Nos. 9 to 44.

SECTION II.

PROGRESS OF EXPENDITURE.

APPENDIX No. 9.

SECTION II.—PROGRESS OF EXPENDITURE.

Paper handed in by Sir Henry Waterfield, K.C.S.I., C.B.

INCREASE OF EXPENDITURE, 1884–5 to 1894–5.

NOTE.—In dealing with figures of Indian Expenditure:—
Rx. means tens of rupees.
1 lakh is 100,000; so that a lakh of rupees is Rs. 1,00,000, or Rx. 10,000.
1 crore is 100 lakhs; so that a crore of rupees is Rs. 1,00,00,000, or Rx. 1,000,000.

On the 26th of June 1895, I put before the Commission a set of tables with the view of enabling them to ascertain in what directions an increase of Expenditure has occurred since 1884–5. I subsequently found that the accounts from 1875–6 onwards had been recast in India, so as to admit of a comparison with later years; and I have therefore enlarged my tables, which now embrace the figures for the last 20 years, from 1875–6 to 1895–6, with statements of the increase or decrease in that period, and also in the 10 years from 1884–5 to 1894–5. Owing to the great alterations which in the earlier period were being made in the arrangements between the Imperial and Provincial Governments, the accounts for that time are not very convenient for a comparison with the present position; and an unrealized Budget seems also unsuitable for the purpose. In the following remarks, therefore, I deal with the 10 years from 1884–5 to 1894–5. The later figures have been slightly altered, owing to the receipt of more detailed information regarding Exchange compensation.

In 1884–5 the Gross Expenditure was Rx. 71,077,000; in the revised Estimate for 1894–5 it was Rx. 94,163,000. But it would be misleading to look at the increase of Rx. 23,000,000, without having regard to the revenue derived from the opening of the public works, upon which a large part of the additional Expenditure is incurred. And I have, therefore, treated the Expenditure as net, setting off the receipts in each case against the head of charge to which they are akin.

Table I. shows (column 3) that the Net Expenditure in 1884–5 was Rx. 41,907,813, and in 1894–5 Rx. 52,747,800, an increase of Rx. 10,839,987. [In this table, owing to the combination of Revenue and Expenditure, the sign + is used to mean *better*, and — *worse*, instead of, as usual, more or less; in column 4 the minus sign denotes a deficit.] During the years from 1885–6 to 1894–5 there have been six years of surplus amounting to Rx. 7,973,684, and four years with deficits amounting to Rx. 7,210,968; the combined result, being a net surplus in the 10 years of Rx. 762,716. In 1884–5 there was a deficit of Rx. 386,446; in 1894–5 an estimated surplus of Rx. 990,500; showing an improvement of Rx. 1,376,946, which has thus arisen (it must be remembered that any variation in the *Provincial* Expenditure is met by a corresponding variation in the Provincial Revenue or Balances, and does not affect the surplus of the year):—

	Rx.
The increase in the net *Imperial* Revenue is	10,711,838
The reduction in the net *Imperial* Expenditure is	3,573,357
But against this improvement of must be set the increase of Expenditure—	14,285,195
In England £1,751,945	
And in Exchange Rx. 11,156,304	
Making a total set-off of	12,908,249
And showing the net improvement to be only	Rx. 1,376,946

In Table II. there is an analysis of the *total* increase of Rx. 10,839,987 in the Net Expenditure, which may be thus divided:—

	Rx.	
Increase in Expenditure in England		£1,751,945
Increase in Exchange		Rx. 11,156,304
		Rx. 12,908,249
Reduction of Imperial Expenditure in India	3,573,357	
Increase of Provincial ditto	1,505,095	
Net reduction		2,068,262
Total increase		Rx. 10,839,987

Table III. contains an analysis of the reduction has occurred in the Imperial Expenditure in that is, in that portion of the Expenditure country which affects the surplus or deficit of There has been a reduction under:—

	Rx.
Famine Relief and Insurance	1,499
Public Works	3,36
Interest	1,
Post Office, Telegraph, and Mint	
And an increase in Civil Charges	
And in Military Expenditure	2,5
The net result being a reduction of	1

Table IV. shows how the increase of Rx. 2,5 in Military Expenditure in India (apart from exch has occurred. At the end of 1885 it was decide add about 10,000 European troops and 20,000 Na soldiers to the Army, which made a permanent additi to its cost of:—

	Rx.	Rx.
		1,617,338
The extra charges in Upper Burmah, though much reduced since 1886–7, may still be taken at		420,000
Special Operations in 1894–5 cost more than in 1884–5 by		157,181
And in other respects the Army charges have increased by		231,619
Making a total increase in the Army Effective Charges in 10 years, of		2,426,138
The Non-Effective Charges in India are heavier by		58,729
The Special Defence Works did not exist in 1884–5; in 1894–5 the cost was		68,900
		2,553,767
But the Military Works are less by		12,929
The result is an increase of		Rx. 2,540,838

Table V. deals with the Famine Relief and Insurance—

	Rx.
In 1884–5 the expenditure was - -	1,541,934
In 1894–5 (excluding Provincial Expenditure) the charge recorded under this head is only - - - - -	42,000
Making a reduction, for want of revenue to devote to this purpose, of - -	1,499,934
Under the Railway Revenue Account, however, is entered the net charge for the Bengal-Nagpur and Indian Midland Railways, which were sanctioned as protective works - - - - -	392,400
So that virtually the Famine Grant is reduced by - - - - Rx.	1,107,534

Table VI. brings together the Expenditure in India on Imperial Account, from Revenue, upon public works of all kind (except the Mititary and Special Defence Works mentioned among the Military Charges, and the Protective Works for which the grants are reckoned as Famine Insurance).

	Rx.
On the construction of Railways no money was spent from revenue in 1894–5, and there was therefore a saving of - -	172,825
The Railway Revenue Account in India improves in most years, omitting the heavy charges for interest in England and for Exchange. In 1894–5 it is better than 10 years ago by - -	2,707,542
The charge for Irrigation and Navigation has been reduced by - - -	534,532
	3,414,899
On the other hand, the outlay on Imperial account on Civil Buildings and Roads was increased by - - -	47,953
net improvement is, therefore - Rx.	3,366,946

	Rx.
il Charges mentioned in Table is an increase in the various s of Administration of -	843,466
n in the Miscellaneous - - - - -	310,454
ease of - - - Rx.	533,012

nents the following has been the

	Rx.
- - - - - -	560,387
- - - - - -	74,306
nd Justice - - - -	74,258
ral Administration - -	57,015
ine - - - - -	47,817
dical - - - - -	23,221
ducation - - - -	11,724
Ecclesiastical - - - - -	1,926
While Scientific and Minor Departments are less by - - - -	−7,488
	Rx. 843,466

(Of this amount Rx. 817,100 is due to Upper Burma.)

(It will, of course, be remembered that the Provincial Governments bear the bulk of the charges under Law and Justice, Police, Medical, and Education.)

Among the Miscellaneous Charges, there are reductions under—

	Rx.
Territorial and Political Pensions - -	175,159
Superannuation - - - -	130,307
Miscellaneous - - - -	67,598
Civil Furlough - - - -	13,052
	386,116
While for Stationery and Printing there is an increase of - - -	75,662
Making the net reduction - -	310,454

Table VIII. deals with the charge for Interest, excluding that on Debt raised for Railways and Irrigation Works. The capital outlay on these Public Works being generally in excess of the amount borrowed, it is the practice in the Accounts to consider the sum so spent as being debt paid off from the Ordinary Account, and transferred to the Public Works Account, the Ordinary Debt being in turn increased by the loans actually raised, as shown in Table XX. In this way it happens that in most years there is a reduction of the charge for interest on Ordinary Debt. During the 10 years the interest on debt has been reduced by - - - 1,225,951

The interest on other obligations (Savings Banks, &c.), has been increased by - 26,902

1,199,059

In the Receipts there is an increase of - 27,025

So that the total net improvement is - Rx. 1,226,084

Table IX. includes the group of the Post Office, Telegraph, and Mint.

	Rx.
The Post Office has improved by - -	293,816
And the Telegraph by - - -	381,683
	675,499
But, owing to the loss of seignorage on silver through the closing of the Mints, the result under the head of Mint is worse by - - - - -	121,256
Giving a net improvement of - -	Rx. 554,243

Tables X. to XVII. deal with the Expenditure in England.

Table X. shows that the Net Expenditure in England has increased during the 10 years by 1,751,945*l.*, which is thus divided:—

	£
Interest and Management of Debt - -	62,628
Railway Revenue Account - -	911,884
Civil Administration (*i.e.*, Departments in India) - - - - -	11,071
Army Effective Charges - - -	178,527
Furlough Pay - - - -	125,382
Non-effective Charges - - -	315,579
Stores - - - -	151,347
	1,756,418
While under India Office there is a decrease of - - - -	4,473
	£1,751,945

Table XI. deals with the interest and management of debt. The charge for interest has increased by 157,895*l.*, while the receipts have fallen off by 27,863*l.*, making a net deterioration of 185,758*l.*; the charge for Discount Sinking Fund (that is, a sinking fund formed to redeem a loan issued at a heavy discount) is 9,500*l.*, but in 1884–85 there was a large discount on the issue of a loan, which did not occur in 1894–95, so that under this head there is an improvement of 164,404*l.* The payment for the management of the debt is heavier by 31,774*l.* And thus the total increase of charge is 62,628*l.*

In Table XII. is shown the increase of charge in the Railway Revenue Account. The payment of annuities for the purchase of railways is heavier by 482,117*l.*, the interest on debt by 629,904*l.*, and the interest chargeable against companies by 862,503*l.* On the other hand, the guaranteed interest is reduced by 1,062,640*l.* The net increase is 911,884*l.*

Table XIII. brings together the charges for Civil Administration. The Postal Subsidy is reduced by 9,400*l.*; the Indo-European Telegraph charges are increased by 20,680*l.*; the contribution for Her Majesty's ships in the Indian Seas was in 1884–85 heavier by 28 866*l.*; the payment for manning the Indian Government Defence Vessels, a new charge amounts to 59,600*l.*; the payments for the Persian Mission and the Diplomatic and Consular Establishments in China are reduced by 5,500*l.*; and the

Miscellaneous charges by 25,443*l.* The net result is an increase of 11,071*l.*

Table XIV. relates to the Army Effective Charges. The payments to the War Office are increased by 231,131*l.*, the Transport Service costs less by 56,449*l.*, and other charges are increased by 3,845*l.* The total increase is 178,527*l.*

Table XV. shows that the total increase of 125,382*l.*, which has occurred in the Furlough Pay, is divided among the Civil Departments, 25,332*l.*; Public Works, 7,851*l.*; and Military, 92,199*l.*

In Table XVI the Non-Effective Charges are treated. There is an increase of 104,492*l.* in the Civil Superannuation, 277,488*l.* in the payments on account of the several Service Funds, and in the Military Pensions a reduction of 371,394*l.* on the British forces, and an increase of 304,993*l.* for the Indian Service; the total increase is 315,579*l.*

Table XVII. deals with the Expenditure on Stores. The Army Clothing shows an increase of 10,746*l.*, the Ordnance and Miscellaneous Stores of 223,906*l.*, while in other Military Stores there is a reduction of 40,080*l.* Those for Special Defence Works amount to 62,300*l.*, The Marine Stores cost more by 19,725*l.*, the Telegraph Stores less by 101,782*l.*, Stationery less by 83,330*l.*, and other stores more by 59,862*l.* On the whole, there is an increase of 151,347*l.*

Table XVIII. separates the total net charge, and Table XIX. gives the annual increase, for Exchange, except so far as a portion of the compensation allowance (Rx. 423,700) is borne by the Provincial Governments. During the ten years there has been an increase of Rx. 9,602,221 in exchange on the Net Sterling Expenditure, against which is a set off of Rx. 177,917 on remittance accounts, the additional payments to the British soldiers are Rx. 950,000, and the Imperial portion of the Compensation to Officers (first granted in 1893–94) was in 1894–95 Rx. 782,000. Adding the charge of Rx. 59,393 included in the net revenue, the total increase is Rx. 11,215,697.

Table XX. shows that during the ten years the debt has increased by 52,924,494, of which Rx. 11,189,756 occurred in India, and 44,734,738*l.* in England. The capital outlay on Public Works during the period has been Rx. 65,516,676, and a corresponding portion of the debt has been transferred to the Public Works portion from the ordinary category, the amount of which is thus reduced by 9,592,182. Against this must, however, be set 2,000,000*l.* of Temporary Debt which is outstanding.

Tables XXI. to XXIX. explain the increase in the Provincial and Local Expenditure, which has resulted from the power given to the Local Governments, under the policy initiated in 1870 and subsequently expanded, to spend in the development of their administration a portion of the resources that they acquire through economy either in their expenditure or in the collection of the revenue. Any part of the revenue at their disposal which is not spent is added to their balances, and is available in future years; if they exceed their revenue, the excess must be made good from the balance in hand.

Table XXI. shows in the 10 years an increase of the net Provincial and Local Expenditure charged to Revenue by Rx. 1,505,095; the increase in Civil Charges is Rx. 1,836,112; in Public Works Rx. 18,367, and under other heads Rx. 15,872, making a total of Rx. 1,870,351; but of this amount Rx. 365,256 was paid out of their balances, and was not charged against revenue.

In Table XXII. the increase of Rx. 1,836,112 in the Provincial and Local Civil Charges is analysed:—

		Rx.	Rx.
General Administration	Increase	124,076	
Law and Justice		469,570	
Police		494,788	
Education		233,528	
Medical		202,977	
Political		67,627	
			1,592,566
Marine	Decrease	31,18)	
Scientific and Minor Departments, &c.		25,796	
			56,976
Net increase in Civil Departments			1,535,590
Superannuation	Increase	286,953	
Stationery and Printing		107,555	
		394,508	
Miscellaneous	Decrease	93,986	
Net increase in Miscellaneous Charges			300,522
Total net increase in Civil Charges			1,836,112

Table XXIII. shows how the increase under Public Works has arisen.

	Rx.	Rx.
Under irrigation there is an increase of	495,096	
Civil Buildings and Roads	138,163	
		633,259
while there is a decrease under—		
Construction of railways out of revenue	70,576	
Railway Revenue Account	544,316	
		614,892
The result is a net increase of		18,367

In Tables XXIV. to XXIX. the increase since 1876–7 in the more important civil heads of expenditure by the Provincial Governments is shown in the several provinces; General Administration, Law and Justice, Police, Education, Medical, and Stationery and Printing. Together, these comprise Rx. 1,632,494 out of a total of Rx. 1,836,112. The increase of Rx. 286,953 in superannuation is regular and automatic, and does not need to be shown in detail.

Table XXX. shows the special contributions which, on four occasions of emergency, the Provincial Governments have been required to make, from their balances in aid of the Imperial Government: namely, in

	Rx.
1879–80, Rx. 710,000, of which one-half was taken in 1879–80	335
and the other half in 1880–81	[illegible]

the total of these two contributions was [illegible] funded to the Provincial Governments [illegible] 1882–3.

Table XXXI. shows the balances [illegible] Governments at the end of each year [illegible] 1875, excluding Local Funds. Under [illegible] in 1884, each Government is required [illegible] minimum provincial balance, to meet [illegible] gency as a famine within the province. [illegible] of these balances amounts altogether to Rx. [illegible] The only occasions of the minimum not being [illegible] tained in any province are in Bengal in 1884, [illegible] had less than the prescribed amount when the rule [illegible] issued, and was unable to work up to it till 1887; [illegible] in Burma in 1885 and in 1886, where the minimum [illegible] was specially restored by the Imperial Government [illegible] (column 5 of Table XXX.).

I have added two Tables XXXII. and XXXIII., with reference to the Memorandum laid before the Commission by Sir William Wedderburn. Table XXXII. shows the agreement in final results between the two systems on which the net figures have been given by him and by myself. Table XXXIII. is designed to show in a small compass the figures in Tables IV., V., and VI., of his memorandum, to which paragraph 9 thereof refers.

August 10, 1895. HENRY WATERFIELD.

* This was refunded in 1895–96.

INDIAN REVENUE AND EXPENDITURE, 1875-6 to 1895-6.

* In this Table the increase in 20 years is not the sum of the increase in the two periods.

APPENDIX No. 10.

Paper handed in by Sir William Wedderburn, Bart., M.P.

NOTE on Sir H. WATERFIELD'S TABLES, dated India Office, 26th June 1895.

TABLE I.

1. With regard to Table I. the Net Revenue and Expenditure are given according to the old form, which, while not affecting the differences from year to year, shows amounts considerably smaller than the true Net Revenue and Expenditure of India. The magnitude of this difference can be seen at a glance.

	Old Form.	New Form.
	Rx.	Rx.
Net Revenue, 1894–5 -	53,738,300	62,348,100
Net Expenditure - -	52,747,800	61,357,600
Surplus - -	990,500	990,500

The real annual net expenditure of British India is now well over Rx. 60,000,000.

2. The distinction drawn between Imperial Expenditure and Provincial Expenditure is, of course, an important one. The system may be explained as follows. The Government of India enter into periodical contracts with the provincial governments by which the local governments are made responsible under conditions for a large portion of the expenditure of British India, having assigned to them in this connexion a proportionate part of the Revenues. For instance, under the last quinquennial contract with the Government of Bengal three-fourths of the revenue from stamps in Bengal and three-fourths of the cost of collecting the stamp revenue in Bengal were assigned to the Provincial Government. Again, the whole of the cost of law and justice, police and education, in Bengal, with the whole of the corresponding departmental receipts, were so assigned; and so on in varying proportions under nearly every head of Revenue and Expenditure.

3. Imperial Expenditure includes and principally consists of the whole of the expenditure on the Army and the Imperial Debt, with the greater portion of that on the Commercial Services (Railways, Irrigation, Post Office, &c.) and Famine Relief and Insurance, together with the whole burden of the home charges and the cost of exchange thereon. The charges for Upper Burma, which constitute a heavy annual drain, are also met out of Imperial Revenue, the province not being yet sufficiently settled or sufficiently solvent for the purpose of entering into a contract with the Imperial Government.

4. This system on the whole makes for economy, but its weak point seems to be that whereas the provincial governments are directly invited to incur increasing expenditure by reason of the growing revenues at their disposal, they are not called upon to bear any of the increasing burdens due to the fall in exchange (except in the case of Exchange Compensation Allowance) even when part and parcel of the expenditure which they practically control.

5. The increase of Rx. 10,711,838 in the Net Imperial Revenue is largely made up of increased taxation and a decrease of nearly Rx. 1,320,000 in the cost of the Opium Revenue in 1894–5 (due to partial failure of the crop). The Imperial Revenue in 1894–5 compares thus with that in 1884–5. [N.B.—The figures which follow give the Imperial share of the actual receipts without deducting either assignments and compensations or the other charges for collection.]

Heads of Revenue.	1884–5.	1894–5.	Increase (+) or Decrease (−).
	Rx.	Rx.	Rx.
- - - - - -	13,131,283	16,641,600	+3,510,317
- - - - - -	8,816,469	7,322,000	−1,494,469
- - - - - -	6,476,127	8,613,400	+2,137,273
- - - - -	1,823,082	1,223,200	− 599,882
- - - - - -	2,031,538	4,176,300	+2,144,762
ates - - - - -	860	4,200	+ 3,340
- - - - - -	897,348	3,779,200	+2,881,852
axes - - - -	255,927	1,028,300	+ 772,373
- - - - - -	440,782	949,100	+ 508,318
stration - - - -	144,139	209,300	+ 65,161
butes - - - - - -	699,017	797,800	+ 98,783
	Rx. 34,716,572	Rx. 44,744,400	+Rx. 10,027,828
Deduct Refunds and Drawbacks - -	126,098	204,400	+78,302
Total Imperial Revenue - - - -	Rx. 34,590,474	Rx. 44,540,000	+Rx. 9,949,526

6. This increase of Rx. 9,949,526 in the Imperial Revenue includes the following amounts (approximate) brought in by additional taxation since 1884–5:—

	Rx.
Income Tax (Imperial share) -	750,000
Customs (Petroleum, Spirits, Import Duties, Cotton Duties) -	2,750,000
Salt (enhancement) - - -	2,000,000
	Rx. 5,500,000

This sum of Rx. 5,500,000, due to additional taxation, and therefore representing a deterioration and not an "improvement" in the financial position, is not exhaustive. A statement should be obtained from the India Office showing the additional taxation imposed since 1884–5 and the amount therefrom, gross and net, in 1894–5 (Revised Estimate) and 1895–6 (Budget Estimate), distinguishing between the Imperial and Provincial shares.

7. With regard to the reduction of Rx. 3,573,257 in the Net Imperial Expenditure, the term is a little too inclusive, as this reduction only refers to the Imperial expenditure in India. It may be desirable to differentiate that portion of Imperial expenditure which is automatically due to the fall in exchange, but increased expenditure in England (with the added cost of exchange all such increase entails) is an increase of Imperial expenditure, and not a mere set off against any so-called "improvement." The exchange on the increase of 1,751,945*l.* was in 1894–5 Rx. 1,459,954, which gives a total of Rx. 3,211,899 increased Imperial expenditure in home charges. Again, included in the total of Rx. 11,156,204, given as the increase in exchange in the 10 years, is Rx. 781,900 for exchange compensation allowance (Imperial share), which is not an automatic increase of expenditure, but one deliberately, even if legitimately, incurred.

8. Finally this reduction of Rx. 3,573,257 in the Net Imperial Expenditure includes a reduction of Rx. 1,499,934 in the Famine Insurance Grant, which, according to the Government of India's contention, is tantamount to the reduction of a surplus, and consequently represents a deterioration and not an improvement in the financial position.

9. Having regard to the foregoing remarks, the following statement (adopting Sir Henry Waterfield's figures) will show the real change in the financial position due to actual increase of expenditure, excluding that automatically due to the fall in Exchange.

			Rx.
The Increase (approximate) in the Net Imperial Revenue on the basis of taxation in 1884–5 is			5,211,838
The Increase in Net Imperial Expenditure is made up as follows:—			
		Rx.	
Decrease in India		— 2,073,323	
Increase in Home Charges:—			
Sterling	£1,751,945		
Exchange	Rx. 1,459,954		
		+ 3,211,899	
Exchange Compensation		+ 781,900	
Net Increase		+ 1,920,476	1,920,476
Showing an improvement of			Rx. 3,291,362
But against this must be set the net automatic increase due to the fall in Exchange of			8,914,350
Showing the net deterioration to be			Rx. 5,622,988
		Rx.	
This has been met by increased taxation amounting to (approximate)		5,500,000	
And the reduction of a statutory surplus (the Famine Grant) by		1,499,934	
Making a total of			6,999,934
Leaving an improvement in the Imperial Balance of			Rx. 1,376,946

10. If the comparison be carried forward one year, the financial position will appear even less satisfactory. The revenue from opium in 1895–6 is estimated at Rx. 1,500,000 less than in 1594–5, but this will be partly counterbalanced by a further Rx. 1,000,000 on a full year's receipts from the cotton duties. It may be mentioned that a very considerable improvement may actually take place in the Opium Revenue; on the other hand, the Chitral Expedition. for which, practically, no provision was made in the Estimates, will more than absorb any such improvement. According to the Budget Estimate there will be a surplus in 1895, of Rx. 46,200, consequently the improvement in the Imperial Balance, as compared with the deficit of Rx. 386,446 in 1884–5, will be Rx. 432,646. Compared then with 1884–5 the financial position in 1895–6 is as follows:—[N.B.—The increase in Net Imperial Revenue is Rx. 10,220,238, of which Rx. 6,500,000 (approximate) is the product of new taxation since 1884–5. The chief variations in Net Imperial Expenditure in India for 1895–6, as compared with 1894–5, are an improvement in the Debt Services of over Rx. 1,000,000, and an increase of nearly Rx. 1,250,000 in the expenditure on the Army and Military Works in India.]

			Rx.
The increase (approximate) in the Net Imperial Revenue on the basis of taxation in 1884–5 is			3,720
The increase in Net Imperial Expenditure is made up as follows:—			
		Rx.	
Decrease in India		— 2,142,123	
Increase in Home Charges:—			
Sterling	£1,889,045		
Exchange	Rx. 1,574,204		
		+ 3,463,249	
Exchange Compensation		+ 920,000	
Net increase		+ 2,241,126	
Showing an improvement of			R
But against this must be set the net automatic increase due to the fall in Exchange of			9
Showing the net deterioration to be			Rx. 7,559,2
		Rx.	
This has been met by increased taxation amounting to (approximate)		6,500,000	
And the reduction of a statutory surplus (the Famine Grant) by		1,491,934	
Making a total of			7,991,934
Leaving an improvement in the Imperial Balance of			Rx. 432,646

11. Allowing for the improvement in the Imperial Balance in 1895 and 1896 respectively, the net deterioration, in the financial position of the Government of India, as compared with 1884–5, was Rx. 5,622,988 in 1894–5 and promises to be Rx. 7,559,288 in the current financial year. It is worthy of note that, while there is a further deterioration in the financial position in 1895–6 of nearly Rx. 2,000,000, Exchange is only worse by about Rx. 250,000 (including the increased cost of Exchange Compensation Allowance.)

Table II.

12. With regard to Table II., Sir Henry Waterfield gives the following analysis of the increase of Rx. 10,839,987 in the total Net Expenditure:—

Increase in Expenditure in England			£1,751,945
,, Exchange			Rx. 11,156,204
		Rx.	Rx. 12,908,149
Reduction of Imperial Expenditure in India		3,573,257	
Increase of Provincial Expenditure in India		1,505,095	
Net reduction			Rx. 2,068,162
Total increase			Rx. 10,839,987

From what has been said in the foregoing paragraphs the analysis would be more instructive if made as follows:—[N.B.—The Imperial share of Exchange Compensation Allowance is classed in Table II. with Exchange, but it would seem that the Provincial share of Exchange Compensation has been taken as part of the Provincial Expenditure. In the Statement here given, Exchange Compensation, not being automatically due to Exchange, is treated as ordinary expenditure, whether Imperial or Provincial.]

		Rx.
Increase in expenditure in England:—		
Sterling	£1,751,945	
Exchange	Rx. 1,459,954	
		3,211,899
Increase in expenditure in India:—	Rx.	
Reduction of Imperial Expenditure (including Exchange Compensation)	— 1,291,423	
Increase of Provincial Expenditure (including Exchange Compensation)	+ 1,505,095	
Net Increase		213,672
Increase in exchange due to fall in exchange		8,914,350
		Rx. 12,339,921
Deduct for suspension of the Famine Insurance Grant		1,499,934
Net increase of total expenditure		Rx. 10,839,987

13. If the comparison be made with 1895–6, the statement would be as follows:—

		Rx.
Increase in expenditure in England:		
Sterling	£1,889,045	
Exchange	Rx. 1,574,204	
		3,463,249
Increase in expenditure in India:	Rx.	
Reduction of Imperial Expenditure (including Exchange Compensation)	— 1,222,123	
Increase of Provincial Expenditure (including Exchange Compensation)	+ 2,206,895	
Net increase		984,772
Increase in exchange due to fall in exchange		9,038,400
		Rx. 13,486,421
Deduct for suspension of the Famine Insurance Grant		Rx. 1,491,934
Net increase of total expenditure		Rx. 11,994,487

TABLE III.

14. With regard to Table III. it is necessary to [illegible]ement the figures by adding the increases of [illegible]ure in England (with corresponding exchange) [illegible]on Exchange Compensation Allowance. It [illegible]d once for all that the only portion of the [illegible]rden of exchange which may be properly [illegible]tside the control of the Government of [illegible]erefore properly excluded from com-[illegible]enditure from year to year, is the cost [illegible] England of the amount of the sterling [illegible] beginning of any given period under [illegible]d the additional rupee pay of British [illegible]ay is on a sterling basis). As owing to [illegible]hange this charge automatically increases [illegible]oluntary addition to Government expen-[illegible]s necessary to show it separately; but any [illegible] in the charge for exchange due to Exchange [illegible]pensation Allowance, or to an increase in the [illegible]ome Charges, is part and parcel of such additional [illegible]xpenditure, clearly foreseen, and necessarily provided for at the time of such increase.

15. It is necessary then to combine the figures of Table X., as further analysed in Tables XI.–XVII., with those of Table III., while there must also be added the exchange on the increase of sterling charges and the cost of Exchange Compensation Allowance. For instance, it seems altogether futile to show a large reduction of expenditure on public works in India when a great portion of this reduction has been obtained—in the form of extra receipts—at a cost of nearly a million sterling (with Rx. 750,000 for exchange) added to the Home Charges on Railway Revenue account. The analysis therefore of the variation in Net Imperial Expenditure in 1894–5 (adopting Sir H. Waterfield's figures) as compared with 1884–5 should appear as follows:—[N.B. As has already been explained the temporary cessation of precautionary expenditure on Famine Insurance is in the nature of a reduction of a balance, involving a deterioration of the financial position, and should not be classed with decreases of Expenditure, which really indicate an improvement in the financial position. As to the apportionment of the Home Charges, *see* end of next paragraph.]

INCREASE IN NET IMPERIAL EXPENDITURE.

		Rx.	
Public Works:—			
Decrease in India		— 3,368,046	
Increase in England:—			
Sterling	£921,738		
Exchange	Rx. 768,115	+ 1,689,853	
Net Decrease			— Rx. 1,678,193
Interest:—			
Decrease in India		— 1,226,084	
Increase in England:—			
Sterling	£30,855		
Exchange	Rx. 25,712	+ 56,567	
Net Decrease			— Rx. 1,169,517
Post Office, Telegraphs, &c.:—			
Decrease in India		— 555,643	
Decrease in England:—			
Sterling	£92,872		
Exchange	Rx. 77,393	— 170,265	
Net Decrease			— Rx. 725,908
Civil Charges:—			
Increase in India		+ 533,412	
Increase in England:—			
Sterling	£412,598		
Exchange	Rx. 343,832	+ 756,430	
Net Increase			+ Rx. 1,289,842

Military Expenditure:—			
Increase in India		Rx. + 2,543,038	
Increase in England:—			
Sterling	£479,626		
Exchange	Rx. 399,688	+ 879,314	
Net Increase			+ Rx. 3,422,352
Exchange Compensation Allowance			+ Rx. 781,900
Total Net Increase (as shown in paragraph 9)			+ Rx. 1,920,476

TABLE IV.

16. With regard to Table IV. the criticism of incompleteness again applies. It does not seem serviceable to detach the Military Expenditure in England from that in India. Dividing the increase in the Military Expenditure of the Government of India between two tables does not reduce the total increase, although it makes it more difficult for the mind to realise that total. Sir H. Waterfield gives the increase in Net Military Expenditure in India from 1884–5 to 1894–5 as Rx. 2,543,038 (Exchange and Compensation Allowance excluded). An examination of the figures in the Finance Accounts for 1884–5 and the Financial Statement for 1895–6 yields a slightly different result, namely, Rx. 2,560,938, or a difference of Rx. 17,900. This is made up of the estimate for Exchange Compensation Allowance under the heads of Special Defence Works and Military Works. Starting with an increase of Rx. 2,560,938 in Net Military Expenditure in India, and taking the figures available, the total increase in Net Military Expenditure of the Government of India compared with 1884–5 is as follows, in 1894–5 and 1895–6 (*Budget Estimate*), respectively:—[N.B. In the following figures that part of the cost of exchange which is due solely to the fall in exchange has been excluded, as also the additional rupee pay of the British soldier due to the same cause. The distribution of the Home Charges among the main heads of expenditure in this and other tables in this note is according to the Statement of Accounts published in the yearly Financial Statements of the Government of India. Sir H. Waterfield seems to have adopted a slightly different distribution not readily traceable in those accounts. This difference of detail, which is due to transfers of small accounts from one head to another or to cross classifications, does not affect the totals. In this connexion *vide* paragraph 28 *post*.]

INCREASE IN NET MILITARY EXPENDITURE AS COMPARED WITH 1884–5.
1894–5. (*Revised Estimate.*)

1. Army:—		Rx.	Rx.
Increase in India		2,484,867	
Increase in England:—			
Sterling	£398,897		
Exchange	Rx. 332,414		
		731,311	
Exchange compensation		518,600	
			3,734,778
2. Military Works (including Exchange Compensation):—			
Increase in India		5,671	
Increase in England:—			
Sterling	£18,429		
Exchange	Rx. 15,357		
		33,786	
3. Special Defence Works:—			
India		70,400	
England:—			
Sterling	£62,300		
Exchange	Rx. 51,917		
		114,217	
Total Net Increase			Rx. [illegible]

INCREASE IN NET MILITARY EXPENDITURE AS COMPARED WITH 1884–5.
1895–6. (*Budget Estimate.*)

1. Army:—		Rx.	Rx.
Increase in India		3,411,267	
Increase in England:—			
Sterling	£487,197		
Exchange	Rx. 405,997		
		893,194	
Exchange compensation		610,000	
			4,914,461
2. Military Works (including Exchange Compensation):—			
Increase in India		188,271	
Increase in England:—			
Sterling	£10,929		
Exchange	Rx. 9,108		
		20,037	
			208,308
3. Special Defence Works:—			
India		70,000	
England:—			
Sterling	£46,200		
Exchange	Rx. 38,500		
		84,700	
			154,700
Total Net Increase			Rx. 5,277,469

17. With regard to Military Expenditure generally the following points seem to deserve special attention.

(*a.*) *Addition to the Army, and Upper Burma.*—If Rx. 1,617,338 is the cost of the addition of 30,000 men to the army, some explanation is required of the principle upon which it is estimated that the quartering of some of these extra troops on Upper Burma costs an additional Rx. 420,000,

nearly ten years after the annexation, and some six or seven years after the settlement of that province. In this connexion it would be desirable to know the numbers of (*a*) European and (*b*) Native troops in Burma (1) before the annexation of Upper Burma, and (2) since the annexation.

(*b.*) *Special Operations.*—According to a Parliamentary Return entitled "East India (Military Expenditure)," and dated India Office, 8th June 1894, the expenditure in India in 1884–5 on special operations was, Quetta, Rx. 102,700 and Minor Expeditions, Rx. 56,219, total Rx. 158,919; from paragraphs 155 and 200 of the Financial Statement, 1895–6, it would appear that the cost of special operations in 1894–5 was, Waziristan, Rx. 202,500, and other expeditions, Rx. 40,000, total Rx. 242,500; this would show an increase in 1894–5 over 1884–5 of Rx. 83,581, instead of Rx. 36,081, or Rx. 47,500 more increase than Sir H. Waterfield shows. Doubtless the India Office possesses later information, which has modified the figures for 1894–5. If the comparison in this connexion be made with 1895–6, the increase over 1884–5 would be Rx. 159,981 (*vide* Financial Statement, 1895–6, paragraphs 50, 155, and 200), besides from Rx. 1,500,000 to Rx. 2,000,000 on account of the Chitral Expedition.

But any comparison between any two years must necessarily give an inadequate idea of the cost in recent years to the Government of India of these special operations. It must be borne in mind that during the ten years 1875–6 to 1884–5 the total cost of special operations (excluding, of course, the Afghan and Egyptian Wars) was only Rx. 161,562, incurred in 1875–6 and 1884–5, while during the ten years from 1885–6 to 1894–5 (excluding the charges on account of Upper Burma) no less than Rx. 4,925,877 was expended on special operations. The following table shows the yearly expenditure during the two periods, side by side:—

SPECIAL OPERATIONS.

	Rx.		Rx.
76 - -	2,643	1885–86 - -	2,190,124
-	—	1886–87 -	—
-	—	1887–88 - -	15,541
-	—	1888–89 -	374,378
-	—	1889–90 - -	420,938
-	—	1890–91 -	399,560
-	—	1891–92 - -	751,836
-	—	1892–93 -	257,300
-	—	1893–94 - -	273,650
-	158,919	1894–95 -	242,500
x.	161,562	Total - Rx.	4,925,877

estimate of Rx. 318,900 for 1895-6 and 0,000 for the Chitral Expedition be added, it be seen that during the twelve years 1884–5 to 95–6 Rx. 7,153,696 has been spent on these special operations.

(*c.*) *Special Defence Works.*—The scheme of special defence works started in 1886–7 is now approaching completion, hence the small amount shown under this head; but during the ten years from 1886–7 to 1895–6 a total net expenditure of Rx. 4,479,738 was incurred on this account.

(*d.*) *Special Military Expenditure.*—During the 12 years 1884–5 to 1895–6 over and above a large increase in ordinary Military Expenditure (*i.e.*, Army and Military Works), and excluding all charges on account of Upper Burma, and the cost of frontier railways, special and extraordinary expenditure has been incurred to the amount of Rx. 11,633,434.

(*e.*) *Strategic Frontier Railways.*—In recent years large sums have been spent on unreproductive frontier railways built and maintained purely for military purposes. It will be necessary to ascertain exactly what this amount is year by year (distinguishing cost of construction and cost of maintenance), for what railways incurred, and how charged in the accounts (whether against Revenue or not, and if against revenue, then whether under the head of Military Works, Railway Construction, or Railway Revenue Account). Such expenditure is obviously military, and the burden thereof ought not to be thrown on the general railway enterprise of the Government of India; nor should it be met otherwise than out of Revenue, unless it should be deemed necessary to raise a special loan for the purpose.

TABLE V.

18. With regard to Table V., it is not quite clear why the net charge for the Indian Midland and Bengal-Nagpur railways should be claimed as a virtual expenditure on account of the famine insurance grant. If these railways should be worked at a profit in the future, the Government of India will hardly feel called upon to increase the grant by the amount of any such profits; and therefore it seems a needless confusion of the accounts to claim the net loss upon these undertakings as a set-off to the suspension of the annual provision for famine insurance.

TABLE VI.

19. This table affords perhaps the most striking instance of the fallacy of separating the expenditure in England from that in India. It cannot be other than confusing to show an improvement on Railway Revenue Account by "omitting the heavy charges for interest in England." As a matter of fact the improvement of Rx. 2,706,242 in India was largely absorbed by an increase in the gold payments for interest, &c., of £911,884, involving with exchange an additional charge of Rx. 1,671,787, leaving a net improvement (exclusive of exchange compensation allowance, and of that part of the cost of exchange due to the fall in exchange) of Rx. 1,034,455. But to show any improvement at all in the Railway Revenue Account by putting exchange out of the way is apt to be misleading. The railways have been built very largely by English capital raised in sterling in London, and the interest charges must be met by gold payments, the cost af exchange upon which has for the last ten years been clearly foreseen by Indian Finance Ministers. In spite of this fact, making for the insolvency of the undertakings, there has been little slackening in the accumulation of railway sterling debt, with the result that in ten years of falling exchange, 911,884*l.* has been added to the annual charges on account of the railways. It is of no avail to show increasing profits in India—which can only be called profits by ignoring most important items on the debit side of the account—when the actual railway enterprise of the Government of India is carried on at a heavy loss.

20. The following figures show the true financial results to the Government of India, on Imperial Account, of the Indian railways in 1884–5 and 1894–5.

[N.B.—Rx. 90,100 for exchange compensation is included in the charges for working expenses in 1894–5.]

INDIAN RAILWAYS (Imperial Account).

——	1884–5.	1894–5.	Increase.
Net Traffic Receipts.	Rx. 7,400,192	Rx. 11,672,600	Rx. 4,272,408
Charges for Interest, &c.:			
In India	Rx. 2,366,258	Rx. 4,027,700	Rx. 1,661,442
In England	£4,826,816	£5,738,700	£911,884
Exchange	Rx. 1,172,877	Rx. 4,782,200	Rx. 3,609,323
Total charges	Rx. 8,365,951	Rx. 14,548,600	Rx. 6,182,649
Net loss	Rx. 965,759	Rx. 2,876,000	Rx. 1,910,241

If from the net loss in each year be deducted the charge for exchange properly due to the fall in exchange on the basis of the sterling expenditure in 1884–5, the result is as follows:—[N.B. Of the Rx. 4,782,200 charged to exchange in 1894–5, Rx. 759,903 was due to increased sterling charges, and not primarily due to the fall in exchange.]

	1884–5.	1894–5.	Increase.
	Rx.	Rx.	Rx.
Actual loss - - - - - - -	965,759	2,876,000	1,910,241
Exchange - - - - - - -	1,172,877	4,022,297	2,849,420
Profit (Exchange excluded) - - -	Rx. 207,118	Rx. 1,146,297	Rx. 939,179

21. From the foregoing figures it will be seen that the improvement of the Railway Revenue Account in India is no index of the actual results of the railway enterprise of the Government of India. In 1894–5 the railways cost the Government Rx. 2,876,000 net, or Rx. 1,910,241 more than in 1884–5, and this is the serious fact which must be kept in mind in considering the railway policy of the Government of India. It does not seem sound finance to borrow in gold for enterprises, however intrinsically desirable, which will probably, owing to the state of the exchange, result in heavy loss in the future.

22. With regard to Indian railways generally, the following points seem to require careful attention:—

(*a*.) The Government of India is practically the owner of all the Indian railways, which have been built at a heavy cost, and are maintained at a heavy annual expense. Of course, the Indian railway system is capable of almost infinite development, hardly more than the main trunk lines being yet in existence, and it is therefore of importance that that development should proceed upon lines of sound finance. The Government of India have recently been carrying out this development by methods which do not appear to be sound. When a feeder line has to be built the present practice is to make over the project to a company, the company raising the capital and the Government building the line and either working the completed undertaking or arranging that it shall be worked by an existing company. After a certain number of years the Government will inevitably buy out the company at what is certain to be an unnecessarily high figure.

This system seems to combine four distinct disadvantages: (1) The capital in the first instance is raised on less favourable terms than the Government could command; (2) A large amount of money is wasted in promotion money, commission, and other preliminary expenses of company floating; (3) A whole separate staff and establishment, with directorate, &c. is brought into existence at unnecessary expense for a line which is dependent for its existence upon the trunk railway, and which could be, and is, most effectively and economically worked with the original undertaking; and (4) a small and separate railway with separate interests is planted in the middle of a great system of State Railways, and must ultimately be bought out on terms less favourable to the State than those on which it could originally have been built.

In this connexion it will be necessary to call for documents showing the latest terms upon which the Government of India is prepared to promote the construction of railways by companies. A statement should be asked for showing the financial results of every railway since construction, the terms upon which constructed, and the future rights and responsibilities of the Government with regard thereto.

(*b*.) The Government of India, some years ago, became entitled to purchase the Great Indian Peninsular, the Bombay and Baroda, and other guaranteed railways, but waived their right for a period of years in return for certain modifications of the contracts. A statement should be called for showing approximately, for each railway, (1) What is the present yearly loss to the Revenues of India on account of this waiver by the Government; (2.) What is the present yearly gain to the revenues of India on account of the modifications of the contracts; and (3) What was the price at which the Government might have purchased these railways in 1875, and what is the probable price which the Government will have to pay on the next date on which it can exercise the option of purchase, and when.

(*c*.) With regard to the Bengal Central Railway, it is desirable to know why a guarantee was given to this company, and upon what terms, and what the yearly loss has been. In the finance accounts of the Government of India there is a constantly recurring footnote with reference to this railway to the effect that "although for convenience "classified among State railways, this line is "the property of the Bengal Central Railway "Company."

(*d*.) The following extract from an article in the "Economist" for July 27th, 1895, upon the Administration Report of Indian Railways, 1894–5, gives a very clear and authoritative statement of the nature of one portion of the present contracts between the Government of India and the guaranteed railway companies.

"The result of the working of the Great Indian Peninsular Railway, which is clearly brought out in the report, shows that during the first half of 1894 the net earnings amounted to Rx. 1,265,800, while during the second half of the year the net earnings only amounted to Rx. 358,700, or a total for the year of Rx. 1,624,500. Now, as we have already explained, in order to arrive at the surplus profits which have to be declared each half year separately, the guaranteed interest in sterling has to be converted into rupees at the nominal rate of 1*s*. 10*d*., and not at their true value, and in the case of this railway the sum to be thus set aside amounts half-yearly to Rx. 657,700. Upon this basis of calculation the surplus profits during the first half of the year amounted to Rx. 608,100, of which the company's half share was Rx. 304,000. During the second half of the year there were no surplus profits. The net receipts, in fact, fell far short of the amount required to meet the guaranteed interest, and, owing to the arrangement by which the profits are declared on a half-yearly instead of a yearly basis, the surplus profits at the end of the fist half-year do not form a set-off against the loss during the second half, and the Government had, therefore, to make good the loss partly out of its own share of surplus profits, and partly from the general revenues of the country.

"The net result on the year's working was, therefore, this: The Company obtained Rx. 304,000 of so-called surplus profits, which enabled them to pay their shareholders an extra dividend of 16*s*. 4*d*. over and above the guaranteed interest of 5 per cent. The Government, on the other hand, had to pay the guaranteed interest, which at the average rate for the official year amounted to no less a sum than Rx. 2,207,800. To meet this, they had the net receipts for the whole year, less the company's share of surplus profits, viz., (Rx. 1,624,300 — Rx. 304,000), Rx. 1,320,300, and they therefore had to provide Rx. 887,500 to make good the guaranteed interest. In other words, while the company were able to distribute an extra dividend of 16*s*. 4*d*., the State suffered a loss of Rx. 887,500. Had, on the other hand, the terms of the contract simply provided a 5 per cent. sterling guarantee with a half share of any surplus profits at the end of the year after meeting the guaranteed interest out of the earnings of the undertaking, the company would have had no

surplus profits with which to declare an extra dividend, and as the whole of the net earnings would have gone towards meeting the guaranteed interest, the loss of the State would have been reduced to (Rx. 2,207,800 — Rx. 1,624,300) Rx. 583,500, a loss solely due to the fall in the value of the rupee, and therefore practically unavoidable.

"It is evident, therefore, that the loss which the Indian Government has had to bear in connexion with the three older guaranteed companies still in existence, and which during the past year alone amounted to over Rx. 1,500,000, has not, as is usually asserted, been solely due to the depreciation of the rupee, but must to a considerable extent be attributed to the very faulty nature of the contracts with the companies. It must also be remembered that not only do these contracts enable the companies to declare higher dividends than their properties really earn, but they also naturally enhance the price of the company's stock in the money market, and as, when the Indian Government wishes to exercise their option of purchase, they have to do so at a valuation based on the average market value of the stock for three years previous to the date of purchase, it follows that they will be compelled to purchase at an inflated capital value."

TABLE VII.

23. With regard to the figures in Table VII., they must, as in the case of the preceding tables, be read in conjunction with the figures relating to the expenditure in England and exchange compensation allowance. Further, as the Imperial expenditure on the Civil Administration (including that for Upper Burma, which is classed as Imperial) is less than a fourth of the total cost of Civil Administration in India, it is necessary to deal with the total expenditure, Provincial as well as Imperial, in order to form a correct idea of the growth of the cost of the Civil Administration in India. Again, the cost of collecting the revenue less the cost of producing the opium revenue (practically the whole of which is cost of cultivation and manufacture) and the cost of manufacture, excavation, and purchase of salt, must be included in a complete statement of the charges for Civil Administration. [N.B.—The cost of collection of Revenue is taken to be the amount shown in the accounts under the head of Direct Demands on the Revenues less the refunds and drawbacks, the charges under opium, and the cost of manufacture of salt (Rx. 134,285 in 1884–5, and Rx. 125,000, estimated, in 1894–5). Exchange is excluded, and Exchange Compensation Allowance, of which Rx. 130,000 is estimated to fall under the head of Collection of Revenue, *i.e.*, Rx. 30,000 Imperial and Rx. 100,000 Provincial, is shown separately.]

INCREASE in NET COST of CIVIL ADMINISTRATION.

1884–5 to 1894–5.

1. Civil Departments:			
Increase in India:—			
Increase in Imperial	Rx. 843,866	Rx.	
Increase in Provincial	Rx. 1,535,590	+ 2,379,456	
Increase in England:—			
Sterling	£96,727		
Exchange	Rx. 80,605	+ 177,332	
Net Increase			Rx. 2,556,788
2. Miscellaneous Charges:			
Decrease in India:—			
Decrease in Imperial	Rx. 310,454		
Increase in Provincial	Rx. 300,522	— 9,932	
Increase in England:—			
Sterling	£315,871		
Exchange	Rx. 263,226	+ 579,097	
Net Increase			Rx. 569,165
3. Collection of Revenue:			
Increase in India:—			
Increase in Imperial	Rx. 510,845		
Increase in Provincial	Rx. 1,351,786	+ 1,862,631	
Increase in England:—			
Sterling	£432		
Exchange	Rx. 360	+ 792	
Net Increase			Rx. 1,863,423
4. Exchange Compensation Allowance:			
Imperial Expenditure		+ 149,600	
Provincial Expenditure		+ 378,300	
Net Increase			Rx. 527,900
Total Net Increase			Rx. 5,517,276

Of this total net increase of Rx. 5,517,276, the Imperial share is Rx. 1,951,078 and the Provincial share Rx. 3,566,198.

24. With regard to the analysis given in Table VII. of the net increase in the Civil Administration Charges, each one of the separate items requires careful investigation. For instance, the net increase of Rx. 76,606 under the head of Political conveys a very inadequate idea of the growth of expenditure under this head during recent years. Besides this increase in Imperial expenditure, there was an increase under this head of Rx. 67,627 on Provincial account, making a total increase in India of Rx. 144,233, excluding Rx. 23,400, the estimated Imperial share of the charge for Compensation Allowance, but including Rx. 4,100, the estimated Provincial share of that charge. The expenditure in England under the head Political shows a decrease of 10,388*l.*, involving a saving of Rx. 8,657 in exchange, the total decrease in Home Charges for Political thus being Rx. 19,045. The following figures show the details of the increase in the Political charges, Imperial and Provincial, in India in 1893–4 (the latest detailed figures available) as compared with 1884–5. [N.B.—There was a slight decrease in the total Political charges in India in 1894–5 as compared with 1893–4, but for 1895–6 there is an estimated further increase. The figures for 1893–4 include Rx. 15,824 on account of Exchange Compensation Allowance.]

INCREASE of POLITICAL CHARGES in INDIA, 1884–5 to 1893–4.

	1884–5.	1893–4.	Increase (+) or Decrease (−).
	Rx.	Rx.	Rx.
Political agents	257,167	338,151	+ 80,984
Charges on North-West Frontier	67,045	124,615	+ 57,570
Political subsidies	133,553	231,060	+ 97,507
Entertainments and presents	33,097	27,579	− 5,518
Refugees and State prisoners	41,307	81,892	+ 40,585
Miscellaneous	44,148	34,041	− 10,107
Afghan Delimination Commission	182,950	—	− 182,950
Special political expenditure: Cabul, Sikkim, Gilgit, Kurram, Chitral Missions, &c.	—	57,656	+ 57,656
Organising Imperial Service troops	—	20,117	+ 20,117
Expenditure against certain revenues	—	14,489	+ 14,489
Total	Rx. 759,267	Rx. 929,600	+ Rx. 170,333

25. If the charge for Exchange Compensation Allowance be deducted the net increase would be Rx. 154,509. Properly speaking the charges for the Afghan Delimitation Commission ought to be excluded as temporary expenditure, when it would appear that the permanent political charges, excluding Exchange Compensation, have increased by Rx. 337,459 during the last 10 years. In this connection it would be desirable to know what was the estimate, and what has been the actual cost from first to last of the Gilgit Agency in the past, and what it is estimated to be in the future. It would also be interesting to have a similar statement with regard to Upper Burma.

TABLE VIII.

26. With regard to Table VIII. and all tables relating to the Indian Debt, the transactions are so intricate that it would be desirable to obtain from the India Office a special memorandum dealing with the Indian Debt in all its forms. In the meantime the following would be of assistance:—A Return showing to what extent the disbursements of the Secretary of State in England have been met by drawings on the Government of India; to what extent by borrowing by the Secretary of State in England, or by money received from railway companies, the equivalent of which was repaid to the companies in rupees in India; and to what extent in other ways.

TABLE IX.

27. With regard to Table IX. no special comment is necessary after what has already been said so often. In the 10 years there was a large reduction in the expenditure in England, so that the working of the Post Office Telegraph and Mint has resulted even more favourably than is shown by Sir Henry Waterfield.

TABLES X. to XVII.

28. These tables have been dealt with generally in conjunction with the previous tables. With regard to Tables XIV., XV. and XVII. a few words of explanation are necessary. These three tables show an increase of expenditure in England amounting to 455,256*l.* Of this only 178,527*l.* is shown as the increase in the Army effective charges. But according to the classification in the accounts of the Government of India, the increase in Army effective charges has been 465,298*l.* This difference of result has been achieved by using the term "Army effective charges" in a narrower sense than that adopted in the accounts of the Government of India. This is not only confusing, but apparently unjustifiable. It is not easy to see upon what grounds furlough pay (drawn by officers on the active list) and military stores are excluded from Army effective charges, more especially when they are very properly included therein in the official accounts. A similar confusing cross-division has been made with regard to civil expenditure, although the confusion of terms has been avoided. The following figures show the distribution of the net increases shown in these three tables, total 455,256*l.* [N.B.—Included in the increases for civil charges of 104,919*l.* is 59,862*l.* shown in Tables XVII. as "other" stores. It is unnecessary to correct this vagueness here, as the following figures are intended to show how the larger increase of 527,598*l.* in military expenditure, is included in the net increase of 455,256*l.* shown in Tables XIV., XV., and XVII. under the titles of "Army Effective Charges," "Furlough Pay," and "Stores."]

Main Heads of Expenditure.	Increase (+) or Decrease (−).	
	£	£
Army Effective Charges	+ 465,298	
Special Defence Works	+ 62,300	
Net Increase (Military)		+ 527,598
Civil Charges, Increases	+ 104,919	
„ „ Decrease	− 83,330	
Net Increase (Civil)		+ 21,589
Public Works, Furlough	+ 7,851	
Telegraph Stores	− 101,782	
Net Decrease, other Heads		− 93,931
Net Increase shown in Tables XIV., XV., and XVII.		+ 455,256

With regard to Table XVI., it may be mentioned that the large reduction of 371,394*l.*, shown under the head of military pensions for the British forces, is part of a larger reduction of 705,198*l.* effected in 1885–6 by the abandonment of the system of capitalizing pensions payable to the War Office. The reduction, which has no real significance, as it is due to a change in the system of accounts, is only temporary; and the expenditure under this head is gradually mounting up to what it was in 1884–5.

TABLES XVIII. AND XIX.

29. With regard to exchange, Sir H. Waterfield shows a total increase in the ten years of Rx. 11,156,204 (excluding the small increase of Rx. 59,493 shown in connection with the net revenue), which is made up as follows:—

Increase in Cost of Exchange.

	Rx.
On Net Sterling Expenditure	9,602,221
On Remittance Accounts	− 177,917
In Soldiers' Pay	950,000
For Exchange Compensation	781,900
Total Net Increase	Rx. 11,156,204

As has already been explained the increase of Rx. 9,602,221 on account of Net Sterling Expenditure

is not wholly due to the fall in exchange, but is partly due to an increase of Sterling Expenditure.

30. If, at a time when 100*l.* of expenditure in England costs the Government of India Rx. 150, 100*l.* be added to the Home Charges, obviously, although Rx. 50 of this additional expenditure will appear in the column headed Exchange, this Rx. 50 is as much additional expenditure as is the Rx. 100, which is made nominally to represent the 100*l.* Further, if at a time of falling Exchange the Government of India incur additional sterling expenditure, whether by necessity or otherwise, they must be taken to have incurred at the time whatever of additional expenditure it may ultimately cost to provide that additional amount in gold. In ascertaining the increased cost of Exchange in Net Sterling Expenditure for any given period the only increase properly due to Exchange is the increased cost of remitting, at the end of the period, the amount of the Sterling Expenditure at the beginning thereof.

In 1884–5 the Net Sterling Expenditure of the Government of India was	£13,792,555
Costing for Exchange (*i.e.*, in addition to Rs. 10 or Rx. 1 for every 1*l.*)	Rx. 3,351,479
Or a total cost of	Rx. 17,144,034
In 1894–5 the cost of remitting 13,792,555*l.* to England was	Rx. 25,286,301
Or an increase, due solely to the fall in Exchange, of	Rx. 8,142,267
If to this be added the cost of Exchange in 1894–5 on the 1,751,945*l.* added sterling charges since 1884–5	,, 1,459,954
We get the total shown in column 6 of Table XVIII.	Rx. 9,602,221

31. The following figures show how the increase in the cost of Exchange should be presented :—

Increase in Cost of Exchange.

	Rx.	Rx.
On Net Sterling Expenditure as in 1884–5	8,142,267	
In Soldiers' Pay	950,000	
Automatic increase in Exchange	9,092,267	
On Remittance Accounts	— 177,917	
Net automatic increase in Exchange		8,914,350
On Additional Sterling Expenditure since 1884–5	1,459,954	
On Exchange Compensation	781,900	
Net increase due to New Expenditure		2,241,854
Total		Rx. 11,156,204

32. With regard to the increase of Rx. 9,092,267 automatically due to the fall in Exchange it is very important to note how the incidence of this heavy charge is distributed among the main heads of expenditure. Dividing the expenditure into four main heads :— I. Civil Services (including Civil Departments, Miscellaneous Civil Charges, Buildings and Roads, and an insignificant increase of Rx. 200 under Famine Insurance—included in order to agree the total—but excluding Direct Demands on the Revenues, *i.e.*, Rx. 59,493); II. Military Services (including Army, Military Works, and Special Defence Works); III. Debt Services (*i.e.*, Interest); and IV. Commercial Services (including Post Office and Telegraphs, Mint, Railways, and Irrigation), the following figures show how the burden of the Rx. 9,092,267 is borne :—

Automatic increase in Cost of Exchange, 1884–5 to 1894–5.

	Rx.
I. Civil Services	1,294,414
II. Military Services	3,259,283
III. Debt Services	1,521,716
IV. Commercial Services	3,016,854
Total	Rx. 9,092,267

Now, it must be remembered that the increase of Rx. 3,016,854 under the head of Commercial Services does not all represent actual increase of Expenditure, but, as a set-off to the increased returns from the Indian Government's commercial undertakings, largely represents the diversion of potential revenue. In spite of this heavy additional charge, the total net cost of the Commercial Services to the Government of India in 1894–5 was only Rx. 2,787,500 as against Rx. 1,972,171 in 1884–5 [the average annual net cost has been about Rx. 2,048,000 during the last 20 years, 1875–6—1894–5], or an increase of Rx. 815,329. Again, in spite of the increase of Rx. 1,521,716 under the head of Debt Services, the total net expenditure of the Government of India for Interest in 1884–5 was only Rx. 3,959,800 (excluding Rx. 301,000 exceptional expenditure on account of "anticipation interest and brokerage paid " in respect of the conversion of the 4 per cent. debt," *vide* F. S. 1895–6, para. 21) as against Rx. 3,907,848 in 1884–5, or an increase of Rx. 51,952. Consequently under the two heads of Debt and Commercial Services, the automatic increase in the cost of Exchange, amounting to Rx. 4,538,570 (nearly half the total burden), although it has prevented a very considerable improvement, has only caused an actual addition to expenditure of Rx. 867,281. The total additional expenditure entailed upon the Government of India in 1894–5 by the automatic increase in the net cost of Exchange since 1884–5 is therefore Rx. 5,420,978, or, including Rx. 28,333 on account of the cost of collection of the Revenue (*i.e.*, Rx. 59,493, less the Charge for Exchange Compensation allowance—Rx. 31,160—and trifling amounts in connection with opium, and increased sterling charges) a total of Rx. 5,449,311. The following contrast is instructive :—

Principal additions to Net Expenditure 1884–5—1894–5.

On account of the automatic increase in the cost of Exchange		Rx. 5,449,311
On account of increased Civil and Military Charges :—		
Civil Services (*vide* para. 23)	Rx. 5,517,276	Rx. 9,476,128
Military Services (*vide* para. 16)	,, 3,958,852	

TABLE XX.

33. With regard to the Debt, Sir H. Waterfield's Table shows a large reduction in the ordinary debt during the last ten years :—

Increase in Debt since end of Financial Year 1884–5.

Increase in India	Rx. 11,161,894
,, ,, England	£44,734,738
Total	Rx. 55,896,632
Debt transferred to Public Works	,, 65,392,589
Net decrease in the ordinary Debt	Rx. 9,495,957

This large decrease in ordinary Debt of Rx. 9,495,957 is entirely illusory. The fallacy consists in taking the increase of 44,734,738*l.* in sterling debt as only equivalent to an increase of Rx. 44,734,738, and then setting off against it what is largely rupee expenditure on

Public works. The following table shows the equivalent in tens of rupees of this 44,734,738*l.* :—

Year.	Increase of Gold Debt.	Rate of Exchange.	Equivalent in Tens of Rupees.
	£	*d.*	Rx.
1885–86 -	4,535,533	18·254	5,963,229
1886–87 -	10,421,556	17·441	14,340,760
1887–88 -	— 88,029	16·898	— 125,026
1888–89 -	10.893,462	16·379	15,962,090
1889–90 -	3,158,781	16·566	4,576,285
1890–91 -	6,215,817	18·090	8,246,523
1891–92 -	2,995,935	16·733	4,297,044
1892–93 -	— 720,376	14·985	— 1,153,755
1893–94 -	1,430,025	14·547	2,359,290
1894–95 -	5,892,034	13·090	10,802,812
Total -	£44,734,738		Rx. 65,269,252

Again, the Rx. 65,392,589 transferred to Public Works contains a sum of 19,943,152*l.* treated as equivalent to Rx. 19,943,152, besides a large amount of sterling expenditure duly converted into Rx. at the current rate of exchange. This sum of 19,943,152*l.* is made up of three separate amounts raised in 1886–7, 1888–9, and 1890–1, shown in column 21 of a table at page 195 of the Finance and Revenue Accounts of the Government of India for 1893–4; and, when converted into Rx. at the Rates of Exchange for those three years respectively, is equivalent to Rx. 28,133,680. Consequently the amount transferred to Public Works should be shown as Rx. 73,583,117.

34. Making these corrections, the following figures show the true state of the case :—

Increase in Debt since end of Financial Year 1884–5.

	Rx.
Increase in India - - -	11,161,894
Increase in England - - £44,734,738 =	65,269,252
Total Increase in Debt -	Rx. 76,431,146
Deduct Amount transferred to Public Works - - - - -	,, 73,583,117
Net Increase in Ordinary Debt (ten years) - -	Rx. 2,848,029

Obviously, if 1*l.* = Rs. 18⅓, as at present, 1,000,000*l.* sterling raised in England, whether applied to the ordinary purposes of Government or to redeeming debt (whether gold or silver), and whether remitted to India or used in reduction of the Secretary of State's drawings in Bills on India, must either produce Rx. 1,833,000 in India on Exchange or—which comes to the same thing—set free that amount in the hands of the Government of India for other purposes. Consequently, to show Rx. 1,000,000 of expenditure on Public Works as a set-off to 1,000,000*l.* of sterling debt without first reducing the sterling to a rupee denomination appears to be indefensible. It would be instructive to know how much of the total sum of Rx. 73,583,117 (corrected amount), transferred to Public Works, is productive.

Tables XXI. to XXIX.

35. These Tables referring to the Provincial Expenditure have already been dealt with generally in commenting on previous tables. As the disturbing elements of Sterling Expenditure and Exchange (except Compensation Allowance) are entirely absent, these tables call for no special criticism here. Of course, with regard to all the tables in Sir H. Waterfield's Memorandum, it must be borne in mind that they are largely in the nature of summaries, and that most of the figures thus presented require searching analysis in order to arrive at the true condition of Indian Finance.

Tables XXX. and XXXI.

36. These Tables, dealing with the Provincial balances, are chiefly instructive as showing a general deterioration in the financial position of the Local Governments in harmony with the more serious deterioration in that of the Imperial Government. Compared with 1891 the balances of the Provincial Governments in 1896 are estimated to be less by nearly Rx. 2,000,000, which means, if the present increased rate of expenditure be maintained, not only less recuperative financial power for the Local Governments, but also, by a natural process of action and reaction, increased difficulties for the Imperial Government at the next revision of Provincial Contracts with, it may be, the necessity for additional taxation.

W. Wedderburn.

12th August 1895.

APPENDIX No. 2.

Paper handed in by Sir William Wedderburn, Bart., M.P.

MEMORANDUM ON INDIAN FINANCIAL EXPENDITURE.

1. The accompanying six tables have been prepared with the object of putting into a convenient form the main facts connected with Indian Financial Expenditure during the last 20 years, 1875–6 to 1895–6. No attempt has been made either to justify or condemn any increase or decrease in expenditure, the sole purpose being to state the essential facts as disclosed by an analysis of the finance accounts of the Government of India.

2. Table I. gives the net expenditure of the Government of India from 1875–6 to 1895–6 (Budget estimate). The figures for the years 1875–6 to 1883–4 have been compiled from Appendix III. of the Financial Statement for 1886–7, when the accounts for those years were finally re-cast in the form since adopted by the Government of India. The figures for the later years have been compiled from Statements E. and F. of the Financial Statement for 1895–6, with frequent reference to the Financial Statements of successive years.

3. The table given in this memorandum differs somewhat in form and substance from that in Statements E. and F. of the Financial Statement for 1895–6. Reasons for the modifications here adopted will be found in Appendix A. to a note on Sir J. Westland's Budget, recently published by this Committee. It will be sufficient here to explain briefly how the figures in the following table have been obtained.

	Rx.
Taking the figures for the closed accounts for 1893–4, the gross expenditure was - - - - - - -	92,112,212
Of this, the departmental receipts, which are properly a set-off against expenditure under corresponding heads amounted to -	29,834,644
Leaving - - -	62,277,568
Then deducting therefrom the refunds and drawbacks of revenue - - -	256,020
The balance is that shown in the present table as total net expenditure charged against revenue - - - Rx.	62,021,548

4. In Table E. to the Financial Statement for 1895–6, the total net expenditure is given as Rx. 60,416,501, or less by Rx. 1,605,047 than the total shown above. This difference is accounted for as follows:—

	Rx.
Assignments and compensations treated as expenditure and *not* deducted from revenue - - - - - -	1,528,260
Miscellaneous expenditure treated as expenditure in full, the miscellaneous receipts being entirely unrelated should not be treated as a set-off - - - - -	273,831
Profits on Post Office, and Telegraph and Mint placed under general heading of Commercial Services, and so operating in reduction of net charges under this general heading - - - - - -	−197,044
	Rx. 1,605,047

5. Table II. is supplemented to Table I. It shows with reference to the totals given in Table I. for each of the eight main heads of expenditure (1) the total increase or decrease from year to year; (2) the amount of this increase expended on exchange, including—for those years where they operated—the increased rupee pay of the British soldier (whose pay is on a sterling basis) and the charge for exchange compensation allowance; and (3) the actual increase or decrease with exchange totally excluded. The figures for (1) are in Roman type, those for (2) in italics, and those for (3) in black type.

6. With regard to the amount shown against exchange in Table II. it must be borne in mind that this represents for each year the increased amount expended on exchange, and not merely the extra amount due to the fall in exchange. As during the 20 years of falling exchange there was a steady increase in the home charges, a portion of the increased cost of exchange in nearly every year was really not due to the fall in exchange, but was due to, and a portion of, increased sterling expenditure.

7. Table III. further supplements Tables I. and II. It shows (1) the net expenditure of the Government of India under the principal heads (distinguishing that due to exchange) for 1875–6, 1884–5, and 1895–6 (Budget estimate); and (2) the increase or decrease in such expenditure for the three periods 1875–6 to 1884–5 (nine years), 1884–5 to 1895–6 (11 years), and 1875–6 to 1895–6 (20 years), respectively. The reason for selecting 1884–5 rather than 1885–6, as the middle year for the purposes of this comparison, is that 1884–5 was the last of a series of four years of financial equilibrium and practically stationary expenditure, while 1885–6 was the first of a series of years (not yet completed) of financial instability, of rapidly increasing expenditure, and of heavy charges on account of military operations.

8. Tables IV., V. and VI. carry the analysis of the main increases or decreases in expenditure still further, Table IV. showing for the period 1875–6 to 1895–6 the exact effect of exchange in this connexion, and Tables V. and VI. showing the same thing for the periods 1875–6 to 1884–5 and 1884–5 to 1895–6 respectively.

9. The figures given in the tables seem to establish the following facts:—

TOTAL EXPENDITURE.

(i.) In the last 20 years the net expenditure of British India has risen from Rx. 46,450,000 to Rx. 65,350,000, showing an increase of Rx. 18,900,000. The total increase of Rx. 18,900,000 is made up of an increase of Rx. 20,900,000 under the three heads of Collection of Revenue, Civil Services, and Military Services, and a decrease of about Rx. 2,000,000 under other heads of expenditure.

(ii.) In the last 20 years the total cost of exchange (including that upon the sterling pay of British troops and exchange compensation allowance) has increased by Rx. 14,350,000. The total increase of Rx. 14,350,000 is made up of an increase of Rx. 7,750,000 under the heads of Civil and Military Services (including Collection of Revenue) and Rx. 6,600,000 under other heads of expenditure.

(iii.) In the last 20 years, excluding exchange altogether, the net expenditure of British India has arisen from Rx. 45,100,000 to Rx. 49,650,000, showing an increase of about Rx. 4,550,000. The total increase of Rx. 4,550,000 is made up of an increase of Rx. 13,150,000 under the three heads of Collection of Revenue, Civil Services, and Military Services, and a decrease of Rx. 8,600,000 under other heads of expenditure.

(iv.) In the last 20 years, therefore, the total increase of Rx. 18,900,000 in the total net expenditure of British India is made up as follows:

	Rx.	
Increase in Civil and Military Services - -	13,150,000	
Add increase in cost of exchange - - -	7,750,000	
Total increase - - -		20,900,000
Decrease in other expenditure - - -	*8,600,000*	
Deduct increase in cost of exchange - - -	6,600,000	
Total decrease - - -		*2,000,000*
Net total increase - - -		Rx. 18,900,000

(v.) From 1875–6 to 1884–5 there was an increase in total net expenditure (excluding exchange altogether) of Rx. 3,000,000; from 1884–5 to 1895–6 the increase is Rx. 1,550,000. The increase of Rx. 3,000,000 during the former period is made up of an increase of Rx. 4,200,000 under the heads of Civil and Military Services (including Collection of Revenue) and a decrease of Rx. 1,200,000 under other heads of expenditure; while the increase of Rx. 1,550,000 during the more recent period is made up of an increase of Rx. 8,950,000 in Civil and Military expenditure and a decrease of Rx. 7,400,000 in other expenditure.

HOME CHARGES.

(vi.) In the last 20 years of falling exchange the sterling expenditure of the Government of India has been increased by nearly £3,200,000, involving a further charge of Rx. 2,650,000 for exchange, so that additional sterling expenditure of the Government of India has added Rx. 5,850,000 to Indian charges. Of this amount, £1,450,000, with exchange Rx. 1,250,000, total Rx. 2,700,000, falls under Civil and Military expenditure); and £1,700,000, with exchange Rx. 1,450,000, total Rx. 3,150,000, falls under other heads of expenditure (almost entirely railways and debt).

(vii.) In the last 11 years (from 1884–5 to 1895–6) over 900,000, involving nearly Rx. 800,000 for exchange, and making a total additional burden of Rx. 1,700,000, has been added to the sterling expenditure on the civil and military services alone.

EXCHANGE.

(viii.) In the last 20 years there has been an increase of Rx. 14,350,000, which in one way or another is claimed by the Government of India to be due to the fall in the exchange value of the rupee. But of this Rx. 2,650,000 is the present cost of exchange on increases in sterling expenditure since 1875–6, and therefore not primarily due to the fall in exchange, while Rx. 1,450,000 is due to the grant of exchange compensation allowance, leaving Rx. 10,250,000 as the true increase in the cost of exchange automatically brought about by the fall in exchange.

(ix.) Of the increase of Rx. 10,250,000 in 20 years, properly due to the fall in exchange, about Rx. 5,000,000 falls upon the commercial (chiefly railways) and Debt Services, in which enhanced profits or economies have far more than counterbalanced this additional burden; leaving only Rx. 5,250,000 as the true additional burden thrown upon the Civil and Military Services during the last 20 years strictly on account of the fall in the exchange value of the rupee.

CIVIL SERVICES.

(x.) In the last 20 years there has been an increase in the total net expenditure on the Civil Services (*i.e.*, Civil Departments, Miscellaneous Civil Charges, and Buildings and Roads) of Rx. 8,000,000. Of this increase Rx. 2,350,000 accrued during the first nine years (1875-6 to 1884-5) and Rx. 5,650,000 during the last 11 years (1884-5 to 1895-6).

(xi.) In the last 20 years, excluding exchange altogether, there has been an increase in net Civil Service expenditure (exclusive of that on account of Collection of Revenue) of Rx. 5,500,000. Of this increase Rx. 2,050,000 accrued during the first nine years (1875-6 to 1884-5) and Rx. 3,450,000 during the last 11 years (1884-5 to 1895-6).

MILITARY SERVICES.

(xii.) In the last 20 years there has been an increase in the total net military expenditure of the Government of India (*i.e.*, Army Services and Military Works) of Rx. 9,500,000. Of this increase Rx. 1,100,000 accrued during the first nine years (1875-6—1884-5) and Rx. 8,400,000 during the last 11 years (1884-5 to 1895-6).

(xiii.) In the last 20 years, excluding exchange altogether, there has been an increase in net military expenditure of Rx. 4,450,000, of which only Rx. 350,000 accrued during the first nine years (1875-6 to 1884-5) and no less than Rx. 4,100,000 in the last 11 years (1884-5 to 1895-6).

(xiv.) In March 1885, Sir Auckland Colvin, at that time Indian Finance Minister, estimated the net cost of the Army (exclusive of war charges) at a little below 15,000,000*l.*, or, as it would now be expressed with exchange excluded, Rx. 15,000,000. This amount, he said, "may be considered to be "about the normal military expenditure in India "and in England." (F.S. 1885-6, paragraph 136.) If Rx. 1,000,000 be added for military works, the normal net expenditure on the military services, exclusive of that due to exchange, and not counting that spent on Special Defence, may be taken at Rx. 16,000,000, according to the Indian Government's standard. The following figures show (1) the amount of the net expenditure on the military services (exchange excluded) in each year from 1876-7 to 1895-6; (2) the excess year by year over this standard; and (3) the aggregate of such excess expenditure during the 20 years.

Year.	Net Military Expenditure (Exchange excluded).	Excess over Indian Government's Standard (Rx. 16,000,000).	
	Rx.	Rx.	
1876-77	16,029,710	29,710	
1877-78	16,884,476	884,476

* Afghan War. † Upper Burma.
‡ Army increased by 27,000 men. [Estimated extra charge about Rx. 1,500,000 annually.]
§ Revised Estimate. ¶ Budget Estimate.

The aggregate excess Military charge during the 29 years of Rx. 51,800,000 is roughly made up as follows:—

	Rx.
Afghan War - - -	11,500,000
Annexation of Upper Burma -	4,000,000
Increase in Army (nine full years)	13,500,000
Expeditions, Increased Expenditure, Occupation of Upper Burma, &c. - - -	22,800,000
	Rx. 51,800,000

Paper handed in by Sir Wm. Wedderburn, Bart., M.P.

INDIAN FINANCE.

NOTE ON MR. WESTLAND'S BUDGET, 1894-5.

Prepared by the British Committee of the Indian National Congress.

1. In his speech on the introduction of the Tariff Bill in the Viceroy's Council, on the 1st of March last, Mr. Westland, the Financial Member of Council, attributed the estimated deficit of Rx. 3,500,000 on the Indian Budget for 1894-95 to "one cause, and one alone," namely, exchange. More particularly he stated that "the fall in the value of the rupee has of late been "increasing the burden of our sterling payments in a "ratio which far outstrips any possible increase to be "hoped for in our revenues." It appears, therefore, that the Government of India, speaking by its Finance Minister, maintains that loss by exchange is the sole cause of the present financial difficulties.

2. This is not the view taken by Indian public opinion. In a memorial addressed to the Secretary to the Goverment of India by the Bombay Presidency

Association, and dated 12th March, 1894, Mr. Westland's conclusions are directly challenged. It is admitted that exchange has been a disturbing factor in Indian finance, but it is denied that it has been the sole or even the principal cause of the present financial embarassments of the Government of India. The Association contends that the true causes are to be found in "the appalling growth of military expenditure in "all its ramifications during the past eight years, in "the increased charges on army services, arms and "ammunitions, stores, military roads, special defences, "and strategic railways. The large growth, again, of "the charges on account of civil salaries and esta-"blishments must be next held responsible. Upper "Burmah is a third cause which has grievously "burdened the general revenues of the empire. And, "lastly, the unjust compensation allowance to the "services."

3. From these adverse contentions the following two main issues appear to arise:—

I. Is loss by exchange the sole cause of the estimated deficit?

II. Is the increase in military and civil expenditure the true source of the present financial difficulties?

In determining these issues it will be necessary to consider what are the relations between the increased cost of exchange, the increase in the revenues, the increases under various heads of expenditure, the decreases under other heads, and the threatened deficit.

4. It so happens that the last 10 years afford in most respects a convenient period for investigation. During this period there have been no wars or famines to strain the resources of India or to injuriously affect the finances of the country. They have, on the whole, been ten years of prosperity. In 1882 the country had so far recovered from the ill-effects of the great famine of 1876–77 and of the second Afghan war that it was found possible to remit nearly Rx. 3,000,000 of taxation under salt and customs. At the same time the cost of exchange had already become so serious an item that radical changes in the form of keeping the accounts were adopted, and a return furnished showing the financial position during the first years of the decade in the form now used. Exact comparisons are therefore possible throughout the period taken. In short, the beginning of the 10 years which are the subject of this inquiry coincides with the return of the country, under Lord Ripon and Major Baring, to a condition of financial equilibrium which has not been since disturbed by extraneous causes; while exchange, the internal element of instability, already stood fully revealed as a source of future financial trouble. What are the causes which from a condition of surplus, have now produced a deficit of Rx. 3,500,000?

5. In order to arrive at the facts it is proposed to apply two separate tests: One is a comparison of the accounts to-day with those of 10 years ago, taking as the starting point or "standard of comparison" the averages shown in the closed accounts for the years 1882–83 to 1884–85; and the other is a comparison between aggregate increases during those 10 years in important items of account over the fixed "standard of comparison" above referred to. A comparison, even though one of averages, between any two items of account in any two given periods may or may not be a true test of relative variation. For instance, as compared with a common standard, the increase of revenue (owing to new taxation) was Rx. 3,000,000 more in 1890–91 than it was in 1888–89, whereas the increase in the cost of exchange similarly compared was Rx. 1,700,000 less, due entirely to a temporary rise in the rate of exchange. To correct the possibility of fortuitous results and to check, as it were, deductions which might be shown to be arbitrary, this further test of variation with a common standard during a series of years has been adopted.

6. As regards the first of these tests the following methods have been adopted:—

(1.) The present state of affairs is taken to be the average shown in the financial statement of the Government of India for 1894–95; that is to say, for any given item of account the average amount shown under the three heads of Accounts, 1892–93; Revised Estimate, 1893–94; and Budget Estimate, 1894–95.

(2.) With regard to the "standard of comparison," the figures from which the averages are calculated are in all cases taken from Appendix III. of the Financial Statement for 1886–87, where the accounts for 1882–83 to 1884–85 and former years (beginning with 1875–76) were finally recast in their present form.

(3.) The cost of exchange is shown separately, but the gain by exchange, being always of small amount, has not been separately dealt with on the revenue side. In calculating net revenue, however, the cost of exchange is, of course, included in the total under the head of direct demands upon the revenue, which is deducted from the gross revenue under the 11 principal heads.

(4.) The net expenditure is always given, thus to arrive at the present expenditure on account of Miscellaneous Civil Charges the following calculations are made:—

Miscellaneous Civil Charges.

	Rx.	Rx.	Net Rx.
Accounts, 1892–93	5,537,840		
Deduct exchange	1,277,519		
		4,260,321	
Deduct receipts		876,994	
			3,383,327
Revised estimate, 1893–94	5,619,100		
Deduct exchange	1,333,600		
		4,285,500	
Deduct receipts		960,900	
			3,324,600
Budget estimate, 1894–95	5,754,000		
Deduct exchange	1,474,800		
		4,279,200	
Deduct receipts		982,700	
			3,296,500
			3)10,004,427
Net average expenditure, *less* exchange			3,334,809

7. As regards the second test, the figures taken are those of the closed accounts for the years 1883–84 to 1892–93. In this case also net expenditure is given, distinguishing the cost of exchange. As in the case of the "standard of comparison," mentioned above, the figures for 1883–84 and 1884–85 are taken from Appendix III. of the Financial Statement for 1886–7.

8. Having thus indicated the lines upon which it is proposed to proceed, the general allegation by the Finance Minister, that the cost of exchange has outstripped the increase of revenue, may be first examined. That it has done so proportionately is obvious, but the practical question is, Has it done so actually? Several comparisons are possible. The first

and most simple is to take the increase in the revenue collected under the 11 principal heads of Land, Opium, Salt, Stamps, Excise, Provincial Rates, Customs, Assessed Taxes, Forest, Registration, and Tributes from Native States, and to compare it with the increase shown under the head of Exchange :—

	Accounts 1882-3 to 1884-5.	Financial Statement for 1894-5.	Increase.
	Rx.	Rx.	Rx.
Average gross revenue under 11 principal heads.	51,357,687	60,962,558	9,604,871
Average amount shown under head of exchange.	3,365,238	10,459,258	7,094,020
Excess of increase of revenue - - -			2,510,851

9. There are two points which require to be mentioned in connexion with the above figures. In the first place, the average cost of exchange for the years 1882–83 to 1884–85 is abnormally raised by the inclusion in the accounts of 1,000,000*l.* (true sterling) paid to the Imperial Exchequer in 1883–84 on account of arrears for non-effective Army services (*vide* Financial Statement 1884–85 pars. 12 and 53) The average cost of exchange on this sum, at the average rate of exchange for the three years, amounts to Rx. 77,833, which should be deducted from the amount given above, leaving the true average cost of exchange for 1832–83 and 1884–85 at Rx. 3,287,405. In the second place, a considerable portion of the increase shown in the cost of exchange is due not only to a falling rupee, but to an actual increase in the sterling charges, which has nothing to do with exchange. The Home Charges for the two periods here dealt with compare as follows :—

Home Charges.

	£
Average for the years 1882–83 to 1884–85 - - - -	14,410,813
Deduct 333,333*l.*, average charge of the 1,000,000*l.* just referred to - -	333,333
True average, 1882–83 to 1834–85 -	14,077,480
Average shown in Financial Statement, 1894–95 - - -	16,024,813
Increase - - -	1,947,333

This amount, 1,947,333*l.*, at the average rate of exchange for the three years, 1892–93 to 1894–95, as shown in the Financial Statement 1894–95, would involve a loss by exchange of rather more than Rx. 1,265,000, which should therefore be deducted from the average cost of exchange shown in the Financial Statement for 1894–95, in order to arrive at the true extra cost involved by the depreciation of the rupee independent of the enhanced sterling expenditure, *i.e.*, Rx. 10,459,258 — Rx. 1,265,000 = Rx. 9,194,258. Making the corrections here indicated, and taking this time the increase in the net revenue, *i.e.*, revenue after deducting refunds and drawbacks, assignments and compensations, and the charges for collection, the comparison would stand as follows :—

	Accounts 1882-3 to 1884-5.	Financial Statement for 1894-5.	Increase.
	Rx.	Rx.	Rx.
Average net revenue under 11 principal heads.	42,511,152	50,934,094	8,422,942
True average cost of exchange -	3,287,405	9,194,258	5,906,853
Excess of increase of revenue - - -			2,516,089

10. In the above statements of revenue, and in all subsequent ones, it should be noted that the Post Office, Telegraph and Mint, and Railway Accounts have, for the sake of simplicity, been classed as expenditure and not as revenue. It may be mentioned here, however, that during the decade the Post Office, &c., which was formerly a burden on the revenue, became a source of profit resulting in a gain to the revenue of Rx. 570,742 ; and that the railway revenue, after meeting all charges (except the cost of exchange), rose from Rx. 245,140 to Rx. 1,889,115, or a gain of Rx. 1,643,975, being a total gain to the revenue under these two heads of Rx. 2,214,717. At the same time, the cost of exchange in connexion with obtaining this revenue increased by Rx. 2,711,646, of which sum about Rx. 560,000 would be due to increased sterling payments in connexion with the railways, and therefore not already included above. These matters being taken into account, there would be an addition to the increase of revenue of Rx. 2,214,717 —Rx 560,000, *say*, Rx. 1,650,000, while the increase shown in the cost of exchange would remain as at present, as all but about Rx. 560,000 of the increase in connexion with railways is already included in the Rx. 5,906,853 shown above. This would make the excess increase of net revenue over the increase of cost of exchange about Rx. 4,000,000.

11. But the truest test as to whether exchange has "of late" outstripped the increase in the revenues is afforded by a comparison extending over a series of years. Taking first the gross revenue under the 11 principal heads and the total cost of exchange in each of the 10 years 1883–84 to 1892–93, and comparing them in each year with the fixed "standard of comparison," the aggregate increase of the revenue over the standard is Rx. 45,804,647, while that of exchange over its standard is only Rx. 24,992,266, showing an aggregate excess increase during the 10 years of Rx. 20,812,381 in favour of revenue (*vide* Appendix, Table A). In other words the average increase of revenue in each of the 10 years 1883–84 to 1892–93 over the average for 1882–83 to 1884–85 was sufficient to meet the average additions to exchange and to provide Rx. 2,000,000 a year for increased expenditure.

12. Much the same results are obtained if the comparison be made between the aggregate increase of net revenue and the aggregate true increase of the cost of exchange. In paragraph 9 the true average cost of exchange was shown to be Rx. 3,287,405, and the true average amount of the home charges 14,077,480*l.* for the years 1882–83 to 1884–85. Taking the standard costs of exchange at Rx. 3,287,405, and calculating for each of the 10 years 1883–84 to 1892–93 the cost of exchange on remitting 14,100,000*l.* at the average rate of exchange obtained in each year for the Secretary of State's bills and telegraphic transfers, the following results are obtained (*vide* Appendix, Table B) :

	Rx.
Aggregate increase of net revenue 1883–84 and 1892–93 over standard.	40,037,298
Aggegate increase of true cost of exchange for the same period.	21.535,030
Excess of increase of revenue -	18,502,268

13. Looking at these figures it is clear that the cost of exchange has not outstripped the increase in the revenues. Indeed during these 10 years the increase in the revenues has been nearly enough to pay the increased loss by exchange twice over. It is therefore obvious that Mr. Westland is in error when he asserts that the one and only cause of the existing financial trouble is exchange. If it is not the sole cause, can it be said to be the principal cause of embarrassment ?

14. In the Financial Statement for 1894–95 the average gross revenue shown is Rx. 90,875,613 against an average gross expenditure of Rx. 91,851,650, leaving an average deficit of Rx. 976,037. On the other hand the accounts for the three years 1882–83 to 1884–85 show an average surplus of Rx. 722,622. In the following tables these accounts are arranged so as to show net expenditure only, as against the total revenue collected under the 11 principal heads of Land, Salt, &c. In both cases, as noted in paragraph 10, the accounts under Post Office, Telegraph, and Mint, and under Railways, have been treated as expenditure, the Post Office, &c, because although it yields a net profit now it was formerly a loss to the revenue, and the railway revenues because, although yielding in both cases a profit, that profit was completely swallowed up by exchange. The respective surplus and deficit remain the same.

TABLE I.—SHOWING the AVERAGE NET EXPENDITURE [*vide* Par. 6 (4)] of the GOVERNMENT of INDIA, distinguishing the cost of Exchange, as shown in the Accounts for the three years 1882–83 and 1884–85, compared with that shown in the Financial Statement for 1894–95 (average of the amounts under Accounts 1892–93, Revised Estimate 1893–94, and Budget Estimate 1894–95).

	Average for Years 1882-83 to 1884-85.	Average shown in F. S. 1894-95.	Increase (+) or Decrease (−).

Revenue	51,357,687	60,962,558	+ 9,604,871
Surplus (+) or Deficit (−)	+722,622	− 976,037	− 1,698,659

TABLE II.—SHOWING the INCREASES and DECREASES in the net EXPENDITURE of the GOVERNMENT of INDIA, as shown in the previous Table, classified as to (*a*) Civil and Military and (*b*) Other Expenditure; showing also the operation of Exchange under each item.

	Increase or Decrease, excluding Exchange.	Increase or Decrease, in Exchange.	Total
(*a*) Civil and Military Expenditure:—	Rx.	Rx.	Rx.
Direct Demands	+1,164,666	+ 17,263	+ 1,181,929
Salaries, &c.	+2,736,931	+ 266,305	+ 3,003,236
Miscellaneous	+ 158,873	+ 935,509	+ 1,094,382
Civil Works	+ 114,168	+ 38,220	+ 152,388
Total Civil Services	+4,174,638	+1,257,297	+ 5,431,935
Army	+4,278,788	+1,998,762	+ 6,277,550
Military Works	+ 137,535	+ 12,659	+ 150,194
Special Defence	+ 263,385	+ 54,068	+ 317,453
Total Military Services	+4,679,708	+2,065,489	+ 6,745,197
Total Civil and Military Services	+8,854,346	+3,322,786	+12,177,132
(*b*) Other Expenditure:—			
Interest	−1,352,263	+1,075,214	− 277,049
Post Office, &c.	− 570,742	+ 97,003	− 473,739
Famine Relief	− 753,323	+ 743	− 752,580
Construction of Railways	− 36,387	− 5,995	− 42,382
Railways	−1,643,975	+2,614,643	+ 970,668
Irrigation	− 108,126	− 1,661	− 110,787
Egyptian War, &c.	− 217,584	− 8,713	− 226,297
Provincial Balances, &c.	+ 38,564	—	+ 38,564
Total Other Expenditure	−4,644,836	+3,771,234	− 873,602
Grand Total	+4,209,510	+7,094,020	+11,303,530

15. These two tables bring out into clear relief the financial history of the past decade. There are several noteworthy points.

1. The expenditure on the Civil and Military Services exhibits the large increase of Rx. 8,854,346, apart from any increase due to exchange.
2. The increase in exchange under Civil and Military expenditure accounts for little more than a quarter of the total increase of Rx. 12,177,132 for these charges.
3. A more detailed examination of the accounts shows that about Rx. 500,000 of the increase of Rx. 3,322,786 under the head of exchange is due to an increase of about 750,000*l.* in the home charges on account of Civil and Military expenditure.
4. The contrast between the large increase under Civil and Military expenditure and the uniform improvement or decrease under other heads of expenditure is striking. Thus under the heads of Interest, Post Office, &c., and Famine Relief and Insurance, in one way or another, Rx. 1,500,000 was taken off expenditure, after meeting heavy additions under these heads on account of exchange.
5. Generally, the decrease of expenditure under all other heads except the Civil and Military Services was sufficient to meet a far larger increased burden of exchange, and to yield in addition an improvement in the accounts of Rx. 873,602.

6. The increase of expenditure upon the Civil and Military Services with less than half the total increased burden of exchange has swallowed up a former surplus of Rx. 722,622, absorbed the total increase in the revenues of Rx. 9,604,871, consumed an improvement under other heads of expenditure of Rx. 873,602, and in addition brought about a deficit of Rx. 976,037.

16. It would seem then that exchange, so far from being the sole cause, is not even the principal cause of the present difficulties. In the first place, the increase in the net Military and Civil expenditure, apart from exchange, is Rx. 8,854,346, against an increase in the cost of exchange under all heads of Rx. 7,094,020. In the second place, Rx. 3,771,234 of the increased cost of exchange is more than covered by decreased expenditure under cognate headings, without using one rupee of the increase in the revenue. This seems to show that the low exchange is not even a necessary cause of financial embarrassment. In the third place, of the Rx. 3,322,786 remaining, about Rx. 500,000 is due to increased sterling charges and not to exchange, which means that out of the total increase of more than Rx. 12,000,000 in the Military and Civil charges, less than Rx. 3,000,000 is due to the depreciation of the rupee and over Rx. 9,000,000 to increased expenditure on the Military and Civil Services.

17. There remains the test of a comparison of aggregate increases. During the 10 years 1883–84 to 1892–93 the aggregate increase of gross revenue over the average of the three years 1832–83 to 1834–85 compares with the aggregate increases under Military and Civil Expenditure and exchange as follows (*vide* Appendix, Tables A, C, and D):—

	Rx.	Rx.
Revenue		45,804,647
Total cost of Exchange		24,992,266
Military and Civil Charges:—		
Expenditure	42,544,526	
Exchange	10,882,732	
		53,427,258

These figures show the following remarkable facts:—

	Rx.
1. Excess increase of Military and Civil charges over increase of the Revenues 1883-84 to 1892–93	7,622,611
2. Excess increase of Military and Civil expenditure (exclusive of Exchange) over total cost of Exchange, 1883–84 to 1892–93	17,552,260
3. Ratio between increased Military and Civil expenditure and the increased cost of Exchange thereon	4:1

18. Upon these facts and figures it is claimed that upon the two main issues stated in paragraph 3, the proper finding should be (I.) that loss by exchange is not the sole (or even the principal) cause of the existing financial difficulties, and (II.) that the increase in Military and Civil expenditure is the true source of the present embarrassment.

19. It only remains to notice a few points in connexion with the increased expenditure already shown. These will be conveniently dealt with under the following principal heads: — Army Services, Civil Services, Upper Burma, Home Charges. Two tables are also given showing the growth of Indian indebtedness during the last 20 years for which the accounts are available, *i.e.*, 1873 to 1893.

Army Services.

20. The table at page 3 shows an increase (exclusive of exchange) in the cost of the Army of Rx. 4,278,788. Taking the finance and revenue accounts for 1892–93 (the latest available), and comparing some of the more important heads of account with those for 1882–83, the results shown in the following table are obtained. The net expenditure only has been compared, while exchange has been eliminated on both sides of the account.

TABLE III.—SHOWING excess NET EXPENDITURE on the ARMY (exchange excluded) in 1892–93 over that in 1882–83.

	India.	England.	Total.
	Rx.	£	Rx.
Regimental pay, &c.	1,232,288	538,919	1,771,207
Commissariat establishment	1,428,672	−83,814	1,344,858
Ordnance establishment	185,580	427,472	613,052
Other effective charges	553,225	−16,402	536,823
Total effective	3,399,765	866,175	4,265,940
Non-effective	92,429	152,151	244,580
Grand Total	3,492,194	1,018,326	4,510,520

The following figures show the established strength of the Army for the years 1882–83 and 1892–93:—

	1882-83.	1892-93.	Increase.
Europeans	64,702	75,687	10,985
Indians	125,774	143,099	17,325
Total	190,476	218,786	28,310

21. There are several matters that call for comment in connexion with these two tables.

(1.) On a total net expenditure (excluding exchange) for effective Army Services of Rx. 12,130,792 in 1882–83 there was an increase in 1892–93 of Rx. 4,265,940, or more than 35 per cent., against an increase of not quite 13 per cent. in the established strength of the Army.

(2.) The large increase in the established strength of the Army of 28,000 men, which was made at the time of, and since, the annexation of Upper Burma, added Rx. 2,000,000 to the cost of the Army; but according to a table at p. 44 of the Financial Statement for 1893–94 the special expenditure on the Army which can be properly charged to Upper Burma has not exceeded an average of about Rx. 500,000 during the six years 1888–89 to 1893–94.

(3.) Although the total net increase in the net non-effective charges is Rx. 244,580, a comparison between the increases on account of Pensions to European Officers and Natives gives the following striking results:—

Pensions.	1882-83.	1892-93.	Increase.
	£	£	£
European Officers	1,391,765	1,908,899	517,134
	Rx.	Rx.	Rx.
Natives	643,762	719,192	75,430

The above sums by no means represent the total amounts paid in Military Pensions, &c., to Europeans, but are the principal items in the account, and are technically named: "Pay and "Pensions of Non-Effective and Retired Officers "of the Indian Service, including Pay of Non-"Effective Colonels of Royal Artillery." On the other hand, the entry under Military Pensions for Natives is the whole amount so paid. The increase for European Officers represents an increase of 37 per cent., while that for Natives shows only 11 per cent.

(4.) The following table shows another curious contrast between the Europeans and the Natives.

TABLE IV.—SHOWING the VARIATION in the AVERAGE COST per HEAD of the EUROPEAN and NATIVE ARMIES (Infantry) between 1882–83 and 1892–93.

European Army (Infantry).

	1882-83.	1892-93.	Increase.	Increase per cent.
No. of men	45,766	53,713	7,947	17
	Rx.	Rx.	Rx.	
Pay, &c.	1,664,208	2,207,155	542,947	32½
	Rs.	Rs.	Rs.	
Cost per head	363	410	47	13

Native Army (Infantry).

——	1882-83.	1892-93.	Increase.	Increase per cent.
No. of men - -	103,716	113,692	9,976	9¼
Pay, &c. - -	Rx. 2,114,985	Rx. 2,232,866	Rx. 117,881	5½
Cost per head - -	Rs. 204	Rs. 196	Rs. −8	−4

Additional charge due to increased cost of European soldiers Rx. 252,451.

Decreased charge due to diminished cost of Native soldiers Rx. 82,972.

That it should have been possible to effect an average saving of Rs. 8 per head in the pay, &c., of the Native Army, in spite of the fact that the cost of provisions had increased during the decade (as shown by a large increase of compensation to Natives under this head), while Rs. 47 was being added to the average cost per head of the European soldier seems to require explanation.

22. It may be mentioned that in the discussion on the Financial Statement, which took place in the Viceroy's Council on the 27th of March 1894, Mr. Westland, referring to some recent criticisms on the Budget, made the following remarks:—"As regards "military expenditure I think there is some misappre- "hension of the argument I used on 1st March. The "increase of military expenditure I admitted, but I "pointed out that it had its origin before 1888. My "argument was that that increase had been met by the "fiscal steps we had recourse to in 1888, and that the "new necessities that arose since 1888 were due to "exchange, and to exchange alone." It is only necessary to point out that, taking the accounts for 1887–88, and comparing net military expenditure there shown with the average in the Budget for 1894–95, in both cases eliminating the cost of exchange, there was an addition of Rx. 1,626,761 to the military charges, as the following figures show :—

——	Accounts, 1887–88.	Average in Financial Statement, 1894–95.	Increase.
Net military expenditure, less exchange.	Rx. 19,404,907	Rx. 21,031,668	Rx. 1,626,761

Civil Services.

23. The table at page 3 shows the following increases (exclusive of exchange) :—

	Rx.
Salaries, &c. - -	2,736,931
Miscellaneous - -	158,873
	2,895,804

This increase is made up as follows :—

TABLE V.—SHOWING TEN YEARS' INCREASE in the CIVIL SERVICE EXPENDITURE under Principal Heads (exclusive of Exchange).

——	Average of Three Years, 1882-83 to 1884-85.	Average shown in Financial Statement for 1894-95.	Increase.
General administration - -	1,590,700	1,768,061	177,361
Law and justice - -	2,674,248	3,208,687	534,439
Police - - -	2,459,252	3,529,959	1,070,707
Marine - - - -	330,965	471,832	140,867
Education - - -	987,536	1,268,930	281,394
Political - - - -	612,570	905,595	293,025
Ecclesiastical, &c., and miscellaneous.	1,157,479	1,188,416	30,937
Stationery - - -	450,222	557,275	107,053
Territorial, &c. pensions - -	700,115	499,971	−200,144
Civil furlough - - -	215,127	206,454	— 8,673
Superannuation, &c. - -	1,861,872	2,330,710	468,838
Total - - -	13,040,086	15,935,890	2,895,804

The chief points to be noticed are the large increases under the three heads of Law and Justice, Police, and Superannuation, &c., which alone account for over Rx. 2,000,000 of the aggregate increase. Of the increase of Rx. 1,070,707 for Police, Upper Burma alone accounts for about Rx. 650,000 (*vide* Financial Statement, 1893–94, p. 44).

Upper Burma.

24. The following figures, taken from tables at page 44 of the Financial Statement for 1893–94, show the cost of Upper Burma to the Indian taxpayer. More particularly it may be noted that Upper Burma seems to have become a permanent charge upon the Indian revenues of about a crore-and-a-quarter of rupees. This compares curiously with the Government of India's anticipation of financial profit at the time of annexation :—

TABLE VI.—SHOWING the COST of UPPER BURMA since its annexation.

UPPER BURMA.

Year.	Revenue.	Expenditure.	Net Cost.
	Rx.	Rx.	Rx.
1886–87 - -	222,500	2,291,200	2,068,700
1887–88 - -	502,300	3,120,600	2,618,300
1888–89 - -	752,500	2,448,100	1,695,600
1889–90 - -	1,034,500	2,368,400	1,333,900
1890–91 - -	1,128,700	2,211,600	1,082,900
1891–92 -	1,115,300	2,507,200	1,391,900
1892–93, revised estimate.	1,142,600	2,317,500	1,174,900
1893–94, Budget estimate.	1,120,100	2,362,500	1,242,400
Total for eight years - -			Rx. 12,608,600

	Rx.
Average cost of Upper Burma during eight years - - - -	1,576,075
Average cost for the last five years -	1,245,200

Home Charges.

25. The following table shows the distribution of the home charges, and the increase during the 10 years, shown by a comparison between the accounts for 1882–83 and 1892–93 :—

TABLE VII.—SHOWING the INCREASE in the HOME CHARGES under the Principal Heads.

——	1882-83.	1892-93.	Increase.
	£	£	£
General administration - - -	249,836	255,545	5,709
Interest on debt - -	2,481,147	2,433,496	— 47,651
Railway revenue interest - -	4,888,332	5,723,491	835,159
Superannuation, &c. - -	1,390,146	1,810,546	420,400
Army (effective) - - -	1,668,474	2,500,499	832,025
Army (non-effective) - -	2,230,734	2,388,297	157,563
Other charges - - -	1,192,593	1,222,667	30,074
Totals - - -	14,101,262	16,334,541	2,233,279

There are two points worth noting :—

(1.) Military and civil charges account for no less than 1,409,988*l.* of the increase.

(2.) The cost of exchange on the increase of 2,233,279*l.* shown above was at the average rate for 1892–93 about Rx. 1,339.967, which means that the increase in the sterling charges during the decade was accountable for an addition of Rx. 3,573,246 to the expenditure of the Government of India.

Debt.

26. Finally an examination of the position of Indian indebtedness during the last 20 years for which the accounts are available, namely, 1873 to 1893, serves but to emphasize the fact that exchange, though a disturbing factor, cannot be charged with the present financial difficulties.

TABLE VIII.—DEBT and INTEREST in Rx. and £ (000's omitted).

	1873.	1883.	1893.	Increase or Decrease. 1873–83.	1883–93.	1873–93.

TABLE IX.—GOLD DEBT and INTEREST in £ and Rx. (000's omitted).

	1873.	1883.	1893.	Increase or Decrease. 1873–83.	1883–93.	1873–93.
A. Debt.	£	£	£	£	£	£
1. General (including that for Productive Public Works).	39,013	68,586	106,684	+29,573	+38,098	+67,671
2. Guaranteed Debt	93,449	68,519	45,020	−24,930	−23,499	−48,429
Grand Total	**132.462**	**137,105**	**151,704**	**+4,643**	**+14,599**	**+19,242**
B. Interest.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
1. General (including that on account of Productive Public Works).	2,467	4,047	6,012	+ 1,580	+ 1,965	+ 3,545
2. Guaranteed Interest	4,619	3,335	2,145	− 1,284	− 1,190	− 2,474
Total	**7,086**	**7,382**	**8,157**	**+ 296**	**+ 775**	**+ 1,071**
3. Exchange	440	1,500	4,907	+ 1,060	+ 3,407	+ 4,467
Grand Total	**7,526**	**8,882**	**13,064**	**+ 1,356**	**+ 4,182**	**+ 5,538**

27. The figures in the above two tables show (leaving out the question of exchange):

(1.) That the debt of India has grown from Rx. 115,000,000 to Rx. 223,000,000, nearly doubling itself in 20 years; and that even if the diminution (by transference) of the railway guaranteed debt be taken into account nearly Rx. 59,000,000 have been added to India's load of debt, or an average annual increment of nearly Rx. 3,000,000.

(2.) That the net charge for interest, &c. (apart from exchange) has increased by over Rx. 2,000,000.

(3.) That the gold debt has increased by nearly 68,000,000*l.*, or, taking into account the diminution (by transference) of the railway guaranteed debt, by 19,000,000*l.*, with increases for interest, &c. (exclusive of exchange) of 3,500,000*l.* and 1,000,000*l.* respectively.

(4.) That during the decade from 1883 to 1893, when the downward tendency of the rupee was no longer in doubt, the Government of India added to their sterling liabilities more than 38,000,000*l.*, with an additional charge for interest of 2,000,000*l.*; or, again, taking into account the guaranteed railway debt, 14,500,000*l.* of debt and 750,000*l.* a year for interest.

28. A large portion of this increase has been incurred on account of what are called productive public works. It is impossible, however, without a parliamentary return, to ascertain from the published accounts how much of this increase is productive owing to the numerous transfer transactions of the Government of India. Thus loans, originally classed under General Debt, are transferred from time to time, as the undertakings for which they were raised become more or less remunerative, to the heading of Debt incurred on account of productive public works. It is at least possible that these transferences have exceeded the apparent reduction in the ordinary debt, which would mean that the amount of debt incurred for the ordinary purposes of government has been actually increasing.

W. WEDDERBURN,
Chairman, British Committee,
Indian National Congress.

H. MORGAN-BROWNE,
Secretary, British Committee,
Indian National Congress.

Offices of the British Committee
of the Indian National Congress,
84 and 85, Palace Chambers,
Westminster, S.W.
6th July 1894.

SUB-APPENDIX.

TABLE A.—SHOWING for each of the years 1883-84 to 1892-93 the INCREASE in GROSS REVENUE and TOTAL COST of EXCHANGE over the average amounts of these items for the three years 1882-83 to 1884-85.

	Gross Revenue.	Increase over Standard.	Exchange.	Increase over Standard.	Excess Increase of Revenue over Increase of Cost of Exchange.
Standard, *i.e.*, Average of 3 years, 1882-83 to 1884-85	Rx. 51,357,687	Rx. —	Rx. 3,365,238	Rx. —	Rx. —
1883-84	52,038,401	680,714	3,434,557	69,319	611,395

No. 1.

EXTRACT from DESPATCH to the GOVERNMENT OF INDIA, dated August 7th, 1884, No. 237 (Financial), paragraphs 31 to 36, and 39.

The reduction in the army expenditure is due to the fact that in 1883–84 special payments were included of 1,000,000*l.* for arrears of non-effective charges, and 50,462*l.* in connection with the military operations in Egypt. The cost of the recent increase of the pay of the British soldier, by converting it at the rate of exchange fixed by the Treasury for the payment of soldiers in the Colonies, is estimated at 184,300*l.*

Under exchange there is a reduction of 321,900*l.*, the drawings being estimated at only 16,500,000*l.*, as compared with 17,800,000*l.* in 1883–84. I observe that in the 113th paragraph of your financial statement it is said that an increase of expenditure under this head is absolutely beyond the control of Government. I may, however, remind you that, although it is not in the power of the Government of India to control the price of silver, there can be no doubt that measures which increase the payments in this country must tend to increase the charge under the head of exchange.

Under provincial adjustments the credit in the Budget is less than in the revised estimate by 591,700*l.* Except in Bombay, where the amount is expected to be very slightly altered during the year, and in Bengal, where it will be considerably increased, there is a reduction to be anticipated during the year in all the provincial and local balances. Taken on the whole, the closing balances of the provincial governments (apart from the purely local balances) are estimated on the 31st of March, 1885, to amount to 1,227,300*l.*, which exceeds by 137,300*l.* the minimum recently prescribed; but this is due to the comparatively large amount held in Bombay and the Central Provinces. In Madras and the Punjab the balance will approximate to the specified sum; and in Bengal, where the balance had been nearly exhausted in 1883–84, there is likely to be a very considerabte improvement in 1884–85. In British Burma and Assam, however, the provincial expenditure is still in excess of the revenue, and the closing balance is estimated at only 3,200*l.* in the one case, and at 22,300*l.* in the other; while in the North-West Provinces the large balance of 555,000*l.* on the 1st of April 1884 is estimated to be reduced to 159,600*l.* on the 31st of March 1885, or less by 40,400*l.* than the prescribed minimum amount.

* * * *

I have further to direct your Excellency's special attention to the case of the North-West Provinces. That Government began the year with the large balance of 555,000*l.*, and was justified in spending a large portion of it, particularly on the public works which it was desirous to promote. Hence, there would have been no objection to the special grants of 132,300*l.* for productive works, and of 250,000*l.* which, under the head of productive works, has been allotted to the Jhansi-Manickpur Railway, in addition to the provision of 7 lacs from the ordinary famine insurance grant. The fact, however, that the closing balance of the year was estimated to be less by 40,400*l.* than the prescribed minimum should, I think, have led to a reconsideration of this offer, and not more than 20 lacs at the outside ought to have been accepted for the latter railway. I must observe also that the Local Government could not have fulfilled its promise to contribute 50 lacs for that line, which was put forward* as a reason for my sanction being given to the construction of the work on the broad guage, without reducing its balances much below the prescribed amount.

There is no objection to the expenditure on public works of the surplus balances which have actually accrued, nor of the savings of previous years, and, subject always to the general exigencies of the Government, I should prefer seeing the money so laid out; but with reference to your Excellency's telegram of the 8th of March, I deem it necessary to state explicitly that the provision of funds for public works must be subject, as in the case of any other branch of the administration, to financial considerations, and that the fact that certain funds may, under the regulations, be supplied for productive public works, gives no claim to the Public Works Department to have that sum allotted to it within the year, if, in the opinion of your Government in the Financial Department, the state of the finances will not permit of the expenditure.

* *See* Government of India's Letters, 29th January 1884, No. 16, Railway, and 14th April 1884, No. 46, Railway.

No. 2.

DESPATCH to the GOVERNMENT OF INDIA, November 27, 1884, No. 148 (Railway).

Para. 1. I have considered in Council your Excellency's letter, dated the 22nd of September, No. 25 (Secret), with a minute by Sir Auckland Colvin, concurred in by Mr. Ilbert and Sir Stewart Bayley, and the first two paragraphs of your Excellency's minute of the 22nd of September, dealing with a proposal to construct certain railways and military roads for the purpose of placing the north-west frontier of India in a satisfactory condition of defence. I have at the same time taken into consideration your letter of the 29th of September, No. 150 (Railway), giving the views of your Government on the general question of railway communication in India, after receiving the report of the Select Committee of the House of Commons which examined the subject during the last session of Parliament.

2. In the latter letter your Excellency makes no allusion to the frontier communications; and in the earlier letter you state that your decision on the general question is in no way affected by the admitted necessity for such works, and that, having to provide against the two evils of famine and complications on the north-west frontier, you are of opinion that "the "protection from both should certainly be provided "concurrently, and to the full extent necessary in the "case of each."

3. I regret that I am unable to concur with your Government as to the manner of effecting these objects. I am of opinion that it is a prudent and a really economical measure, to plan and to carry into execution, with as little delay as possible, a system of railways and roads designed to strengthen our military position on the north-west frontier; and also that it is desirable to complete a well-devised scheme for preserving the country from the effects of famine, and for increasing the facilities for commerce. But the rapidity with which the works necessary for these purposes shall be constructed must manifestly depend on financial considerations. Whatever be the object with which a great system of railroads is undertaken, whether for the protection of the country from famine or from war, the effect must be the same as regards the money market, the strength of the Public Works Establishment, the demand for labour, and the increase of prices; and hence I have thought it right to treat your Excellency's two letters as forming one comprehensive scheme for the extension of railways in India.

4. Your consideration of the report of the Select Committee has not led you materially to modify the views that you had previously expressed. You have now removed from the category of railways that you deem indispensable the one from Vizagapatam to Raipur, and you have substituted for it one from Kontera through Cuttack to Puri. With this exception, however, you adhere to Schedule A, which accompanied your letter of the 29th of January 1884, No. 27, as representing the lines that you desire to see constructed by the Government during the next six years, which are thus divided in the forecast accompanying your letter of the 29th of September:—

	Estimated Cost.	Outlay to End of 1883–84.	Amount needed to complete on 1st April 1884.
	Rs.	Rs.	Rs.
Works in progress -	10,88,02,991	about 3,67,60,991	7,20,42,000
Not commenced -	7,81,01,000	- - -	7,81,01,000
Extra capital for open lines - - -	1,80,00,000	- - -	2,73,00,000
	20,49,03,991	- - -	17,74,43,000
[*To which must be now added the frontier communications*] -	5,05,00,000	- - -	5,05,00,000
	25,54,03,991	- - -	22,79,43,000

These projects do not include the undertakings that it is intended to entrust to private companies working with Government assistance, the cost of which, in your letter of the 28th January 1883, No. 29, was estimated at about Rs. 12,23,00,000.

5. The scheme of frontier communications, described in your letter of the 22nd of September, appears to me to be well adapted to the purpose that you have in

view; and I desire to express, not merely my general concurrence in its adoption, but my hope that it will be completed within the four years over which your Excellency proposes to spread the expenditure. The line to which your efforts are naturally being first directed is the Sind-Pishin Railway.

6. Accepting the estimates for these works, I find that, in the two forecasts which accompany your letters, it is proposed to incur the following expenditure by Government on railways, and on other public works constructed from borrowed money:—

Works.	1884–85.	1885–86.	1886–87.	1887–88.	1888–89.	1889–90.	Total of 6 years.
	Lakhs.	Lakhs.	Lakhs.	Lakhs.	Lakhs.	Lakhs.	Lakhs.
General Railways	381	296	265	265	265	287	1,759
Frontier Railways	113	225	80	25	—	—	443
Total Railway Expenditure after 31st March 1884	494	521	345	290	265	287	2,202
Of which, to be provided from Famine Insurance Grants	111	50	50	50	50	50	361
Ditto from Provincial Contributions and Lapses	17	—	—	—	—	—	17
Ditto, recovery from Nagpur-Chhattisgarh Line	—	—	—	—	—	63	63
	128	50	50	50	50	113	441
Leaving the amount to be borrowed for Railways	366	471	295	240	215	174	1,761
To which add the amount to be borrowed for Irrigation	70	70	70	70	70	70	420
And for Military Roads, and past expenditure on the Sind-Pishin Line	12	18	23	9	—	—	62
Making the total to be borrowed for Public Works	448	559	388	319	285	244	2,243

7. From the total of 2,243 lakhs, which in the six years it is proposed to charge against borrowed money, I find it necessary at the outset to make certain deductions. I cannot admit the propriety of so treating the past expenditure on the Sind-Pishin Railway in 1883–84 - - - - - 12¼ lakhs
the special grant made in the Budget of 1884–85 for the Harnai Road (included in the 113 lakhs for this year on frontier railroads) - - - - 7¼ „
or the outlay on the military roads - - 50 „
69½ „

The whole of these 69½ lakhs must be treated as charges on revenue, thus reducing the aggregate that may possibly have to be obtained by borrowing, to 2,174 lakhs.

8. In the 11th paragraph of your letter of the 22nd of September, you say that "funds must obviously be "supplied according to the nature of the works, and "not in equal annual instalments." Although this remark is sound when applied to a particular work, it does not apply to a scheme comprising a number of projects, some of which can without difficulty be delayed if the expenditure on others is unusually heavy.

9. The amount which, in recent years, it has been considered right to borrow, when necessary, for productive public works, has been 250 lakhs a year, supplemented occasionally by the sums needed for the completion of the East Indian Railway. Your Excellency proposes to add to this amount 35 lakhs a year for railways, as well as to borrow in the present year about 69 lakhs on account of arrears of productive works; and you also desire to construct the whole of the frontier communications by means of loans. On this subject I concur in the opinion of Sir Auckland Colvin, rather than that which has been adopted by the majority of your Council, and I think it most undesirable to show a surplus of revenue over expenditure, by failing to charge each year with whatever portion of the necessary expenditure it can bear, and which is properly chargeable thereto, while I hold that it would be unsound and dangerous to remit taxation on the strength of a nominal surplus so obtained. At the same time, really urgent works should not be delayed, by refraining from raising reasonable amounts by loans when requisite for their completion within a specific time. The course that I am of opinion should be pursued is, that the frontier communications should be completed with the utmost speed, consistent with economy of construction; that, as far as possible, their cost should be provided from revenue; but that, when the revenue available after meeting other essential charges of administration is exhausted, your Government should not allow the proposed works to be retarded, but should prosecute them with borrowed money.

10. In my Despatch of the 14th of August, No. 89 (Railway), I referred to the Select Committee's recommendation that the technical distinction between productive and protective lines should not be maintained, but that the bulk of the lines undertaken should be self supporting; and I stated my willingness to authorise an addition to the amount of the annual loan of about 400,000*l.* or 500,000*l.*, especially for famine lines. In view of the urgency of the requirements that you have now brought to notice, I sanction, for the present, the extension of the maximum limit of borrowing to 350 lakhs in any one year, which seems to me the extreme limit to which it is prudent to pledge our resources for such purposes; and accordingly this amount must be held to cover all the expenditure of the Public Works Department from borrowed money, whether for ordinary railways and irrigation, open lines, arrears of previous grants, protective works, frontier communications, or any other purpose, while lapses in previous years should only be subsequently made good from the balances if that is practicable without unduly reducing them; and no resort must be had to borrowing unless the amount cannot be provided from revenue.

11. I would further remark that there is an important difference between the works now specially referred to and those for which it has heretofore been held to be legitimate to provide funds by borrowing, viz., that the outlay on the latter class may be properly regarded as an investment on which there is reason to anticipate a return which eventually will meet the interest on the borrowed money required for them. This character, as you recognise, will not necessarily apply to the railways and other public works designed for the military protection of the frontier, and the necessity for limiting, as far as possible, the permanent charge they will bring on the revenues in future years is obvious.

12. I find that in the five years from 1879–80 to 1883–84 (excluding, on the one hand, the increase of debt caused by the purchase of the East Indian Railway, and, on the other hand, the decrease arising from the operations of the Commission for the Reduction of Debt), the Rupee Debt was increased by 1,526 lakhs,

while the Sterling Debt has been reduced by 2,018,000*l.*, equal, at 1*s.* 8*d.* the rupee, to 242 lakhs; the amount of borrowed money, therefore, which has been at the disposal of your Government during the last five years, has been 1,284 lakhs, or an average of 257 lakhs annually. The sanction now conveyed to you will enable you, if you find it really necessary, to add to your funds for public works from borrowed money very nearly a crore of rupees in each year; and the total amount of 2,100 lakhs in the six years is very nearly equal to the aggregate of 2,174 lakhs, which I have above shown to be the extreme sum admissible as a charge upon the Debt.

13. If, however, as is probable, your Government may not have at your command in the earlier years the amounts that you desire, some reduction must be made, and I am of opinion that it should not fall upon the frontier lines, although I doubt if the whole expenditure contemplated in 1884–85 and 1885–86 will be incurred during those years. Until the funds can be provided, the expenditure on works in Schedule A. must be restricted accordingly; and I leave it to your Excellency to decide the best manner of re-arranging the expenditure on the lines already sanctioned.

14. In so doing, it will be necessary for you to bear in mind the recommendation of the Select Committee, already cited, that the bulk of the lines undertaken should be self-supporting. According to paragraphs 6 and 9 of your Excellency's letter of the 29th of September, your general scheme includes 2,800 lakhs of outlay, of which about 725 are for unproductive lines; with the addition of the frontier railroads, the amounts become 3,250 and 1,175 lakhs respectively.

15. While thus enlarging your powers of borrowing for the works the urgency of which is recognised, I must also impress upon you the necessity for regarding any available surplus of revenue over the ordinary expenditure as being primarily applicable to meeting the exceptional charges which your Government is now called upon to bear, and the consequent importance of using every effort to avoid all expenditure usually classed as ordinary which is not strictly necessary. In ordinary public works, and in all branches of administration, the utmost economy should be practised; and the Provincial Governments, as well as the Departments more directly under your own orders, should be enjoined to co-operate in the endeavour to keep their expenditure within the limits of strict economy, so that the unavoidable demands upon your Government for services which cannot be postponed may, when they arise, be met as far as possible from the revenues of the year, and the necessity for adding to the debt may be to the same extent avoided.

16. The question whether the money shall be borrowed in India or in England is one that can only be decided from time to time according to the circumstances. In my Despatch of the 15th of May, No. 131 (Financial), I communicated my decision to relieve you of the necessity of borrowing in India this year, by reducing the drawings to the extent of 250 lakhs; and my telegram of the 3rd of September accepted your proposal for a further temporary reduction of 65 lakhs. If your Excellency should be of opinion that you can economically spend the full 350 lakhs from borrowed money this year, I shall be prepared to make a further reduction of 35 lakhs; but, as that will involve a total addition to the sterling debt of nearly 3,000,000*l.* in this year, I refrain from any alteration of the amount to be drawn until I learn your opinion on the point.

17. Your Excellency proposes, as a ground for providing the whole outlay on frontier communications from borrowed money, to place the loan on a distinct basis, which may provide for the discharge of the capital obligation within a term of years. The objection to the institution of an ordinary sinking fund for the extinction of a particular loan, at the same time that other loans are continually being raised, is manifest; the payment in reduction of the earlier debt can only be provided by adding to the new debt, and it is much less wasteful to lessen the amount of fresh borrowing. Moreover, the sinking fund in such a case would be sure to be suspended, on the first pressure arising from famine or war. Your Excellency, however, would prefer to raise the money by terminable annuities, on which I need only observe that such a scheme appears to me impracticable on any reasonable terms, considering the total absence of demand for such securities in India, the relatively low price which the Annuities of the East Indian Railway and Eastern Bengal Railway actually command in the London market, and the extent to which that market has been, and may hereafter be, called upon to accept them from time to time as the Guaranteed Railways are purchased by the Government.

18. The charge for interest on the debt to be incurred must, therefore, I fear, be treated as permanent; and, in so far as the amount is borrowed in this country, there will be the great disadvantage that the interest will have to be added to the large sum at present needed for the home disbursements. This is an additional reason why the increase of the debt, and especially the sterling debt, should be kept within the strictest limits. To the interest payable on the sums directly borrowed, moreover, may have to be added a considerable charge for interest as a consequence of the arrangements now under discussion with the promoters of private companies for the construction of railways; and, as the returns from the various lines as they come into operation will be necessarily received in India, the burden created by the increased charge for interest in this country will not be diminished.

No. 3.

LETTER from the GOVERNMENT OF INDIA, March 3rd 1885, No. 35 (Railway).

We have had the honour to receive your Lordship's Despatch, No. 148 (Railway), dated 27th November 1884, together with telegrams of that date and 2nd December 1884, which deals with our two despatches* on internal and frontier communications as "one comprehensive scheme." Your Lordship in Council approves of the three objects, namely, "strengthening our military "position on the north-west frontier," "preserving "the country from the effects of famine," and "increasing the facilities of commerce," which the Government of India have set themselves to promote, and accepts the individual projects proposed.

2. Proceeding to details, the despatch does not dwell on the railways which it is proposed to entrust to private companies. We have reason to believe that arrangements have been practically concluded with one company for the "Bhopal System," in which the Jhansi Manikpore Railway and the Kutni Etawah section of the Bilaspur-Etawah project are comprised, and with another for the Nagpore-Bengal line. Negotiations we understand to be pending regarding the remainder. We have, therefore, merely provided in the new forecast appended, for the completion of the Kutni Umaria section of the Bilaspur Etawah Railway, which has been commenced provisionally by the State pending arrangements with a company for the Umaria Colliery, and for advances to the works on the Bhopal and Nagpore lines up to the close of the current financial year.

3. Your Lordship in Council rules, in the first place, that the proposed outlay on the two military roads (50 lakhs) and the past expenditure on the Harnai Road or Sind Pishin Railway (19½ lakhs) shall be debited to revenue. The letter has already been carried out, and the Finance Department have arranged to treat the former charge as independent of their revenue grants for railways, and to provide 10 lakhs for it in the coming Budget. The remainder of this despatch will therefore relate to railways alone.

4. With respect to the remaining railways to be made by State agency, the conclusions in the despatch may be very briefly summarised as under:—

1st. The frontier communications should be completed "with the utmost speed consistent with economy of construction" (para. 9), and, if possible, "within the four years" (para. 5), and any reduction of expenditure arising from want of funds in earlier years should not fall upon them, but upon the general railways in Schedule A. (para. 13).

2nd. The proposal to borrow for frontier communications upon a distinct basis, such as to discharge the capital obligations within a term of years, is disapproved (paras. 17 and 18).

3rd. The maximum limit of borrowing for public works capital outlay, "whether for ordinary

* No. 159 Railway, dated 29th September 1884. No. 25, Secret, dated 22nd September 1884.

" railways and irrigation, open lines, arrears " of previous grants, protective works, frontier " communications, or any other purpose," is to be "350 lakhs in any one year absolutely."

4th. In addition to the 350 lakhs which may thus be borrowed for public works, your Lordship impresses on us "the necessity for regarding " any available surplus of revenue over the " ordinary expenditure," or "revenue avail- " able after meeting other essential charges " of administration," as being "primarily ap- " plicable to meeting the exceptional charges " which your Government is now called upon " to bear."

The first and second of these conclusions, in one aspect or another, go somewhat beyond the views of various members of Lord Ripon's Government; the third is opposed in respect of open line capital, to the recommendation to which we invited the special attention of your Lordship and the Select Committee of the House of Commons in paragraph 18 of our Despatch, No. 27, Finance and Commerce, dated 29th January 1884. We have determined, however, to accept your Lordship's decisions upon these points without demur.

5. Before submitting the forecast which we have drawn up in compliance with your Lordship's desire, it is necessary to examine what funds will be available under the recent orders for our disposal. We observe that your Lordship, in the 12th paragraph of your letter, assumes that we shall be able to add to our funds for public works from borrowed money very nearly a crore of rupees in each year, and that this sum will be sufficient to enable us to carry out the complete scheme of railways within the term recommended by the Parliamentary Committee, and, so far as frontier railways are concerned, in four years. This calculation, however, is inaccurate, inasmuch as the sums required for open lines on the East Indian and Eastern Bengal Railways were outside the 250 lakhs hitherto annually borrowed, and if these sums are to be provided in future from the 350 lakhs which it is now proposed to borrow, the net sum available for construction will be very much diminished. In the estimate which we are now submitting, the expenditure on the open lines of these railways is as follows:—

1884–85	51¼ lakhs.
1885–86	58 „
1886–87	55 „
1887–88	30 „

and not less than 30 lakhs annually till the close of the five years.

The net sum, therefore, by which our resources will be increased is not a crore of rupees, but in the first year 48¾ lakhs, in the second 42, and in the third 45, and in the remaining years 70 lakhs at the most.

6. On the other hand, the concession of the Bhopal system and the Nagpore-Bengal Railway to companies which, we understand, is imminent, will entitle the Government of India to a refund of about 39 lakhs advanced from the productive grant for works commenced. We conclude that your Lordship will have no objection to the re-grant of this and the other similar advances on the receipt of the amounts respectively; 2nd. the Jhansi-Manikpur Railway, which was provided for in the forecast of September last as a State work, will be included in the Bhopal system conceded to a company. As your Lordship was aware of this fact when the despatch now under consideration was written, we assume that the grant of 350 lakhs is irrespective of it. A refund of 31¼ lakhs similarly advanced, together with the non-prosecution of the line by the State, will thus set free 170 lakhs for other lines in the schedule.

7. Finally, we may assume for the purpose of the revised forecast, which we have now to make, that there will be an annual grant of 50 lakhs from revenue; but it is important to remember that this annual grant must be contingent on the financial circumstances of successive years. Grants made from revenue to the Public Works Department will be liable, should circumstances compel us, to be resumed in the course of a year like other grants. In the event, however, of economies being rendered imperative by unforeseen circumstances, they should be considered of the nature of a preference charge in their relation to other reductions.

8. With these remarks we present the following forecast:—

Works.	1884–5.	1885–6.	1886–7.	1887–8.	1888–9.	1889–90.	Total of Six Years.
GENERAL RAILWAYS.	Lakhs.	Lakhs.	Lakhs.	Lakhs.	Lakhs.	Lakhs.	Lakhs.
In progress	253½	93	102¾	76	41¾	—	567
Not commenced; stores and working capital	3¼	18½	29	162½	278¼	264½	749½
Total of above	250¼	111½	131¾	238½	320	264½	1,316½
Open line capital	138¼	119	85	60	60	60	522¼
Total, general railways	388½	230½	216¾	298½	380	324½	1,838¾
Frontier railways	79	184	163¼	81½	—	—	507¾
Grand total	467½	414½	380	380	380	324½	2,346½

9. This forecast must, however, be considered subject to important reservations:—

(1.) Some lines are as yet only roughly estimated for, and there may eventually be excesses; the Sind-Pishin Railway, in particular, is a very uncertain item. We hope, however, that such excesses, if they arise, may not have a greater effect than that of deferring the depletion of the schedule till the end of the last year of the series, for which the forecast provides, it will be observed, 55½ lakhs less than the normal 380 lakhs.

(2.) The apportionments of annual outlay are made to suit the financial demand for equal annual allotments, not the constructive requirements of the several works, whence much inconvenience and some delay and waste may ensue.

(3.) Lapses are inevitable, especially on English indents, and if they are in any instance not re-granted, the forecast will be deranged, and it may even be impossible to curtail Indian outlay to meet an unexpected home liability.

In the framing of this forecast, the new Madras famine lines are unavoidably put back, for two years in most cases. This is a grave evil, which we emphatically deprecated in paragraph 11 of our Despatch, No. 150 of 29th September last, and which is freshly illustrated by the present scarcity in Bellary and Anantapur. It might, however, be considerably mitigated if the recovery of 70 lakhs on account of the Nagpore-Chhattisgurh Railway, for which credit has been taken in the forecast as an extraordinary asset, were allowed to be spent on these lines in 1885–86 and 1886–87, if then received from the new company. We request your Lordship's approval of this course.

10. The perusal of the above statements and figures will show your Lordship that, although should none of the anticipated sources of income fail us, we shall be able to work out our forecast within the period contemplated, any such accident, as the failure of the Financial Department to grant in any year 50 lakhs from revenue, or the failure of either of the companies we have referred to take up the lines indicated, will prevent the forecast being carried out for a period in excess of the six years indicated therein, and we consider this risk too serious to be passed over without being brought to your notice. On the one hand, are to be considered the exigencies of our present financial and political position and the state of exchange, on the other hand, are the uncertainty above explained and the grave importance which we attach to taking early steps to guard against famine. We would ask your

Lordship to consider, in these circumstances, whether it is more expedient to maintain the absolute limit of 350 lakhs, or so to modify it as that in any year in which, owing to the grant from revenue being deficient, it may seem necessary we may be permitted, with your Lordship's special sanction, to add to our registered debt such a sum as will suffice to complete the annual amount necessary for the execution of the forecast within the time contemplated.

11. We beg specially to invite your Lordship's attention to the extreme importance, in order to the realisation of this forecast, of an early settlement with both the Bhopal and Nagpore-Bengal Companies. We have already reported, in our telegram of the 16th, and Despatch No. 27 R? of the 17th instant, that we possess no funds available, compatibly with this forecast for further advances to these lines, and rely for the execution of the forecast now submitted on the recovery of advances made already. The effect of delay in a settlement will, in the first instance, be to deprive us of at least 70¼ lakhs of rupees for the prosecution of work according to the forecast in the coming year, and in the second place (unless your Lordship should be able to arrange independently of us for temporary advances) be to necessitate the stoppage of the works, involving considerable pecuniary loss, besides the postponement of railways, which are the centre of our famine relief system. We trust that, in view of these considerations, your Lordship will not hesitate to come to an understanding with the companies, adopting, if need be, the terms recommended in our Despatch, No. 191 R., of 9th December last.

12. Two subsidiary points remain for notice.

In paragraph 4 of your Lordship's Despatch, No. 1 (Financial) of 6th January 1881, there was a three-fold option as to the employment of the surplus revenue of previous years. It might be devoted (*a*) to public works "productive" or "unproductive," (*b*) to the remission or re-adjustment of taxation, or (*c*) to the reduction of sterling debt, or to the diminution of the amount borrowed in India for productive public works. The effect of the present orders will apparently be a limitation to the first of these three methods of disposal. What was ordered in that case in respect of such surplus was that the amount "realised in any one year" might be "added in the following year to the amount borrowed." As a matter of fact, the Financial Department, so far as they have availed themselves of the discretion indicated, have hitherto resorted to the second and third option in preference to the first, and they see practical difficulties in the way of carrying out the first. On the other hand, it may be urged that there is no objection to the prompt grant of a round sum in any year as soon as the fact of a surplus in the preceding year has been definitely ascertained, provided the financial outlook for the year then current be not gravely unpromising. We shall be obliged for explanation as to the course to be adopted.

We would here observe, however, that in the event of your Lordship thinking that the latter of the alternatives indicated in our 10th paragraph is the most to be guarded against, the question of what revenue should be considered as surplus will be of less importance to the actual progress of the works.

13. In connection with surplus revenue, we must also point out that we anticipate that it will in practice prove somewhat difficult to decide what expenditure is to be deemed "ordinary" or the "essential charges of administration," and what surplus is "available." Increases of current annual expenditure for civil and military establishments would evidently be comprised in the terms, but if special grants of any considerable amount far abnormal capital outlay are also included, such as for harbour defences, for instance, the latter would very seriously reduce the surplus revenue.

14. We have finally to bring another point to your Lordship's notice. The inclusion of "arrears of previous grants" in the absolute annual limit, and the dependence of re-grant of lapses on balances, now enjoined, apparently cancel the pre-existing orders on this subject.* We understand your Lordship clearly to direct that the full 350 lakhs are to be actually put on the market, if necessary, in order to make up the grant of that amount, or the re-grant of lapses to the Public Works Department. We are also aware that hitherto lapses have usually been re-granted. But this may not cover the whole case. It is easy to suppose occasions when the balances might be strong enough in one year to render the full loan unnecessary, and so weak in the next year as to be unable to bear the re-grant of a lapse which had occurred in the former.

We need not enlarge upon the evils attendant upon uncertainty as to regrant of lapses, and the absolute diminution of the amount available for railway construction in the event of the withdrawal of the option, which has hitherto existed, of borrowing above the fixed limit (when otherwise unobjectionable) in order to compensate for times of borrowing below it. We see room for reasonable doubt whether your Lordship, in directing this limit of borrowing to be absolute, contemplated the reversal of the previous orders in this respect, and we think it our duty to point out what may be the effect of the present restriction, so as to clear up the point and make sure that the effect was fully foreseen.

* Secretary of State's, No. 485, December 11th, 1879. Secretary of State's, No. 1, January 6th, 1881. Secretary of State's, No. 365, December 8th, 1881.

No. 4.

DESPATCH to the GOVERNMENT OF INDIA, April 30th, 1885, No. 112 (Financial).

Para. 1. I have considered in Council your Excellency's Letter, dated the 3rd of March, No. 35 (Railway), in reply to the Despatch of the 27th of November 1884, No. 148 (Railway), conveying to you my decision in Council that, for the extension of railways in India, whether designed to strengthen your military position, to protect the country from the effects of famine, or to increase the facilities of commerce, the amount to be borrowed annually for public works might be enlarged from 250 to 350 lacs; and that this was the extreme limit to which I considered it prudent to pledge the revenues of India for such purposes in any one year.

2. There has, I think, been some misapprehension on the part of your Government as to the main considerations that influenced me in adopting this decision. I did not fail to appreciate the importance of authorising as large an expenditure on the construction of railways as the financial position would justify; but I had to weigh seriously the question to what extent it was prudent to continue to incur debt year after year for this object; and, on a very careful review of the whole matter, I came to the conclusion that the limit which I have prescribed could not be safely exceeded.

3. In reply to my remark that, as the amount actually borrowed in the last five years had averaged 257 lacs a year, the power of borrowing 350 lacs would enable you, if you found it really necessary, to add to your funds for public works, from borrowed money, very nearly a crore of rupees in each year, you state that this calculation is inaccurate; and that, as the sums required for the East Indian and Eastern Bengal Railways were outside the 250 lacs hitherto annually borrowed, if these sums are to be provided in future from the 350 lacs which you are now authorised to borrow, the net sum available for construction will be very much diminished.

4. But, as my statement had in view a comparison of the actual sum borrowed in the past with that authorised for the future, it was not inaccurate. The amount borrowed during the last five years for all purposes has, on the average, been less than the amount which you are now authorised to borrow, by 93 lacs a year; and the total amount of 2,174 lacs, which included the extra outlay needed on the open lines, and which in that Despatch I showed to be the extreme sum admissible as a charge upon borrowed funds, is very nearly met by the permission to borrow 2,100 lacs in six years.

5. In summarising, in the 4th paragraph of your Letter, the conclusions of my Despatch, your Excellency seems to have fallen into an error of some importance. The 4th clause of that summary says that, "In addition to the 350 lacs which may thus be "borrowed for Public Works," I impressed on you "the necessity for regarding any available surplus of "revenue over the ordinary expenditure," or "revenue "available after meeting other essential charges of "administration," as being "primarily applicable to "meeting the exceptional charges which your Govern-"ment is now called upon to bear." The reference is to the 9th and 15th paragraphs of my Despatch; and your Excellency will observe that there are no words there implying that the outlay from revenue which I was impressing on your Government was to be *in addition to* the 350 lacs that might be borrowed. In

the 9th paragraph I stated "that the frontier communications should be completed with the utmost "speed, consistent with economy of construction; "that, as far as possible, their cost should be provided "from revenue; but that, when the revenue available "after meeting other essential charges of administration is exhausted, your Government should not "allow the proposed works to be retarded, but should "prosecute them with borrowed money." In the 15th paragraph I impressed "upon you the necessity "for regarding any available surplus of revenue over "the ordinary expenditure as being primarily applicable to meeting the exceptional charges" arising from the frontier railways and roads, or, in other words, for the purpose of avoiding the incurring of debt for them; and I therefore enjoined "the utmost "economy" in all branches of expenditure, in order "that the unavoidable demands upon your Government for services which cannot be postponed may, "when they arise, be met as far as possible from the "revenues of the year, and the necessity for adding "to the debt may be to the same extent avoided." The outlay from Revenue here mentioned was to be in place of, and not in addition to, any outlay that might otherwise have been provided from borrowed money. In no other sense did I suggest any interference with the discretion which the Government of India has always been at liberty to exercise, as to the amount of ordinary revenue which, on a due consideration of the various requirements of the year, it can allot for the construction of railways, in addition to the sums appropriated from borrowed money; and I do not understand how my words can have been regarded, as they seem to have been, as an instruction that any surplus revenue was to be primarily applicable for the prosecution of public works, *in addition* to the full amount that might be borrowed.

6. For the purpose of the forecast, you have assumed that there will be an annual grant of 50 lacs from revenue, an arrangement to which I make no objection, provided that the revenues will admit of it; but you state that, in the event of economies being rendered imperative by unforeseen circumstances, these annual grants should, in your opinion, be considered of the nature of a preference charge in relation to other reductions. In this suggestion, which is directly opposed to the instruction contained in the 39th paragraph of my despatch of the 7th of August last, No. 237, I am quite unable to acquiesce. It can scarcely be necessary for me to remind your Excellency that it is the duty of the Government of India to judge each year what are the branches of administration most needing attention, and in what manner the revenues can be disposed of to the best advantage; and it would be contrary, in my opinion, to sound principle, and indeed impracticable, to resolve beforehand that, when a restriction of expenditure became necessary, the operations of any particular department should be entitled to special exemption from curtailment.

7. In paragraph 13 it is remarked that difficulty may be anticipated, in practice, in deciding what (to use the expressions adopted in paragraphs 15 and 9 of my despatch) should be considered "ordinary expenditure" or "essential charges of administration," and "what surplus is available"; and that you fear that the latter may be seriously reduced, both by current annual expenditure for civil and military establishments, and by abnormal capital outlay on such works as harbour defences. This opinion appears to have its origin in erroneous views, such as those to which I have already adverted in this despatch, and of which I had occasion to speak in the paragraph above-mentioned of my despatch of the 7th of August, 1884, advocating the specific allocation of portions of the general fund available for the service of the Government to the use and control of the Public Works Department. I need only say further on this point that the Government of India, as a whole, must be the judge, from time to time, how the available funds at its disposal shall be applied, subject to the control of the Secretary of State, and with careful regard for the general stability of your finances, the demands of no one department being allowed to have undue weight.

8. Of a similar character must be my reply to the question raised in your 12th paragraph, whether the surplus revenue actually realised in a past year is only available for the prosecution of public works, or whether it may be used for the remission or readjustment of taxation, the reduction of debt, or the diminution of the amount to be borrowed in the coming year. The question is put with special reference to the 4th paragraph of the Marquis of Hartington's despatch of the 6th of January, 1881, No. 1, in which, subject to the condition that the surplus was actually realised, and was not merely estimated, the Government of India were then authorised to dispose of it in the manner that they might deem best. I see no reason to modify the instructions then given. A realised surplus represents actual cash in the balances, and your Government must determine the best method of using it in the event of the amount being in excess of current or anticipated requirements. It may be of importance to reduce the amount of the annual loan, in which case the money can be allotted to the Public Works Department as a portion of the 350 lacs, which otherwise might be supplied by loan in any year; or it may be practicable with the money in your balances to reduce sterling debt, as was done in 1883 out of funds provided by the Protective Grant, while raising the full loan in India. Again, it may be needed for some financial reform, and not be available for public works; or, on the other hand, it may be practicable to make a special grant for railways, in addition to the amount otherwise provided. Of its proper disposal the Government of India must judge, on a careful consideration of all the circumstances of the time.

9. In the 8th paragraph of your letter you give a forecast, showing the division between general and frontier railways of the amount that will be at your disposal, which, as a rule, will be 380 lacs, that is, I presume, 280 lacs from borrowed money, 50 from the Protective Grant, and 50 which it is assumed that it will be practicable to allot from ordinary revenue. In this manner you consider that it will be possible to complete within six years the operations that you have in view, although any accidental failure in the arrangements may prevent this expectation from being fulfilled, a risk which you consider too serious to be passed over without notice. On this point I must observe that I am aware of no absolute necessity for executing the whole scheme within six years, if financial or other difficulties should arise. It is true that the Select Committee of the House of Commons expressed an opinion that your proposals for outlay during the next six years were moderate, and that the annual limit of borrowing previously in force might safely be enlarged. But they held that the full responsibility of deciding on the amount to be borrowed must rest with the Secretary of State in Council; and I must remind your Excellency that the position is materially affected by the decision to construct forthwith, at a cost of some five millions, the works for improving the frontier communications, the scheme for which had not been submitted by the Government of India at the time that the Committee made its report.

10. In order to enable you to adhere as closely as possible to the forecast, you ask that lapses in one year may be again granted in the next, and that you may be permitted, in any year when the anticipated grant from revenue cannot be sanctioned, to make up the deficiency by loan. I am unable, for the reason already stated, to depart from the decision which was carefully expressed in the 10th paragraph of my despatch of the 27th of November, 1884, that no larger amount than 350 lacs must be borrowed in any one year, and that lapses can only be made good if the state of the balances admits of it.

11. You further observe, in the 6th paragraph of your letter, that you conclude that there will be no objection to the re-grant of the sums laid out on the Nagpore-Bengal Railway and the Bhopal system, whenever they shall be received from the Companies which it is hoped may undertake those works. If the money be subscribed in England on the terms offered it will involve for several years the payment of 4 per cent. interest in this country, and will therefore be an expensive method of borrowing; it is therefore essential that, if in any year the Companies shall be permitted to raise more than they require to spend in that year, the normal loan shall be reduced by a sum equivalent to the excess so raised. The expenditure, indeed, which will have to be incurred by the Companies within the year (which will include in the first year of their formation the repayment of the amount already spent by you), is distinct from that for which you are authorised to borrow 350 lacs. So far as it takes place in England, it will be met from the funds received from the Companies; and, so far as it takes place in India, the money will have to be advanced by your

Government, the drawings on India being reduced to a corresponding extent.

12. Such an arrangement is, I admit, contrary to that proposed by the Government of India, in regard to the Southern Mahratta Railway, in their letter of the 24th of June, 1882, No. 186, and assented to in Lord Hartington's despatch of the 7th of September, 1882, No. 279, under which it was intended that the sterling debt should be reduced, and the rupee debt increased, by the amount of the capital subscribed by the Company. So long, however, as your Government is unable to raise in India the usual loan for public works, there is no hope of carrying this intention into effect.

13. To the extent, then, of the sums required for disbursement by the Companies, in excess of receipts from them in the same year, it may become necessary to borrow beyond the limit which I have laid down; and this contingency makes it of the more importance to act on my injunctions that general economy may be practised, and that, as stated at the close of the 10th paragraph of my former despatch, "no resort "must be had to borrowing unless the amount cannot "be provided from revenue."

14. I notice that, in your 2nd paragraph, your Excellency speaks of the arrangements with the two Companies as being "practically concluded," and that, in the 6th paragraph, you refer to the concession to them as "imminent." I informed you, in my despatch of the 12th of March, No. 27 (Railway), of the progress of the negotiations with the promoters of those two undertakings; and I have at present nothing to add on the subject, beyond saying, as you were informed in my telegram of the 13th of March, that, in the present aspect of affairs, there is no hope of either Company being able to issue their shares.

No. 5.

EXTRACT from LETTER from the GOVERNMENT OF INDIA, 20th June 1885, No. 174 (Financial).

Immediately after the publication of the Financial Statement for 1885–86, forwarded to your Lordship with our Financial Despatch No. 106, dated 21st April 1885, it became necessary to undertake military preparations involving heavy expenditure, which have seriously affected the financial position of the year. The chief measures involving additional expenditure, as well as the question of reductions under civil heads, have since been considered in telegraphic communication with your Lordship; but it will be convenient that we should recapitulate in a despatch the measures which have either been taken by us or recommended for the sanction of your Lordship, and that we should state more fully than was possible in a telegram the considerations by which we have been guided.

It was impossible for us, in the first instance, to determine to what extent preparations might ultimately be found necessary, and consequently we were unable to make a precise estimate of the total expenditure to be incurred, but as the orders already given involved the expenditure of 200 lakhs of rupees, we addressed your Lordship on the 3rd April in the telegram noted below,* requesting that your Lordship's drawings should be so regulated that we would not have more than 400 lakhs of rupees to pay between 1st April and 31st August 1885.

Our financial arrangements for 1885–86 had been framed on the basis of our having to pay in the period above stated the sum of 600 lakhs; and a reduction to 400 lakhs would just suffice to meet the additional expenditure due to the military preparations which we had ordered.

We could not have borrowed the necessary funds at that time except at an excessive cost, and any large and sudden reduction of civil expenditure must necessarily have involved great waste. Practically, therefore, there was no course open to us but to request your Lordship to reduce drawings.

* Our financial arrangements for 1885–86 contemplated payment bills and transfers 600 lakhs of rupees April to August, 300 lakhs of rupees September to November, 800 lakhs of rupees December to March. Orders since given in view of war involve estimated expenditure of 200 lakhs of rupees. Please, therefore, arrange your drawings so that we shall not have more than 400 lakhs of rupees to pay from April to August, both inclusive.

On 15th April, we received in reply your Lordship's telegram quoted below,* and as the estimate of excess military expenditure had risen to 306 lakhs, while the opium crop then being gathered was turning out unusually heavy, we proceeded to take into consideration the question of reduction of civil expenditure.

The orders which we issued on the subject are contained in our Resolution in the Finance Department, No. 552, dated the 29th April, 1885, of which a copy is forwarded with this despatch. At the same time we called on the different departments of the Government of India to consider what measures of immediate retrenchment were feasible.

In the Public Works Department of the Government of India the following reductions were ordered at once:—

	£
16—Telegraph	30,000
44—Irrigation and navigation	20,000
46—Civil buildings, roads, and services	80,000
50—Railways	265,000
51—Irrigation and navigation	115,000
Total	510,000

A further reduction of 320,000*l.* in expenditure sanctioned for railways in Madras was also considered possible; but as doubts were entertained by some of us, regarding the expediency of checking the progress of works specially required as a protection against famine, we addressed your Lordship on the 11th May, in the telegram quoted below.† Subsequently this reduction of 320,000*l.* was also ordered to be made. To effect this reduction, a sum of 50,000*l.*, which it was found could be without much inconvenience temporarily transferred from the Irrigation Protective Grant to railways was so transferred, so that only 270,000*l.* was actually withdrawn from the sum allotted for expenditure on the Madras railways. The total reductions in the Public Works Department of the Government of India will, therefore, amount in round numbers to 830,000*l.*

The reductions by other departments of the Government of India amount in the aggregate to 122,500*l.*, of which the details are here given:—

	£
Survey and revenue and agricultural department	17,500
Military works	100,000
Home department, archæological grant	5,000

Local governments have arranged for reductions amounting in the aggregate to about 845,000*l.*

The total reduction in all classes of expenditure amounts, therefore, to 1,797,500*l.*, of which 453,600*l.* is Imperial expenditure, 610,400*l.* is provincial expenditure, 33,500*l.* is local expenditure, and 700,000*l.* is capital expenditure, charged outside the ordinary account.

* * * * *

The items making up the estimate of total excess military expenditure, amounting to 3,060,000*l.*, were subsequently communicated to your Lordship in our telegram of the 3rd May, quoted below.‡

* * * * *

Subsequent to the date on which we had taken preliminary steps to reduce civil expenditure, the prospects of peace so far improved that we were able to modify in some degree the orders we had given for military preparations, and the estimate of total excess

* Your telegram, 3rd April—Drawings. Your proposal leaves only 10 lakhs a week through summer, which might seriously interfere with trade remittances. Moreover, it would compel borrowing here, including requirements of guaranteed companies, of seven millions before October. You will have to reconsider general financial position, and whether in present circumstances it may not be desirable to borrow in India some portion of the money you require, and see what reduction can be effected of ordinary expenditure and of capital outlay on railways other than frontier lines. Early reply requested.

† We can make reduction of 58¼ lakhs under railways and 13¾ lakhs under irrigation (capital expenditure); but of this probably 50 lakhs will be needed for increased grant during the year to frontier railways, and, therefore, cannot be made available for your Lordship's drawings. We wish to point out that this involves the withdrawal of 32 lakhs from famine railways in Madras; but under your Lordship's instructions we presume that this is incumbent on us. We will telegraph again when we receive information as to amount of provincial economies. Government of India reductions (Revenue) will not probably exceed in all 170,000*l.*

‡ See our telegram of the 29th ultimo. Extra military expenditure during next three or four months from April to July estimated approximately at 306 lakhs under following heads:—Pay 22 lakhs, purchase transport 76, rations and forage 75, railway 49, Bolan Pass Railway 20, sea transport 13, ordnance 12, medical 10, clothing 19, miscellaneous 5, remounts 5. Some part of clothing and commissariat charges included in above will be incurred at home, but ordnance demands on England are additional to above. Subsequent estimates will be based on excess of civil issues over normal figures.

military expenditure may now be taken approximately at 2,400,000*l.*

Notwithstanding the reduction in military charges we have decided to maintain the orders already given for the reduction of Imperial expenditure, and to abstain, for the present at any rate, from withdrawing the restrictions on provincial expenditure. We have been influenced in coming to this decision partly by the continued uncertainty in regard to the prospects of peace, but mainly by consideration of the heavy expenditure not classed as military, which must be incurred this year in excess of the provision in the estimates.

The principal items of expenditure of the nature referred to in the preceding paragraph, not provided for in the estimates of the year, are the following:—

In your Lordship's telegram* of 19th May the laying of a telegraphic cable between Jask and Bushire was sanctioned at a cost of 88,000*l.*

We have sanctioned an extra subsidy of 250,000*l.* to the Ameer of Kabul, and may find it necessary to grant him further assistance.

It has been decided to push on the Sind-Pishin Railway, independently of the limit to expenditure imposed by the provision in the estimates of the year; and it is probable that this decision may lead to the expenditure of 500,000*l.* on this line in excess of the amount provided for it in the estimates.

In your Lordship's telegram of the 5th May, quoted below†, sanction was given to the extension of the Sind-Pishin Railway, and to the provision of reserve railway material to be stored at Quetta. The cost of the provision of railway material sanctioned by your Lordship, including cost of carriage, will probably amount to 500,000*l.*, and there will doubtless be further expenditure of about 180,000*l.*, incurred in laying rails and forming the permanent line of railway from Quetta back to the head of the Bolan Pass.

The opium crop has again proved to be one of exceptional magnitude, and the additional expenditure on this account will probably amount to 600,000*l.*

Your Lordship will, therefore, observe that the total additional expenditure of the year, not provided for in the estimates, and not chargeable under Army, will not be less than 2,000,000*l.*, and in view of this fact, we see no prospect, at present, of foregoing any of the reductions which were ordered when the prospects of peace were less assured than they are at the present time.

No. 6.

EXTRACT from LETTER from the GOVERNMENT of INDIA, dated August 22nd, 1885, No. 234 (Financial).

It was explained in the budget statement of the present year that the revenue and expenditure, as they then stood, broadly speaking balanced one another. It is true that we were enabled this year to devote a sum of rather more than half-a-million from revenue for the prosecution of railways and other works. On the other hand, owing to a diminution in your Lordship's drawings, we were in a position to take credit in the estimates for an equivalent amount, due to nominal saving under exchange, a credit which cannot be taken into account in determining our true financial position. It is certain that in their present state our resources will not without assistance suffice to meet the increased expenditure; and it will be necessary to strengthen them considerably.

In the first place, we propose in 1886–87 to withdraw the grant to railways from revenue, which, as we have above mentioned, was provided in this year's estimates. This grant, with the further special grant of 70,000*l.* given under military works for harbour fortification, amount in 1885-86 to 570,000*l.* We require, to cover the estimated increased expenditure, at least 430,000*l.* more, and it will be incumbent upon us to resort to taxation in order to provide this amount.

* * * *

We are aware that before resorting to taxation, it is necessary to exhaust every reasonable means of economy. We shall not fail to do so. It may be urged that, when the Imperial Government is in difficulties, the provincial governments should not be left in the unqualified enjoyment of revenues granted to them in a time of greater abundance. In other words, it may be contended that the provincial contracts should be at once revised with a view to securing for the Government of India a larger share than it at present enjoys of the general revenues. We cannot, however, recommend this course. Were we to interfere with the contracts during the term of their currency, otherwise than in the event of war, famine, or other such calamity, it is impossible to doubt that local administration and local arrangements would be disorganised. Your Lordship will remember that in our resolution, dated 30th September, 1881, we undertook to maintain the contracts, except in the event of great abnormal disaster. The confidence of the local governments in the good faith of the Government of India would very reasonably be shaken, and their interest in the economical carrying on of their administration would be proportionately decreased, so that any immediate increase of revenue which we should obtain would be purchased at too great a sacrifice. When the provincial contracts are renewed, on their expiry in 1887, the necessities of imperial revenues will be carefully considered; meanwhile, we think it desirable to make the best arrangements possible for the ensuing year, irrespective of this source of revenue.

* * * *

It is estimated that a tax of the nature we have described will add to the revenue about 670,000*l.*, or in round numbers, 700,000*l.* By devoting to current expenditure the special grants given in 1885–86 to frontier railways and harbour fortifications, we expect to obtain, as has been above explained, a sum in the ensuing year amounting to about 570,000*l.*, so that, apart from other sources of improvement, we may reasonably hope to improve our position by a figure which may be put approximately at 1,250,000*l.* The estimated increase of expenditure for 1887–88 has been taken in paragraph 5 at 1,200,000*l.*, or a figure equivalent to that by which we expect to increase our available resources. The normal surplus on the estimates must, as usual, be provided, and we expect primarily to obtain it by such economies as we shall have effected in civil expenditure; to this must be added the normal growth of our railway and other revenues; while in 1887–88, and in the ensuing year, the provision for non-effective army charges will be considerably less than in the estimates for the current year. We look to these resources, and to such assistance as the revision in 1887 of the provincial contracts may yield, to provide us with any increase which may prove necessary to the normal provision for interest on our loan, and with the difference between the provision we are at present making and the maximum amount of 1,500,000*l.* which may possibly be required in 1888–89. We expect to obtain with the less difficulty the necessary resources for that expenditure, inasmuch as the estimate of military expenditure has been framed with especial care to err on the side of excess of what our requirements are likely to be

---

No. 7.

EXTRACT from DESPATCH to the GOVERNMENT of INDIA, dated August 27th, 1885, No. 239 (Financial).

In the 139th paragraph of the Financial Statement some doubt was expressed whether additional expenditure might not have to be incurred, exceeding the limits of the revenue even if strengthened by additional railway receipts or diminished charge for exchange. Almost immediately after the Statement was published, it became necessary to make special preparations in connexion with events on the North-west frontier of Afghanistan; and, from your Excellency's letter of the 20th of June, No. 174, and telegram of the 14th of July, I gather that the following corrections should now be made in the estimate for 1885–86:—

The expenditure must be increased by—

	£
(1) Special military preparations in India	2,600,000
and in England	450,000
(2) Telegraph cable between Jask and Bushire (*see* my despatch of 30th June, No. 12, telegraph)	75,000
(3) Extra subsidy to Amir of Kabul	250,000
(4) Further expenditure on Sind-Pishin Railway	500,000
Carried forward	3,875,000

* Your telegram of 8th May, 1885, Jask-Bushire cable. I have taken steps to pay new cable in autumn. Estimate of the cost of 88,000*l.* Particulars by post.

† Yours 1st. Bolan Railway works and Sind-Pishin extension approved. Material for these will be supplied as soon as possible.

	£
Brought forward - -	3,875,000
(5) Provision of railway material at Quetta - - -	500,000
(6) Railway from Quetta to Bolan Pass - - - -	180,000
(7) Additional opium charges -	600,000
(8) Discount on loan in England -	508,000
	£5,663,000

To meet these additional charges, the reduction from the budget estimate of expenditure which you have been able to effect amounts altogether to 1,797,500*l.*; of which 700,000*l.* occurs in capital outlay, 453,600*l.* in Imperial expenditure chargeable to revenue, 610,400*l.* in provincial, and 33,500*l.* in local expenditure. If these latter sums were to remain at the credit of the Provincial Governments, under the head of provincial surpluses, they could not be taken in reduction of the foregoing increase, and the set off would be only - - - - - £ 1,153,600

	£
To which must be added a saving in exchange owing to reduced drawings - - -	400,000
And additional receipts from railways - - -	500,000
Making a total of - -	£2,053,600

which, with the budget surplus of 508,100*l.*, might be deducted from the above-mentioned extra charge of 5,663,000*l.*, the result being an expected deficit of 3,101,300*l.* I agree in the conclusion of your Excellency that, under the circumstances, it is better to accept the deficit than to attempt to reduce it by the imposition of additional taxation in the middle of the year. I will refer, in a later paragraph, to the question of the adjustments with the Provincial Governments.

* * * *

From this review of the present financial position, it is apparent that the estimates for the current year showed a bare equilibrium, and that this has already been converted into a serious deficit, while it will certainly be necessary in the ensuing year to provide for a material increase in the regular expenditure on the army, as well as further outlay on frontier defences, and probably a larger charge under exchange. I trust, therefore, that your Excellency will forthwith take into your serious consideration the measures which you may deem most suitable for adoption, with a view to meeting the present and prospective state of the finances. Some improvement may perhaps be anticipated in the revenue by larger sales of opium, as the reserve will have been greatly strengthened in consequence of the abundance of the last two crops. But, unless you are prepared to take other measures to enlarge the revenue, it will, in my opinion, be essential to consider whether, apart from other possible economies, the outlay on public works, other than those required for the defence of the frontier, is not greater than your financial condition will permit. The following amounts are given in the estimates as intended to be spent on the construction of State railways (including the East Indian and Eastern Bengal lines) and irrigation works, during the last and current years, irrespective of the sums that are being expended by the various railway companies, and in addition to the outlay on civil buildings and roads, to which I shall refer hereafter :—

	1884–85.	1885–86.
	£	£
From borrowed money :—		
Railways - - -	3,681,990	3,382,700
Irrigation works - -	760,356	819,700
	4,442,346	4,202,400
From Revenue :—		
Railways : Protective - -	898,100	500,000
Frontier - -	140,015	500,000
Other lines -	191,100	398,000
Irrigation : Protective - -	270,600	287,300
Other works : say	200,000	200,000
	1,699,815	1,885,300
Total - -	6,142,161	6,087,700

The memorandum inclosed in your Excellency's letter of the 21st of April, No. 106, explains the manner in which you have arrived at the amount entered in the budget estimate for 1885–86 as available for the expenditure not chargeable against revenue. But, as you proposed to charge to borrowed funds 4,442,000*l.* and 4,202,000*l.*, in the two years, making together 8,644,000*l.*, and are only authorised to borrow for such a purpose to the extent of 350 lacs annually, it is evident that you contemplated the outlay of 1,644,000*l.* from the balances (of which 216,000*l.* will be provided by the Government of the North-West Provinces), in addition to 3,585,000*l.* from revenue. I do not overlook the urgency of the demand for the frontier railways, on which the estimates showed an expenditure of 771,000*l.* in 1884–85, and 1,717,000*l.* in 1885–86. Deducting these sums, the expenditure proposed is about 5,371,000*l.* in the former, and 4,371,000*l.* in the current year, sums which exceed by 1,121,000*l.* and 121,000*l.* respectively the total amount available from borrowed money and from the ordinary protective grant.

Further, to admit of this expenditure, the balances in India were estimated to be reduced during the two years by very nearly 3,000,000*l.*, and have been left at so low an amount as to be unable to bear any strain without immediate relief from this country. I cannot think, therefore, that the estimates were framed with a due regard to the instruction contained in the 10th paragraph of Lord Kimberley's despatch of the 27th of November, 1884, No. 148 (Railway), in which it was stated that the sum of 350 lacs was to be held to include all expenditure from borrowed money, including the frontier lines, and that lapses in previous years were only to be made good from the balances subsequently, when it could be done without unduly reducing them.

It is not, however, merely in the railways and irrigation works that the expenditure seems to have been allowed to expand too largely. In a despatch of the 28th of June, 1883, No. 183, Lord Kimberley called the attention of the Government of India to the continued increase of the expenditure; and the result of the correspondence which ensued was to show that one of main causes was the outlay by the Provincial Governments of their accumulated balances on public works of various kinds. At the close of his despatch of the 22nd of November, 1883, No. 348, Lord Kimberley expressed the pleasure with which he learnt that a reduction was anticipated, not merely in the Provincial, but also in the Imperial expenditure on public works of an unremunerative character, particularly on civil buildings. Some little reduction has, no doubt, been made, but the following figures will show that the net charge is still much greater than it used to be.

Net Expenditure on Civil Buildings and Roads.

	£
Average, 1871–72 to 1873–74 -	3,059,000
,, 1874–75 to 1876–77 -	3,468,000
,, 1877–78 to 1879–80 -	2,474,000
,, 1880–81 to 1882–83 -	3,394,000
1883–84 (deducting 533,070*l.* for Madras Harbour) - -	3,740,111
1884–85. Revised Estimate -	3,503,682
1885–86. Budget Estimate - -	3,620,700

The amount entered in the Budget for this year, apart from the special increase of 100,000*l.* for frontier roads, is about the same as the charge in 1881–82, and is very considerably in excess of that in earlier years. Moreover, it appears to me that, in dealing with such a subject as the expenditure on buildings and roads, the receipts, which are derived from rents or sale of stores, do not, in truth, diminish the outlay, and that, therefore, a more accurate view is obtained by observing the gross expenditure. In this light, I find that the charge has arisen in the following manner :—

	£
Average, 1871–72 to 1873–74 -	3,539,968
,, 1874–75 to 1876–77 -	3,397,017
,, 1877–78 to 1879–80 -	3,047,763
,, 1880–81 to 1882–83 -	3,914,013
1883–84 (deducting 533,070*l.* for Madras Harbour) - -	4,244,374
1884–85. Revised Estimate -	4,069,000
1885–86. Budget Estimate -	4,116,500

Apart, therefore, from the extra grant for frontier roads, the expenditure of the last three years exceeds by more than a million the average outlay six years previously.

The table of Provincial and Local Balances in Abstract D of the Financial Statement does not enable me to judge, in the case of all the provinces, whether the minimum balance is being maintained which is prescribed for provincial apart from local purposes. It is, however, evident that in some instances the Budget has been so framed as to permit of an unduly large sum being withdrawn; and, in particular, I request an explanation of the proposal to permit the Government of the North-West Provinces to expend so large a sum as 501,800*l.*, thereby reducing its total balance to 111,414*l.*, seeing that it is required to maintain 200,000*l.* independently of the purely local balance.

It is, in my opinion, most important that the Provincial Governments should not be allowed to overdraw their balances. The arrangements made in 1882 required that they should not look to the Imperial Government for assistance until the whole of their resources are exhausted; and, if they are permitted to draw their balances below the required minimum, it is evident that they will not be in a condition to meet a sudden demand, as was intended. The actual circumstances of the present time indicate that those arrangements were more liberal than a prudent policy should have contemplated as likely to be maintained without interruption; and I am of opinion that your Government should consult with the Provincial Governments as to whether the financial pressure which has arisen ought not to be borne in part by the Provincial resources, and whether the reduction of the outlay of 610,400*l.* which you have been able to ensure ought not to be regarded as a contribution towards the present extraordinary demands, which cannot be added to Provincial balances available for expenditure in future years, and which will consequently go towards the reduction of the year's deficit.

I desire to express my hearty approval of the measures taken by you, and by the Local Governments acting in accordance with your Resolution of the 29th of April, to effect without loss of time all possible economy in the ordinary expenditure which had been contemplated and sanctioned. Greatly as I regret the necessity which has arisen for enforcing a reduction of a rate of outlay which under more favourable circumstances would have been unexceptionable, I feel convinced that the Local Governments will be the first to recognise the duty of co-operating in the retrenchment necessary for a re-establishment of the equilibrium of the general finances.

In another respect I think that some relief may be obtained, as a temporary measure. The main object of the scheme for Famine Insurance was to provide the means of reducing the Debt, in prosperous times, at the rate of 15,000,000*l.* in 10 years; so that, if that sum should have to be borrowed during the decade for the purpose of relieving distress, the aggregate amount of the Debt would at the end of the time have not been increased, in consequence of Famine Relief. I find that between the 1st of April 1875 and the 31st of March 1885 the ordinary Debt has been reduced, by discharge or by transfers to the productive works portion of the debt, by about 14,000,000*l.*

	£	£
Total Debt, 31st March 1875 -		118,446,991
Capital outlay at that date - -		16,223,058
Difference, being ordinary portion of Debt - - -		102,223,933
Total Debt, 31st March 1885 - -		162,454,748
Capital outlay to 31st March 1884 - -	68,505,623	
Add outlay in 1884–85 -	5,732,400	
		74,238,023
Difference, being ordinary portion of Debt - - -		88,216,725
Reduction in 10 years - - -		14,007,208

At the same time, the net charge for the railways and irrigation works, including the interest on the portion of the debt charged against those works, as well as the charge on account of exchange, has been reduced from 2,068,000*l.* in 1874–75 to 1,100,000*l.* in 1884–85. Therefore the object of the Famine Insurance arrangement has in fact been attained, though no doubt not wholly through the operation of the measures directly taken for that object. In this view of the matter, and in consideration of the urgent necessity that has arisen for incurring a large outlay for the protection of the frontier, which at present is more pressing than that for making further provision against famine, it appears to me that, subject to meeting the actual cost of famine relief, the arrangement for making a yearly grant of 1½ millions as Famine Insurance may for the present be suspended, and the money thereby set free be made available for meeting the additional charges that have now arisen. I am hardly able to see how, without some such temporary diversion of the grant, the imposition of considerable fresh taxation can be avoided.

Experience, in my opinion, fairly justifies the anticipation that, if a strict watch is maintained in preventing the growth of charges for administration and ordinary public works for a comparatively short term of years, the natural expansion of the revenues will supply the means of meeting all increases of expenditure properly chargeable on the annual income, that are likely to be required in the immediate future, of maintaining a sufficient surplus to restore the annual provision for insurance against famine, and to guarantee the general financial position. I greatly regret the necessity of interrupting for a time the operation of a system so essential to the security of the finances as that which has been successfully established for meeting the liabilities arising from drought and famine. I recognise the duty of the Government to provide for those liabilities among the ordinary charges of the year; but, under present circumstances, it is wiser to make some temporary, and I hope not serious, sacrifice of future advantage, than to resort to the extreme measure of replacing any of those burdens on the people which were so lately removed.

No. 8.

LETTER from the GOVERNMENT of INDIA, September 22nd, 1885, No. 264 (Financial).

In our Despatch, No. 234, of the 22nd August last to your Lordship we explained that we had limited ourselves to the consideration of the measures necessary to strengthen our revenues in view of the proposed increase to our military expenditure. We deferred to a later period the recommendations which we have to make in regard to the steps necessary to provide funds for defensive fortifications, whether frontier or harbour, concurrently with those which are requisite for the completion of our system of internal and of frontier railways. We have now the honour, in addressing your Lordship on this subject, to bring to a close the series of administrative and financial proposals regarding the measures required to strengthen our military position, which commenced with our despatch No. 112 of 10th July 1885.

2. The problem which we have had to consider in regard to the financial aspect of the matter has been to ascertain in what way we could most effectively and economically harmonise the conflicting claims of the several classes of works, of which the construction is urgently necessary. It is desirable to review more or less briefly the considerations which have led us at different times to recommend the several classes of works in question.

3. A scheme of internal railways was sanctioned no later than last year, of which the object is to mitigate the severity of famines. The importance of this scheme increases with the lapse of time, since with each successive year the day inevitably draws nearer when famine will recur. The project was prepared by us in pursuance of the policy recommended by the Famine Commission, and approved by this Government and by your Lordship's predecessor. It was in consequence of the measures recommended by this Commission that the scheme of insurance against the cost of famine which originated in 1877–78 was modified, and a sum of 500,000*l.* was from the year 1881 annually devoted from the insurance revenues to the construction of railways. It was found necessary, however, in order to give full effect to the recommendations of the Famine Commission, that we should supplement our means by borrowing on a scale more extensive than that which had hitherto been sanctioned. The works which were undertaken for the protection of the country and for the assistance of the Government in the event

of famine are still far from completion. Recognising as we do the vital importance of these works, we are of opinion that it is imperative upon us to find funds with which we may continue them in as short a time as may be to completion. In our despatches noted below* we have expressed our deep conviction of the necessity of these railways. We have never ceased to urge the responsibility which lies on us to complete these lines, both as the one sure means of saving life, and as greatly diminishing the cost of meeting famines. The Parliamentary Railway Commission of last year summed up the situation in paragraph 17 of their report, and the considerations to which we refer furnished evidently the main ground on which they based their decision recommending considerable railway extension. If, when famine comes, it is found that we have postponed these lines indefinitely, and are unprepared with that means of defence on which we and all parties have persistently relied as the one effectual way of meeting it, we shall have much difficulty in replying to those who will hold us responsible, not only for the preventible loss of life, but for the financial difficulties in which we shall be entangled. Yet we cannot but feel that there is great danger of the urgency of these works being lost sight of, in the presence of the other projects with which we have been recently occupied. Apart from the consideration that the more important of the famine lines are already considerably advanced, and that wholly to discontinue them now in their present unremunerative state would be a costly and indefensible policy, the necessity for their construction is obviously in no way lessened by the need which has arisen for other classes of works. We therefore consider it essential that we should endeavour to combine the execution of this class of railways with that of the military railways, and of our proposed defence works, and that notwithstanding the fresh obligations forced upon us, we should not allow ourselves to be deterred from the policy recommended by the Famine and the Parliamentary Commissions, and deliberately adopted by us and by your Lordship's predecessor. From the proposals contained in this despatch your Lordship will see that we believe we have the means of meeting within the next five years our various requirements at a total cost but little exceeding that which is at present sanctioned for our annual capital expenditure.

4. The next portion of our scheme consists of military railways. We have recently explained to your Lordship, in our Despatch No. 112 of 10th July, our views on the subject of these railways. Some of the works referred to in that despatch had been sanctioned when it was written. The remainder are as follows:—

(*a.*) The improvement of the gradients of the Punjab Northern Railway.

(*b.*) The construction of a line crossing the Amran range to the frontier, or of a tunnel through the range.

(*c.*) The permanent construction of a railway in the Bolan.

(*d.*) The construction of a line from Peshawar to the mouth of the Khyber.

(*e.*) The construction of the British section of the Patiala and Bahawalpur line.

The necessity of these works was fully explained in the despatch of July 10th, which is at present under your Lordship's consideration, and it seems unnecessary to repeat what was then put forward. The projected construction of the Ajmere-Bahawalpur line, or of some other line to connect the Rajputana with the Indus Valley system, and the possible extension at a future time of the Pishin Railway to Kandahar, were also mentioned in that despatch as works of which the construction may have to be eventually undertaken.

5. Finally, we have before us, as yet only partially sanctioned, a scheme of frontier and coast defences. This scheme also has been fully reported upon in our despatch of July 10th, and the urgency of the several works of which it is composed has been explained.

6. We will next gather up into a single statement the several groups composing the combined scheme of works to be executed by State agency, exhibiting in each group the projects of which it is composed, and the total cost remaining to be met from the commencement of 1886–7.

7. Apart from the above works to be directly executed by the State, however, there remain the important projects of the Nagpur-Bengal Railway and Bilaspur-Etawah from Umaria to Bilaspur, both of which we have proposed to your Lordship's predecessor to make over to companies. Our liability during the next five years, in regard to these railways, is restricted to the

* No. 92, dated 22nd July 1881. No. 29, dated 23rd January 1883. No. 269, dated 24th September 1883. No. 27, dated 29th January 1884. No. 150 R, dated 29th September 1884. No. 35 R, dated 3rd March 1885.

finding of the net interest on the capital expended, a forecast of which was submitted by us in paragraph 35 of our Despatch No. 29, of 23rd January 1883, and again in the third enclosure of our Railway Despatch No. 150, dated 29th September 1884. The necessity of the construction of these railways, and especially of the former, has been insisted upon by us in successive despatches. The Nagpur-Bengal Railway is the backbone of our whole protective system, as it taps the country which produces the largest and most reliable surplus of grain in India, is centrally situated, and when the system is complete, will be connected by radiating lines with every province of India. The construction of this line is essential to the scheme of famine protection. Similarly, the completion of the Katni-Umaria-Bilaspur section of the Etawah-Bilaspur line and its connection with Raipur is necessary to the utilization of the Indian Midland as a famine railway. We trust, therefore, that your Lordship will facilitate as far as may be possible the early launching of these railways by companies. The important results, both commercially and in regard to protection against famine, which this would secure have already been explained. We may add that we shall thus also obtain a refund of 85 lakhs from the former, and 37½ lakhs from the latter of these lines.

8. Before we proceed to explain our recommendations in regard to the mode of meeting the expenditure on the State lines, we desire to urge upon your Lordship a reconsideration of the decision by which the capitalization of any part of the famine fund was negatived. We are aware that the Parliamentary Commission disapproved last year of the employment of any part of the famine fund for the purpose of providing interest on the capital expended by companies during construction; but since their report was presented circumstances have greatly changed. Much additional expenditure has been forced upon us, imposing a considerable burden on our revenues, in the form of interest on loans. We have further been obliged to recommend a very onerous increase to our normal military expenditure. It is necessary, if the equilibrium of our budget is to be maintained, that we should utilise all the resources at our command in the manner most suited to meet our increased requirements. It would, on the other hand, so far as we can at present see, be impossible that, with so many additional burdens thrown upon us, we should undertake to meet from our ordinary revenue the charge for interest on the lines to be made over to companies. But the necessity for those lines, in order to complete our famine system, remains, as we have shown, unchanged. We think that these considerations justify us in again soliciting your Lordship to sanction our capitalizing, during the next five years, so much of the railway share of the protective famine grant as is necessary to meet the interest on the lines conceded, or to be conceded to companies. As this, however, reduces the sum annually available for construction of railways, we propose temporarily to devote to railway construction from the capital grant for irrigation a sum equivalent to that which is required to meet the interest on lines conceded to companies, so that our annual resources available for the purpose will continue, as at present, to be 280 lakhs plus 50, or 330.

In the event, however, of your Lordship continuing unwilling to sanction the capitalization of the famine grant, even to the limited extent proposed, we beg to recommend, as an alternative, that the net interest charge on the lines conceded to companies be met out of the sum we at present propose, in accordance with paragraph 7 of Lord Kimberley's Railway Despatch, No. 148, dated 27th November, 1884, to devote out of revenue to the completion of the frontier military roads.* The roads might be, to that extent, provided for out of the normal annual grant of 350 lakhs, an equivalent amount out of the irrigation share of that grant being annually applied to railways, as in the capitalization proposal.

9. With these remarks we proceed to explain in what manner we propose to arrange for the funds necessary for the construction of the several works indicated in paragraph 5. The funds actually at our disposal for railway construction we take at 280 plus 50, or 330 lakhs. But in the communications noted below,† and elsewhere, we have pressed upon your Lordship the expediency of negotiating with companies for the transfer of the Assam-Behar, the Nagpur-Bengal, the Katni-Bilaspur, Sindia's and the Mysore Railways. Should these transfers be arranged, as we earnestly trust that at the earliest possible date they may be, the following refunds will approximately be available:—

	Lakhs.
Assam-Behar (including Tirhoot lines)	253
Nagpur-Bengal	85
Katni-Bilaspur	37½
Sindia's Railway	95
Mysore Railway	64
Or a total of	534½

To these may be added the 60 lakhs to be repaid us by the Indian Midland Railway Company, making a total contemplated refund of 594½ lakhs.

10. We shall thus have a total of 330 × 5 = 1,650 plus 594½, or 2,244½ lakhs, against a total estimated expenditure of 2,145¼ or 99¼ lakhs in excess of what is required to work the whole scheme. But we have entered 170 lakhs for the construction by the State, during the above term of the remainder of the Assam-Behar Railway. Should the line be conceded to a company, as we strongly recommend, we shall be relieved of this sum, and may look for a refund of the 253 lakhs already spent; so that the total surplus on the whole account would be not less than 269¼ lakhs.

11. We propose to give the prior claim on our funds to the lines in group A. C. and D., to so much of group E. as concerns the Punjab northern gradients and the Amran Range project, and to group F., with the exception of 17 lakhs on account of certain works at Sukkar, Bahawalpur, and Mooltan, which our military colleagues consider can be left over to later years. To the above works, as of course to group G. (the open line expenditure and to the expenditure on account of stores and working capital), we desire to assign priority in the distribution of the regular annual grant of 330. We propose also to allot to certain projects in groups A. and D., in addition to the existing grants, the refund of 60 lakhs from the Indian Midland Railway, which we hope to receive this year. We have calculated the grants in the first Appendix to our despatch on this basis.

12. It is desirable to add a few words to show why we have given priority to the railways comprised in the several groups indicated in the last paragraph. On the Bellary-Kistna line, some 70½ lakhs will have already been spent by the end of this year, and it will still require 120¾ lakhs more to be spent before it can either be utilised for famine protection or earn any interest on the outlay. We need not remind your Lordship of the excessive liability to famine of the tract which this line is designed to protect. Its annual rainfall is always small, and to a marked degree precarious. It suffered pre-eminently in 1877, and is from the latest accounts in imminent danger of a similar visitation this year. The Madras Government, telegraphing on the 10th instant, report the condition of the ryots in Bellary as very critical, and add that if early amendment is not reported it will be necessary to re-open work on the Hindupur Extension Railway to provide means of subsistence for them. For this line the grant in the present year was originally 50 lakhs, reduced afterwards to 40 and then to 22 lakhs. This reduction, however indispensable, has postponed the opening for a year of the first section of 90 miles, which was almost ready and would have been invaluable from a famine point of view, involving not only loss of revenue on that section, but further postponing for at least a similar period the completion of the entire line, and the through traffic that might be expected, and leaving all the money hitherto spent pro tanto unproductive.

Similar remarks apply, though in a lesser degree, to the Cuddapha-Nellore line, on which 28 lakhs will have been spent by the end of this year, requiring at least a similar amount to complete it.

On the Assam-Behar line 77 lakhs will have been spent by the end of this year, but it will remain to a great extent unproductive, and in case of famine useless, till funds can be supplied to fill in the broken

* Foreign Despatch, No. 25, Secret, dated 22nd September 1884, paragraphs 5 and 8 (*a*). Military Despatch, No. 112, dated 10th July 1885, paragraphs 9, 10, 13, and 14.

† Railway Despatch, No. 97, dated 17th July 1885 (Assam-Behar Railway). Railway Despatches, No. 132, dated 13th August, 1883, No 17 dated 29th January, 1884. No. 191, dated 9th December, 1884, No. 77, dated 12th June, 1885 (Nagpur-Bengal Railway). Railway Despatch, No. 83, dated 2nd June, 1883 (*et seq.*) (Katni-Bilaspur Railway). links. By completing the Gundak Bridge and extending from Jhinjarpur to the Kosi the western branch of this line might be made complete in itself, and would be both useful and remunerative. A separate eastern branch, not connected with the western, but still protective and remunerative, might be provided by completing the branch from the Ganges to Purneah, and thence to Dinajpur and the Northern Bengal system. The whole Assam-Behar project, however, cannot attain its proper measure of development until the link between Kaunia and Dhubri on the Brahmaputra has been completed also.

With regard to the lines entered in Group B. it is sufficient to refer your Lordship to paragraph 14 of our Despatch No. 27, of 29th January 1884, for those lines that belong to the Madras Presidency, and to paragraph 7 of our Despatch No. 150 R., of 29th September 1884, regarding the Koontera-Pooree line. The Madras Government began operations, as a relief work, on the Hindupur Extension in January last, and are now, as above explained, proposing to go on with it for the same purpose. All this group of famine lines are of immense importance for the protection of districts of the Madras Presidency which suffered so severely in 1877, and though we postpone them in favour of the lines which have been already begun, we think it of great importance that they should as soon as possible be completed.

The works in Groups D. and F. have formed so recently the subject of communication to your Lordship, that we think it unnecessary to do more at present than refer to our Despatch of July 10th, to which was appended the Report of the Commission appointed to examine into the matter, and in which our own conclusions were carefully summed up. The annual grants for the railways in Group D. and the defence works in Group F. have been entered in the first Appendix to this Despatch, in accordance with the recommendation of his Excellency the Commander-in-Chief and of our honourable military colleague, arrived at in view of their relative urgency. An extract from the papers, continuing their recommendations, will be found in the second Appendix to this Despatch.

13. Your Lordship will observe that, except in the year 1886–87, the total annual expenditure will in no case exceed the sanctioned limit of 330 lakhs. The gross amount shown against 1886–87 is 500¾ lakhs, or 170¾ lakhs in excess of the normal grant. But of this sum 61 lakhs is to be expended on replacing rails for the Kandahar lines already ordered, but which we desire to divert to the prosecution this year of the Sind-Sagar Railway and for the supply of further materials urgently needed for that line; and this expenditure we propose to make contingent on the refund next year of 61 lakhs, which we anticipate on account of the Mysore Railway, or on any other refund which may first accrue. The net excess is, therefore, an additional expenditure of 109¾ lakhs only, over the whole term of five years, and for the construction of the entire system of works. This excess, moreover, is attributable solely to the cost of frontier and coast defence works, amounting to 197½ lakhs, being debited to the normal grant of borrowed money, which has hitherto not been available for such objects but reserved for railways and irrigation alone.

14. Your Lordship will observe that certain lines in Group E., while entered in paragraph 6 of this Despatch, have no allotments assigned to them in the scheduled forecast of Appendix I. The reason is that these lines must await for the present the result of the inquiries and estimates in progress concerning them, as well as the completion of the transfers to companies which we contemplate. The lines are as follows:—

	Lakhs.
Bolan Railway, making permanent	80
Line from Peshawar to the mouth of the Khyber	12
Patiala Bahawalpur, British section	50
Total	142

Should the arrangements for the transfer of the lines indicated in paragraph 9 be carried out it will, in our opinion, be most desirable that the proceeds of all refunds accruing after the first (which will be allotted as proposed in paragraph 13) should be held primarily available for the completion of the lines in Group B., &c., are completed, the sooner will the objects of the Famine Fund have been fulfilled, and the sooner will the fund itself revert to our disposal, while the security given to the country will be an all-important insurance to us in respect of expenditure on the next occurrence of famine.

15. Our conclusions, finally, on the whole matter may be briefly stated as follows:—

(1.) It is essential that the important Famine Protective railways should be carried on at a fair speed, irrespective of the additional demands that have been thrown on our finances by the necessity of constructing additional frontier railways and frontier and coast defences. With a view of obtaining this end, we propose to utilise the present railway grant of 280 lakhs of borrowed money and 50 lakhs of the Famine Insurance Grant for the prosecution of Famine Protective railways, frontier railways, and frontier and coast defences, until these works are completed.

(2.) We propose to supplement the existing grants for outlay on the above objects this year by 60 lakhs from the refund anticipated from the Indian Midland Railway Company. This additional grant will be utilised somewhat as under:—

	Lakhs.
Sind-Sagar Railway	25
Bellary-Kistna Railway	15
Cuddapah-Nellore Railway	10
Assam-Behar Railway	10
Total	60

(3.) In the year 1886–87 we consider that the fixed grant of borrowed money of 350 lakhs should be increased for this year only by 109¾, and that a further sum of 61 lakhs from the refund anticipated on account of the Mysore Railway, or such other refund that may be first secured, should be added to the grant made to the Sind-Sagar Railway to allow of the purchase of materials urgently needed. On this being determined we intend to utilise a portion of the materials under supply for the Kandahar Reserve on the Sind-Sagar Railway, and to replace them next year out of the special grant of 61 lakhs above alluded to.

(4.) We propose that subsequent to 1886–87 the normal rate of borrowing should be reverted to, but that the balance of the refunds anticipated from companies alluded to in paragraph 9 should be made available for prosecuting the railways in Groups B. and E. as may be found most advantageous.

(5.) We desire that a portion of the Famine Insurance Grant should be temporarily diverted to the payment of the interest on the capital of the following railways:—

Indian Midland,
Bengal Nagpur,
Bilaspur Katni,

the funds needed for this purpose to be obtained by reducing the capital outlay on irrigation works; or, if this procedure should not be approved, that the cost of the frontier military roads should be made a charge against the fixed grant of 350 lakhs of borrowed money, the proportion of this grant now allotted for outlay on irrigation works being reduced pro tanto, and the net charge for interest on the capital of the companies met from reserve in ordinary course.

(6.) We are strongly of opinion that endeavours should be made to launch the Bengal-Nagpur Railway Company at the earliest possible date, and that the construction of the Bilaspur-Katni Railway be made over, as soon as this can be arranged on similar terms, to that company or to a new company with the option of taking over the Umaria-Katni Railway within a fixed period.

No. 9.

LETTER *from the* GOVERNMENT *of* INDIA, *September 29th, 1885, No. 271 (Financial).*

WE have the honour to inform your Lordship that since we reported in our Financial Despatch of the

20th June last, No. 174, the total reductions expected in all classes of expenditure this year, we have been compelled to sanction for certain public works additional grants aggregating Rs. 20,36,500, in consideration of absolute and unavoidable necessity connected with outstanding arrangements which it was found imperative to liquidate. The exact amount of net reduction in expenditure which may be expected in the Public Works Department during the current year is accordingly Rs. 62,63,500, and not Rs. 83,00,000 as stated in our Despatch of the 20th June last.

2. The works for which the additional grants have been sanctioned, and the amount of the grant sanctioned for each, are the following:—

	Rs.
Rangoon and Sittang Railway - -	1,65,000
Naraingunge-Dacca-Mymensing Railway - - - - -	1,50,000
Bellary-Kistna and Cuddapah-Nellore Railways - - - -	3,00,000
Compensation paid to Indian Portland Cement Company - - -	97,500
English expenditure on stores for State Railways - - - -	9,39,000
Carriage of stores for the Assam-Behar Railway from Howrah - -	50,000
Assam-Behar Railway, Tirhoot Section	2,00,000
Additional outlay on the Muzaffargarh and Shona Canal embankments, and for the protection of the Indus Canals - - - -	51,000
Grant for the construction of quarters for Mechanics in the Bombay Mint, regranted partly for that work and partly for other urgent works -	84,000
Total - - -	20,36,500

3. We take this opportunity to inform your Lordship that, owing to an oversight recently discovered, there will be a further diminution in the amount of savings reported in paragraph 4 of our Despatch of the 20th June last. It appears that the grant for military works for the Bombay Presidency has been twice reduced—once by the Government of India, the reduction being included in the total reduction of Rs. 10,00,000 under military works, and again by the Government of Bombay to the extent of Rs. 3,86,000. This was not known when we reported the reduction in June last, owing to the insufficient description then given by the Government of Bombay of its reductions. The effect of this error will be to reduce the amount of savings to be effected by local governments from Rs. 84,50,000 to Rs. 80,64,000.

No. 10.

LETTER from the GOVERNMENT of INDIA, October 6th, 1885, No. 275 (Financial).

We have had the honour to receive your Lordship's Financial Despatch, No. 239, dated the 27th August. We propose hereafter to reply to so much as may in ordinary course require explanation from us, but we observe that towards its close the despatch deals with important questions of finance, the decision in regard to which must determine the policy to be adopted in respect to the construction of the railway and other works which form the subject of our Despatch No. 264, of the 22nd September. We think it, therefore, desirable to dispose at once of this part of the subject, in order that, when taking into consideration our communication of the 22nd September, your Lordship may have before you our views upon the whole matter.

2. Your Lordship observes, in the 46th paragraph of the despatch, that, from a review of the present financial position, it is apparent that the estimates for the current year show a bare equilibrium; that this has already been converted into a serious deficit; and that it will certainly be necessary in the ensuing year to provide for a material increase in the regular expenditure on the army, as well as for further outlay on frontier defences, and probably for a larger charge under exchange. Your Lordship desires us to take forthwith into our serious consideration the measures which we may deem most suitable for adoption with a view to meeting the present and prospective state of the finances. It is pointed out that, after making allowance for larger sales of opium, it will be essential, unless we are prepared to take other measures to enlarge the revenue, to consider whether, apart from other possible economies, the outlay on public works, other than those required for the defence of the frontier, is not greater than our financial position will permit. Your Lordship further desires, in the 51st paragraph of your despatch, that we should consult with the Provincial Governments as to whether the financial pressure which has arisen ought not to be borne in part by them, and whether the reduction of the outlay of 610,400*l.*, which we have been able to insure, ought not to be regarded as a contribution towards the present extraordinary demands, which cannot be added to Provincial balances available for expenditure in future years, and which will consequently go towards the reduction of the year's deficit. "Greatly as I regret," your Lordship adds, "the necessity which has arisen "for enforcing a reduction of a rate of outlay, which "under more favourable circumstances would have "been unexceptionable, I feel convinced that the Local "Governments will be the first to recognise the duty "of co-operating in the retrenchment necessary for a "re-establishment of the equilibrium of the general "finances." Finally, in the 53rd and 54th paragraphs of the despatch, your Lordship observes that the main object of the scheme for famine insurance was to provide means for reducing the debt in prosperous times, at the rate of 15,000,000*l.* in 10 years, so that if that sum should have to be borrowed during the decade for the purpose of relieving distress, the aggregate amount of the debt would, at the end of the time, not have been increased in consequence of famine relief. Your Lordship quotes certain figures to show that the object of the famine insurance arrangement had in fact been attained, though not wholly through the operation of the measures directly taken for that object. In this view of the matter, and in consideration of the urgent necessity that has arisen for incurring a large outlay for the protection of the frontier, which at present is more pressing than that for making further provision against famine, it appears to your Lordship that, subject to meeting the annual cost of famine relief, the arrangement for making a yearly grant of 1,500,000*l.* as famine insurance may for the present be suspended, and the money thereby set free be made available for meeting the additional charges that have now arisen. "I greatly regret," your Lordship concludes, "the "necessity for interrupting for a time the operation of "a system so essential to the security of the finances "as that which has been successfully established for "meeting the liabilities arising from drought and "famine. I recognise the duty of the Government to "provide for these liabilities among the ordinary "charges of the year; but under present circum-"stances it is wiser to make some temporary, and I "hope not serious sacrifice of future advantage, than "to resort to the extreme measure of replacing any of "those burdens on the people which were so lately "removed."

3. The proposals contained in the above paragraphs, if we understand them rightly, are threefold. First, it is suggested that we should appropriate the 610,400*l.*, which the Provincial Governments, at our request, have placed this year at our disposal; secondly, that we should credit ourselves with an equal sum in the ensuing year; thirdly, that we should temporarily divert the Famine Insurance Grant from the purposes for which it has been hitherto assigned, and devote the money so acquired to outlay on frontier railways and defence works. Your Lordship bases the recommendations you make to us under these heads on the necessity of maintaining the equilibrium of our finances, without reimposing on the people any of the burdens which have been so lately removed from them.

4. We propose to examine, severally, your Lordship's recommendations, in their relation, primarily, to the engagements by which we are bound, whether to the Provincial Governments or to the public, and, in the next place, in connexion with our financial position. We shall then be in a position to ascertain how far the course which your Lordship has presented to our consideration is consistent with the conclusions to which such an examination may lead us.

5. First, with regard to Provincial contracts. When, in the course of the current year, we called upon the Local Governments to assist us by placing at our disposal what economies they could effect temporarily in their expenditure, they responded loyally to the invitation. We gave them at that time no reason to believe that, unless the probabilities of war increased, we should call upon them for further sacrifices; and we

cannot but feel that, in the turn affairs have taken, to exact from them as a retrenchment what was asked for as a temporary sacrifice, is a measure which requires the very strongest justification. Your Lordship is aware that the contracts expire in ordinary course at the close of the ensuing financial year, so that the question as regards the future narrows itself to the relief required by the Imperial revenues during the ensuing year only. These considerations carry greater weight when we find that the pledges given with regard to the Provincial contracts have been extremely explicit, and justly calculated to give to the Governments the utmost confidence that, except in the circumstances indicated in the assurances proffered at various times by this Government, no interference should take place with their engagements.

6. Apart, therefore, from these special circumstances, namely, the brief period during which the contracts have yet to run, and the conditions under which the Provincial Governments were invited to assist us this year, it is desirable to examine briefly what, at different times, has been by us declared to be the general nature of our engagements towards Provincial Governments. The words of Lord Mayo's resolution of 14th December, 1870, inaugurating the system of Provincial powers and responsibility, will be in your Lordship's recollection: "Unless some fiscal misfortune, such as a heavy loss in "the opium revenue, or national disaster, such as war "or severe famine occurs, the Governor-General in "Council will maintain, for the future, the assign- "ments for 'Provincial Services' at the amounts now "fixed. They will not, in any case, be reduced without "previous consultation with the Governments." The substance of this declaration has been repeated on the successive occasions on which fresh contracts have been entered into. In 1879, in its Resolution No. 410, dated the 1st May of that year, the Government of India spoke as follows:—

"The policy of maintaining Provincial responsibility for the management of Provincial finances, inaugurated by the Government of India in December 1870, has now been in course of development for nine years, with a success which has equalled the most sanguine expectations of its authors. It has led to greatly increased efficiency in many of the chief branches of the public service, to the development of the revenues without addition to the public burdens, and to economy in expenditure. It was one important object of that policy that the normal and obligatory administration of the country should be, as far as possible, shielded from the effects of ordinary vicissitudes affecting the Imperial finances; and during the last nine years, notwithstanding the serious financial pressure that has often been experienced, as, for example, that caused by the famine in Bengal in 1874, by the famine in the Madras and Bombay Presidencies in 1876 and 1877, and by the present war on the frontier, the Governor-General in Council has left at the disposal of the Provincial Governments, without diminution, the whole of the resources assigned to them."

When the contracts were about to be revised, the Government of India, in its Resolution No. 3,353, dated 30th September 1881, wrote:—

"Another important change which is contemplated requires somewhat fuller explanation. In the Resolution No. 3334, dated 14th December 1870, the Imperial Government, speaking broadly, announced a policy of divesting itself of both responsibility and control within certain limits; but a reservation was made (paragraph 17) of power to modify the resources granted in the event of 'some fiscal misfortune, such as a heavy loss in the opium revenue, or national disaster, such as war or severe famine.' On two occasions already within a decade this reservation has been acted on. On the occasion of the great famine of 1876–77 in Western and Southern India, the Supreme Government necessarily came to the rescue of the Local Governments in meeting the enormous outlay involved; but it directed that all Provincial and Local resources must be exhausted before Imperial aid could be supplied. This decision was unexceptionable in the sense in which it was meant; but it may have lead to developments which were not altogether intended. The second occasion on which the reservation has been acted on is that of the Afghan war. The Local Governments were called upon during the years 1879-80 and 1880-81 to contribute 670,000*l.* from the resources made their own by the decentralisation policy; and in the Financial Statement of 1880-81 (paragraph 170) the hope was expressed that they had been able 'to afford this timely help to the general finances with little apparent difficulty.' The circumstances of the time were, without doubt, peculiar, and the strain upon the finances was undoubtedly severe. But the sudden suspension of improvements in progress, the starvation of public works, and the discouragement of care and economy by requiring a surrender of their results, could not, in themselves, be otherwise than prejudicial."

"In modification, therefore, of the reservation hitherto in force, it is proposed to declare, on the one hand, that the Local Governments must look for no special aid from the Imperial Government except in the case of severe famine (and then only within limits to which allusion will presently be made); and, on the other, that the Imperial Government will make no demand on them except in the case of disaster so abnormal as to exhaust the Imperial reserves and resources, and to necessitate a suspension of the entire machinery of public improvement throughout the Empire."

In the correspondence between the Government of India and the Secretary of State, which followed this Resolution, the latter observed that he thought it would be sufficient to state that the Local Governments would not be called upon to surrender any portion of their revenues, unless the Government of India saw no alternative between such a course and the imposition of taxation which it would not be deemed expedient to undertake. Eventually, however, in his Despatch No. 208, dated the 6th July 1882, the Secretary of State wrote as follows:—

"The first point to which your letter refers is the suggestion which I made regarding the assistance to be rendered by the local administrations to the Central Government in the case of an abnormal strain on its resources. Your proposal was to declare that such assistance would not be required, unless the Imperial reserves should be exhausted and a suspension of the entire machinery of public improvement throughout the Empire were rendered necessary. As I thought it not desirable that your Government should have to prove the existence of such a state of affairs before requiring the assistance of the local administrations, I suggested that it would be sufficient to undertake not to call on them to surrender a portion of their revenues, unless you saw no other alternative than the imposition of taxes, which were not considered expedient. To this your Excellency replies that my despatch reached you too late to admit of your proposing such a condition, pending the preliminary negotiations; and you enquire whether I still desire it to be promulgated, observing that you consider it highly inexpedient, somewhere absolutely unavoidable, to change any of the conditions on which the contracts with the Local Governments were concluded. You express an opinion that, though theoretically open to the objection taken to it, the original condition is not, in practice, likely to cause inconvenience; and I am willing accordingly to waive the question for the present, though I should desire to have it borne in mind when the time arrives for the next revision of the contracts, and that an explanation of this view should be given to the Provincial Governments."

7. It will be seen, on review of the above passages, that the reserves, which, from time to time, have been made by the Government of India, are based on a condition of affairs so serious as to leave to it no alternative but taxation of an inexpedient nature, deficit, or a recourse to Provincial resources. Your Lordship will learn from this despatch what we consider our financial position to be; but meanwhile we desire to express our entire concurrence in the principle upon which the policy is based, and on which successive Governments have acted, and to repeat that it is unquestionable that the success of the system of Provincial contracts depends mainly on the confidence felt by the Provincial Governments in the judicious and temperate exercise of the discretion reserved to the Government of India. Nothing can be more disheartening to the Local Governments, and nothing, therefore, can be so provocative of extravagance, as the feeling that the engagements entered into with them are liable to interruption on occasions other than those determined by the Government of India. On two occasions, as stated in the Resolution of 1881, the Government of India has unhappily been compelled to intervene; once in the great famine of 1876–77, and once in the Afghan war of 1879–80–81. Whatever anxieties we may feel with regard to the ultimate burden to be placed upon us by military expenditure, we are not at present likely, so far as we can foresee, to be called upon to undergo an

abnormal strain on our resources corresponding to those which we have cited. Circumstances, it is true, have lately compelled us to review our financial position, and to examine it thoroughly with the object of ascertaining how far our resources are capable of meeting the increased military expenditure which is likely to be placed upon them. With the design of strengthening our resources, in order to meet such addition to our estimates, we have further proposed to your Lordship an expansion of direct taxation. But our proposals on this head contemplate the carrying out of a measure which, as your Lordship is aware, has been constantly before our eyes of late years, on the ground of the more equitable distribution of taxation, irrespectively of financial necessities. In these circumstances, we feel no hesitation in deciding that extension of the present system of direct taxation is a lesser evil than interference with the Provincial contracts. Sir Evelyn Baring, in his Minute of the 11th August 1883, forwarded to your Lordship with our Despatch No. 234 of the 4th idem, speaking of the sum of 670,000*l.* which during the Afghan war was taken by the Imperial from the Provincial Governments in order to help towards paying the expenses of that war, wrote: "This money was given back to the Provincial "Governments in 1881; and I may say that there is "no act with which I have been connected since I "have been in India to which I look back with greater "pleasure than the repayment of this money. If it "had not been repaid, a fatal blow would have been "struck at the Provincial system of finance." The strong sense entertained by our late financial member, of the necessity of maintaining the credit of this Government, is shared by us all. As the contracts are now drawing to a close, we shall, however, instruct the Local Governments to enter, in the ensuing year, into no fresh arrangements having for their object the construction of works, or the carrying into effect of measures, which may engage their resources during the approaching quinquennial term. We shall also intimate to them the probability of our being compelled to reduce the revenues which during the last contract were assigned to them; for, although we are opposed to any present interference with those resources, we fully recognise that, when the Government of India is called upon permanently to meet a large increase of expenditure, the Local Governments, on the occasion of a revision of contract, must contribute towards Imperial necessities, and must so reduce their own scale of expenditure as to furnish their share to the common burden. We, therefore, think that both in the spirit and by the express terms of the contracts we are bound to restore to Provincial Governments, during the ensuing year, with the warning which we have above indicated, the sums which they placed at our disposal; but we shall be careful that the minimum balance of each Government is maintained, subject to the conditions prescribed in your Lordship's Despatch, No. 183, dated 28th June 1883, at the respective figures recorded in paragraph 109 of the financial statement for 1884–85. In no case does the balance now at the credit of any of the local governments or administrations, after taking into account the recent retrenchments and expenditure, fall short of the minimum prescribed; while in most cases it is considerably greater.

8. We proceed, now, to the question of the famine insurance scheme, which, we observe, has been declared, on the one hand, to have been to all intents and purposes swallowed up, and, on the other, to have so far attained its object as to admit of its being for the present suspended. The objects of that scheme were fully stated in Sir John Strachey's speech of the 9th February 1878, on the Northern India Licence Bill; and it will be convenient to repeat here so much of his remarks as is necessary for the purposes of this despatch, and to review as briefly as may be the subsequent changes introduced into the fund. Sir John Strachey, in the course of that speech, said:

"As I previously explained, we start with the hypothesis that in every 10 years the Government of India will have to spend 15,000,000*l.* on the relief of famine. The case will be put into its simplest form, if we assume that the whole of the 15,000,000*l.* will have to be spent at once at the end of this period, and the arguments I am about to use will not be in any way invalidated by this assumption, though it be not strictly true. Now, as the very foundation of our policy is the resolution not to permit this expenditure to create a constantly increasing charge for interest, the expedient of simply borrowing when the occasion occurs, and thus increasing the annual charges on account of debt, say, by 600,000*l.* in each period of 10 years, must, of course, be set aside; and it follows that we can only obtain the 15,000,000*l.* which we require by saving up an equivalent sum in years of prosperity. If we provide for this purpose a *bonâ fide* surplus of 1,500,000*l.* a year for 10 years, we shall have obtained our 15,000,000*l.*

"As we cannot keep our annual savings locked up in a separate box, it is inevitable that when the actual necessity for spending the 15,000,000*l.* arrives, we shall have to borrow the money, so that what we have practically to do is this—we must reduce our debt by 1,500,000*l.* year by year during the whole period, or by 15,000,000*l.* in the 10 years, thereby reducing the yearly charge for interest at the end of that time by 600,000*l.* Then, when the necessity for spending the 15,000,000*l.* arrives, we can borrow that amount and incur a fresh charge for interest of 600,000*l.* a year, and be no worse off than we were 10 years before. This process, by which in periods of prosperity the charge for interest on debt is gradually reduced, thus constantly restoring the exhausted power of borrowing without increased taxation, is what the Government virtually proposes to adopt.

"In India, however, the policy has been deliberately and wisely accepted, of borrowing every year large sums of money for the construction of the railways and canals which it is absolutely necessary that the country should possess, if its material advancement is not to be arrested. Even if the financial consequences of this policy had been less satisfactory than they have been, it might still have been our duty to persevere in it, though it should have called for increased sacrifices from the country in the forms of taxation. But experience has shown beyond the shadow of a doubt that, looking at the matter even from a purely financial point of view, we could have done nothing wiser and more profitable than go on investing capital in these undertakings; and that, so long as these investments are prudently limited, as they have been up to the present time, so that the growing income derived from the works keeps pace with the charge for interest on the borrowed funds, they may be continued with complete financial safety.

* * * * *

"We assume, therefore, that the Government will continue to borrow money on these principles for such productive works.

"Now, it would be obviously absurd to pay off every year debt to the amount of 1,500,000*l.* and simultaneously to incur fresh debt to the same extent. What, therefore, we have to do, in the actual circumstances of the case, is, by applying to the construction of these works the proceeds of the new taxes, to reduce by 1,500,000*l.* a year the sum which we might otherwise have borrowed. The ultimate financial result of this, as will readily be seen, will be practically the same as that which would have followed if we had devoted every year 1,500,000*l.* to the actual repayment of debt. For, returning to our former hypothesis, we shall, at the end of our 10 years, thus have prevented borrowing to the extent of 15,000,000*l.*, and our annual charge for interest will then be less by 600,000*l.* a year than it would otherwise have been. We could, therefore, if occasion required, borrow 15,000,000*l.* for the relief of famine, and be in no worse a financial position than we were at the beginning of the period of 10 years.

"The soundness of this argument depends, of course, on the assumption that the works which are constructed from our annual contribution of 1,500,000*l.* from the public revenues will be really reproductive; that is, that they will at the end of the 10 years produce an income at least equal to the interest which we should have to pay if we had then to replace by borrowing a sum equal to that furnished from the new taxes for their construction. This assumption, however, has no special or peculiar significance in connexion with these new arrangements; it is (as I have just explained) the justification of our whole policy of borrowing money for works of public improvement. Whether we construct our railways and canals with borrowed capital or pay for them out of this famine insurance fund, we equally assume that they will eventually give us a return of more than the ordinary charge for interest on the outlay; and, to repeat what I have said before, experience has now been sufficiently prolonged to show conclusively that, notwithstanding all the mistakes that have been made, the gradual growth of the income of the productive public works has been sufficient to protect the Imperial Treasury against any increase to the actual charge for interest on debt. This explanation will show the Council how, either by the direct charge of debt or by the investment of money in productive works, if the circumstances of the time should render that course more suitable, charges on the revenue may be extinguished, or new income created,

which shall enable the Government to borrow in the future to the full extent to which the proceeds of the new taxes are applied, and that a true famine insurance fund will thus have been created."

In our resolution of the Government of India, No. 1,911 of the 18th March 1878, the method in which the scheme of famine insurance was to be put into operation was thus defined:—

"It will manifestly be a necessary condition of success," it was observed,* "in carrying out such a "policy, that the works undertaken shall, in fact, produce the growing income from which to meet the "gradual increase of interest charge; and it, therefore, "becomes essential to examine very strictly the "character of all projects brought forward for execution, so that borrowed capital shall not, under any "circumstances, be supplied for any work of which it "cannot reasonably be anticipated that it will in a "definite period of time produce a net income at least "as great as the interest on the capital outlay upon it. "Further, the same limitation, that it is thus necessary to apply to the grant of borrowed money to "these works must also be applied to the grant of all "funds the expenditure of which does not appear as a "direct charge against the revenues of the year, under "which will be included the new resources lately "specially created to provide a surplus from which to "meet charges on account of the relief or prevention "of famine. . . . . The justification for granting, "for productive works, funds from the surplus "revenues which might otherwise be applied to the "extinction of debt is that, so far as it prevents an "increase of debt, it will virtually be equivalent to a "corresponding discharge of debt; a condition, however, that cannot be fulfilled unless the works are "properly remunerative."

In Despatch No. 62, of the 20th February 1879, from the Secretary of State, the arrangement indicated by Sir John Strachey, in the terms which we have above quoted, was so far modified that, while it was held that a first claim on the receipts from special taxation being that of the Home Government for the repayment of debt already incurred on account of famine, 750,000*l.* should be held available for remittance to England on that account, consent was given to the annual appropriation of the remainder of the fund at the discretion of the Government of India to the extinction of debt, to the relief of famine, or to the construction of protective works not necessarily directly remunerative, but obviously productive in the sense of guarding against a probable future outlay in the relief of the population. These arrangements, however, had scarcely been formulated when two important elements of disturbance entered into the general finances, namely, the fall of silver and the Afghan War. It was therefore argued in some quarters that whatever good had been done by the famine insurance taxation had been undone, and more than undone, by these new charges, and that the policy had to be begun again. Sir John Strachey, in his financial statement, made on the 24th February 1880, fully met such objections. The Government of India, in their Despatch No. 30 (Financial), of 2nd February 1881, stated that the general policy of the famine insurance scheme had "met with general "approval in 1877, and indeed, so far as we are aware, "has never been impugned"; and that "if the policy "is to be continued, as we think it should, it will be "advisable to give some additional security to the "taxpayers that 1,500,000*l.* a year will be applied either "to the direct relief of famine or to providing an "insurance against famine in future years."† The result of the discussion was a decision that no connexion should be recognised between the famine insurance outlay and the licence tax and cesses originally imposed to meet it, but that the former should be treated as a charge only, and invariably provided for in the Budget estimate, up to the full amount of 1,500,000*l.* In the financial statement of 1881–82, it was announced that the sum of 1,500,000*l.* to be provided annually as an assurance against famine, instead of being considered, as heretofore, to be a surplus receipt for subsequent appropriation, would be treated as a fixed portion of the normal expenditure of each year. At the same time, the Government of India reaffirmed its applicability to the extinction of debt, the relief of famine, or the construction of protective works, not necessarily remunerative, but obviously protective in the sense of guarding against a probable future outlay in the relief of the population. It was also pointed out that the amount to be provided as an insurance against famine was only so far dependent upon the receipts from the licence tax and the public works cesses that those receipts go to swell the general revenue, and by so much facilitate the execution of the policy under discussion; that the aim of the Government was to apply annually a specified sum from the general revenue in order to provide an insurance against famine; that there was no special connexion between the amount so provided and the amount received from the licence tax or the public works cesses; and that those taxes had never yielded so large a sum as 1,500,000*l.* in any one year. Subsequently, in Government of India Resolution, No. 683, dated the 3rd February 1882, it was laid down that the relief of actual famine would be a first charge upon the whole 1,500,000*l.* annually provided as expenditure; that protective works would be the next charge, but only to the extent of 750,000*l.*, or such portion of that sum, if any, as may remain after all necessary relief of actual famine has been afforded; and that the remaining 750,000*l.* should be assigned to reduction of debt, except so far as all or any portion of it may be needed for relief of actual famine. The arrangement then laid down has continued in force up to the present time; and of the sum of 750,000*l.* to be annually spent upon protective works, 500,000*l.* has been allotted to railways and 250,000*l.* to works of irrigation.

9. Having thus given the history of the design and application of the famine insurance scheme, we proceed to consider whether it can be said either to have fulfilled its object, or to have been defeated and rendered inoperative by subsequent financial exigencies.

10. Your Lordship states in the present despatch that the ordinary debt has been reduced by 14,000,000*l.* during the last ten years, and, therefore, that the object of the famine insurance arrangement has in fact been attained, though no doubt not wholly through the operation of the measures directly taken for that object. The operation of the famine insurance scheme, it must be observed, did not commence till 1878. We observe, also, that credit cannot be taken for so large a figure as 14,000,000*l.* The total debt of India on the 31st March, 1875, according to the finance and revenue accounts presented to Parliament, is shown to be 118,446,992*l.* The reduction of 14,000,000*l.* on this figure is subject, however, to the following deductions. In the first place, we must take out the outlay provided for from the ordinary revenues previous to 1875–76, but which was subsequently transferred to debt:—

	£	£
Irrigation - - -	5,308,367	
Railways - - -	256,499	
		5,564,866
This amount being deducted from the sum of 14,007,208*l.*, the reduction of debt becomes - - - -		8,442,342

Further, by the operation of the sinking fund, the debt incurred for the East Indian Railway has been reduced:—

	£	£
To end of 1883–84 -	100,305	
Estimate 1884–85 -	40,000	
	140,305	
		140,305
The actual reduction therefore is - -		8,302,037

If, on the other hand, we take as our starting point April 1st, 1878, from which date the operation of the famine insurance scheme may be said to have begun, the following are the results of the operation of the scheme up to the commencement of 1885–86:—

	£
Total debt on 1st April 1878 - -	134,631,553
Capital expenditure on productive public works to that date - - -	29,094,023
Difference - - - -	105,537,530
Ordinary debt on 31st March 1885 -	88,216,725
Net reduction of ordinary debt - -	17,320,805
Deduct on account of outlay provided for from ordinary revenue previous to 1878–79 (inclusive of East Indian Railway sinking fund) - -	5,971,025
Actual reduction in the 7 years -	11,349,780

* Paragraphs 76-7-8.
† Secretary of State, No. 135 (Financial) of 14th April 1881.

Had there been, however, the usual loan in 1884-85, the reduction of ordinary debt would have been less by 2,500,000*l.* The loans of the present and ensuing year, in consequence of there having been no loan in 1884-85, must be materially in excess of what would otherwise have been the case, thus considerably diminishing in the course of the current decade the probable reduction. The proportion, therefore, of the ordinary debt reduced in the first seven years of the current decade is not likely to be maintained during its remaining term.

11. Although further, as your Lordship states, the net charges for railways and irrigation works may have decreased from 2,068,000*l.* to 1,100,000*l.*, and our general position have been thereby improved to that extent, we cannot credit the famine insurance scheme with this result, as the works which have yielded it were only in part executed by the aid of that scheme.

12. If the actual reduction of debt under the operation of the famine insurance scheme has thus not been such as to warrant the conclusion that the object of the latter has been attained, still less can such a conclusion be admitted so long as a very large proportion of the railway and irrigation works which have been accepted as necessary for the reasonable security of the country against famine remain uncompleted. It was recognised, as we have seen, in 1879 that the fund might be appropriated to the construction of protective works not necessarily directly remunerative, but obviously protective in the sense of guarding against probable future outlay in the relief of the population. We cannot admit that we should abandon our efforts to carry out this portion of the scheme, which has for its object the carrying to completion of works which are productive in the sense that they lessen, on the recurrence of famine, the cost to which we must unavoidably be put. We stated in our despatch of the 22nd September the considerations which lead us to believe that this latter object is as yet far from being attained. We may point out here that the Famine Commission in their report, writing in 1880, contemplated an extension of the railway system then existing by a length of 10,000 miles in the course of the next 25 years; but they regarded the completion of one-half of this amount, or 5,000 miles, as more urgent in its nature; saying that this mileage, "in addition to the existing lines, would "go far to remove all future risk of serious difficulty "in supplying food to any part of any district in the "whole country." Up to the present time only 2,900 miles of railway, other than frontier railway, have been completed. Until, therefore, we have completed the works indispensible to the protection of the country om the effects of famine, we are unable, except under ressure of absolute necessity, to assent to the diversion the revenues raised under the scheme from the ects with which the scheme was started. Although may expose us to the criticism that by this use of famine insurance grant we run the risk of incurring cit, and thereby adding to in lieu of reducing our we believe that our justification will be found in eply that the abandonment of the protective scheme before your Lordship will expose us eventually to ater financial loss than any deficit likely to be urred (abnormal disaster apart) during the period construction. We are aware that there is no special nnexion between the amount annually provided from he general revenues in order to provide an insurance against famine and the amount annually received from the licence tax or the public works cesses. But in strengthening our revenue the Government of India, beyond all doubt, has deliberately affirmed the policy of utilising the increased resources placed at its disposal for the purposes to which we have referred; and unless it can be shown that financial pressure compels us to alter our policy, we consider that those purposes should be maintained, and that it would at present be wholly premature to affirm that the object of the famine insurance arrangement has been attained. We may again quote Sir John Strachey's words in the course of the speech we have already referred to, as completely expressing our own views: "So far, however, as we "can now speak for the future, the Government of "India intends to keep this 1,500,000*l.* as an "insurance against famine alone. . . . . We consider "that the estimates of every year ought to make "provision for religiously applying the sum I have "mentioned to this sole purpose; and I hope that no "desire to carry out any administrative improvement, "however urgent, or any fiscal reform, however wise, "will tempt the Government to neglect this sacred "trust. In the debate which followed Sir John Strachey's speech, Lord Lytton emphatically pledged the Government to the execution of the necessary works from the increased revenues raised under the name of the famine scheme. His Excellency anticipated the objection that "the current claims upon the activities "and resources of the Government of India are so "numerous, so pressing, so important, official forces "and imperial funds so necessarily limited, that when-"ever the daily, hourly strain of a great famine has "been removed from a wearied administration and "impoverished treasury, its fearful warnings are soon "forgotten; its disquieting ghosts are quickly exor-"cised by the conventional declaration of some unex-"ceptionable principle; its bitter memories decently "interred beneath the dull *hic jacet* of a blue book; "and there, for all practical purposes, is an end to the "matter." Lord Lytton declared that the Government was not open to this customary criticism; that it promised nothing which it had not provided itself with the means of performing; that it spoke of what it could and would do; and that it was "a policy on which all "our plans, and all our hopes for steady improvement "in the financial, social, and administrative condition "of this Empire, are necessarily dependent." The proposals which we have submitted to your Lordship in regard to the partial capitalisation of the resources raised under the famine scheme have, in effect, for their object the strengthening of our revenues; we believe this proposal to be consistent with the objects for which the scheme was created; but beyond this, we feel that we are not justified in proposing any application of those resources differing from that to what they are at present devoted.

13. We may now sum up our remarks on the famine insurance scheme. We have seen that its object was to insure such a surplus of ordinary revenue over ordinary expenditure as would suffice to cover, within each decade, the outlay on relief of actual famine which might be expected to occur during that period. The method of carrying out the scheme was varied in view of experience and criticism, that finally adopted and now in force being, that a certain portion of the surplus should be devoted annually to the direct reduction of debt, or to the avoidance of debt, which must otherwise be incurred, and that the remainder should be spent on railways and irrigational works likely either to avert or mitigate famine. The result of the former allotment is to save interest, simple and compound, and thus to place the Government, when the necessity of a loan for famine relief arises, in a better position for borrowing, both as to terms and amount, than it would otherwise have been. The result of the latter is twofold; whatever return the works may produce is, on the one hand, a set off against the interest of such a loan; while, on the other, the actual amount needed for famine relief, and therefore of the loan, is lessened by the existence and operation of the works. The effect of the scheme, from a purely financial point of view, has so far been that but for its application, our position would have been worse than it now is by any interest yielded by the works carried out through the agency of that fund, by the amount of debt redeemed, and by the sums which we have annually devoted to lessen our borrowings.

14. If the returns from the works or the saving of interest by the discharge of debt should happen to be appropriated to new expenditure, ordinary or extraordinary, the operation of the scheme remains unaffected, because, but for its existence, new taxation would have been unavoidable to meet the new expenditure. Such taxation the scheme defers until the day when a famine loan is indispensable, or, if there should then be a surplus independently of it, it furnishes the means of avoiding taxation altogether. Thus, in view both of the works which have been and are being executed through their agency, and of the actual reductions of debt, or avoidance of fresh debt, and the saving of interest on the same, which have been and are being secured, it does not appear to be to be precisely accurate to describe the funds provided under the famine scheme as having been swallowed up. Nor can the object of the scheme be described as having been attained, as long as either the admittedly most important protective works are incomplete, or famine necessity for outlay on actual relief in time of famine remains.

15. It is, at the same time, obvious that the effect of outlay on the protective works must be to diminish the outlay on actual relief, and we therefore consider that the capital sum which the scheme is calculated to create, should be subject to periodical revision.

revision might well take place in the year 1890-91, by which date we have estimated, in our Financial Despatch, No. 264 of the 22nd ultimo, that all the protective works of major importance will be finished, or in the event of our obtaining the refunds for which we hope as a part of the arrangement therein proposed, it might be effected a year or two earlier. On the occasion of such a revision, we should be enabled, if necessary, to assign to ordinary purposes so much of the present famine insurance grant as is not required to countervail whatever may be the new amount then fixed as the probable average outlay on actual relief in the new decade.

16. We have thus concluded our examination of the circumstances in which we stand with regard to the provincial contracts and the famine insurance scheme. We have shown that the former has been repeatedly declared to be only liable to appropriation as a source of Imperial revenue in the event of extreme calamity. We have sought to prove, under the same reserve, the necessity for the continued application of so much of the Famine Insurance grant as remains to us after devotion of 750,000*l.* to diminish borrowing. We now proceed to examine our financial situation with a view of ascertaining whether our circumstances are, indeed, such as to compel us to have recourse, either to interfering with the provincial contracts, or to a temporary diversion of the famine insurance grant, or to both of these measures.

17. In our Despatch, No. 234, dated 22nd August 1885, we indicated the sources from which we propose to meet the additional military expenditure which is about to be imposed upon us. We confined ourselves, as will have been apparent to your Lordship, in that despatch to a consideration of the annual sum by which our revenue was to be increased, in order to meet a specific charge about to be imposed upon it; but we refrained from any such general review of our position as lay outside the question immediately before us. It is necessary now, however, to enter more fully into our general situation, and to show why, in our opinion, there is no necessity at present for interfering either with the provincial contracts or with the Famine Insurance Fund. We may take, as our point of departure, the Budget of the current year, which, as we are aware, and, as your Lordship states, exhibited a bare equilibrium. The Budget of 1885-86, however, must, in certain important respects, be regarded as abnormal. The railway receipts were taken at an exceptionally low figure, owing to the depression existing at that time in the export trade. The estimate of opium receipts was also reduced, owing to the necessity which at that time existed for increasing our reserve. As we stated in our despatch of the 22nd August, we devoted in that Budget from revenue, with your predecessor's approval, the sum of 585,000*l.* for railways and defence works. But the export trade is reviving. The comparative exports of wheat for the first seven months of 1883, 1884, and 1885 are given below. The export of oilseeds is assuming increasing

1884	7,931,659
1885	11,501,512.

and very considerable dimensions, and in our half-yearly estimates we expect to be able to take credit for a sum of 500,000*l.* on account of net railway receipts in excess of the sum which, at the time of the Budget, we thought it prudent to accept. Should exchange remain at about its present rate, we consider that it will be safe to maintain that figure in 1886-87. We shall be enabled next season to put upon the market a larger amount of opium than has been possible during the last two years, and we may take the increase to our revenue thereby obtainable at a figure not less than 300,000*l.* The figures noted below give the net revenue,

	Chests sold.	Net Revenue.	On 31st December.	Reserve (Chests).
		Rs.		
1882-83	56,466	72,168,000	1882	12,743
1883-84	54,406	77,018,000	1883	11,632
1884-85	46,698	58,902,000	1884	2,296
1885-86	50,994	65,473,000	1885	18,290
1886-87 (estimated)	54,000	68,473,000	1886	29,220

the number of chests sold, and the amount of opium in reserve during the last four years, together with the reserve for 1886-87, and they will enable your Lordship to judge of the moderateness of the sum of 300,000*l.* which we assume as an addition to next year's estimates. The 585,000*l.* assigned in this year's Budget to railway and defence works are in future, in view of the urgency of our situation, to be devoted to ordinary expenditure, and the charge for which this sum was to serve is to be debited to loan. We further expect that the extension of direct taxation will yield us 700,000*l.* additional. The decrease in the non-effective charges during the ensuing year may be set down at 150,000*l.*; and, apart from railway receipts, the annual increment of our revenue may also be taken at 150,000*l.* The minimum increase, therefore, to our revenue over the Budget of the present year will be, so far as on what appear to us cautious and reasonable calculations, we can estimate 2,385,000*l.* We arrive at this estimate without taking into calculation any reductions that we may effect; and on the assumption that our railway receipts in 1886-87 will be no greater than in the year 1883-84, although in 1886-87 we shall have more than 1,000 miles of railway open in excess of 1883-84. The rice trade shows every symptom of revival. The customs have yielded this year, to the end of August, Rs. 46,92,000, against a total estimate of 53 lakhs, being for the five months Rs. 7,37,000 in excess of the corresponding period of last year. The rains, on the whole, have been sufficient, and the prospect before us for the ensuing year may be regarded with satisfaction. On the other hand, we must prepare for an addition next year of 1,000,000*l.* to our military estimates, and of 880,000*l.* on account of exchange, on the assumption that in the Budget of the ensuing year the rupee will taken at 1*s.* 6*d.* To this we may add 100,000*l.* on account of increased charge for interest, making a total of 1,980,000*l.*, and leaving a surplus of 405,000*l.*, which appears to us a reasonable expectation. Should exchange prove even somewhat more adverse than we anticipate, it may be expected, on the other hand, that our railway receipts will be increased by the stimulus given to exports, and that the figure of 500,000*l.*, based on the estimates of 1883-84, which we have taken as our estimate for the receipts of the next year, will be considerably exceeded. At the close of the ensuing year the provincial contracts expire, and we shall be enabled to strengthen our revenue by whatever sum is obtainable on a revision of those contracts. Viewing, meanwhile, the general situation of our revenues, we see at present no reason to doubt that they will prove equal next year to the expenditure to be placed upon them.

18. It will be apparent to your Lordship from the above remarks that we are not prepared to recommend at present the measures indicated to us in your Lordship's despatch. The choice before us, in truth, lies between strengthening our budgetary surplus by 750,000*l.*, acquired at the cost of putting a complete stop for the next four or five years to works designed to protect us and the people from the effects of famine, or pushing the works to completion as rapidly as may be with the aid of the Famine Insurance surplus, exposing ourselves to the risk during that term of years at the worst, unless circumstances very greatly change, will be but an inconsiderable deficit. We cannot think that the employment of the Famine Insurance surplus for the completion of the scheme of works in which we are engaged is a more economical and a more suitable use of it than its temporary utilisation as an addition to the surplus revenues exhibited in our accounts. We believe that during the comparatively short term required to carry out the great projects on which we are engaged, we should be prepared to accept a risk of temporary difficulties in respect of the absolute equilibrium of our finances greater than any we can at present foresee, in the assurance that when the projects now in hand are completed, a stability will have been given to our finances which they could not otherwise have attained. The proposal which we have made to your Lordship in respect of a partial capitalisation of the Famine Insurance Grant is in effect an alternative to that which has been placed before us. It amounts to a proposal to strengthen our revenues by the amount so capitalised; the difference between our proposal and that submitted to us being, that instead of devoting that sum to an unappropriated surplus, we desire to assign it to the payment of interest on projects which are a part of the scheme itself, since they are essential to the protection of the country from famine, while they will assist the development of the export trade, on which our railway receipts so largely depend. We may add that in our despatch of September 22nd we have estimated the total charges for the purposes there described at 21,500,000*l.* in the next

five years, of which we have advised recovery, by arrangements with companies on account of lines now conceded or to be conceded of 7,640,000*l.*, leaving 11,500,000*l.* to be raised in the market by loan for the purpose in the next five years, after deducting 2,500,000*l.* employed during those five years from the Famine Grant. Inclusive of irrigation capital, the total loan to be raised in the market in the five years will be 15,000,000*l.* if our proposals as to capitalising the Famine Fund are accepted.

19. Apart, finally, from the considerations which, in the course of this despatch, we have urged upon your Lordship's attention, we cannot but feel that it would add greatly to our difficulties at the precise moment when we were about to impose a more extended scheme of direct taxation, if we laid ourselves open to attack in connexion with the provincial contracts or the Famine Insurance scheme. The latter subject especially is one on which in former times there have been much misapprehension and considerable expression of public dissatisfaction, which have recently reappeared, and have been strenuously renewed on the occasion of the recent retrenchments. If our circumstances were such as to enable us to plead the justification of necessity, we should have no hesitation in adopting the policy suggested by your Lordship; but it is impossible not to apprehend that the plea of necessity would prove of questionable validity. Although we have no desire to speak with confidence of the future, we cannot but feel that our financial position is not at present such as to oblige us to resort to extreme measures, the result of which must be to put a summary stop to many works of great importance now in hand; to cause thereby considerable ultimate loss to our revenues; to expose us to greater risks in the event of famine; and to disturb the confidence which at present exists between the Imperial and the Local Governments. We judge it more prudent to confine ourselves at present to the circumstances with which we have immediately to deal, leaving to a later period the consideration of the steps to be taken, should unforeseen difficulties increase upon us. We propose, however, as we have stated, not only to take the measures necessary to prevent any increase to our own present expenditure, but to restrain the Local Governments from entering during the ensuing year upon fresh projects or engagements of a nature to tie up their revenues during the next term of the Provincial contract.

20. It appears to us, to sum up, that our aim should be to carry out, with the utmost possible promptitude, and in the most economical manner, the series of works embodied in our despatch of the 22nd September, so that on their completion we may be in a position to consider the average annual sum to be set aside in order to countervail borrowing on the occurrence of actual famine, and thus to regain possession for ordinary purposes of so much of the present grant as may then be found to be no longer required. On the other hand, in the absence of any unforeseen calamity or disaster, we think that there is reasonable ground for feeling confidence in our ability to maintain, during the interval necessary for the construction of these works, the equilibrium of our finances, and that the time has not yet come when we should suspend, even partially, a portion of the Famine Insurance scheme, and fall back upon the provincial contracts, immediate recourse to which will, in our judgment, lead to difficulties greater than any which we are at present likely to encounter. Until the year draws nearer to a close, and the position of the silver market becomes more certain, we shall not be in a position to pronounce finally on our actual position. Whatever steps may be dictated to us by necessity in regard to the provincial contracts, we trust that we shall be enabled to meet our difficulties without being called upon to divert or suspend the present operation of the Famine Insurance scheme.

No. 11.

DESPATCH to the GOVERNMENT OF INDIA, December 10th, 1885, No. 367 (Financial).

1. I have considered in Council your Excellency's letters, dated the 22nd of August, No. 234, the 22nd of September, No. 264, the 29th of September, No. 271, and the 6th of October, No. 275.

2. In the first of these letters your Excellency proposes that, in view of the increase of your permanent military charges, estimated at 1,000,000*l.* in 1886–87, rising ultimately to 1,500,000*l.*, you should make no grant from revenue next year towards the cost of frontier railways and defences, the provision of the necessary funds being obtained by loan; and that the licence tax should be modified in such a manner as to embrace the professional and official classes, and to assume the form of an income tax on all incomes of Rs. 2,000 a year and upwards, those derived from land being, however, exempted.

3. Your letter No. 264 deals with the subject of capital outlay on railways and defensive works, regarding which it is sufficient for the present to say that you propose to devote no revenue in 1886–87 towards this expenditure, except such as may be available from the Famine Insurance Grant, the remainder being supplied by loan.

4. The letter of the 29th of September, No. 271, reports that, owing to the necessity of making further grants during the present year, and to a miscalculation as to the amount of savings, the reduction of expenditure in the present year on the public works contemplated in the budget is less by about 24 lacs than had been previously anticipated.

5. The letter No. 275, written on the receipt of my despatch of the 27th of August, No. 239, deprecates any interference during the coming year with the Provincial Allotments or the Famine Insurance scheme, expresses your intention of restoring to the Local Governments in 1886–87 the sums temporarily withheld, and intimates a confident expectation that, with no further taxation than has been already recommended, you will be able to realise a surplus of 405,000*l.*, provided that the rate of exchange does not fall below 1*s.* 6*d.* the rupee.

6. In regard to the question of taxation, I concur with your Excellency in thinking that the alteration of the existing licence tax, so as to assess the official and professional classes, and to levy a rate of the nature of an income tax on incomes of and above Rs. 2,000 a year, is desirable; and I observe with much pleasure your opinion that no further imposition of taxation will be necessary. I shall be glad to learn the details of the proposed measure, when your Government have more fully considered them.

7. In reference to the suggestions made by me regarding the provincial contributions, I need not say that it is only in the last resort, as an alternative to an increase of the taxes of the people, that I should wish in any manner to interfere with the working of the quinquennial arrangement made in 1882. The point which I desired to impress upon your Excellency is one by no means inconsistent with the spirit of that arrangement, namely, that, on the occurrence of such an emergency as arose this year, it is the duty of all parts of the Indian Administration to unite in measures necessary for the common welfare, and that the Provincial Governments should be prepared to take their share of the burden. In the 52nd paragraph of my despatch of the 27th of August, I cordially recognised that the Provincial Governments had shown a readiness to effect the necessary measures of economy. It is for you to consider whether it is proper that such measures should give merely temporary relief to the balances, and whether, by promptly refunding the sums withheld from the Provincial Administrations, the whole burden of the additional charges should be thrown on the limited portion of the revenues which is more immediately controlled by your Government, the result of which must be to compel you to meet the charge by loan; and, if your Excellency should eventually find that the state of your resources admits of the replacement of this money at the disposal of the local governments, I will not withhold my assent from such a course, it being understood that, in the revision of the Provincial Agreements in 1887, care will be taken to provide for such a contingency as has now arisen.

8. I propose in another despatch to address your Excellency in regard to the very urgent need which has, in my opinion, arisen for exercising the greatest economy in all branches of the administration, and especially in the expenditure on ordinary public works.

9. My observations respecting the disposal of the grant for famine insurance were actuated by motives somewhat similar to those which dictated my remarks on the provincial contributions. It was to meet the emergency which has arisen, that I intimated my view that, rather than resort to the imposition of consider-

able fresh taxation, I should be prepared to sanction the diversion, for the time, of the grant for famine insurance, to works needed for the protection of the country against the more pressing danger of war.

10. On both these questions I am content to leave the decision in the hands of your Excellency when the time comes for a final determination as to the financial measures of the ensuing year.

11. I now come to the manner in which you propose to meet the outlay on the railways and defensive works. In the tables appended to your letter, No. 264, the total cost is given as follows, in lacs of rupees :—

Works.	Spent to End of 1884–85.	1885–86.	1886–87.	1887–88.	1888–89.	1889–90.	1890–91, or subsequently.	Total Estimated Cost.
Frontier Lines in progress	84½	326½	216¼	48¼	—	—	—	675½
Ditto, proposed	—	—	25	35		142		202
					(say 47)	(say 47)	(say 48)	
Protective Lines in progress	129	115	85½	60¼	94	40⅓	14	538¼
Ditto, not commenced	—	—	—	—	76	178⅓	193	447½
Lines under agreement	—	—	10	16	19	16	—	61
Open Line Capital	114½	119½	100	100	70	70	70	644
Stores and Working Capital	—	—	10	10	15	20	20	75
Total Railways	328	561	446¾	269½	321	372	345	2,643¼
Frontier Defences	—	4	39	45	44	27		159
						(say 13½)	(say 13½)	
Coast Defences	—	7½	15	15½	12	—	—	50
Grand Total	328	572½	500¾	330	377	385½	358½	2,852¼

12. After the year 1886–87 it is your intention to spend 330 lacs a year, namely, 280 lacs of borrowed money and 50 lacs of revenue from the Famine Insurance Grant, together with such sums as may be at your disposal through the refunds anticipated from private companies. In 1886–87, however, you propose, including the irrigation works, to expend 596 lacs,* although you are unable to make any grant from revenue, except that which is provided under the head of Famine Insurance; and, therefore, if some 10 lacs are reserved for famine relief, and the remaining 140 lacs taken for outlay on protective works and in reduction of borrowing, there will remain 456 lacs for railways, irrigation, and defensive works, to be provided next year from loan.

13. Large as is the amount of the expenditure thus contemplated in 1886–87, I will not withhold my sanction from your Excellency's proposal to obtain the funds from borrowed money, such a course being, in my opinion, rendered necessary by the importance of rapidly completing the works already begun, especially those for the protection of the country against the risks of war or famine. At the same time I rely on your Excellency to take all possible care that the outlay shall not be allowed to exceed what is absolutely requisite for these important purposes.

14. I do not deem it necessary at present to pronounce an opinion on the programme which you have laid before me, for years subsequent to 1886–87, as the rate at which progress can be made must be contingent on many circumstances on which no confident opinion can at present be formed. The disposal of sums obtained from private companies, in repayment of money previously laid out, will be considered from time to time as occasion arises.

15. Great objection has been taken, both by former Secretaries of State and by the Select Committee of the House of Commons last year, to the proposal to appropriate as interest any portion of the Famine Insurance Grant, the declared object of which was to keep down debt. I recognise, however, that the circumstances of the present time are of a special character, and could not have been contemplated either by my predecessors or by the Parliamentary Committee; and I do not interpret your Excellency's proposals as desiring to obtain a pledge as to the future sanction of outlay through the agency of Guaranteed Companies, which would naturally have to be obtained in each case in the usual manner, after careful consideration of the existing financial exigencies.

16. Assuming that at any time it is determined to incur the liabilities involved in the grant of a guarantee to a railway company, it becomes little more than a question of account whether the interest payable in consequence is charged under the head of Famine Insurance or under that of Railways. I, therefore, authorise you to charge against the Famine Insurance Grant the amount payable during the next five years as interest on capital raised by companies for the purpose of constructing any of the lines which are mentioned by your Government as being, in your opinion, needed for the protection of the country against famine, but which you are not at present able to construct through State agency.

17. In doing so, however, I am anxious that I may not be considered as in any way authorising, encouraging, or even suggesting, the policy of regarding the Famine Insurance Grant as a fund which may be legitimately resorted to for the payment of interest on any large or novel public works expenditure.

18. With reference to your Excellency's final suggestion regarding the Bengal-Nagpore Railway, I request to be informed what terms you would think it desirable to offer to a company, if one should be formed for its construction, bearing in mind that considerable difficulty has been this year experienced in launching a company for the construction of the Indian Midland Railway, although a permanent guarantee of 4 per cent. in sterling, and a fourth share in surplus profits, were the not unattractive features of the scheme.

No. 12.

EXTRACT from LETTER from the GOVERNMENT OF INDIA, December 22nd, 1885, No. 347 (Financial).

. Your Lordship will observe that capital expenditure on railways and irrigation works not charged against revenue shows a net increase of 839,400*l.*

This increase is due to our having decided to charge under this head the total additional capital expenditure on railways sanctioned since the commencement of the current year. If your Lordship should be of opinion that the total expenditure on railways and irrigation works to be charged outside the ordinary account must be limited to that provided in the original estimates, the sum of 839,400*l.* must be added to the figures shown under 43—frontier railways, the deficit of the year being increased by an equivalent amount.

No. 13.

EXTRACT from DESPATCH to the GOVERNMENT OF INDIA. February 11th, 1886, No. 43 (Financial).

In the last paragraph of your letter your Excellency refers to the question whether the additional capital

*

	Lacs.
Railway	447
Defences	54
Irrigation:—	
Loan	70
Famine Insurance	25
	596

expenditure on railways, sanctioned since the commencement of the year, may be excluded from the expenditure chargeable against revenue, and added to the amount debitable to borrowed money. According to the rule, the amount to be provided from borrowed funds for the construction of railways and irrigation works is a limited sum, only to be exceeded if there have been lapses in past years by reason of the grants not having been fully spent, and if the balances admit of the requisite provision without further borrowing than is permissible under the regulations; and any amount that may be spent in excess must be provided from revenue. In the circumstances of the present year, however, it is evident that, whether the sum be debited against loan funds, or whether by charging it against revenue the deficit is enhanced, the amount must equally be provided from borrowing. Considering, also, the urgent character of the demand for the frontier railways, and the sanction already given to their prosecution in 1886-87 by means of borrowed money, I authorise your Excellency to treat the additional expenditure in 1885-86 on these railways in the same manner.

No. 14.

EXTRACT from DESPATCH to the GOVERNMENT OF INDIA, July 29, 1886, No. 216 (Financial).

In the group of buildings and roads, the expenditure shows an increase of 745,191*l.*, of which 158,547*l.* under military works arises chiefly from a provision of 150,000*l.* being made for additional accommodation in consequence of the larger European force; while 586,644*l.* is for civil works, and is due to special grants of 200,000*l.* for frontier roads, and 100,000*l.* for Upper Burma, the remainder being for increased outlay by the Provincial Governments, particularly in Bombay and Bengal. In the 8th paragraph of the despatch sent to your Excellency on the 10th of December, 1885, No. 367, Lord Randolph Churchill expressed his intention of addressing you regarding the very urgent need of a reduction of expenditure, especially on the ordinary public works. While such a despatch was being prepared, information was received of your intention to appoint a Committee in India to examine the subject: and I, therefore, refrained from taking it up in the meantime. I desire, however, to draw your Excellency's attention to the table below, taken from the

Expenditure on Buildings and Roads.

Year.	Amount.	Average of Five Years.
	£	£
76 - - -	4,683,930

85-86, revenue estimated	4,702,900	
886-87, budget - -	5,449,300	

Appendix to your Financial Statement, from which it will be seen how very largely the expenditure in this branch has increased during the currency of the existing Provincial agreements, and that, even if allowance be made for the special grants above mentioned, the outlay proposed in the Budget is nearly 800,000*l.* greater than the average of the five years ending in 1881-82. This class of expenditure takes place almost entirely in India, and is therefore not exposed, as are so many of the other heads, to great increase, owing to the fall in exchange. It is, indeed, peculiarly within the control of the various administrations; and I trust that stringent orders will be issued to carry yet further the reduction which I am glad to perceive has already been made, when compared with the charge of three or four years ago.

Under the head of army services there is a net reduction of 1,462,547*l.*, the effective charges being diminished by 1,597,505*l.*, and the non-effective charges enhanced by 134,958*l.* As regards the former, a reduction of 30,239*l.* in England was almost balanced by the increased charge for exchange, so that nearly the whole decrease took place in India. Of the excess of 1,101,600*l.* in the Budget of expenditure in 1886-87 over the Budget of 1885-86, 300,000*l.* is stated to arise from the extra military charges in Burma, and 38,800*l.* in connexion with the Bolan railway; and it may perhaps be taken roughly that the remainder, or 762,800*l.* represents a permanent increase of the effective army charges in India (about 500,000*l.* being for the addition to the British forces, 225,000*l.* for the augmentation of the native cavalry, and 40,000*l.* for the new Goorkha battalions), and that the further excess of 1,594,300*l.* in the revised estimate of 1885-86 as compared with the Budget of 1886-87 denotes the cost of the special preparations made last year. The expenditure in 1886-87 is affected by the revision of the artillery establishments, 13 batteries being placed on a war footing; the reconstruction of the artillery divisions and districts; the addition of 20 supernumerary sepoys to each native corps; the formation of three more regiments of native cavalry, and the increase of the strength of the existing cavalry regiments; the gradual rising of five Goorkha battalions; and the reorganisation or revision of the commissariat, veterinary, clothing, subordinate medical, and pay departments, and of the corps of sappers and miners. Among the other additions to the permanent portion of the expenditure in India, I notice a charge of 51,500*l.* caused by the pay of the British soldiers being calculated at 1*s.* 7*d.* instead of 1*s.* 7½*d.* the rupee; more officers will be unemployed in India, owing to the rules regarding the tenure of appointments taking greater effect; a larger number of troops will have to be fed, and also more horses, about 2,500 having been purchased owing to the additions to the mounted branches of the army; the allowance to the band funds of British regiments has been increased; the current year is one in which compensation for clothing is payable to the British troops, this charge also being increased by the fall in exchange; free conveyance by railway has been granted to native officers and men proceeding on furlough; and the development of the volunteer movement has rendered necessary additional appointments and allowances.

The explanation given in the 473rd paragraph of Part II. regarding the increase of the army effective charges in England does not agree with the figures adopted in the Budget. The actual increase over the budget in 1885-86 is 587,000*l.*, of which 120,000*l.* occurs in the home charges of the British forces, and is due to larger provision for deferred pay; 65,800*l.* arises under the Indian troop service, mainly owing to new machinery being required for the "Malabar"; and 401,400*l.* is for stores. There is also an addition of 255,400*l.* to the charge for exchange.

Of the increase in the non-effective charges, the annual addition to the payments to the War Office under the new arrangement mentioned in the despatch of the 17th of September, 1885, No. 262, accounts for 50,000*l.*, and the revised scale of Indian military pensions for the remaining increase in the sterling expenditure, while 54,988*l.* is due to exchange.

The total expenditure, Imperial and Provincial, estimated for 1886-87, exceeds that of the revised estimate of 1885-86 by 252,770*l.* Last year, however, it is expected that the allotments to the Provincial Governments will have exceeded their expenditure by 113,900*l.*, while in 1886-87 they are to defray from their balances 575,400*l.* of the total outlay. Thus, the portion of the expenditure chargeable on the revenues of the year would be reduced by 689,300*l.*, and, consequently, when the excess of 252,770*l.* above mentioned is deducted, it would be less than in 1885-86 by 436,530*l.* As, however, it became apparent that this was insufficient to give the requisite equilibrium, the Local Governments were called upon to contribute to the Imperial Government a sum of 400,000*l.* from their share of land revenue during the year, a measure by which the charge falling on them was raised to 975,400*l.*, and the relief to your Government, as compared with the revised estimate of 1885-86, was increased to 836,530*l.*, the total expenditure chargeable on the revenue becoming 75,615,500*l.*, and a surplus of 182,200*l.* being shown.

I approve of the action of your Government, so far as it went, especially since you state that it leaves at the disposal of the Local Governments in the aggregate the minimum balance which they are required to maintain. I must, however, express a hope that, in the new arrangements which will be made next year with

the Local Governments, some means will be devised by which, in the case of emergency, they may be called upon to contribute a proportionate share towards meeting the necessities of the Empire, according to some established principle.

I must also point out that it has repeatedly been desired that a surplus of about 500,000*l.* may be provided in the Budget, and that one of 182,200*l.* is much smaller than is prudent. It was especially necessary this year to allow a larger margin of revenue over expenditure, inasmuch as your Government were engaged in hostile operations, the cost of which it was very difficult to estimate, and a further fall in exchange was only too probable.

The capital outlay not charged to revenue shows an increase of 352,804*l.*, the provision for railways being less by 169,526*l.*, and that for irrigation works greater by 80,630*l.*, while a charge of 441,700*l.* for special defence works at Bombay and Aden is included in the Budget for 1886-87. In the Despatch of the 10th of December 1885, No. 367, it was agreed that, owing to the importance of rapidly completing the works already begun, especially those for the protection of the country against the risks of war or famine, the limit of 350 lacs, which had been laid down as the maximum sum to be borrowed in any one year for the construction of public works, should be removed in the present year; and you were authorised to provide from loan as much as 456 lacs, for railways, irrigation, and defensive works, on the understanding that all possible care would be taken that the outlay should not be allowed to exceed what might be absolutely requisite for these important purposes. The amount now shown in the Budget as expenditure not chargeable to revenue is 5,868,800*l.*, which includes 651,700*l.* for exchange, and an outlay of 749,000*l.* provided from the grant for the reduction of debt. Omitting these two sums, the amount to be obtained by borrowing is shown to be 4,468,100*l.*, that is, about 448 lacs, or rather less than the sum sanctioned.

Of the total of 587 lacs, no less a sum than 406 lacs, as shown below,* is for works in connection with the scheme of frontier and coast defences. The allotments to railway construction, from all sources, amount to 547½ lacs, as shown in the following table:—

	£	£
Capital outlay on State railways:		
Charged to revenue:		
Protective: construction	500,000	
Protective: interest on Indian Midland Railway capital	138,700	
Provincial	109,200	
Grant for reduction of Debt	749,000	
		1,496,900
Not charged to revenue:		
Ordinary loan	2,800,000	
Special addition	1,327,100	
Exchange	600,000	
	4,727,100	
Less, provision from grant for reduction of Debt	749,000	
		3,978,100
Total		5,475,000

On other railways than those for the defence of the frontier, the principal outlay is expected to take place on the Punjab Northern system, the East Indian, Eastern Bengal, Cuddapah-Nellore, and Bellary-Kistna railways, and on the Lucknow-Sitapur-Kheri line which is being constructed from provincial revenues.

The total expenditure on the construction of irrigation and navigation works, from revenue and loan, is estimated at 811,300*l.*, the chief outlay being on the Lower Ganges, Sirhind, Chenab, and Orissa canals.

* * * * *

It thus appears that it is contemplated to spend in the current year 5,868,800*l.* on public works constructed by the State, 3,162,000*l.* on railways undertaken by companies under a guarantee of interest, and 897,600*l.* on advances to municipalities, &c., or altogether 9,928,400*l.* To meet this expenditure 748,500*l.* has been provided from the Famine Insurance Grant, and 182,200*l.* by surplus of revenue. Assuming, then, that the expectations of the Budget were to be fulfilled, it would follow that 8,997,700*l.* is being spent during the year from money obtained by borrowing in some form or other.

However important it is to develop the resources of the country, I cannot think it desirable, in present circumstances, that the credit of the State should be so largely used for promoting objects not of absolute or urgent necessity; and it is especially necessary to be cautious in incurring permanent liabilities, when borrowing in rupee securities is so difficult, and the continued fall in exchange has so greatly enhanced the burden of sterling obligations. In the tables which accompanied your letter of the 22nd of September 1885, No. 264, it was shown that after the year 1886-87 you proposed to limit the direct outlay by the State on the construction of railways and defensive works to 280 lacs of borrowed money in each year (which with the addition of exchange may be taken as involving an actual outlay of about 340 lacs), besides the amount that might be at your disposal from revenue or through refunds by private companies. I observe also that, so far as estimates have yet been sanctioned, it is anticipated that only 275 lacs will remain unspent after the 31st of March 1887. Doubtless this sum may be somewhat increased, as in one or two cases the sanctioned outlay has already been exceeded; but, speaking generally, it appears that there ought to be no difficulty in keeping the estimate for next year within the authorised limit, and I request that the budget may be prepared accordingly. I also desire to point out that to expend on fresh undertakings refunds by companies of the cost of works constructed by the State from borrowed money is virtually to borrow and spend the amount over again; and that sums thus obtained must in future be applied in reduction of the authorised annuel loan, and not as an addition to it.

As regards the current year, I have, in my telegram of the 19th of June, impressed on your Excellency the urgent necessity for taking prompt steps to adjust the finances in such a manner as to secure an equilibrium of revenue and expenditure; and I have stated my inability to sanction further borrowing this year for public works. In your reply of the 30th of June, you referred to a partial suspension of the famine insurance as a possible mode of procuring the surplus which you admit to be essential, and you added that you did not propose any reduction of the expenditure on railways chargeable to loan funds. You have, however, mentioned in a telegram of the 29th of May, that an extension of the Burma State Railway to Mandalay was in contemplation; and I must repeat the remark made in my telegram of the 19th of June, that, if such a work be inevitable, on which point I give no opinion at present, it is most important that the funds for it should, if, possible, be found by the postponement of operations on other lines of railway, or of some other expenditure not equally urgent.

From this review of the financial position, I much regret to be forced to the conclusion that it is far from satisfactory, and that the prospective liabilities of various descriptions that must be contemplated give cause for anxiety as to the means of securing a proper balance of income and expenditure in the immediate future. The uncertainties of the exchange are such that it is impossible to frame any really trustworthy forecast of the burdens it may throw upon us; and, although the subject will continue to receive the serious consideration of the Secretary of State in Council, I am unable to see any present means of removing this difficulty, or of mitigating it. The obligation on your Excellency's Government to enforce every practicable economy, and to avoid every fresh cause of expenditure that is not inevitable, is in these circumstances most pressing. I confidently trust, therefore, that your Government will be able, before the commencement of the next financial year, in reviewing your position, to find the means of preparing the estimates for that year on a basis that shall bring the expenditure satisfactorily within the available income, and leave a substantial

surplus, while the outlay of borrowed money is strictly limited to the amount which has been recognised as that beyond which this class of expenditure cannot be safely carried.

No. 15.

EXTRACT from DESPATCH to the GOVERNMENT of INDIA, February 10th, 1887, No. 58 (Financial).

It is only necessary for me to observe generally that the responsibility rests with your Government, as a whole, for seeing that suitable arrangements are made for carrying on, in the most economical manner possible, the public works sanctioned for the development of the country, both as regards the extent to which new projects should be entered upon and the appropriation of available funds to works in progress, subject to the limits prescribed and the rules laid down regarding expenditure on such objects, and especially to those general financial considerations which must always be paramount, and in reference to which the matured views of the Financial Member of your Council should obviously on all occasions carry special weight. I trust that the spirit of the instructions which have been from time to time given relative to the expenditure on public works, particularly in the despatches noted below,* will be cordially accepted by your Excellency's Government, and enforced in all departments of the Service.

No. 16.

EXTRACT from LETTER from the GOVERNMENT OF INDIA, dated March 15th, 1887, No. 65 (Financial).

We have the honour to acknowledge the receipt of Lord Kimberley's Financial Despatch, No. 216, dated the 29th July 1886, reviewing the Revised Estimates for 1885-6 and the Budget Estimates for 1886-7.

* * * * *

With regard to the increase in the ordinary public works expenditure in the group of buildings and roads referred to in paragraph 35, it will be observed that such expenditure occurs partly under military and partly under civil works. The increase under military works in the present instance is due to special causes, viz., the occupation of Upper Burma, the rendition of Morar to Scindia, and the need for providing accommodation for the troops added to the strength of the army in India. It is covered by the payment of 150,000*l.* by Scindia on account of the Morar Cantonment, and this amount should be deducted in comparing the estimate of expenditure with the actual expenditure of previous years.

We would invite special attention, however, to Statement A., which is appended. From this it will appear that the item is lower than it was 10 years ago, and shows no greater fluctuations from year to year than might reasonably be expected in the varying circumstances and emergencies which from time to time arise.

As regards the expenditure on civil works, we solicit a re-perusal of the remarks in paragraph 21 of the Secretary of State's Despatch, No. 183 (Financial), of 28th June 1883, and of the reply made to them by the Honourable Sir Evelyn Baring and Mr. Barbour, in the documents referred to below,† which were concurred in by the Government of India. The misapprehensions likely to arise from arguments based wholly on increase of expenditure and on comparisons between groups of recent and anterior years were demonstrated in a special note by Mr. Barbour, which formed Appendix I. to the Despatch No. 234.

Your Lordship will probably, however, desire from us a more specific explanation in reply to paragraph 35. The purport of this paragraph we understand to be, that after deducting 300,000*l.* of special grants for frontier roads and Upper Burma, the outlay on ordinary public works is nearly 800,000*l.* larger than the average of the five years ending in 1881-2; that this outlay is not swollen by exchange; that it is peculiarly under the control of the Local Administrations; that it has been reduced compared with three or four years ago; and that stringent orders should issue to carry the reductions further. We will examine these points in succession, with the aid of the analytical Statement A. already referred to.

The first point we would explain is that the outlay is not, as it is supposed to be, peculiarly under the control of the Local Administrations. They have no concern in about three-fifths of it, which will be seen from the following abstract of the aggregate figures given in the paragraph to be partly under the Imperial Military and Civil, and partly under the Local Boards' control. What the Provincial Governments do control is the sum allotted to them for expenditure under the terms of their contracts, which cannot be curtailed (except under abnormal exigency) without a breach of faith. The portion appertaining to Local Boards is mostly placed by law under the control of those bodies. No reduction in it would have any appreciable effect on our finances.

	Total of Twelve Years.	Percentage.
	£	
Military Works - -	12,976,508	22·60
Civil Works, Imperial -	5,309,218	9·24
„ Provincial -	21,278,657	37·04
„ Local - -	16,564,324	28·83
„ England and Exchange.	1,317,734	2·29
Totals - -	57,446,446	100·00

The next point to which attention may be called is that a comparison with the five years selected can give no useful result, since they were co-incident with the Bombay-Madras famine and the Afghan war, during which outlay under this head was much reduced by both the accumulation of balances and the debit to "Famine Relief" of charges which would otherwise have appeared under it. The return to normal outlay and the expenditure of accumulations necessarily caused an increase which from this cause was apparent, and not real. The depletion of those accumulations again produced a reduction to the eye which was not really economy.

A further consideration which cannot be ignored is, that the India of to-day is not the average India of a period terminating five years ago. Not merely do our greater population and increased commerce, means of locomotion, &c., require enlarged accommodation in the way of post offices, telegraphs, court-houses, jails, schools, dispensaries, feeder roads, &c., but every permanent addition to these facilities involves a new permanent current charge for its maintenance.

Despatch No. 234 (Financial), dated 24th August 1883, forwarding Sir Evelyn Baring's minute. Appendix II., paragraphs 314 to 323.

That the Budget of this year for ordinary public works should show a larger total than an average struck between five and ten years ago need not, therefore, cause surprise. Although much reliance should not, in our opinion, be placed on contrasts with periods differently circumstanced from our own, we may invite a study of the above table, deduced from Statement A., in which the Budget figures of this year, normalised by the exclusion of the three special items named in paragraph 35, viz., barracks for extra European troops, frontier roads and Upper Burma civil works, and also of estimated outlay from Provincial balances, are contrasted with the average of 1875–76 and 1876–77. Although those two years are low, owing to the complicated effect of the famines in Bengal, Madras, and Bombay, the aggregate of 1886–87 touches them within 133,157*l.*, while the excesses of provincial and local outlay are only 197,918*l.* and 182,565*l.* respectively. Regarding these last, it is noticeable that the provincial outlay which is under our control has increased in no greater ratio than the local, which is not, and in so far as this test may be adopted, it would serve to show that the provinces, in devoting their available revenues to this amount of expenditure, have not exceeded what the needs of the country justified, in view of the resources at their command.

Again, if the special grants of 200,000*l.* for frontier roads, and 100,000*l.* for Upper Burma, be deducted, the present expenditure on Imperial civil works in India is reduced to 321,000*l.*, a figure which is almost the same as the average expenditure of the years 1877–78 to 1879–80, when this item of expenditure was kept as low as possible in view of the financial difficulties of that time.

Local expenditure being thus met from local resources, there is, in our opinion, no special reason why we should attempt to impose restrictions on it so long as local bodies have sufficient resources at their command to meet the expenditure which they propose to incur. Similar remarks, subject of course to the amount of revenue left at the disposition of Provincial Governments, apply to provincial expenditure on civil works. One of the chief inducements that Provincial Goverments have towards good administration of their finances is that by this means they can obtain funds for useful expenditure on public works and otherwise. From Statement A. it will be seen that since 1877–78 the increase of provincial and local expenditure accounts for 904,930*l.* of the total increase. It cannot be expected, nor is it desirable, that there should be any large reduction in purely local expenditure, but the contribution of 400,000*l.* obtained this year from Provincial Governments, and the probable reduction in their resources of about 500,000*l.* yearly, which will result from the investigations of the Finance Committee, will necessarily lead to a material reduction of provincial public works expenditure in future years.

The inconclusive nature of comparisons between groups of recent and anterior years has been alluded to in paragraph 7 of this despatch. This is further illustrated by that of the two groups 1877–78 to 1881–82 and 1882–83 to 1885–86, which are presented in paragraph 35—one group being distinguished by famine, war, and accumulation of revenue deposits, and the other by the opposite characteristics. How very materially the provincial and local balances influence and vitiate such comparisons may be gathered from a study of Statement B. appended. It will show, for instance, that the supposition already mentioned in paragraph 10 that there have been reductions compared with three or four years ago is mistaken. A contrast less open to objection, though still unsatisfactory, may be obtained by taking (from Statement A.), as above, an average of the whole 12 years cited in paragraph 35, so that ephemeral peculiarities may neutralise each other as far as possible. This does not indicate, we venture to submit, any undue growth of controllable outlay or any extravagance at the present time. If, moreover, we were to consider, per contra, the revenue arising from some of the works undertaken and of the Departments served, such as the Post Office and Telegraph, the percentage of outlay would be an annually diminishing one.

	Average 1875–76 to 1886–87.	Budget 1886–87 Normalised.
	£	£
Military Works - -	1,081,376	1,005,367
Civil Works, Imperial -	442,435	321,000
„ Provincial -	1,773,222	1,709,200
„ Local -	1,380,360	1,617,100
„ England -	90,608	77,300
„ Exchange -	19,203	25,767
Total Civil Works -	3,705,828	3,750,367
Grand Total - -	4,787,204	4,755,734

Passing from all such broad contrasts, we desire to remark that a careful scrutiny of the details of expenditure can alone convey a just appreciation of the course of administration in the matter of ordinary public works. We may point out, as an illustration of the value of averages, that the Civil Imperial item for 1883-84 was more than doubled by the transfer to this head, from that of "Productive Public Works," of a book item of 533,070*l.*, capital outlay on the Madras harbour. We believe that the result of such a scrutiny would be to justify the administration during the period under review, and to show that it might be charged as much with undue parsimony, in the face of the growing material needs of the Empire, as with extravagance.

Referring to the discrepancy in the figures of the military estimates pointed out in paragraph 37, we beg to explain that the figures in paragraph 473 of Part II. of the Financial Statement are those finally adopted on receipt of the telegraphic corrections in the Home Treasury estimates, while those quoted in the despatch under reply are the figures of the original Home Treasury estimates.

Your Lordship's 39th and 40th paragraphs deal with the subject of contributions from the Provincial Governments in case of emergency. The withdrawal of 400,000*l.* from Provincial balances last year is approved, and a hope is expressed that some means may be devised by which those Governments may be called upon, in such case, "to contribute a proportionate "share towards meeting the necessities of the Empire "according to some established principle." Remarks of somewhat similar tenor are to be found in your Lordship's Despatch, No. 367 (Financial), dated 10th December 1885.

With regard to this point we beg to refer to our resolution, No. 458 (Finance and Commerce) dated the 28th ultimo, which explains the principles on which we have regulated the relations of the Imperial and Provincial Governments in respect of the Provincial contracts.

In revising the contracts we considered whether it would be possible to devise some such form of words as would not interfere with the satisfactory working of the provincial arrangements. But the terms of the new contracts are such that, in all probability, a smaller margin than that accruing under previous arrangements will be left to the Local Governments. The matter referred to us by your Lordship is not likely to lead to practical difficulties in the case of contracts based upon such detailed inquiries and estimates as have this year been made.

With reference to paragraph 41 of the despatch, we beg to state that we would have provided for a surplus of 500,000*l.* if it had been possible to do so without imposing further taxation; but that it was considered inexpedient to have recourse to taxation for this purpose, and that in the uncertainty of our position caused by exchange (alluded to in paragraph 52 of the despatch), the provision of such a surplus in the Budget, however useful as a precautionary measure, presents no longer any guarantee as to securing a surplus on the year's accounts.

The 42nd paragraph of the despatch under reply contains a description of the capital outlay arrangements of the current year, which would seem to indicate an impression that the Public Works Department has received more than has actually been the case. It may be mentioned that the remarks which we have to make in respect of capital outlay referring as

they do to 1886-87 and the immediate preceding years, are put forward with entire reserve as to the question submitted to your Lordship in our Despatch, No. 47, dated 22nd February 1887. It is necessary to point out that the loan limit of 350 lakhs fixed for "the construction of public works" was originally assigned with reference to the needs of railways and irrigation only. The amount by which this limit is said to have been exceeded is swelled by 39 lakhs for frontier and coast defences, an item which has never been charged to it until the current year. We append an account (Statement C.) from 1882-3 showing that on 31st March 1886 there was a balance of loan funds in favour of railways and irrigation amounting to Rs. 55,23,835, and that in the current year the extra grant (irrespective of the temporary special provision for the Mandalay Railway) is only 131 lakhs, of which Rs. 68,68,245 will be provided without borrowing, by the Mysore refund, as contemplated in our Despatch, No. 264 (Financial), of 22nd September 1885. If the unexpended balance of Rs. 40,23,835 be set off against this grant, as it reasonably may be, the net extra amount for the year is reduced to Rs. 90,76,165.

Taking the current year alone, it is possible that this outlay on railways may appear to some to be excessive. It is, therefore, important to mark the fact that in the whole five years up to the end of the present year the excess of grant over the normal amount sanctioned by the Secretary of State after reference to two Parliamentary Committees has been only 155½ lakhs. The

	Rs.
Extra grant - - -	64,71,966
,, - - -	48,06,755
Mysore refund - -	68,68,245
Extra grant - - -	14,25,000
	1,95,71,966
Deduct balance on account -	40,23,835
Net extra grant -	Rs. 1,55,48,131

whole of this excess is due to increased activity in prosecuting the frontier railways, caused by the war anticipations of 1885, and nearly half of it has been provided by the Mysore Railway refund which accrued without resort to the money market. This activity has received the entire concurrence and active support of successive Secretaries of State, as the following instances will show:—

In Despatch No. 148 R., of 27th November 1884, it is said—

"I desire to express, not merely my general concurrence in its adoption, but my hope that it* will be completed within the four years over which your Excellency proposes to spread the expenditure."

And, again, in the same despatch—

"The course I am of opinion should be pursued is that the frontier communications should be completed with the utmost speed consistent with economy of construction."

In his Military Despatch of 15th October 1885, the Secretary of State says:—

"With respect to the roads, railways, and bridges, &c. &c. &c., I have only to express my earnest desire that they may be pressed forward with such energy as to ensure their completion within the period estimated by your Government, viz., the end of the year 1887-88."

And again, in Despatch No. 367 (Financial) of 10th December 1885, in which Lord Randolph Churchill reviews the programme of railway expenditure for 1886-87, his Lordship says:—

"Large as is the amount of expenditure thus contemplated in 1886-87, I will not withhold my sanction from your Excellency's proposal to obtain the funds from borrowed money, such a course being, in my opinion, rendered necessary for the protection of the country against the risks of war and famine."

* Against this expenditure there was a credit on account of the India Midland refund of 46,75 lakhs.

The extreme extent to which expenditure on other railways has been reduced in order to meet these orders and the obvious necessities of the case in respect of frontier lines, is shown by the marginal table from which exchange is excluded.

The 49th paragraph of the despatch is devoted to the analysis of the loan funds outlay for the current year, which is extracted marginally, adding the figures exclusive of exchange, so as to obtain comparisons with

—		Current Year's Outlay.	Excluding Exchange.
		£	£
Railways, irrigation, and defences		5,368,800	5,217,100
Advances to municipalities - -		897,600	897,600
Railways of guaranteed companies.		3,162,000	3,162,000
Total - - -		9,928,400	9,276,700
Deduct, paid from revenue famine insurance grant.	£ 748,500	—	748,500
,, Ordinary surplus	182,200	—	469,500
		930,700	279,000
Balance to be raised - -		£8,997,700	£8,997,700

past years. It is remarked that 8,997,700*l.* is "obtained by borrowing in some form or other." And in the next paragraph it is added that—

"However important it is to develop the resources "of the country, I cannot think it desirable, in present "circumstances, that the credit of the State should be "so largely used for promoting objects not of absolute "or urgent necessity;" and "it is specially necessary "to be cautious in increasing permanent liabilities "when borrowing in rupee securities is so difficult and "the continued fall in exchange has so greatly enhanced "the burden of sterling obligations."

Your Lordship's comments, to which we have drawn attention, might be held to point to the conclusion that the outlay to which they refer was abnormal in amount, and was devoted to objects which are not of urgent necessity; and that the Government of India was alone responsible for incurring the expenditure in question, which was largely unremunerative. It is desirable to make a few remarks on this aspect of the subject.

In the first place, it may be remarked that the figures quoted in the last paragraph are unsuitable for the purpose of comparison with former years in respect of the liabilities incurred during the year on account of Public Works. The entry for "Railways of Guaranteed Companies" is a net figure, arrived at as shown below:—

	£	£
Subscribed capital received - - - -		2,060,500
Net expenditure—		
Gross - - - -	5,449,000	
Less refunds - - -	1,684,700	
		3,764,300
		1,703,800
Net withdrawals—		
Paid for discharge of debentures - -		1,458,200
Figure given in despatch - -		3,162,000

The subscribed capital may indeed be termed a "form of borrowing," but the discharge of debentures is a reduction of liability. These guaranteed railway accounts are, in reality, mere drawing accounts, and a large withdrawal in one year is counterbalanced by the advantage of using surplus deposits in another; thus, there was a surplus of 3,848,600*l.* in 1885–86 against the debit of 3,162,000*l.* in this year.

Again, in the calculations of paragraph 45 of the despatch under consideration, we observe that the reduction of 4,098,700*l.* in the balance is regarded as a form of borrowing, although it is clear that the balances may have been strengthened by the excess deposits of guaranteed railways in former years.

We append a statement (D.) which may, perhaps, show the whole position more clearly. The "Balance to be raised for Public Works," and the actual borrowings, are the items requiring chief attention.

It will be observed, in the first place, that when the effects of what we have termed the drawing accounts are practically eliminated, the amount to be raised for Public Works in 1886–87 is only 4,938,100*l.* instead of 8,997,700*l.*, as might otherwise be inferred from the method of stating the account adopted in paragraph 49 of the despatch, coupled with the remarks next following.* Secondly, the amount actually borrowed in 1886–87 compares favourably, if due allowance be made for the exigencies of frontier defence, and the special grants on that account, with the average amounts borrowed annually in earlier years as far back as 1859–60.

As to the bulk of the outlay shown in the statement, which is for State railways and irrigation, we would invite perusal of paragraphs 7 to 11 of our Despatch, No. 269. Financial, dated 24th September 1883, in which it was shown that the outlay then advocated (which differed comparatively little from the present normal sanction) was less in amount, and far less less burdensome, than the outlay which was thought necessary 25 years ago, when the country and finances were in a far less advanced and flourishing state. Adopting and supplementing the figures there given, we obtain the contrasts of annual figures, given below, which necessarily exclude exchange:—

ANNUAL AVERAGES.

——	1859–60 to 1863–64.	1864–65 to 1867–68.	1868–69 to 1873–74.	1874–75 to 1883–84.	1884–85 to 1886–87.	Revised Estimate 1885–86.	Budget Estimate 1886–87.
	£	£	£	£	£	£	£
Railways, guaranteed and subsidised.	6,394,277	6,044,225	2,675,679	1,041,901	3,042,983	3,166,000	3,764,300
State - - -	—	(*a*) 594	934,256	(*b*)2,928,711	(*b*) 3,950,918	(*b*) 4,346,900	(*b*)4,127,100
Irrigation and Navigation.	—	(*a*) 219,255	1,024,684	971,086	672,165	617,100	700,000
Total State - -	6,394,277	219,849	1,958,940	3,899,797	4,623,083	4,964,000	4,827,100
Grand Total -	6,394,277	6,264,074	4,634,619	4,941,698	7,666,066	8,130,000	8,591,400

(*a*) Outlay for 1867–68 only.

(*b*) Exclude debt incurred in purchase of guaranteed railways.

Regarding the necessity for the above outlay, the passages to which we have referred in the preceding paragraph 20 might be supplemented by others specifically recognising the importance and urgency of protective work, especially railways, which is admitted on all sides, and the execution of which on the lines from time to time advocated by us is delayed, not because they are not needed, but from pressure on our finances. That capital outlay on open lines is unavoidable needs no demonstration. We need scarcely add that not one of the great works in hand has been undertaken without the Secretary of State's previous sanction.

The remaining point is that of dead weight. It is shown in paragraph 8 of the Despatch, No. 269 F. of 1883, already referred to, that at the time when the large loans, at a high rate of interest, were raised in past days the railways were a heavy and progressive loss to the State. In 1863–64 this loss amounted to 1,634,634. Now the case is very different, as shown in the appended statement, E., and summarised below,* where the figures given in enclosure No. 3 to the above despatch are revised and carried on down to the present time. The broad result is a gain of 4,239,600*l.* in the seven years, which exchange converts into a loss of 5,066,424*l.*, as detailed in Statement F. Statement F., however, puts the case in the most unfavourable light, for it includes under the head of State Railways the interest on all the capital for the time locked up unproductively in unopened lines in progress. This interest is estimated in the Budget of the current year for both State railways proper and subsidised lines such as the Southern Mahratta, the Indian Midland, and the Bengal Central, at 709,438*l.* excluding exchange, or 821,538*l.* including that item. It will be noticed in Statement F. that it is the old guaranteed lines which drag down the amount. As their contracts fall in, and the lines in hand are opened, a far better result will be attained. In any case, the improvement on earlier years is, of course, unaffected, and the fact remains that the railways are bringing in a large and annually increasing return.

We also append a statement (G) for 1885–86, showing that the open State railways, including exchange and indirect charges earned 5·53 per cent., and that the temporarily unproductive capital outlay on state lines proper in progress amounted to about 7½ crores of rupees. Even when allowance is made for the cost of remitting to England such portion of the net earnings as is due for interest on capital raised in sterling, the return is 5·39 per cent.

In view of such results of our investments, coupled with the fact that our credit is so good that sterling loans can readily be obtained at about 3½ per cent., there would seem to be no impropriety in borrowing for really urgent needs, as we do unless in accordance with the contention which we are well aware will not be endorsed by your Lordship that loans are an absolute evil, irrespectively of the results they may produce.

In paragraph 50 of the despatch it is stated, with respect to State outlay on railways and defensive works, that "so far as estimates have yet been sanctioned it is anticipated that only 275 lakhs will remain unspent after 31st March 1887." This statement is based on the last column in Appendix C., at page 43 of the Financial Statement. We would point out that the figures in Appendix C. shew that on the estimates not worked up to there remains a balance to spend of 330·6 lakhs and to add that this larger figure may be exceeded.

No. 17.

EXTRACT from DESPATCH to the Government of INDIA, dated August 18th, 1887, No. 215 (Financial).

Although, in my despatch* above mentioned, regarding the expenditure on the construction of railways, I have drawn attention to the very serious change that has occurred in the financial position in recent years, I cannot on the present occasion refrain from comment on some of the chief points. The following table shows since 1881–82 the provision made from revenue for insurance against famine and construction of railways, and the surplus over expenditure if such charges had been excluded, the special transactions connected with the Military operations in Afghanistan and Egypt in the earlier years being also omitted:—

—	1881–82.	1882–83.	1883–84.	1884–85.	1885–86.	1886–87. Revised.	1887–88. Budget.
Famine Insurance:—	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Construction of Protective Railways.	682,403	— *133,129*	649,248	946,457	589,000	200,000	
Interest on capital raised by Indian Midland and Bengal-Nagpore Railway Companies (charged under Railway Revenue Account).	—	—	-	—	—	152,000	228,000
Construction of Protective Irrigation Works.	135,449	263,443	283,223	253,046	186,807	111,300	92,500
Reduction of Debt -	715,151	1,343,555	581,137	341,504	683,498	—	—
Total - -	1,533,003	1,473,869	1,513,608	1,541,007	1,459,305	463,300	320,500
Construction of Railways charged against Revenue, in addition to that under Famine Insurance (excluding outlay from Provincial Balances, so far as shown in the Accounts).	512,655	480,923	— *176,295*	172,825	500,000	—	—
	2,045,658	1,954,792	1,337,313	1,713,832	1,959,305	463,300	320,500
Surplus (excluding Military Operations in Afghanistan and Egypt).	2,107,769	1,301,991	1,931,213	— *383,586*	—*2,801,726*	60,073	16,700
Virtual Surplus, available for Famine Insurance and Railway Construction.	4,153,427	3,256,783	3,268,526	1,330,246	— *842,421*	523,373	337,200

The remissions of taxation and other advantages conferred on the people by the measures announced in the financial statement for 1882–83 were estimated to cost Rx. 2,886,000, which approximately accounts for the reduction of the "virtual surplus" between 1881–82 and 1884–85. The year 1885–86 was abnormal, owing to the heavy temporary outlay on military preparations; but, apart from this, your letter of the 22nd of February last, No. 47, assumed the position at the beginning of that year to have been one of equilibrium, after providing Rx. 1,500,000 for expenditure on famine insurance. It is, therefore, necessary to examine the statements carefully, in order to see to what causes the alteration of the position is due; and for this purpose the most convenient figures are those of the net revenue and expenditure, for the year 1884–85 and for the current year, which are as follows:—

—	1884-85.	Budget, 1887-88.	Increase.
	Rx.	Rx.	Rx.
Net revenue - -	41,521,000	44,478,000	2,957,000
Net expenditure - -	41,905,000	44,461,000	2,556,000
Surplus or deficit -	— *384,000*	17,000	Improvement 401,000

Of the increase of Rx. 2,957,000 in the net revenue, Rx. 405,000 is attributable to Upper Burma, and the remainder is distributed among the several heads in the manner shown below.† In the net expenditure, Upper Burma accounts for Rx. 2,176,000, so that, apart from this, the increase is only Rx. 380,000; but,

† —	Improvement since 1884–85.
	Rx.
Land Revenue - - -	482,000
Opium (chiefly reduction of expenditure).	538,000
Salt - - - -	73,000
Stamps - - -	65,000
Excise - - -	196,000
Provincial rates - -	171,000
Customs - - -	199,000
Assessed Taxes -	868,000
Forests - - - -	53,000
	Rx. 2,645,000
Assignments and Compensations -	93,000
	Rx. 2,552,000

as the allotment under famine relief and insurance is reduced by Rx. 1,453,000, there is a sum of Rx. 1,833,000 to be explained in other ways. Foremost among the causes of this deterioration must be placed the fall in exchange, which involves a charge in 1887–88 of

* August 18, 1887, No. 216 (Financial).

Rx. 2,055,000* more than that which was borne in 1884–85 (excluding, on the one hand, an additional receipt of Rx. 353,000 on the capital transactions of railways, &c., and, on the other hand, the additional charge of Rx. 252,600 under Army for the pay of the British troops). Next comes the permanent increase of the Army, the net payments for which (apart from Burma) have risen in India by Rx. 1,147,000, while there is a temporary reduction of 159,000*l.* in the sterling charge. Further, the payments in England on the railway revenue account are heavier by 535,000*l.*, apart from exchange, while the receipts in India are better by Rx. 815,000. The following, then, is a summary of the variations between the Accounts for 1884–85 and the Budget for 1887–88:—

* Distribution of Exchange.

	Increase since 1884-85.
	Rx.
Railway Revenue Account	818,000
Army	443,000
Interest	346,000
Civil Superannuation	241,000
Other heads	207,000
	Rx. 2,055,000

	Worse since 1884–85.
	Rx.
Exchange	2,055,000
Upper Burmah (net charge)	1,771,000
Army (excluding Exchange)	988,000
Railways, sterling payments	535,000
	Rx. 5,349,000

	Better since 1884–85.
	Rx.
Land Revenue	482,000
Assessed Taxes	868,000
Opium	538,000
Railway receipts in India	815,000
Other sources of Revenue	664,000
Other sources of Expenditure	462,000
Provincial Adjustments	468,000
	Rx. 4,297,000
Net worse	Rx. 1,052,000

This has been met by reducing the provision for famine relief and insurance to the extent of Rx. 1,453,000, thereby making the balance of revenue and expenditure better by Rx. 401,000.

This result has been attained by not only absorbing almost the whole of the provision made for famine insurance, but by also appropriating as much as possible of the provincial resources. It is in this respect that I feel some anxiety regarding the recent arrangements with the Local Governments for the next five years, of which a description is given in the financial statement of your Government. The suggestion made by Lord Kimberley, in the 40th paragraph of his despatch of the 29th of July 1886, No. 216, was that, in making the new arrangements, some means should be devised "by which, in the case of emergency, "the Local Governments may be called upon to "contribute a proportionate share towards meeting "the necessities of the empire, according to some "established principle." In your financial statement, however, it is observed that it has been proved by experience that the only means by which the Government of India, in a time of emergency, has been enabled to obtain help from the Provincial Governments, has been by adjusting its demand according to the power of each Government to pay; and, as this is an inequitable arrangement, the pressure falling on those only who happen to have balances in hand, and as you consider that the necessity of applying to Local Governments during the term of the current contract is inconsistent with that sense of security which is essential, you deem it a lesser evil that large balances should not accrue, than that the accumulation of large balances should expose provincial finances to claims for contributions. You have, accordingly, in the new arrangements, so apportioned the increase of revenue as, while leaving to the Provincial Governments a fair share thereof, to lessen the probability of their being called upon for exceptional assistance.

Of the right of your Government to call on the Provincial Governments to take a larger share in the general burdens, there can be no question; and I doubt not that you have, after careful examination, adopted the plan which, for the present, seems the most suitable for effecting the desired object. I must, however, point out that you have given up, to a great extent, your first reserve of the grant for famine insurance, and that, by lessening the power of the Provincial Governments to render assistance if requisite, you also relinquish your second reserve of aid from the provincial balances.

Before passing from this subject, I desire to comment on one or two expressions in the financial statement which seem open to criticism. The closing words of paragraph 53 appear to imply that a Provincial Government may, in any year, withdraw the whole of its surplus balances, provided only that it has estimated to do so in its Budget. It appears to me that, in a case in which a Local Government has accumulated considerable balances, a very large expenditure in one year beyond its income might be injudicious on the part of the Provincial Governments, and might even expose your Government to difficulty, and that you ought to possess the right of regulating in some degree the rate of expenditure of the balances accumulated. At the end of the 67th paragraph a suggestion is thrown out that it may be practicable to make the agreements in future for a longer term than five years. Considering the important alterations which it has been found desirable to introduce on each occasion of revision, and the fact that it is only through such alterations that any additional assistance is in future to be given by the Local Governments to the Supreme Governments, I am of opinion that in no case should the period of five years be exceeded.

* * * * *

It is, nevertheless, highly important to consider, in good time, what arrangements can be made for the provision of an adequate surplus in 1888–89. In that year, the payments in connection with the sterling debt will be reduced by only about 30,000*l.*; since, besides the charges otherwise occurring, there will be the interest for a fifth quarter on 5,300,000*l.* On the other hand, you will, as it would seem from the 81st pargraph of the financial statement, have to meet upwards of Rx. 300,000 for the permanent military expenditure; and your power of doing so, without the imposition of additional taxation, will probably be greatly dependent on the extent to which the net charge now incurred in Upper Burma may be capable of reduction. In any case, I must desire that, apart altogether from the addition to the expenditure caused by the special Defence Works, a proper margin shall be provided to meet the consequences of a fall in exchange, or any other contingency.

No. 18.

DESPATCH to the GOVERNMENT OF INDIA, August 18th, 1887, No. 216 (Financial).

I have considered in Council your Excellency's Letter, dated the 18th of April, No 75 (Railway), forwarding a programme of the outlay which you propose to incur on State Railways during 1887–88, an analysis of which, under main heads, gives the following result:—

	Rx.
Frontier lines	1,304,000
Burma extension	1,095,000
Protective lines	454,800
Assam-Behar Railway	191,970
Bezwada Junction with the Nizam's Railway	140,400
Open line capital	818,540
Stores and working capital, including reserve	288,190
Surveys	1,300
Total	Rx. 4,294,200

2. To meet this expenditure, your Government consider the following sums to be available:—

	Rs.
Amount entered in forcast forwarded to the Secretary of State with Finance Letter, No. 264, dated 22nd September 1885, and approved in Despatch, No. 367, of 10th December 1885 - -	2,69,50,000
Contribution by the Government of the North-western Provinces and Oudh, from surplus provincial balances, for outlay on the Bareilly-Pilibhit State Railway during 1887–88 - -	20,000
Estimated outlay on the Toungoo-Mandalay Extension of the Burma State Railway (*vide* Letter, No. 148 (Railway), dated 20th September 1886, to the Secretary of State - -	1,00,00,000
Outlay on the railway from Bezwada to the Hyderabad frontier during 1886-87, which will be paid for in 1887-88 - - - -	2,75,000
Addition on account of proposed short outlay by military department on special defence works - - -	15,50,000
	3,87,95,000
Exchange debitable to the capital accounts of railways - -	41,47,000
Total as before -	Rs. 4,29,42,000

3. The whole of this amount of upwards of 429 lacs of rupees is to be provided from borrowed money, and, as appears from your financial statement, is in addition to 70 lacs that are to be supplied in like manner for works of irrigation. The total of about 5 crores of rupees is so much in excess of the sum of 3½ crores which your Government have been authorised to borrow for public works in any one year, that I have felt it to be necessary to consider carefully whether so large an expenditure is compatible with the exigencies of the present financial position, and how far the sums which you hold to be available for meeting it may be properly regarded as applicable to the purpose.

4. Anxious as I am to extend, as fast as practicable, the construction of railways, whether for the defence of the north-west frontier or the extension of such communications in Burma, for the protection of the country from famine, or for the promotion of the commercial and industrial progress of the country, I cannot but think that there appears to have been some misapprehension on the part of your Government as to the scope and intention of orders on the previous forecasts of expenditure submitted to the Secretary of State in Council, as your proposals so greatly exceed the limit of 350 lacs, which, at a much more favourable time, was fixed as the maximum that it would be prudent to borrow in any one year for public works.

5. In replying on the 27th of November 1884 to the letters of the Government of India, No. 25 (Secret), and No. 150 (Railway), dated the 22nd and 29th of September 1884, explaining their views in regard to railway construction, including the system of railways and other works designed for the defence of the north-west frontier, Lord Kimberley observed that "the "rapidity with which the works necessary for these "purposes shall be constructed must manifestly depend "on financial considerations;" and he directed that the frontier communications and defences should be completed as speedily as was consistent with economy of construction, their cost being defrayed as far as possible from revenue, and only from borrowed money when the revenue should prove insufficient; and, in view of the urgency of the requirements, he consented to the extension of the maximum amount of borrowing for public works in any one year, from 250 to 350 lacs of rupees, that being, in his opinion, "the extreme "limit to which it is prudent to pledge our resources for such purposes," a point on which he subsequently enlarged in another Despatch, dated the 30th of April 1885, No. 112 (Financial).

6. In a letter of the 22nd of September 1885, No. 264, your Government, feeling the urgent necessity for pressing on the frontier railways, combined with the importance of not discontinuing the famine lines which had been already begun, which called for an expenditure in excess of the limit of borrowing that had previously been prescribed, made proposals for meeting a total outlay of 2,643¼ lacs to be expended on railways in the following five years, of which 877½ lacs were needed for frontier lines, 538¼ lacs for protective lines in progress, 447½ lacs for similar lines not to be begun till 1888–89, and 780 lacs for lines under agreement with companies, open lines, and stores and working capital. Lord Randolph Churchill, in his reply, dated the 10th of December 1885, No. 367 (Financial), assented to the proposal that 456 lacs should be provided by borrowing, in 1886–87, for railways, irrigation, and defensive works; and he at the same time agreed that, for the next five years, any interest becoming payable to guaranteed companies formed for the purpose of constructing the special railways which had been designed by your Government as essential for the protection of the country against famine might be treated as a deduction from the allotment annually made for famine insurance. In other respects he gave no opinion on the proposals relating to years subsequent to 1886–87.

7. Turning now to the actual progress recently made in railway construction, I find that, on the 31st of March 1884, the number of miles of open railway was 10,832¼, while the sanctioned mileage was 14,290. The length open on the 31st of March 1887 appears from the Administration Report for 1886–87 to have been 13,390 miles, and that sanctioned to have been 16,596. Thus the addition made in the three years to the open mileage was 2,558; and a further length of 2,306 miles has been sanctioned, of which 627 are comprised in the military defence system, 987 miles have been alloted to companies, and 692 are being constructed by the Government, by Native States, or from provincial revenues. These results cannot be regarded as unsatisfactory.

8. Next I find that the annual average capital outlay, combining that by the Government and by companies guaranteed or subsidized by the Government, was stated in the Report of the Select Committee to have been 4,370,000*l.* (conventional sterling) from 1874–75 to 1878–79, and 4,845,000*l.* from 1879–80 to 1883–84. According to the manner in which the accounts and estimates are now stated so as to include exchange on capital outlay in England, the figures for the years from 1874–75 to 1887–88 would be those given below,

	1874–75 to 1878–79.	1879–80 to 1883–84.	1884–85 to 1887–88.
	Rx.	Rx.	Rx.
State Railways -	3,449,989	3,946,496	5,149,648
Companies Lines -	1,192,344	1,267,140	4,112,534
Total - Rx.	4,642,333	5,213,636	9,262,182

showing an increase from Rx. 4,642,333 in the first period, and Rx. 5,213,636 in the second, to no less than Rx. 9,262,182 as the average for the four years from 1884–85 to 1887–88, including the lines* which are being constructed by Native States, or without a guarantee from the Government. Thus it appears that in the period of five years the average rate of expenditure for these objects has been very nearly double what it was between 1874 and 1879, and that the financial liability arising from this outlay is borne by the revenues of India as completely as though the whole of the funds had been directly borrowed by the State.

9. As regards the financial position generally, the Budget for 1884–85 showed a surplus of Rx. 319,300, after providing Rx. 1,750,000 for famine insurance, so that virtually there was, according to that estimate, a surplus of Rx. 2,069,300 available for expenditure on public works or reduction of debt, if not needed for other purposes. The actual accounts were not so favourable; but the surplus of revenue over other expenditure was still in that year Rx. 1,330,246.

10. Viewing the expenditure of 1885–86 as having been to a large extent of a temporary and exceptional character, in connexion with the Quetta Field Force and the Burma Expedition, your letter of the 22nd of

* Bengal and North-Western.
West of India Portuguese.
Nizam's.
Mysore.
Jodhpore,
Wadhwan-Morvi.

February last, No. 47, refers to the commencement of 1885–86 as a time when your finances were in a state of equilibrium, and the Budget for that year showed a surplus of revenue over other expenditure amounting to Rx. 2,631,600, or about Rx. 1,300,000 better than the accounts of the previous year.

11. But in that letter your Excellency reports that the expenditure has since been increased by Rx. 1,500,000 for the permanent augmentation of the Army, and Rx. 1,200,000 for the military and civil charges in Upper Burma, to which must be added Rx. 2,000,000 on account of exchange.* Against this total of Rx. 4,700,000 may be set Rx. 800,000 from the imposition of the Income Tax, Rx. 1,000,000 from increased net railway receipts, and Rx. 500,000 from reduction of expenditure, or Rx. 2,300,000 in all; so that the financial position for the present year is worse than it was two years ago by Rx. 2,400,000, and consequently there is no surplus revenue available for the construction of public works, either under Famine Insurance or otherwise, nor for the reduction of the usual loan, and, on the contrary, even the moderate surplus of Rx. 231,600,† to which the above figures would lead, is not likely to be realized.

12. I now turn to a consideration of the proposals that you have made for the allotment of borrowed money to the Public Works Department in the present year. You commence with a sum of 269½ lacs, which is said to be the amount entered in the forecast approved by Lord Randolph Churchill. I have pointed out that his Lordship did not approve the forecast, or sanction the proposed expenditure, as respects the years subsequent to 1886–7. That forecast was based on the supposition that it would be practicable to allot to the railways and special defences 280 lacs of borrowed money, and 50 lacs of revenue from the Famine Insurance Grant; but, excepting the payments of interest to the Indian-Midland and the Bengal-Nagpur Railway Companies, which in 1887–88 require Rx. 228,000, you have not been able to make any provision from revenue for these purposes. To the above-mentioned sum of 269½ lacs, you add 100 lacs for the Toungoo-Mandalay Railway, regarding which you were informed in Lord Kimberley's Despatch of the 29th July 1886, No. 216, that the funds must, if possible, be found by the postponement of operations on other lines of railway, or of some other expenditure not equally urgent, and no authority was conveyed for providing for the outlay by any special addition to the sum to be borrowed. As to the 15½ lacs which will not be required for the Special Defence Works, and which you have regarded as applicable to railway construction, I must observe that a reduction of such expenditure affords no justification for an increase on the proposed outlay on railways. The two small sums of Rs. 275,000 and Rs. 20,000 call for no comment.

13. To the total of these amounts, Rs. 3,87,95,000, you add Rs. 41,47,000 on account of exchange on the English expenditure. In Lord Kimberley's Despatch of the 29th of July 1886, No. 216, it was recognised that, for comparison with the sum of 350 lacs authorised as outlay from borrowed funds in the old form of account, it was necessary now to add the exchange; and, therefore, I do not object to a suitable increase of the amount now to be authorised. In future, however, I desire that, whatever sum may be recognised as the limit of borrowing for such works, it shall be considered to include the exchange, for otherwise the anomalous and dangerous position will arise that, in proportion as the value of the rupee measured in gold falls, the amount to be borrowed for public works will increase.

14. A consideration of all the circumstances to which I have referred has satisfied me that while, on the one hand, very satisfactory progress has been made, and an unusually large expenditure undertaken for railway construction during the last few years, on the other hand the important surplus of revenue which had been available for Famine Insurance, and for meeting unforeseen charges, has entirely disappeared, that additional taxation has already been necessary, and that the prospect of the imposition of further charges cannot be disregarded. The conclusion has therefore been forced upon me that some reduction must be made in the outlay which you comtemplate, and as regards the current year, the amount available from borrowed funds should be taken as follows :—

	Rs.
Authorized annual outlay for railways and irrigation works - -	3,50,00,000
Bareilly-Philibhit Railway -	20,000
Bezwada Line - - - - -	2,75,000
Exchange, say - - - -	40,00,000
	Rs. 3,92,95,000

or say 400 lacs, as compared with the sum of Rs. 4,99,42,000 proposed in the Budget; and I have accordingly to request that the estimated expenditure on railways and irrigation works this year, not provided from revenue, may be so revised as to reduce the amount of outlay to four crores of rupees. I will not attempt to apportion between railways and irrigation, or to the various works, the sum by which the estimates must be reduced; but I feel convinced that, without interfering with the progress of what may be essential for military or political purposes, or stopping works actually in hand, your Government will be able to curtail to the necessary extent the outlay proposed on other works, additions to or improvements of the open lines, on stores, or on irrigation, or by postponement of work to a future year.

15. I must fully recognise the very great value of the railways constructed in India, and the important development of the resources of the country to which they have so largely contributed. No less strongly do I feel the obligation to do all in my power to facilitate and expedite their extension within the limits of what is financially possible. I trust, therefore, that the pressure which has led me most reluctantly to require some reduction of the proposed expenditure in the present year may at no distant date be relieved, and that the early completion of those lines of communication which are of most pressing necessity will, before long, admit of the prosecution of others which must for a time be postponed.

16. I shall, moreover, continue to hope that the sustained evidence of the generally satisfactory financial results of railway working in India may induce capitalists to invest in these undertakings without a Government guarantee. The Government of India will always afford every facility to *bonâ fide* investors, but its power to accept financial responsibilities in connection with such enterprise is obviously limited, and it cannot be expected to carry out every railway that may be shown to be useful, at its own risk or through its own agency. I would also add that, now that the main lines of communication throughout British India are either completed or in a fair way towards completion, I should welcome any measures that led to the gradual addition of shorter and less costly branch lines, on any appropriate gauge, which would serve to supply more fully the means of cheap transport, and its attendant benefits, to all parts of the country.

17. With regard to the proposed railways in the south of India, which were mentioned in Sir Auckland Colvin's minute, and in your letter of the 22nd of February, No. 47, I have now before me your subsequent letters of the 16th of May, Nos. 94 and 95 (Railway), suggesting that negociations should be opened with the Southern Mahratta and South Indian Railway Companies, for the purpose of taking over these lines; and I have caused communications to be addressed to these companies on the subject.

18. I have not on the present occasion taken into consideration the outlay on Special Defences, as I shall await a reply to my before-mentioned Despatch of the 12th of May last, in the Military Department. It was explained in my Despatch of the 31st of March, No. 103 (Financial), paragraph 11, that such expenditure was in future to be included in the expenditure on military works chargeable against revenue; but I am aware that, as this may involve a deficit on the year, the money may have to be supplied by borrowing.

	Rx.
* Exchange at 1*s.* 5½*d.* on 14,632,100*l.* = - -	5,434,743
Exchange at 1*s.* 5½*d.* on 14,632,100 in 1884-85 = - -	3,426,424
Increase - - -	Rx. 2,008,319

	Rx.	Rx.
† Budget of 1885-86: Surplus of Revenue over Expenditure, excluding Famine Insurance and Construction of Railways -		2,631,600

Better - - - - -	2,300,000	
		2,400,000
Apparent surplus - -		Rx. 231,600

19. As it is important that you should be informed of my decision regarding the outlay on railways in the present year at as early a date as possible, I addressed to your Excellency, on the 10th instant, the following telegram :—

"Proposed outlay on railways and irrigation works from borrowed money so greatly exceeds authorized limit that, without delaying progress of works essential for military or political purposes, or stopping works actually in hand, outlay proposed on other works, additions to or improvements of open lines, on stores, or in irrigation, must be revised, with view to reduction by one crore. Despatch follows."

No. 19.

LETTER from the GOVERNMENT OF INDIA, June 18th, 1887, No. 153 (Financial).

We have the honour to forward, for your Lordship's information, ten copies of the Volumes I. and II. of the Report of the Finance Committee appointed under our Resolution, No. 649, dated 10th February 1886, and of a third volume, being the Report of the Finance Commissioner appointed under our Resolution, No. 4821, dated 24th December 1886.

2. The first of these volumes contains the proposals of the Finance Committee with reference to provincial contracts. These we have for the most part disposed of, and we forward, for your Lordship's information, three copies of a volume containing the successive resolutions which establish the new provincial contracts.

3. We enclose also copy of a resolution issued by us in the "Gazette of India" of June 4th, 1887, in which we recorded our acknowledgment of the services of the Finance Committee.

No. 2952.

GOVERNMENT OF INDIA.

DEPARTMENT OF FINANCE AND COMMERCE.

Salaries, Establishments, &c.—Administration.

RESOLUTION.

Simla, the 3rd June 1887.

The Finance Committee, appointed by Resolution No. 649, dated 10th February 1886, to inquire into public expenditure has submitted its report to the Government of India. The Report of the Financial Commissioner with the Government of India who, when the Finance Committee was dissolved, was nominated by Government Resolution, No. 4821 of the 24th December 1886, to bring to a conclusion certain enquiries, has also been submitted.

The recommendations contained in these reports are for the most part now under the consideration of the Government and will continue for a considerable time to occupy its attention, but the Government does not desire to delay acknowledgment of the labours of the Finance Committee and of the Financial Commissioner until its examination of their reports has been concluded.

The researches of the Committee have already resulted in an increase of over 50 lakhs of rupees to imperial revenues on the revision of the provincial contracts, an increase which it is believed will be obtained without injury to provincial finances. This result has been attained entirely by the judgment and industry of those members of the Committee who were deputed to work out the basis of the new provincial contracts, with the assistance of the local members nominated by the several Provincial Governments to consult with them. The notes which have been recorded by Sir Charles Elliott and his colleagues, Mr. Westland, Colonel Filgate, and Mr. Bliss, will prove of the greatest assistance to the several Local Governments during the ensuing five years, and at the next revision of the contracts will furnish an invaluable standard of comparison. They have thrown light upon the administration of provincial finance which it had never received before, and have placed it in the power of Provincial Governments to introduce extensive economies into their administration without prejudice to its efficiency. This result alone would have entitled the Finance Committee to the best thanks of the Government. It is not possible at present to say what may be the result of the decisions taken on the various other matters submitted for the consideration of the Government of India, in connection with its own expenditure. Questions of policy are necessarily in many cases involved which may over-ride considerations of economy; but in all departments with which they have dealt the Commission have examined the details of administration in a manner which, so far as the considerations referred to do not intervene, will enable the Government to deal with their recommendations without difficulty or delay. The Government desires to return to Sir Charles Elliott, and to the various members of the Committee, but more especially to the members charged with the duty of reporting on the provincial finances, its thanks and acknowledgments for the admirable manner in which they have carried out the instructions conveyed to them. The best thanks of the Government are also due to the officers who successively represented the Provincial Governments on the Committee. The objects which the Government had in view in appointing the Committee have been entirely fulfilled. Nothing but the most untiring industry, guided by great experience and sound judgment, could have ensured the completion of these enquiries and the preparation of these reports within the comparatively brief space of one year. The reports are, and must for a time remain, of a confidential nature, dealing as they do with a variety of questions the public discussion of which would prove at present inconvenient; but at a later stage, when the views of the Secretary of State have been obtained, his Excellency in Council will consider what steps should be taken towards their publication.

Ordered, that a copy of this Resolution be communicated to each of the following members of the Finance Committee :—

President :

Sir C. A. ELLIOTT, K.C.S.I.

Members :

Honourable Mr. JUSTICE CUNNINGHAM.
Sir W. W. HUNTER, K.C.S.I.
Honourable RAO BAHADUR MAHADEO GOVIND RANADE, C.I.E.
Mr. J. WESTLAND, C.S.
Lieutenant-Colonel A. J. FILGATE, R.E.
Mr. H. W. BLISS, C.S.
Mr. ROBERT HARDIE.

C. J. WEIR,
Officiating Under Secretary to the Government of India.

No. 20.

DESPATCH to the GOVERNMENT OF INDIA, September 8th, 1887, No. 234 (Financial).

I have considered in Council your Excellency's letter, dated the 18th of June, No. 153, forwarding copies of the Reports of the Finance Committee appointed by your Government last year, and of the Finance Commissioner, who, with two other members, carried on the work, after the greater portion of the Committee had terminated their labours.

2. I concur in the opinion expressed in your Excellency's Resolution of the 3rd of June last, as to the value of the various notes recorded by Sir Charles Elliott and his colleagues, whose recommendations have already resulted in an increase to Imperial revenues, and as to the manner in which the Committee discharged the onerous task entrusted to them.

3. I shall await with much interest the opinion of your Government on the several subjects treated in the reports; and, until the receipt of the proposals

which in many cases you will, doubtless, think it right to make, with the view of attaining the economy contemplated by the Committee, I refrain from commenting in detail on the matters with which the report deals.

No. 21.

DESPATCH to the GOVERNMENT OF INDIA, September 8th, 1887, No. 235 (Financial).

In your Excellency's letter, dated the 15th of March, No. 65, you reply to certain observations made by the Earl of Kimberley, when reviewing the Financial Statement of 1886.

2. It is unnecessary for me to discuss the arguments which it contains in detail. They are valid as a defence of an outlay on objects of public utility at a time when there is a surplus of revenue available, but they do not affect Lord Kimberley's contention that, when the pressure on your finances renders economy essential, it is incumbent on all the local administrations to restrict such expenditure within the narrowest limits consistent with efficiency. And, considering the financial position of the present year to be even less satisfactory than in 1886, I desire that every effort may be made to prevent avoidable outlay in the Public Works Department.

3. Paragraphs 17 and 18 of your Excellency's letter refer to the subject of the arrangements with the Provincial Governments, which have been dealt with in your Financial Statement for the year.

4. The remaining portion of the letter contains many interesting observations regarding the outlay in the construction of public works from borrowed money, on which it is needless for me to make any comments, as in another Despatch (No. 216, dated 18th August 1887), I have addressed your Government on the subject at some length.

No. 22.

EXTRACT from DESPATCH to the GOVERNMENT OF INDIA, April 12th, 1888, No. 98 (Financial).

Your Excellency was undoubtedly right in desiring that the fresh burdens placed on the country should be as light as was consistent with financial prudence; but, at the same time, I fear that the measures now adopted will not in themselves be sufficient to restore your finances to a condition that can be considered satisfactory. Even with the additional taxation now imposed, your Government estimate that, excluding the Special Defence Works, your surplus will be little more than Rx. 500,000; and this, under existing circumstances, is clearly an insufficient margin between revenue and expenditure.

In the very careful estimate which was laid by Mr. Westland, in 1884, before the Select Committee on Railways in India, he reckoned on a normal increase of the revenue by Rx. 360,000, and of the expenditure by Rx. 96,000, per annum, or a net yearly improvement of Rx. 264,000, apart from the railway revenue account and exchange. As regards the ordinary transactions, the accuracy of that forecast has, on the whole, been justified; although the revenue from Salt and Customs has recovered less rapidly than he anticipated, the improvement in Land Revenue and Provincial Rates has exceeded the Estimate, and, apart from the Income Tax, the net revenue has improved by Rx. 391,775 per annum; and, while the charges for Law and Justice, Police, Marine, and Buildings and Roads, have been heavier than was foreseen, there has been a considerable reduction under Post Office, Telegraph, and Mint, and the net expenditure has altogether increased by Rx. 145,625 a year. Thus the annual improvement has been Rx. 246,150, as compared with Rx. 264,000 above mentioned. In the Railway Revenue Account an improvement of Rx. 150,000 a year was anticipated, which in four years would have given an increase of Rx. 600,000; the increase, according to the Budget of 1887–88, was Rx. 675,500, but this estimate is now reduced to Rx. 275,500.

Mr. Westland's figures would, then, have presented the following position at the end of the four years:—

			Rx.
Normal surplus in 1883–84 - - -			479,700
		Rx.	
Annual improvement: Revenue		360,000	
Railways		150,000	
		510,000	
Less, increase of expenditure -		96,000	
		414,000 × 4 =	1,656,000
			2,135,700
and, allowing for the fall of ¼d. a year in exchange, or Rx. 220,000 a year - - -			=880,000
there would have been a surplus in 1887–88 of - - - - -			Rx. 1,255,700

The result, according to the Budget for 1887–88 is as follows:—

			Rx.
Normal surplus, as above - - -			479,700
		Rx.	
Annual improvement: Revenue		391,775	
Railways		168,875	
		560,650	
Less, increase of Expenditure -		145,625	
		415,025 × 4 =	1,660,100
			2,139,800
Fall in exchange at an average of ½d. a year -			1,853,400
			286,400
Additional Revenue from Income Tax -			864,400
Expenditure reduced under Famine Insurance - - - - -			1,330,500
			2,481,300
		Rx.	
Increase of charge for Interest -		566,000	
,, ,, Army -		887,700	
,, ,, Upper Burma (net) - - - -		1,770,500	
			3,224,200
showing a deficiency of - - -			742,900
which is converted, by the payment from Provincial Balances, of - - -			759,600
into a surplus of - - - -			Rx. 16,700

The deterioration from the Budget amounting to Rx. 1,420,000, and the imposition of fresh taxation to the extent of Rx. 1,925,000, bring the surplus to the present estimate of a little more than Rx. 500,000.

* * * * *

The expenditure on railways has been heavily increased owing to a combination of circumstances. The military and political necessities rendered imperative the construction of a great system of strategic lines on the North-West frontier, and the extension of railways in Burma; and the importance of taking all practicable measures to avert or mitigate the consequences of famine was thought to render desirable the early completion of the programme laid down for the protection of the country. There can, however, be little doubt that the construction of railways generally would not have been carried on so rapidly if the present financial position had been foreseen; and great caution will be required in adding to the liabilities which are now pressing on the Government on this account.

I will next refer to the question of the home charges. Your Excellency is aware that in 1879 this subject was specially investigated, with the view of effecting any reductions that might be found possible. So large a portion, however, of the payments in this country, such as the interests on debt, superannuations, and contributions under agreements for a series of years, is practically beyond my control, that very little effect can be produced in this direction. I have, however, made a very careful examination of the subject, with reference to the growth of these charges in the last six years, and I find the following result, on a comparison of the accounts of 1882–83 (excluding the charges

connected with the expedition to Egypt) with the Budget estimate for 1888–89 :—

The charge for interest and management of debt is increased by 120,648*l.*; but, excluding in both years exceptional charges, and supposing the conversion of the 4 per cent. stock to have been completed, there is a reduction of 38,800*l.*, notwithstanding that the principal of the debt has been increased by 7,440,000*l.*

Under the head of railway revenue account there is an increase of 727,168*l.*, of which 641,929*l.* is due to the payments made to companies formed in recent years. There can be no doubt that further capital will have to be raised, and consequently a further annual charge to be incurred, before their lines are completed, and even then additions to the capital outlay will continue to be necessary.

For the India Office, the charge has been reduced by 967*l.*

For the Civil Administration in India, the payments on account of the various Departments, the Postal, Telegraph, Marine, Political, and various miscellaneous charges, have been reduced by 61,709*l.*

In the army effective charges there is an increase of 101,551*l.*, caused partly by the augmentation of the force in India, and still more by the growing amount of the deferred pay, while the cost of passage has been largely reduced.

Excluding the sum of 78,302*l.* for frontier railways in 1882–83, which are no longer debited to revenue, the payments for stores show an increase of no less than 371,002*l.*, of which 313,876*l.* is in those for the Army.

The furlough pay has increased by 21,938*l.*, and the Civil Superannuation by 227,854*l.*, of which 203,766*l.*, is due to the Government having taken over the Civil Funds. There is, however, a certain set-off to this in the Indian charges, owing to the discontinuance of the contributions and interest paid by the Government to these funds.

The non-effective Army charges are, on the whole, less by 212,734*l.*, owing to the alteration in the system of paying for the share of pensions of British officers and soldiers who have served in India. There has been an increase of 291,496*l.* in the retired pay and pensions of officers of the Indian Army.

The final result is to show an increase of 1,216,449*l.* in the six years, of which considerably more than half (727,168*l.*) occurs in the railway revenue account, 292,700*l.* in stores, and 120,648*l.* in interest, leaving only 75,933*l.* under other heads. Some further increase must be anticipated in the deferred pay and non-effective charges, and in the interest due to the railway companies, and I can see little hope of a material reduction in other respects; but there appears to be no reason to anticipate any rapid addition to the sterling payments, if borrowing in England and guarantees to railway companies are avoided.

Besides the general obligation to reduce the home charges so far as may be possible, the continued fall in the gold value of silver, which has added enormously to the burden that they throw upon your Government, affords a strong additional incentive in the same direction. The reduction in the sterling value of the rupee from 1*s.* 7½*d.* in 1882–83 to 1*s.* 5*d.* estimated in my Despatch of the 5th of January, No. 7, for 1888–89, would have added more than 2½ crores to the cost of remittance, if the sterling expenditure had been unaltered; and, according to the latter rate, the total expense of defraying the home charges in 1888–89 would exceed that of 1882–83 by Rx. 4,269,347. The figures already given in paragraph 3 show that the revised amounts under exchange for the current year and for 1884–85 respectively are Rx. 6,154,000 and Rx. 3,364,000, showing an increase of Rx. 2,790,000, to which I fear that it is not impossible that a further large sum may have to be added, if the fall of exchange that has occurred within the last few weeks is maintained. If, unfortunately, a recovery does not take place, the whole of the surplus estimated by your Government in January will have been lost, and further additions to your resources will become necessary. What measures the Government either in India or in England can adopt for the mitigation of this continually growing evil, which is a cause of the greatest anxiety to me, whether viewed financially or politically, I do not propose now to discuss, since it is necessary for me to reserve my opinion until the Royal Commission on Gold and Silver Currency have made their report. The question, however, is one the extreme gravity of which I fully appreciate, and your Excellency may rely on its receiving the earnest attention of Her Majesty's Government.

Under the head of Famine Insurance your Government may probably make, in the estimate for next year, a small allotment for Protective Irrigation Works; and the railway revenue account will include about Rx. 493,000 for the payment of interest to the Indian Midland and Bengal-Nagpur Railway Companies, which it has been arranged should be treated as a charge under the same head. But there is no longer any surplus of revenue from which these charges can be met, and they have to be added to the general expenditure of the year. Although the provision against the financial consequences of famine has been swept away, the obligation that rests upon the Government to protect the country from such a calamity is no less than in 1878, when the policy of providing a surplus to meet this liability was adopted. The grounds on which that policy rested have not been impugned; it was maintained until two years ago, and it is only under irresistible financial pressure that its operation has been suspended. During the past ten years India has had an almost uninterrupted succession of favourable seasons; but, judging from past experience, we must assume that the time is not far off when we may again have to meet a very large expenditure on account of the relief of distress from widespread scarcity. The necessity for maintaining a surplus revenue on this account is as great as ever. Considering, however, the extension of the railways, and the increased protection given to the people since the average annual charge for famine relief was estimated at Rx. 1,500,000, it would, perhaps, now be sufficient if Rx. 1,000,000 were annually provided on this account. I am of opinion that, when this has been accomplished, it may be better to revert of the original arrangements under which the whole of the famine surplus was to be applied to the reduction of existing debt or the diminution of borrowing. Until provision is made for meeting this liability, the financial position must be viewed as unsatisfactory.

* * * * *

For the reasons which I have stated, I think it necessary that you should take into your serious consideration the condition of the finances, since I cannot doubt that they require to be very considerably strengthened. In view of the various contingencies to which I have referred, it appears to me that the improvement which is needed cannot be estimated at less than from 1½ to 2 crores of rupees, and that, if that amount were provided, and no further fall in exchange were to occur, you would even then be hardly able to set aside the annual surplus of Rx. 1,000,000 as a provision against famine, together with a sum of Rx. 500,000, which has always been regarded as a necessary margin for contingencies.

In these circumstances, and with this prospect, the question of restoring the equilibrium of your finances becomes one of extreme difficulty. Although an increase of taxation, to keep pace with the growth of expenditure, may ultimately be the only resource left to the Government, there are great and manifest political reasons against accepting this necessity, until and unless no alternative has been proved to be possible. But the only possible alternative, when the new demands to be met are of paramount urgency and importance, is to provide the money, or some of it, by a reduction of the outlay allotted or available for purposes less absolutely and immediately necessary. Your Excellency is no doubt well acquainted with the course and tenor of the correspondence on the subject of reduction of expenditure, which has, since June 1883, been from time to time passing between the Secretary of State and the Government of India; so that I need not remind you that my predecessors, in communicating the grave apprehensions caused by the steady growth of expenditure in India, have consistently and continuously laid stress upon this view of the situation, and have impressed upon the Government of India their conviction that nothing but the strictest economy could long avert "the serious evil of imposing fresh taxation." That these apprehensions should have been already fulfilled is to me, as it will have been to your Excellency, a matter of extreme regret; and I cannot deny that it materially increases my anxiety for the future.

I do not propose to lengthen this despatch by even a brief recapitulation of the correspondence to which I have referred; but I may remind your Excellency that

one of the main issues discussed (but not conclusively determined) was whether the system of quinquennial provincial assignments could be so adapted or revised as to reserve to the Supreme Government some further power of exceptional control over provincial expenditure, and to provide some method of uniting provincial with Imperial resources against emergencies that must call out the whole financial strength of the Empire. The Government of India did not directly contest the principle, which the Secretary of State proposed to lay down, that, where the choice lay "between taxation of "an inexpedient nature, deficit, or a recourse to provincial revenues," some interference with the assignments was justifiable; but they were decidedly opposed to any such interference during the term of the assignments then current. And thus, although Lord Randolph Churchill recorded, in his Despatch of the 10th of December 1885, No. 367, a very decided opinion as to the duty of all parts of the Indian Administration to unite in measures necessary to the common welfare, the correspondence on this point terminated with an understanding that, in revising the provincial arrangements in 1887, care would be taken to provide for the contingency of financial emergencies.

The arrangements have since been revised for another period of five years; they transfer to the Government of India a substantial additional income, with a share in the increase, during that term, of the main provincial heads of revenue. And the Government of India have declared that "the obligations of "Provincial Governments in the event of severe famine "or abnormal disaster, as provided in the Resolution "of 1881, will continue to be enforced." The point, however, which I desire now to press upon your Excellency's attention, is that the contingency which was anticipated in the papers to which I have referred, of inexpedient taxation being forced upon the Government of India to meet inevitable expenditure, appears now to be approaching, if, indeed, it has not already occurred. It is my conviction that this position imposes the strongest obligation upon all departments, Imperial and provincial, to avoid or postpone such a contingency by the closest economy and retrenchment. And, since I do not doubt that this view has been adopted and will be effectively acted upon by the Government of India in regard to all departments under their direct control, it seems to me impossible that the large expenditure of the local governments should remain beyond the scope of this obligation, or exempt from its pressure.

The experience gained since the system of provincial assignments was introduced, appears to me to show that, great as the advantages resulting from that system have been, there is, in the form which it has now taken, a fundamental defect which it is necessary to remedy. In India the conception has acquired increasing strength, that the arrangements between the Imperial and Provincial Governments are in the nature of contracts or agreements entered into for a term of years, and that it is only in the event of what has been called "abnormal disaster" that any interference with those contracts by the Imperial Government is justifiable. Such a system, while it holds out no sufficient inducements to provincial economy, makes no due provision for meeting the constantly changing requirements of the Government of India.

Strong illustrations of the result of this system are seen at the present time. The existing financial difficulties affect the Imperial Government alone, while the Provincial Governments are virtually relieved from all responsibility. The Government of India is compelled to have recourse to fresh and, perhaps, objectionable taxation, and is even then unable to place its finances in a satisfactory position, at a time when the Provincial Governments are in no financial embarrassment. They possess, under the guarantee of the Government of India, an ample and increasing income, the amount of which they can assume will never fall below a certain sum; and, unlike the Government of India, the necessity for meeting serious demands for additional expenditure, over which they have no control, can hardly fall upon them. They are under no inducement to reduce expenditure, or to refrain from devoting their steadily increasing resources to administrative and other provincial improvements. The finances of India must be dealt with as a whole; and it is not reasonable that the Provincial Governments should bear no share of the most difficult part of the financial responsibilities of the Empire. Scales of income and expenditure liable to no modification for a term of years are impossible for the Imperial Government, and, consequently, cannot be suitable for the Provincial Governments. The latter should be expected to manage their finances, as the Government of India and other modern Governments are compelled to do, according to the varying requirements of the time; and among the obligations which they must recognise would always be the necessity of maintaining a proper equilibrium in Imperial finance. Nor can I avoid the conclusion based on recent experience, that the uncertainties affecting some of the existing sources of revenue, as well as the demands for further charges, are likely in the future to lead, more frequently than heretofore, to the necessity of readjustments of revenue and expenditure, and that increasing embarrassment can hardly fail to arise, so long as the responsibility for providing the means for such readjustments rests on the Supreme Government alone.

For these reasons, I am decidedly of opinion that some system should be arranged, by which the Government of India, as occasion demands, should announce to the Provincial Governments the extent to which in each case it had become necessary to modify the normal arrangements, in order to meet the requirements of the Imperial Treasury, and the Provincial Governments should reconsider and readjust their expenditure and revenue accordingly. In the event also of the Government of India at any time anticipating any serious addition to the expenditure or diminution of income, it should be in a position to require the Provincial Governments to place a limit on the extent to which their income or their accumulated balances should be engaged in large or permanent outlay, or to which new charges should be incurred.

In making these observations, it is not my intention to suggest any restriction of the powers and responsibilities of the Provincial Governments in administering their finances. On the contrary, I am satified that, for successful financial management and political progress, nothing is more important than the continued development of the principle of decentralization which has been already applied with so much advantage. But I think it desirable that your Excellency should review the financial relations between the Central and Provincial Governments, with the view of placing upon the latter a more complete obligation for bearing their due share of those Imperial liabilities from which, under the present system, they are exempt.

I have no doubt that, when these views are placed before the Provincial Governments, they will not fail to acquiesce in the necessity of their aiding the Imperial finances to the full extent of their respective capacities whenever occasion may require. To what extent the requisite help could, in any case, be given by reducing expenditure, and how far additional taxation may sometimes be unavoidable, is a question which you and the Provincial Governments are most competent to discuss. The only alternative to retrenchment is taxation, which obviously must fall upon the provinces. The Provincial Governments will, undoubtedly, prefer to co-operate with the Government of India in strenuous exertions to provide the necessary funds from the existing revenues, instead of raising them by an additional impost upon their provinces. Between diminishing the expenditure and increasing the taxes, the choice, where any is possible, will scarcely be doubtful.

It is, therefore, to the curtailment of all expenditure, both Imperial and Provincial, that can be postponed or discontinued, and to the employment of all available reserves, whether of income or of accumulated balances, that your Excellency and the Provincial Governments will, I trust, have recourse, in the first place, for providing against deficiencies.

No. 23.

LETTER from the GOVERNMENT OF INDIA.
July 21st 1888, No. 193 (Financial).

In the debate in the House of Commons on March 13th last, the Under-Secretary of State indicated that the attention of the Government of India would be drawn to the comments of Lord Randolph Churchill upon the increase of expenditure in India.

2. The portion of the noble Lord's speech to which we understand that attention was specially drawn was as follows:—

"I will first take the increased cost of administration quite apart from Public Works. I find that under the head of administration, which covers only a limited area, there has been an increase in 15 years, from 1870 to 1885, of 440,000*l.* In the administration of law and justice in the same period, the increase has been 403,000*l.*, and under the head of police, 399,000*l.* The total increased expenditure under these heads is, therefore, 1,242,000*l.* The medical services have increased during the 15 years by 301,000*l.*, the political agencies by 414,000*l.*, the miscellaneous civil charges 83,000*l.*, and other expenditure 1,685,000*l.* The total increase of expenditure between 1870 and 1885 has therefore been no less than 2,483,000*l.* I pass to another branch of expenditure. Superannuation has increased in 15 years by no less than 1,953,000*l.* Therefore, the total increase in 15 years of expenditure connected with administration is 5,668,000*l.* In addition to that, I add the increased cost of the collection of revenue in the same period. Under the head of land revenue there has been an increase of 1,118,000*l.*, and of opium 1,146,000*l.* The increased cost of the collection of salt revenue is 58,000*l.*, making the total increase in the cost of collection 2,322,000*l.* Adding together the total increased expenditure for administration purposes and collection of revenue, I find the increase has been no less than 7,990,000*l.* in 15 years. It is there that large economies may and must be made."

* * * "I find that in 1870 the land revenue only produced 744,000*l.* less than it produced in 1885, but the cost of collection has increased by 1,188,000*l.* The cost of collection has therefore increased to a much greater extent than the revenue itself. In 1870 the cost of collection was 10 per cent. of the total, but in 1885 it amounted to 15 per cent., while the increase in the land revenue itself is less than 5 per cent. Those figures deserve great attention. So it is with regard to opium. Between 1870 and 1885, the opium revenue has increased by 863,000*l.*, but the increased cost of collection has been 1,146,000*l.*"

Sir John Gorst said—

"He was sure he was expressing the sentiments of the noble Lord, the Secretary of State for India (Viscount Cross), when he said that the speech the noble Lord, the member for South Paddington, had made that evening would be most salutary to the Government of India. He did not wish to criticise the statements made in that speech."

3. We think it a matter for regret that Sir J. Gorst should have given an answer which implied that the Government of India was open to the charge of unnecessarily increasing its expenditure.

4. We have been unable to find the precise figures given by Lord Randolph Churchill, who, we observe, states that he derived them from the paper of a distinguished gentlemen read before the Society of Arts. The figures we have adopted as the foundation of the following remarks are those of the 20 years' accounts prepared under your Lordship's orders for the presentation to Parliament, and they differ materially from those quoted by Lord Randolph Churchill; for instance, the increase in land revenue receipts during the 15 years in question was Rx. 1,960,048 according to our accounts, but is stated by Lord Randolph Churchill to have been Rx. 744,000 only; and the increase of expenditure under the same head was Rx. 656,091 and not Rx. 1,118,000. As we have been unable to reconcile the discrepancies which appear between all his Lordship's figures and those of our accounts, we propose to confine our remarks to an explanation of the variations in the revenue and expenditure of the years 1870–71 and 1885–86 as exhibited in the two statements accompanying this despatch, which are extracted from the compilation mentioned above.

5. Your Lordship will observe that the total increase of expenditure as shown in statement B. was Rx. 22,080,615, of which Rx. 16,978,428 occurred in India, 1,465,570*l.* in England, and Rx. 3,636,617 under the head of exchange. As our present purpose is to refute the charge of extravagance in our Indian expenditure, we do not propose to enter into a very detailed explanation of the increase in England; the increase under exchange is of course due to the fall in the gold value of silver—a circumstance beyond the control of the Government of India.

The increase of expenditure in India may be distributed among the following classes:—

	Rx.
(1.) Civil Expenditure -	- 2,945,244
(2.) Famine Relief and Insurance	- 1,500,500
(3.) Public Works Expenditure	- 9,671,674
(4.) Army Services - -	- 2,697,785
(5.) Provincial Adjustment	- 163,725
Total -	Rx. 16,978,428

6. Short explanations will dispose of the last four items. No. 2, *Famine Relief and Insurance*, represents the fixed sum of Rx. 1,500,000, which it was decided under Lord Lytton's Government to appropriate every year to construction of protective works against future famine and in reduction of debt or borrowing, and was treated from the year 1881–82 as a part of the ordinary expenditure of the year. The increase in No. 3, *Public Works*, arises almost entirely from the extension of railways and irrigation works, the outlay on railways in India having risen from Rx. 241,056, in 1870–71 to Rx. 8,386,159 in 1885–86, or by Rx. 8,145,103; and that on irrigation from Rx. 852,626 to Rx. 2,303,157, or by Rx. 1,450,531.

7. We observe that Lord Randolph Churchill noticed with satisfaction the decrease in the net expenditure on railways and irrigation works in 1885–86 as compared with earlier years, and the figures below, which bring together the transactions in India and England, including exchange on these works, indicate the gradually diminishing burthen on the public revenues due to the construction and maintenance of railways. The real benefit due to the vigorous prosecution of irrigation works cannot be set forth in the public accounts. For instance, it is impossible to distribute, otherwise than arbitrarily the land revenue between land revenue proper and irrigation revenue.

RAILWAYS.

——	1870–71.	1885–86.	Increase.
	Rx.	Rx.	Rx.
Revenue - -	2,867,000	13,684,000	10,817,000
Expenditure -	4,810,000	15,048,000	10,238,000
Net Expenditure	1,943,000	1,364,000	*—579,000*

IRRIGATION.

——	1870–71.	1885–86.	Increase.
	Rx.	Rx.	Rx.
Revenue (including Land Revenue).	547,000	1,588,000	1,041,000
Expenditure -	906,000	2,304,000	1,398,000
Net Expenditure	359,000	716,000	357,000

8. We observe that attention was also called to the increase of expenditure upon public works under the head "Roads and Buildings." As this is a question rather of policy than of finance, we do not enter upon it here. Your Lordship is aware that the increase of railways in India would have been quite ineffectual as an opening of communications, if it had not been accompanied by a large development of the local District Board system for the application of local rates to the construction and maintenance of roads all over India. The matter has, however, been separately dealt with in our Public Works Department, and reported to your Lordship.

9. A considerable portion of the increase in Army expenditure in 1885–86 was due to causes which were peculiar to that year. The expenditure in India in 1885–86 was greatly in excess of the average ordinary expenditure of the preceding 10 years, and exceeded the Budget estimate of the year by Rx. 3,085,600. The increase represents the extra charges incurred in

connection with the preparations on the North-West frontier and the expedition to Burma. About Rx. 200,000 may be reckoned as a permanent increase of expenditure in India owing to the augmentation of the army; the rest was of a character which can only be classified as recurring in so far as the political complications which necessitate it are recurring.

10. The increase on account of the Provincial Adjustment represents a decrease, and not an increase of expenditure. It means that Provincial Governments saved Rx. 163,725 more in 1885–86 than in 1870–71, and this additional amount had therefore to be charged off by transfer to their balances.

11. We now turn to the important question of the increase in Civil expenditure, which was Rx. 2,945,244 in India, 717,083*l.* in England, and Rx. 1,354,901 in Exchange, or Rx. 5,017,228 altogether. The most convenient manner in which this large increase may be analysed and explained is to arrange the several items of expenditure into the following groups:—

(1.) Those which have not increased at all.
(2.) Those which have increased merely in proportion to the increase in the population and the resources of the country.
(3.) Those which have increased to a greater extent, the increases being caused by special circumstances requiring explanation.

We have followed this arrangement in contrasting the expenditure of the two years under the several heads of Civil Expenditure in Statement C. accompanying this despatch, in which the charges under India, England, and Exchange are set forth separately, but the following explanations apply almost entirely to the variations in Indian expenditure. The total increase or decrease of expenditure (including England and Exchange) is stated in each case, but only very marked increases of expenditure in England are noticed, while the increases due to the fall in Exchange obviously need no explanation.

12. The heads of expenditure which fall within the first category are:—

(1.) Interest.
(2.) Refunds and Drawbacks.
(3.) Stamps.
(4.) Excise.
(5.) Customs.
(6.) Assessed Taxes.
(7.) Marine.
(8.) Territorial and Political Pensions.
(9.) Miscellaneous.

The aggregate decrease of expenditure under these heads was Rx. 2,710,504, and was the result of a decrease in India of Rx. 3,427,575, and an increase in England and Exchange of Rx. 717,071. The greater part of the decrease is under the head of "Interest," and is due to the burden of ordinary debt, as distinguished from Railway and Irrigation debt, having largely decreased, notwithstanding the increase in the charge for Exchange. This head is also largely affected by the extinction of the Civil and Annuity Funds, the interest payable on the balances at credit of the Funds having ceased on the transfer of the Funds to Government.

The reduction of expenditure resulting thereby is however only nominal, as there is a corresponding increase under the head of *Superannuations*, where the whole of the amounts paid as annuities now appear.

13. Under the second category, the following heads of expenditure fall. The total increase of expenditure was Rx. 2,036,945 as detailed below, of which Rx. 1,808,059 occurred in India and Rx. 228,886 in England and Exchange:—

	Rx.
(1.) Forests	290,327
(2.) Registration	76,894
(3.) Post Office	467,098
(4.) Telegraph	358,006
(5.) Mint	50,922
(6.) Education	407,665
(7.) Ecclesiastical	9,816
(8.) Scientific and other Minor Departments	200,044
(9.) Civil Furlough and Absentee Allowances.	74,322
(10.) Stationery and Printing	101,851

Except in the case of classes (7) and (9) above, which appear only on the expenditure side of the account, and have together increased by Rx. 14,082 in India and 19,082*l.* in England, the growth of expenditure in each case has, to a greater or less extent, produced a corresponding increase of revenue, the increase being Rx. 1,803,266 in India and 15,121*l.* in England, against increased expenditure of Rx. 1,793,977 and 32,905*l.* respectively. It should, however, be explained that the Telegraph receipts were abnormally high in 1885–86, in consequence of the increased number of State messages caused by the occupation of Upper Burma and the Afghan Boundary Commission. On the other hand, the increase in Post Office revenue would compare more favourably with the increase in expenditure if the receipts on account of district dâks were shown under *Post Office*, where the corresponding charges, amounting to about Rx. 100,000, are debited, instead of under *Provincial Rates*. The expenditure under *Education* it is obviously unnecessary to defend; and the same may, to a large extent, be said of that charged under *Scientific and Minor Departments*.

14. Your Lordship will doubtless agree with us in thinking that, considering the nature of these services, the increase of revenue alone sufficiently justified the increase of expenditure referred to. It is indeed obvious that most of these Departments must necessarily and from the nature of things expand concurrently with the progress of the country in civilisation, population, and internal prosperity. Increased expenditure is, under such conditions, inevitable, and in some cases loss of revenue, as in the case of the Post Office, the policy under which that Department is administered being to surrender a portion of its increasing revenue by reduction of the charges made to the public for the services it renders. Some idea of the expansion of the services rendered by the Post Office, the Telegraph, and the Mint Departments, may be gained from the following statistics of the operations of those Departments in the two years under comparison; and similar evidence could be advanced to justify the increased cost of many other Departments of the Government of India:—

Post Office.

	1870–71.	1885–86.
Number of Imperial Post Offices.	2,743	6,849
Number of Imperial letter boxes.	1,597	9,056
Number of articles given out for delivery.	84,562,634	233,800,803

Telegraph.

	1870–71.	1885–86.
Number of circles	15	17
Number of signal offices open.	205	634
Length of telegraph wire — Line	14,016	27,510
Length of telegraph wire — Wire	23,360	81,667
Number of messages	548,605	2,292,842

Mint.

	1870–71.	1885–86.
	Rx.	Rx.
Net imports of silver	941,924	11,606,629
Silver received into the Mint	1,071,549	9,432,000
Value of silver coinage	1,718,197	10,285,566

15. The remaining heads of Civil Expenditure which fall into the third category are the following:—

(1.) Assignments and Compensations.
(2.) Land Revenue.
(3.) Opium.
(4.) Salt.

(5.) Provincial Rates.
(6.) General Administration.
(7.) Law and Justice.
(8.) Police.
(9.) Medical.
(10.) Political.
(11.) Superannuation.

The total increase amounted to Rx. 5,690,787, of which Rx. 4,564,760 was in India, 627,282*l.* in England, and Rx. 498,745*l.* in Exchange. The increase in England occurred chiefly under Superannuations, and partly under General Administration.

(1.) *Assignments and Compensations.*—The increase in this head (Rx. 532,312) dates from the year 1878–79, and for the most part represents the payments made to Native Princes when the Northern Customs line was abolished—a reform which conferred great benefits on the country. The arrangements under which these payments were made brought in a corresponding increase of revenue under salt.

(2.) *Land Revenue.*—The increase is Rx. 656,091, and arises chiefly in connexion with allowances to district and village officers, and is due to the following causes: (1) the acceptance, as a charge against General Revenues, of the cost of the Patwari Establishment in the North-Western Provinces, by the remission of Rx. 310,000 of special taxation, out of which, until 1882, these charges were met, and of the cost of the Oudh Patwari Establishment amounting to Rx. 85,000 which had previously been borne by the zemindars; (2) the regularisation and inclusion in the accounts of similar charges in other provinces which are met from local cesses, but were not, in the year 1870–71, included in the accounts. The local cesses referred to come in as increased revenue, partly under land revenue, and partly under provincial rates.

(3.) *Opium.*—The expenditure under this head, which has increased by Rx. 1,043,249, depends on the quantity of opium produced, which was 44,323 and 66,994 chests in 1870–71, and 1885–86 respectively. The charges recorded in the Finance and Revenue accounts of those years do not, however, exactly represent the cost of the opium produced in them, as the year of opium operations does not correspond with the financial year, but runs from September to August. The actual cost to Government of the opium produced in the two years was Rx. 1,570,234, and Rx. 2,695,776 respectively, being 35⅗ and 40½ per chest, or Rx. 20·5 and Rx. 22·2 per maund. This difference almost exactly corresponds to the increased price from Rs. 4–8 to Rs. 5 a seer which it was found necessary in 1880–81 to pay to the cultivators for the raw produce. At present, owing to a succession of favourable seasons, the reserve stock is so high, that we may be able to reduce the price again to Rs. 4–8, for the present at any rate.

(4.) *Salt.* — The increase is trifling, being only Rx. 10,672; but in stating the real increase in salt expenditure, the salt compensations (Rx. 299,135 in 1885–86) shown above under *Assignments and Compensations* should be taken into account.

(5.) *Provincial Rates.* — The increase is small (Rx. 41,119), and first appears in 1871–72, in which year the expenditure rose from Rx. 11,964 to Rx. 47,958, and has not since varied materially from the latter figure. The extra expenditure represents the cost of collection in Bengal of the District Road cess, the levy of which was first authorised by Bengal Act X. of 1871. The increased expenditure produces a very much larger increase of revenue, *i.e.*, Rx. 1,648,766 in 1885–86.

(6.) *General Administration.* — The increase in this head is Rx. 339,318, of which Rx. 227,263 is in India, and Rx. 112,055 in England and Exchange. A portion of the increase in India is not of a permanent nature, but is peculiar to the year 1885–86, on account of the extra expenditure connected with the Rawalpindi Durbar, Burma war, &c., which necessitated a large outlay on account of service telegrams, and also to a special expenditure of about Rx. 10,000 under tour expenses, and Rx. 20,000 under civil secretariats. The cost of the offices of account and audit has increased owing (1) to the creation of the Assam Comptroller's office; (2) reorganisation of the Financial Department in 1876 and 1880; (3) the appointment of Auditors-General in connection with the appropriation audit; and (4) to natural increase in most of the offices, and especially in the Public Works Department, owing to the ever increasing amount of public business, and to the vast extension of railway operations. The expenditure under Allowances to Presidency Banks increased as a consequence of the growth of the public debt and savings bank deposits, and that under local funds owing to the establishment of the newly constituted district local boards. Excluding these last and the special charges of 1885–86 on account of the Rawalpindi Durbar and the Burma war, the increase in 15 years (1870–71 to 1886) would not be more than 10 or 12 per cent. The expenditure in England was largely in excess of that for 1870–71, owing to increased expenditure on telegraph charges. A portion of the increase was also due to the fact that the cost of printing currency notes, for which there was a heavy demand in 1885–86, appeared prior to 1882–83 under *Stationery and Printing.*

(7.) *Law and Justice.* — Of the total increase of Rx. 411,659. the most important was under civil and sessions courts, and is due to demands for additional tribunals. The important changes were the reorganisation of the judicial service in Bengal and Burma in 1882–83, and in the Punjab in 1884–85. The net expenditure in India under law and justice, taking into account receipts from court fees credited under stamps, was Rx. 659,448 in 1870–71, and only Rx. 288,532 in 1885–6, thus showing a net decrease of Rx. 370,916 during the 15 years.

(8.) *Police.* — The increase under this head is Rx. 369,136, and is due chiefly to local Governments having taken over as a provincial charge the police charges previously borne by municipalities. A portion of the increase is nominal, as the municipalities have generally been required to undertake corresponding services charged under *Education* and *Medical.* There has been a large increase under State railway police, the obvious and inevitable consequence of extension of railways; and in local funds expenditure, principally on account of the village police in the North-Western Provinces and Burma; and the increase in expenditure (which is of the same nature as that connected with village land revenue officers, *see* clause (2) above) has been more than counterbalanced by increase in the receipts under provincial rates.

(9.) *Medical.*—The increase of Rx. 162,605 is mostly under local, and represents the extension of hospitals and dispensaries provided for under Local Rates Acts. The corresponding receipts occur under provincial rates; excluding local, the real increase from 1870–71 to 1885–6 in the net expenditure has been Rx. 28,975.

(10.) *Political.* — The increase in this head was Rx. 782,562, but the expenditure of 1885–86 was altogether abnormal, special charges amounting to Rx. 492,490 having been incurred therein on account of the Afghan Delimitation Commission. Special subsidy to the Amir of Afghanistan, Rawalpindi Durbar, the Gilgit Mission, and the supply of artillery to the Amir. The following charges, aggregating Rx. 248,890, also contributed to the increase over 1870–71:—Ordinary subsidy to the Amir, Rx. 139,643; refugees and State prisoners, chiefly the ex-Amir Ayub Khan, Hussein Khan, and other Kabul refugees, and the ex-King Theebaw, Rx. 43,744; and charges on the North-West Frontier, Rx. 65,503.

(11.) *Superannuation.*—Of the increase of Rx. 1,342,064, Rx. 265,535 occurred in India, and Rx. 1,076,529 in England and Exchange. Progressive increase under this head is inevitable, and can only be avoided by a complete reconstruction of the conditions of public service. It is obvious that there are grave administrative questions involved which make it difficult to deal in an arbitrary way with this class of infructuous expenditure. As explained in paragraph 12, a material portion of the increase is due to the change in accounting necessitated by the transfer of the annuity and civil funds to Government. Moreover, a very large share of this increase is not a real increase of expenditure. The balances of the civil service annuity funds were transferred to credit of Government in 1874–75, and those of the civil funds and Bombay City Police Superannuation Fund in 1882–83, and 1885–86. The aggregate amount so transferred was over Rx. 8,000,000. This sum was not credited as revenue, but as an extraordinary receipt outside the revenue account. But the accounts now record the full liability incurred in exchange for the relief afforded to the funds on their surrendering their claims to the balances at credit with Government.

16. We have thus shown, we trust to your Lordship's satisfaction, that some of the heads of expenditure in our accounts have not increased at all during the 15 years ending with 1885–86; that the increases in some others are inseparably connected, partly as cause, and partly as effect, with the natural growth of revenue; while the increases in the rest were inevitable, and due to the ever-increasing pressure of public business in a country whose progress during the period under consideration has been at a rate which has seldom been equalled The increase of expenditure in England, a country of comparatively stable conditions, has been from 67,777,657*l.* in 1870–71 to 92,223,844*l.* in 1885–86 (*vide* page 7 of Parliamentary "Statistical Abstract" of 1886); a rate of increase almost as great as that shown by India, one of the most rapidly progressive countries in the world.

17. The Government of India has been at all times most anxious to discover practical methods of reducing expenditure, and in illustration of this statement we may mention that special investigations have repeatedly been made with this object in view, and that quite recently a very strongly constituted Committee of experts was appointed for this purpose. The report of this—the Finance Committee—which was received in the early part of of last year has since engaged our anxious consideration. The proposals of the Committee have already been given full effect to so far as they related to the provincial contracts. The scale of necessary provincial expenditure was carefully scrutinised, and the assignments from general revenues to meet that expenditure were framed with reference to the reduced scale. Reduced provincial expenditure, resulting in corresponding relief to the general revenues of the Empire, was therefore an immediate and necessary result of the revision. The Committee further investigated the conditions of work and the constitution of almost every department of the administration, and, though we are yet quite unable to forecast the eventual savings that will result from their labours, we can confidently say that they will be considerable.

18. We have presented this analysis to your Lordship in order that it may be understood that we have lost no opportunity of revising and contracting our expenditure, wherever that has been possible without unduly paralysing the administration of the country. We have already, in view of the embarrassments due to the continued fall in gold value of silver and a diminishing opium revenue, been compelled with extreme reluctance to enhance the tax on a necessary of life, and under such conditions, it seems almost superfluous to assure your Lordship, and the audience to whom Lord Randolph Churchill's remarks were addressed, that the responsibilities and anxieties of the situation necessarily enforce upon us a continuous and acute stimulus to vigilance and economy in administration. On the assumption that all the services hitherto so charged are to continue to be charged to general revenues, we do not think that the administration can be conducted more economically than it has been conducted by the successive Governments since 1870. We trust your Lordship will accept the figures and explanations we have given, as proof that, though face to face with difficulties, which are almost unparalleled—difficulties, moreover, which are entirely due to influences absolutely beyond the power of the Government to control or direct—we and our predecessors have not unsuccessfully conducted the administration of this country on a system which, in its economical aspects, will compare favourably with that of any administration in the world.

No. 24.

DESPATCH to the GOVERNMENT OF INDIA, October 31st, 1888, No. 273 (Financial).

I have considered in Council your Excellency's letter, dated the 21st of July, No. 193, on the subject of the increase of Civil Expenditure in India.

2. The passage to which you take exception in the remarks of the Under Secretary of State, when separated from the rest of the speech delivered by him on the occasion referred to, does not accurately represent what he said. Lord Randolph Churchill professed to refer, in his observations, to a paper read before the Society of Arts; but it has been ascertained that the figures he quoted were taken from the article by Mr. Jeans in the Journal of the East India Association for April 1887. In reply, Sir John Gorst said that, having received no notice of Lord Randolph Churchill's intended criticism of expenditure, he could not at the moment fully answer the charge that there had been a considerable increase in the Civil Expenditure, but he could readily see that the two sets of figures did not admit of a fair comparison, owing to the change in the form of accounts, the inclusion of exchange in the later period, and other circumstances; but he added that the importance of restricting all avoidable expenditure was engaging the attention of the Government of India and the Secretary of State in Council, and that he did not doubt that the remarks made by Lord Randolph Churchill would strengthen the hands of those authorities in their efforts.

3. Your Excellency may, no doubt, have observed that, at page 14 of the Explanatory Memorandum, of which copies have been already forwarded to your Government in due course, Sir John Gorst has dealt with this subject, and has shown that the statements of Mr. Jeans were greatly exaggerated.

No. 25.

DESPATCH to the GOVERNMENT OF INDIA, May 30th, 1889, No. 121 (Financial).

With the letter from the Government of India, dated the 18th of June 1887, No. 153, I received copies of the three volumes containing the recommendations made by the Finance Committee and the Finance Commissioner for the reduction of expenditure in India; and, in acknowledging the receipt of that letter, I observed that I should await with interest the opinion of your Government on the several subjects treated in the Reports.

2. The first of those volumes dealt particularly with the agreements made with the Provincial Governments, and recommended a revision estimated to produce a gain to the general finances of the State amounting to Rx. 690,100. As a result of the consideration of these proposals by your Government, the agreements made in 1887 showed a resumption to Imperial from Provincial revenues of sums amounting in the aggregate to Rx. 640,100, of which, however, for special reasons, credit could be taken for only Rx. 490,000 in the Estimates for 1887–88.

3. The Committee made further suggestions calculated, in their opinion, to give an additional annual saving of Rx. 157,120 in the provincial expenditure; but I am not aware whether any of these have been adopted by the Local Governments, or whether you have passed orders on these details.

4. In the Imperial and Miscellaneous Departments, treated in the second volume of the Report, the Committee recommended various reductions, of which, so far as estimates were given by them, the following is a summary:—

	Rx.
Public Works Department - -	275,700
Allowances for hill stations - -	64,660
Ecclesiastical Department - -	31,000
Salt and Customs Department -	23,880
High Courts - - - -	18,400
Presidency and house rent allowances, &c. - - - -	12,100
Various - - - - -	11,720
	Rx. 437,460

5. The Report of the Finance Commissioner, which formed the third volume, took up the work which the Committee had been compelled to leave unfinished, and made further suggestions, the saving from which he estimated at Rx. 225,590 in India, besides 100,000*l.* roughly calculated as the economy which might accrue from the abandonment of the Indian Troop Service in favour of a system of conveyance by hired vessels. This matter has for some time been under my consideration, but I have not yet come to a conclusion on the subject.

6. On some of the questions dealt with by the Committee, your Excellency has already communicated with me, or you have reported that they are under consideration.

7. I shall be glad to receive from your Government a brief report, stating to what extent the recommendations made in these volumes have been examined, and how far you have found it possible to carry them into operation. As I am desirous of having this information at an early date, I do not wish the report to be delayed for a complete inquiry into all the details, and it will be sufficient if in a general way you can indicate to me what has hitherto been the financial result of the inquiry conducted with so much care and labour by the Committee.

No. 26.

EXTRACT from DESPATCH to the GOVERNMENT OF INDIA, dated July 25th, 1889, No. 159 (Financial).

32. The review of the Estimates is satisfactory in so far that the deficit of Rx. 2,029,000, in 1887–88, has been converted into an equilibrium of Revenue and Expenditure, notwithstanding a fall in Exchange by more than a halfpenny per rupee since 1887–88, involving a net additional charge of Rx. 1,010,000, besides an increase of Rx. 557,000 in the cost of the Army, and of Rx. 647,000 in the outlay upon Special Defence Works. This result has, however, only been attained by additional taxation, and by large contributions from the Provincial Governments, my sense of whose co-operation in meeting the difficulties of the time I desire to place on record. At the same time, I notice Sir David Barbour's observation, in the 69th paragraph of his Financial Statement, that, looking to the portion of the assistance from the Provincial Governments which was received only for one year, and the amount of gain by exchange on the capital transactions of the subsidized Railway Companies which is of a temporary character, a deficiency exceeding a crore from these two causes is to be expected in the ensuing year, which must be otherwise met, and the outlay still remaining to complete the Coast and Frontier Defences is very heavy. While, therefore, strongly urging the importance of postponing all avoidable expenditure, at any rate until the Special Defence Works are more nearly completed, I would impress upon your Government the urgent need of devising forthwith some permanent method by which you may obtain from the Provincial Governments assistance, in a time of necessity, as suggested in my Despatch of the 12th of April 1888, No. 98.

	1887–88.	1889–90.
	Rx.	Rx.
Net Charge for Exchange	6,357,000	6,954,000
Gain on Remittance Accounts	745,000	527,000
	5,612,000	6,427,000
Additional pay to British Soldiers.	437,000	632,000
	Rx. 6,049,000	7,059,000

No. 27.

LETTER from the GOVERNMENT OF INDIA, October 15th, 1889, No. 328 (Financial).

We have the honour to acknowledge the receipt of Your Lordship's Despatch, No. 121, dated the 30th May 1889, asking for a brief report stating to what extent the recommendations contained in the Reports of the Finance Committee and of the Finance Commissioner have been examined by our Government, and how far we have found it possible to bring them into operation.

2. As regards the suggestions of the Finance Committee referred to in paragraph 3 of Your Lordship's Despatch estimated to yield a saving of Rs. 15,71,200 a year, we have the honour to state that orders have issued resulting in an immediate saving of Rs. 4,44,200 and an eventual additional saving of Rs. 1,30,600, making a total saving of Rs. 5,74,800 a year. Of the remaining proposals for reducing expenditure, a few may have been given effect to by the local Governments, without informing the Government of India, but most of them have been considered and abandoned as inexpedient.

3. In regard to the suggestions referred to in paragraph 4 of Your Lordship's Despatch, which were estimated to yield a saving of Rs. 43,74,600 a year, we have issued orders which result in an immediate saving of Rs. 3,73,600 and an eventual further saving of Rs. 1,41,800, making a total of Rs. 5,15,400 a year. Of the remaining proposals, a few are still under consideration. The large difference between the estimated savings and those actually secured is due principally to the following items:—

(i.) Under Ecclesiastical, the Finance Committee estimated an annual saving of over 3 lakhs of rupees. We have, however, decided that the Government of India should not at present move in the large question which the recommendations of the Committee raised.

(ii.) Under Public Works, the Committee estimated an annual saving of over 27½ lakhs of rupees, of which a sum of 4½ lakhs was to be secured by the abolition of the Military Works Department, and a sum of over 23 lakhs by the reorganisation of the establishment of the Public Works Department, which was roughly estimated to be in excess by 150 or 200 officers. It has been decided to maintain the Military Works Branch, though savings are to be attempted by making over Military Works to the Civil Works Establishment at places where they are small and unimportant, and *vice versâ*. A scheme for the reorganisation and gradual reduction of the Public Works Department Establishment was submitted to Your Lordship in our Despatch in the Public Works Department, No. 30, dated the 2nd April 1889; in this scheme the number of officers to be maintained was fixed at 740 instead of 887, a reduction of 147. The saving to be effected gradually by this reduction is estimated at about 11 lakhs of rupees; and the saving effected by what has already been done in this direction, together with the dismissal of temporary officers and the amalgamation of local and provincial establishments in the North-Western Provinces, is estimated to amount to about 4¾ lakhs of rupees. These amounts are in addition to the sum of Rs. 5,15,400 mentioned above.

(iii.) Under Simla Allowances the Committee's lowest estimate was 4 lakhs and the highest 5¼ lakhs. The examination of these allowances is still under consideration, but we are afraid that the savings considered possible by the Finance Committee will be found to have been placed too high. We have just considered the report of the Committee appointed to inquire into the subject of the travelling allowances to and from Simla, with the result that about Rs. 60,000 annually will be saved on this account against the Committee's estimate of possible savings of Rs. 1,05,000.

4. In regard to the suggestions of the Finance Commissioner referred to in paragraph 5 of your Lordship's Despatch, which were estimated to yield a saving of Rs. 22,55,900 a year, orders have been issued which secure an immediate saving of Rs. 9,49,230 and an eventual additional saving of Rs. 8,77,250, making a total of Rs. 18,26,480 a year. Of the remaining proposals, a few are still under consideration, but nearly all the suggestions in this section have been disposed of.

No. 28.

EXTRACT from DESPATCH to the GOVERNMENT OF INDIA, July 9th 1891, No. 129 (Financial).

That your Excellency should be able to meet expenditure on Public Works and Loans for improvements of various kinds, to the extent of Rx. 4,508,300, without the necessity for borrowing, is very satisfactory; and it is, of course, mainly due to the addition to the cash balances, which were already in excess of their usual amount, caused by the surplus revenue of 1890–91. This surplus resulted in a great measure from the sudden rise that occurred in exchange, and from the special contributions by the Provincial Governments amounting to Rx. 490,000. Seeing that that surplus was only of a temporary character, and that it was almost entirely obliterated by the great increase of Expenditure for which your Government had to provide in the Budget of the following year, I am of opinion that you could not have applied the cash balances in a manner better calculated to develop the resources of the country, and to improve the public credit. Since the foregoing observations were written, I have learnt from a memorandum, dated the 25th of May, that the surplus of 1890–91 is now estimated to exceed Rx. 3,600,000.

Had the surplus promised to be of a more permanent character, your Excellency would doubtless have found it possible to apply some portion of it in reduction of taxation; and, in consequence of your inability to do so, it becomes necessary to examine carefully the causes which have led to such a result. In the first place, you have once more been able to devote to the purposes of Famine Relief and Insurance the full sum of Rx. 1,500,000, for which provision was made by the Government of Lord Lytton, but for which a much smaller sum is all that has been available annually since 1886. In my Despatch dated the 12th of April 1888, No. 98, I suggested that, in view of the extension of the railways and the increased protection now given against famine, it might be sufficient if the allotment for this grant were fixed at Rx. 1,000,000, provided that there were also to be a surplus of Rx. 500,000 as a necessary margin against contingencies. Your Excellency has, however, preferred to set aside the whole sum of Rx. 1,500,000 for Famine Relief and Insurance, including the net charge entered in the Railway Revenue Account for the two railways constructed by companies as being specially calculated to secure the country against the effects of famine.

There is, however, one point which needs special consideration. In the despatch above mentioned, I expressed my opinion that when it should be found possible to provide the requisite surplus of revenue (which I took as Rx. 1,000,000), it might be better to revert to the original plan under which the whole sum was to be applied to the reduction of debt or the diminution of borrowing; in that case, any further allotment which you might have been able to make for expenditure upon Protective Railways would have been entered under the separate head of "Construction of "Railways charged against Revenue in addition to "that under Famine Insurance." On the present occasion, there were special reasons for increasing the grant for Railways; your Excellency had undertaken the construction of the East Coast line, and it was desirable not to delay its prosecution through want of funds, and you therefore proposed to spend 395 lakhs in the coming year; I had, however, on general financial principles, been compelled in my Despatch of the 3rd of July 1890, No. 131, to express my objection to a larger sum than 350 lakhs being entered under the head of Expenditure not charged to Revenue. Accordingly you have provided under that head for Rx. 3,500,000, of which Rx. 2,950,000 is devoted to railways; and under Famine Relief and Insurance you have allotted from Revenue Rx. 975,000 for the construction of protective railways, while for provincial lines there is a further expenditure of Rx. 210,500. Thus the total expenditure on Railways contemplated in 1891–92 is Rx. 4,135,500, and, including the allotments for Irrigation Works, the capital outlay on Public Works amounts to Rx. 4,750,500. While giving my sanction to this programme as an exceptional measure, I must draw your Excellency's attention to the risk of allotting to specific works nearly the whole of your surplus revenue, leaving so very small a margin as is shown in your present Budget.

The great decline in the price of opium has a most important effect on the finances; at the sale in March last the price of Benares opium was but Rs. 982 a chest, a lower rate than appears to have been realized since 1865; but I have learnt with satisfaction that some improvement has occurred at the more recent sales. The precarious character of this source of revenue is a subject on which my predecessors have repeatedly commented; and your Government has exercised a wise discretion in reducing the estimate considerably in this year. The gold value of the rupee, which rose above 18 pence on the average of 1890–91, has fallen below 17 pence; and, while admitting the impossibility of forming any trustworthy estimate on a matter which is dependent on such constantly varying elements of calculation, I cannot but fear that the estimate of 17¼ pence which has been taken in the Budget may prove to be too high as an average.

With all these reasons for caution in the framing of your Estimates, there is the greatest necessity for doing the utmost to keep the Expenditure down to the lowest limits compatible with good administration. Much stress is laid in the Financial Statement on the growth of the Military Expenditure, and not without reason, seeing that the charges for the Army, Military Works, and Special Defence Works, taken together, show an increase of Rx. 522,742 in the Budget of 1891–92 over the amount in the Accounts for 1889–90. An examination which I have instituted into the increase of these expenses during the last seven years shows that since 1884–85 the burden which they impose on the Revenues has been augmented by more than five crores of rupees, the total amount paid in 1884–85 having been Rx. 17,913,450, and that entered in the Budget for 1891–92 being Rx. 23,028,500. The year 1884–85 has been selected for comparison, because by that time the abnormal expenditure in connection with the expeditions to Afghanistan and Egypt had ceased, while the recent augmentation of the forces had not then been commenced.

The following table shows the main causes to which this increase of military expenditure is to be attributed:—

	Account, 1884–85.	Budget, 1891–92.	Increase.
Charges in India:	Rx.	Rx.	Rx.
Exchange on Payments in England -	966,984	1,964,300	997,316
Additional pay of British Troops, owing to fall in Exchange.	184,000	322,000	138,000
Total attributable to Exchange -	1,150,984	2,286,300	1,135,316
	Rx.	Rx.	Rx.
Extra Army Charges for Upper Burma.	—	400,000	400,000
Special Expeditions - - -	161,562	155,000	*—6,562*
Pay - - - -	5,986,398	6,814,241	827,843
Commissariat - - - -	2,202,383	3,138,560	936,177
Other Army Charges: Effective -	2,667,489	2,819,958	152,469
" " Non-Effective	821,797	915,741	93,944
Military Works: Upper Burma -	—	150,000	150,000
" " Other - -	943,344	968,900	25,556
Special Defence Works - -	—	360,000	360,000
Total Charges in India, excluding Exchange - - -	12,782,973	15,722,400	2,939,427
Charges in England:—	£	£	£
Effective, excluding Stores - -	1,151,760	1,321,800	170,040
Non-Effective - - - -	2,360,284	2,165,500	*—194,784*
Stores: Clothing, Medical, Commissariat, and Malt Liquor -	320,239	272,300	*—47,939*
" Ordnance and Miscellaneous	142,139	902,000	759,861
" Military Works - - -	5,071	8,200	3,129
" Special Defence Works -	—	350,000	350,000
Total Charges in England -	3,979,493	5,019,800	1,040,307
	Rx.	Rx.	Rx.
Total Military Expenditure -	17,913,450	23,028,500	5,115,050

The total increase of Rx. 5,115,050 may, then, be thus divided:—Exchange, Rx. 1,135,316; Upper Burma and Special Expeditions, Rx. 543,438; Pay and Commissariat Charges, Rx. 1,764,020; Special Defence Works in India, Rx. 360,000; Stores for Ordnance (including Miscellaneous) and Special Defences, 1,109,861*l.*; other Expenditure, an increase in India of Rx. 271,969, and a reduction in England of 69,554*l.* During these seven years the British force has been increased by 10,475, and the Native army by 18,895, making a total augmentation of the Establishment by 29,370 officers and men, raising it to about 15½ per cent. above the former strength; the charge for pay, apart from the addition on account of Exchange, has increased by nearly 14 per cent., while the Commissariat charges are heavier by no less than 42 per cent.; in other respects there is not a great increase of the payments in India. The reduction in England is largely due to the alteration made in 1885–86 in the method of paying for the pensions of the British forces, and will soon disappear; the effective payments are necessarily higher, owing to the increased force in India. As to the cost of the special operations in Upper Burma and on the North-West Frontier, I can only express my hope that their success will render it unnecessary to incur charges to the same extent in future years. But the increase in the payments caused by the re-arming of the troops, the improvement of the ordnance, and the special defences, amounting, if exchange be added, to very nearly Rx. 1,900,000, is more than, in my opinion, ought to be required in a single year, to the exclusion of the possibility of reducing the taxes, or adopting reforms in other departments of the State. I trust, therefore, that, when these immediate demands have been met, your Excellency will find it possible to effect a very considerable reduction in the military expenditure.

It is not, however, only under the Army that I find the growth of the charges very great, since in the group of Civil Departments the Budget for 1891–92 shows an increase of Rx. 582,774 over the Revised Estimate for the previous year. A very interesting correspondence* took place on this subject in 1883, when the various heads of Expenditure were examined in considerable detail, and explanations given respecting the causes of the rise then observed. Up to the year 1885–86 the charges continued to increase, mainly owing to the very heavy Political expenses; but from that date to 1889–90 there was very little fluctuation, the reduction in the political charges counteracting the increase under some other heads, and it is only during the last two years that the upward tendency has again become so strong and general in all departments. In the following table the expenditure in Upper Burma is omitted, for the sake of obtaining a clearer comparison:—

Civil Departments.	1881–82.	1885–86.	Increase in Four Years.	1889–90.	Increase in Four Years.	Budget, 1891–92.	Increase in Two Years.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
General Administration	1,542,100	1,732,909	190,809	1,737,088	4,179	1,743,300	6,212
Law and Justice	3,232,788	3,352,284	119,496	3,470,935	118,651	3,640,200	169,265
Police	2,553,861	2,852,724	298,863	3,025,844	173,120	3,190,200	164,356
Marine	664,207	524,700	*— 139,507*	627,167	102,467	671,500	44,333
Education	1,078,558	1,243,097	164,539	1,315,599	72,502	1,418,800	103,201
Ecclesiastical	162,227	163,846	1,619	159,532	*— 4,314*	167,200	7,668
Medical	684,726	747,568	62,842	768,552	20,984	815,400	46,848
Political	654,675	1,150,723	496,048	624,131	*— 526,592*	734,100	109,969
Scientific and other Minor Departments.	565,239	475,838	*— 89,401*	437,846	*— 37,992*	601,100	163,254
Total	11,138,381	12,243,689	1,105,308	12,166,694	*— 76,995*	12,981,800	815,106

The manner in which the augmentation of expenditure shown in the Estimates is expected to arise is shown in more detail in the following statement:—

	Imperial.	Provincial and Local.	England.	Exchange.	Total.
	Rx.	Rx.	£	Rx.	Rx.
General Administration	4,320	8,067	5,455	*— 11,630*	6,212
Law and Justice	3,568	166,543	*— 435*	*— 411*	169,265
Police	*— 330*	164,686	—	—	164,356
Marine	*— 46,164*	5,887	65,256	19,354	44,333
Education	*— 1,273*	104,251	228	*— 5*	103,201
Ecclesiastical	7,659	—	54	*— 45*	7,668
Medical	1,448	44,405	1,008	*— 13*	46,848
Political	112,930	3,460	*— 3,568*	*— 2,853*	109,969
Scientific and other Minor Departments.	159,537	10,646	*— 3,885*	*— 3,044*	163,254
Total	Rx. 241,695	Rx. 507,945	£ 64,113	Rx. 1,353	Rx. 815,106

The only serious additions to the Imperial portion of the charges are those under Marine caused by the subsidy of 60,000*l.* a year to the Admiralty for the Indian Government defence vessels, under Scientific and other Minor Departments arising from the allotment of Rx. 188,000 for the cost of the Census this year, and under Political where, though it is in some degree due to the levies stationed in Baluchistan, the greater part is nominal in consequence of the irregularity of the payments to the Amir of Afghanistan. When, however, I turn to the Provincial portion, I find a very heavy increase under Law and Justice, Police, Education, and Medical—and that not of an exceptional or temporary character—amounting with smaller sums under other heads to Rx. 507,945. The opportunity will be afforded next year of revising the agreement with the Provincial Governments, in such a manner as to give to the Imperial Government that assistance which they are bound to contribute towards the general expenses of the Empire; but the difficulty of making such arrangements is much enhanced if, during the preceding years, they have, in reliance on their improving revenues, made great additions to their permanent establishments, which will not admit of reduction when the necessity arises.

No. 29.

EXTRACT from the LETTER from the GOVERNMENT OF INDIA, September 23rd, 1891, No. 262 (Financial).

We have the honour to acknowledge the receipt of your Lordship's Financial Despatch, No. 129, dated the 9th July 1891, reviewing the Financial Statement for the year 1891–92.

2. With reference to the remarks in paragraph 29 of the despatch, we are of opinion that the reduction

* *See* Parliamentary Paper 352 of 1885.

of the Grant for Famine Relief and Insurance to Rx. 1,000,000 at the present time would be misunderstood by the public, and would be open to misconstruction, and we propose, therefore, to maintain it at Rx. 1,500,000. We consider it desirable that the net loss on the Bengal-Nagpur and Indian Midland Railways should be chargeable against the Grant so long as the amount is maintained at Rx. 1,500,000. But as the orders quoted below* authorise the inclusion of that loss in the Grant only up to the current year, we request that your Lordship will sanction the continuance of the present practice until further orders.

No. 30.

DESPATCH to the GOVERNMENT OF INDIA, November 5th, 1891, No. 213 (Financial).

I have considered in Council your Excellency's letter dated the 23rd of September, No. 262, in which you state that you propose to maintain at Rx. 1,500,000 the Grant for Famine Relief and Insurance, including therein the net charge on account of the Bengal-Nagpur and Indian Midland Railways; and, under the impression that the arrangement by which this charge is so included was sanctioned for only five years, you ask that the present practice may be continued until further orders.

2. I agree to this proposal, which, indeed, it was hardly necessary that your Excellency should now make to me, for, in your telegram of the 5th of March 1890, it was suggested "in future" to include the net loss on the railways, instead of the "interest for first five years only"; and my reply of the 11th of that month assented thereto.

3. The question whether the Famine Insurance Grant should thus be maintained at Rx. 1,500,000, or whether the appropriation of Rx. 1,000,000 is sufficient, can only be determined on a full consideration of the financial position in the coming year. If, however, it be possible, without interference with other measures of greater importance, to make the larger allotment, it is no doubt desirable in this manner to secure surplus revenue for the reduction of debt, which may be available in case of an emergency arising.

No. 31.

DESPATCH to the GOVERNMENT OF INDIA, June 16th, 1892, No. 103 (Financial).

From the Financial Statement published by your Government on the 18th of March, I learn that, for the third year in succession, your Excellency has been able to provide the full amount of the funds authorised for the construction of public works, without the necessity of raising a loan for the purpose. This satisfactory condition of affairs is ascribed by Sir David Barbour to various causes,† of a temporary nature, on the continuance of which no policy can be based; and it seems desirable to consider, with reference to the progress made in the construction of railways in recent years, and the present wants of the country, whether the annual allotment of 350 lakhs of rupees for State Railways and Irrigation Works is adequate, in addition to any sums that may be available from the revenue of the current year.

2. Before the investigation made by a Select Committee of the House of Commons in 1884, the limit of 250 lakhs had been imposed, in accordance with the recommendation of a previous Committee which sat in 1878 and 1879. The programme of the Government of India framed in 1884, while specifying a large number of railway schemes as likely to be remunerative, and therefore suitable for private enterprise, described in a Schedule A. 30 projects which they were desirous of undertaking, at an estimated cost of 27,632,450*l*.

3. The Select Committee recorded its opinion that the operations of the Government should not necessarily be limited to works expected to be remunerative, and that railways needed either for the development of the country or for its protection from famine should be made as required; that the amount which it was proposed to spend was moderate; and that the limit of 250 lakhs a year imposed on the amount to be borrowed might safely be enlarged, provided that no additional taxation were involved.

4. Scarcely had the Select Committee made its report, when the Government of India forwarded its scheme for frontier railways, involving an outlay of 443 lakhs, and showing that, including the sums required for irrigation and for military roads, as well as for railways generally, it was desired to spend within the next six years 2,243 lakhs of rupees. In view of the urgency of the circumstances, the Earl of Kimberley sanctioned* the extension of the maximum amount of borrowing to 350 lakhs in any one year, that being, in his Lordship's opinion, the extreme limit to which the resources of India could with prudence be pledged for such purposes; and, while stating that this must cover all the expenditure of the Public Works Department from borrowed money, for whatever purpose, he directed that borrowing should not be resorted to unless the amount could not be provided from revenue.

5. The limit was specially waived in 1885–86 and 1886–87, in order that rapid progress might be made with the frontier railways; but in some years, especially 1887–88 and 1888–89, large credits were received on account of lines transferred to Companies; so that, after deducting 334 lakhs thus obtained, the amount charged against borrowed money has not been much in excess of the prescribed sum of 350 lakhs a year, although the total outlay averaged 453 lakhs.

OUTLAY (in Lakhs of Rupees) on the CONSTRUCTION of STATE RAILWAYS and IRRIGATION WORKS.

Total	296	2,876	334	2,542	3,172	2,838
Annual average	42	411	48	363	453	405

During the time that has elapsed since the inquiry of the Select Committee, the programme laid down in Schedule A. of the letter from India in 1884 has been practically completed, a great extension of the Burma system has also been effected, and the mileage of railway has been raised from 10,832 open and 3,458 under construction on the 31st of March 1884, to 17,209 open and 2,795 under construction on the 31st of December 1891.

6. In the Statement A. which accompanied my Despatch of the 18th of August 1887, No. 216, a table was given showing the capital outlay on railways by the Government of India, either directly or through Companies guaranteed or subsidised by the Government, from 1874–75 to 1885–86; and I enclose a revised copy of that Statement bringing the figures to the

* Despatches to the Government of India, Nos. 367 and 378, dated, respectively, the 10th and 17th December 1885, and telegram dated the 11th March 1890.

† "(1.) The large surpluses of 1889-90 and 1890-91.
"(2.) The provision made for reduction of debt since 1889-90.
"(3.) The large increase in the Savings Banks deposits.
"(4.) The fact that the Secretary of State hopes to receive in 1892-93 considerable capital receipts from Railway Companies, only a portion of which will be required for expenditure next year.
"(5.) The fact that the Secretary of State intends to meet a portion of his expenditure in 1892-93 by drawing on his cash balance."

* Despatch to India, 27th November 1884, No. 148 (Railway).

close of 1891-92, of which a summary is given below, with the addition of the expenditure on irrigation. It will be seen that the average outlay since 1885 has greatly exceeded that of the previous years; and, although there has been a considerable reduction since April 1889, the annual outlay falls little short of six crores of rupees during the last three years.

CONSTRUCTION OF PUBLIC WORKS (in Lakhs of Rupees).

Outlay on Construction of Railways and Irrigation Works.	Five Years: 1874-75 to 1878-79.	Six Years: 1879-80 to 1884-85.	Seven Years: 1885-86 to 1891-92. Four Years: 1885-86 to 1888-89.	Three Years: 1889-90 to 1891-92.	Total: 1885-86 to 1891-92.

Grand total	568	674	1,003	591	827

7. During the seven years from 1885-86 to 1891-92, the increase of debt has amounted to Rx. 9,512,071 in India, and 38,133,055*l.* in England, or a total of 47,645,126,† of which 21,984,850*l.* was incurred for the purchase of Guaranteed Railways, and 7,123,978*l.* for advances to companies, leaving 18,536,298 which may be considered to have been spent in the construction of public works by the Government establishments. Out of the advances to Companies, 1,856,900*l.* was used for the discharge of debentures; and the total debt applied to new works was, therefore, about 23,800,000, or an annual average of 3,400,000.

DEBT.

†	1st April 1885.	31st March 1892.	Increase.
India - Rx.	93,183,984	102,696,055	9,512,071
England - £	69,271,088	107,404,143	38,133,055
Total	162,455,072	210,100,198	47,645,126

DISTRIBUTION OF DEBT.

Ordinary	78,391,209	76,881,617	— *1,509,592*
State railways	60,203,146	105,010,525	44,807,379
Irrigation works	23,860,717	28,208,056	4,347,339
Total	162,455,072	210,100,198	47,645,126

8. Besides this addition to the Public Debt, the liabilities of the Government have been augmented by sums amounting to 16,855,000*l.* having been raised by railway companies under the guarantee of the Secretary of State; so that the total obligations of the Government on account of Public Works have been enhanced by more than 40,600,000, or at the rate of nearly six millions a year. Your Government have, however, been careful not to add to the debt when such a course could be avoided; and the large surpluses in 1889-90 and 1890-91, amounting to 630 lakhs, were properly appropriated to the expenditure of the Public Works Department in the succeeding years, a course which, by rendering it unnecessary to incur debt, was in effect similar to the reduction of debt to which in this country such a surplus is by law applied.

9. As regards the revenue account of the railways, I find that the net charge, which has included an enormously increased sum for exchange owing to the fall in recent years that has taken place in the gold value of the rupee, was, nevertheless, only Rx. 687,291 in 1890-91, and is estimated at Rx. 528,800 in the year that has just closed; but, not considering it prudent to reckon on a continuance of the recent heavy traffic, you have in the Budget for 1892-93 taken the net charge at Rx. 1,574,500.

RAILWAY REVENUE ACCOUNT.

Years.	Net Charge. Total.	Net Charge caused by Exchange.
	Rx.	Rx.
1879-80	1,570,478	958,495

1889-90	1,852,601	2,517,090
Average of five years	1,625,752	2,199,529
1890-91	687,291	1,862,886
Revised, 1891-92	528,800	2,464,200
Budget, 1892-93	1,574,500	2,870,500

10. These figures show the cost at which during the last seven years the great line of railway communication between Bombay and Calcutta has been completed, Bhopal connected with Cawnpore and Agra, and branches thrown out, enabling the grain districts of the Central Provinces to send their produce to the coast and to Upper India; some 1,500 miles of railway have been constructed in the districts of the Deccan and Southern India, which are most liable to suffer from famine; a large system has been completed to the north of the Ganges; the scheme of frontier lines in the north-west of India has given a vast addition of strength to the security of the country from military invasion; and the newly acquired province of Upper Burma is being rapidly opened up and pacified; while at the same time about 800 miles of railway have been constructed by various Native States of India at their own expense.

11. It can, therefore, hardly be doubted, in my opinion, that the Earl of Kimberley was justified in his decision that the resources of the country could with safety be pledged to the construction of new works to a greater extent than in the past; but the figures do not induce me to think it prudent that the Government should now embark on a course which would involve liabilities being incurred more rapidly than in recent years. I am, however, as in various despatches I have explained to your Excellency, most desirous of restricting the sterling obligations; and, in so far as this can be done, their place might with great advantage be taken by debt on which the interest is payable in rupees. Your Excellency's Government is able to form a better opinion than I can, how far, with reference to the administration generally, it is practicable in any single year to borrow from the market, or whether to any degree money can be raised by debentures guaranteed in silver, as suggested in the papers which accompanied my Despatch of the 18th of February last, No. 22 (Railway).

12. Fluctuations of a large amount in the expenditure on the construction of public works have a tendency to disarrange the establishments, and often lead to a want of economy; but these considerations have less force if the money is entrusted to companies, who will execute the projects by means of temporary establishments, and who are not fettered in an equal degree by the financial rules which unavoidably must be applied to the distribution of a fixed annual grant among the Government works.

13. While, therefore, I deem it requisite to maintain the limit of 350 lakhs within which funds may be annually allotted to railways and irrigation works under construction by the direct agency of State officers, I see no objection to an enlargement of the total grants, to an extent not exceeding Rx. 500,000, in cases where you are satisfied that the money can without inconvenience be supplied to enable companies to undertake new lines of railway and extensions. It is with satisfaction that I observe a grant of 16 lakhs to the East Indian Railway Company in the Budget of 1892–93 for the branch to the Jherria coalfields. Another instance in which money may usefully be employed in this manner is for the connection of the East Coast line with Madras, as to which proposals have been made by the Madras Railway Company.

14. In conclusion, I desire to say that, apart from the question of the revenue which may be directly derived from an extension of the railway system, I attach great importance to the construction of new lines, not only on account of their effect on the general development of the country, but especially in view of their value in the prevention or mitigation of famines, of which during the last few months we have had the strongest evidence. On this, as on other grounds, I shall always be ready to give favourable consideration to any scheme which your Government may think it prudent and advisable to recommend for my sanction within the limits above stated.

No. 32.

EXTRACT from DESPATCH to the GOVERNMENT OF INDIA July 7th, 1892, No. 119 (Financial).

It is most satisfactory that your cash balances should have been in so flourishing a condition as to permit of your being able, for a third year in succession, to dispense with a loan in the Indian Market; and I am glad to find that the high price to which your 4 per cent. securities have risen has enabled you to make an offer to the proprietors of the 4½ per cent. Rupee Debt still outstanding for the conversion of their holdings into debt bearing interest at 4 per cent. I have in another Despatch, dated the 16th of June, No. 103, treated of the subject of using your surplus balances to make more rapid progress with railways under construction by companies.

From the very small surplus of revenue at the disposal of your Excellency, it is obvious that it was impossible on the present occasion to take any measures in reduction of taxation; and this is the more evident when it is remembered that it would have been impracticable to have shown in the Budget any surplus, without the assistance derived from the revision of the Provincial Agreements. On the duty of the Local Governments to assist the Central Government in meeting the constantly increasing charges of the Indian Empire, I strongly insisted in my Despatch of the 12th of April 1888, No. 98; and, while I am glad that the various administrations should be allowed to retain as large a share of their increasing revenue as may be practicable, with a due regard to all the Imperial interests, I must express my opinion that on the present occasion no excessive demands have been made upon them.

The 97th paragraph of the Financial Statement contains a most instructive table regarding the working of the Provincial Agreements made in 1887, from which I deduce the following figures:—

Provinces.	Five Years' Revenue, 1887-88 to 1891-92.			Five Years' Expenditure, according to Estimate.	Surplus of Actual Revenue over Estimate of Expenditure.	Disposal of Surplus.			New Agreements.		
	Estimate of 1887.	Result.	Excess over Estimate.			Contributions to Imperial Government.	Spent on the Province.	Added to Provincial Cash Balances.	Surplus of Revenue in 1891-92 over Estimates of 1887.	Portion allotted to the	
										Imperial Government.	Provincial Government.
	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.	Rx.
Central Provinces	3,484,500	3,755,800	271,300	3,484,500	271,300	30,000	232,500	8,800	119,200	22,700	96,500
Lower Burma	4,893,000	5,996,600	1,103,600	4,359,500	1,137,100	—	827,600	309,500	334,900	58,900	276,000
Assam	2,320,000	2,598,500	278,500	2,320,000	278,500	10,000	224,200	44,300	99,300	—	99,800
Bengal	18,842,000	20,424,700	1,582,700	18,842,000	1,582,700	100,000	1,482,600	100	517,700	51,900	465,800
N.-W. Provinces and Oudh.	16,200,500	16,001,900	*— 198,600*	16,060,500	*— 58,600*	—	*— 117,600*	59,000	63,300	56,900	6,400
Punjab	7,916,500	8,360,100	443,600	7,901,000	459,100	—	359,400	99,700	195,400	41,000	154,400
Madras	12,818,000	14,143,500	1,325,500	12,818,000	1,325,500	175,000	1,181,500	*— 31,000*	313,200	103,800	209,400
Bombay	18,402,500	19,508,200	1,105,700	18,402,500	1,105,700	175,000	1,091,500	*— 160,800*	399,200	131,100	268,100
Total	84,877,000	90,789,300	5,912,300	84,688,000	6,101,300	490,000	5,281,700	329,600	2,042,700	466,300	1,576,400

From this calculation it appears that, during the quinquennial period from 1887–88 to 1891–92, the Provincial Governments received Rx. 6,101,300 above the estimate of their expenditure on which the agreements of 1887–88 were founded; and that, besides making special contributions amounting to Rx. 490,000 in aid of the Imperial Government in 1890, they were able to devote Rx. 5,281,700 to measures for improving the administration and developing the country, and to strengthen their cash balances by the sum of Rx. 329,600 which is available for similar purposes in future years. It is further shown that their annual revenue has improved during the five years by Rx. 2,042,700; and that of that improvement they have been required to contribute to the general purposes of Imperial Finance only Rx. 466,300, or less than 23 per cent., leaving Rx. 1,576,400 or more than 77 per cent. at their own disposal. It is a source of satisfaction that your Excellency should find yourself in a position to deal with the Local Governments so liberally; and my only doubt is whether, in view of the general necessities of the Central Administration and the importance of effecting certain fiscal reforms as soon as it may be practicable, the portion of the improved revenue appropriated to Imperial purposes might not with propriety have been fixed at a higher amount. I fully share in the view expressed in Sir David Barbour's statement (at paragraph 98), that it would have been desirable, if possible, to allow the Local Governments to spend the whole of their surplus revenue on measures of utility; and I regret that the necessities of the Imperial Government should have made this impossible. It must, in this connection, be borne in mind that the rate of exchange, which in the Budget of 1887–88 was fixed at 1*s.* 5½*d.* the rupee, has for the present year been estimated at only 1*s.* 4*d.*, and that the difference between these two rates on a remittance of 17,000,000*l.* considerably exceeds two crores of rupees. while at the rate of 1*s.* 3¼*d.*, which is about the average at which the bills have been sold up to the present date, the increase of Expenditure due to the fall in Exchange would be 344 lakhs of rupees. It is with satisfaction that I learned from your telegram of the 16th of June, that at present you

see no reason to alter your estimate of a small surplus in the current year, notwithstanding the recent fall in the gold price of silver.

The extreme importance of the subject of Exchange renders it necessary that the utmost economy should be exercised in every branch of the service; and I desire especially to enforce this view with reference to the military expenditure. While the established strength of the Army has remained practically unchanged since the Budget of 1887-88, the charge for the effective services is now higher than at that date by Rx. 938.400 in India, and by 511,200*l.* in England; and, including Exchange, the net payments for the Army, effective and non-effective together, now amount to more than 42 per cent. of the total net Revenue of India. In my Despatch of the 9th of July 1891, No. 129, paragraphs 32 to 34, I drew the attention of your Government to the great increase which had taken place in recent years in the military expenditure; and I have again to beg that your earnest attention may be given to this subject.

No. 33.

EXTRACT from DESPATCH to the GOVERNMENT OF INDIA, NOVEMBER 3rd, 1892. No. 143 (Military).

In sanctioning this increase of expenditure, I have accepted the opinion of your Government that it is necessary in order to keep your Transport Service in a state of efficiency, but I would at the same time invite your Lordship to consider the effect of these and similar increases of pay on other establishments of the Army, on the Civil Departments of the State with which they compete for labour, and especially in regard to the pay of the native soldiers. I understand that the pay of these drivers on field service will be Rs. 10. 8 per mensem, as compared with Rs. 8. 8, the pay of a private of Native Infantry, field batta being included in both cases.

I notice also in the attached correspondence that the pay of the Government servant is contrasted with the market rate of wages, no weight being allowed to the fact that the former carries with it deferred pay in the shape of pension. If the market wage for temporary or non-pensionable work is to be given, the Service should not be considered as pensionable.

In connection with this case, my attention has been forcibly drawn to the very large number of similar proposals for increase to pay and establishments which have been sanctioned of late years. A list of the principal items is attached.

These several measures may have been unavoidable, but their numbers and the large and constantly increasing expenditure which they have involved, point, more especially in the existing financial pressure, to the need for the utmost caution in accepting the recommendations of heads of departments and others for any further increase. Where such increases are found to be absolutely indispensable, a most searching inquiry should be made in each case as to whether the cost cannot be met by some equivalent economies. It is only by a rigid scrutiny of such demands, and a constant re-examination of all possible means of retrenchment, that the military expenditure in India can be kept within its present limits.

The subject of the continual increase of expenditure on the Army was prominently brought to the notice of your Government in Viscount Cross's Despatches in the Financial Department, dated the 9th of July 1891, No. 129, paragraphs 32 to 34, and the 7th of July 1892, No. 119, paragraph 24. On the latter occasion he observed that, since the Army was raised to its existing strength, the effective charges in India had been increased by no less than Rx. 9,38,400 a year, a figure which it is only necessary to state in order to show how essential it is that proposals for any permanent augmentation of the cost should be admitted only in case of absolute necessity.

No. 34.

LETTER from the GOVERNMENT OF INDIA, March 8th, 1893, No. 39 (Military).

With reference to the Viceroy's telegram of the 5th instant, we forward herewith a Minute by Lieutenant-General Brackenbury, showing the reasons for which he considered it impossible to accept the proposal of Sir David Barbour, that the India Military Budget net estimate for 1893-94 should not exceed the net budget estimate for 1892-93 (all charges on account of military operations or expeditions being excluded from both estimates), and for which he proposed to increase the net Budget estimate by a sum not exceeding 54½ lakhs.

2. The proposed items of increase to the military estimates were before us at the time when we arrived

at the decision communicated to your Lordship in our telegram above referred to, Sir David Barbour and Sir Charles Pritchard dissenting, as stated in the telegram.

Enclosure in No. 34.

MINUTE by Lieutenant-General BRACKENBURY.

I will endeavour to state as briefly as possible the reasons which made it impossible for me to accept the Honourable Sir David Barbour's proposal that the India Military Budget net estimate for 1893–94 should not exceed Rs. 14,26,50,000, that being the amount of the net budget estimate for 1892–93; all charges on account of military operations or expeditions being excluded from both estimates.

2. The net Military Budget estimate consists of two parts, receipts and expenditure. The receipts estimated for are the probable amounts to be received under existing regulations in the several heads shown in the abstract appended to this minute. They are calculated by the Accountant-General, they are checked by the average actuals of the past three years, and verified by the Comptroller-General, with whom and the Accountant-General in the Military Department rests the amount to be estimated. It is not in the power of the Military Department, or of the Member of Council in charge of the Department, or of the Governor-General in Council to alter the amounts which will probably be received, unless they alter the regulations under which those receipts are obtained. Whether it is or is not possible so to alter those regulations as to increase the receipts is a question into which I need not enter here. It would clearly be unwise to alter the regulations hastily and without due consideration, and it is impossible that due consideration should be given to the questions involved, in the few weeks intervening between the date of Sir David Barbour's proposal and the final closing of the estimates. The receipts for 1893–94 must therefore be taken at the amounts estimated by the Accountant-General in the Military Department and the Comptroller-General in consultation together.

3. The expenditure estimated for is divided into two heads, effective services and non-effective services. The amounts estimated as required for non-effective services are based upon the known requirements under existing regulations as to rewards and pensions, checked by the actuals of the past three years. It is impossible to alter these figures without altering the existing pension regulations, and any alterations which might be made in those regulations, other than the actual taking away of pensions already granted, would have no immediate effect. It may, therefore, be confidently stated that it is not in my power or in the power of the Governor-General in Council to make any alterations in the amounts estimated for for non-effective services. Any alteration to be made in the estimates must therefore be made in the estimated expenditure on effective services.

4. The expenditure for effective services is divided, as shown in the accompanying abstract, into 15 heads or grants:—

Grant 1, Army and Garrison Staff, and *Grant* 2, Administrative Staff, contain only the pay and allowances of existing sanctioned establishments, and no alteration can be made in them except by altering the establishments or the allowances sanctioned by the Government of India.

Grant 3, Regimental Pay, Allowances and Charges, contains only the actual pay and the sanctioned allowances of existing establishments. Deduction is made for the probable number of officers and men absent during the year, and the totals are checked by the average actuals of the past three years. No alteration can be made in this grant except by reducing the number of troops or reducing the allowances sanctioned by existing regulations.

Grant 4, Commissariat Establishments, Supplies and Services, contains the pay and allowances of the existing commissariat establishments, the estimated amounts required for food for the troops, and forage for the horses and transport animals, for hire of transport, sea and inland water charges, railway charges and incidentals. The amount for establishments cannot be altered without reducing the establishments or the sanctioned allowances. The amount estimated for supplies is based upon the existing scales of rations and forage, and is checked by the actuals of the past three years, allowance being made for any known cause of deviation, such as increasing or decreasing price of food and forage. The amount estimated for commissariat services is similarly based upon existing regulations, checked by past actuals. The amounts for supplies and services are as near the actual requirements as it is possible to make them, and any deduction made from them would only result in a false estimate being put forward, in which case money not estimated for would compulsorily be spent.

Exactly the same arguments apply to *Grant* 5, Remount and Veterinary; *Grant* 6, Clothing; *Grant* 7, Barrack; and *Grant* 9, Medical Establishments, Supplies and Services.

Grant 10, Ordnance Establishments, Stores and Camp Equipage, provides for the authorised establishments, including labour, of the Director-General and Inspectors-General of Ordnance, of the arsenals and the manufacturing establishments; and for the establishments of the fort armaments. The estimate for stores, which includes repairs, is based upon the actual requirements for keeping up sanctioned reserves in arsenals and depôts, and for the materials required for manufacture in the several manufacturing establishments. No alteration can be made in this grant except by reducing establishments or reducing sanctioned reserves or throwing the factories out of work, by not providing the materials for them to work upon.

Grant 8, Administration of Martial Law; and *Grant* 11, Ecclesiastical, contain only the pay and allowances of the Judge Advocate-General's Department and the Chaplains' Department, respectively.

Grant 12 contains only the pay and sanctioned allowances of educational staff (Director of Military Education, Superintendents and Inspectors of Schools and Garrison Instructors) and the charges of the Lawrence Military Asylums, and Orphan School, and donations to educational institutions. *Grants* 8, 11 *and* 12 cannot be touched without altering existing regulations.

Grant 13, Sea Transport Charges. Contains charges for passage money, for Her Majesty's Indian troopships, and for medical comforts, bedding &c., supplied to troops proceeding by sea in chartered vessels. This is based upon the average actuals of the past three years as regards all the charges except Indian troopships, which are based upon the actual requirements for the year's relief.

Grant 14, Miscellaneous Services, contains the charges for examination of military officers in the Native languages, purchase and rent of lands and buildings, munshi allowance to officers and men in passing in Native languages, camps of exercise, contingencies and a number of minor items. This grant is not capable of any sensible reduction. It varies chiefly according to the amount of charges for military operations and expeditions which are included in it, and these, which depend upon the policy of the Government of India, were, by the mutual consent of Sir David Barbour and myself, excluded from the present discussion.

Grant 15, Volunteer Corps. This grant includes existing establishments and capitation grants of existing volunteer corps, and is not capable of any reduction.

5. The estimates thus prepared after allowance has been made for an increase of 7½ lakhs, due to rise in the price of food and forage in India, for 8¾ lakhs for increased outturn of stores due to changes in armament and equipment, and for the increases due to automatic fluctuations, show an increase over the estimates of 1892–3 of 1¼ lakhs, without including one new item of expenditure.

6. I have thus endeavoured to show that no reduction can possibly be made in the estimates for 1893–4, which show an increase of 1¼ lakhs before any new items are included in them, except by one of the following methods:—

(*a.*) Reducing the establishment of the army.
(*b.*) Reducing the pay of the army.
(*c.*) Reducing allowances.
(*d.*) Reducing the authorised reserves of stores.
(*e.*) Throwing the ordnance factories out of work.

7. Of these methods it is for the Governor-General in Council and the Secretary of State for India to

decide, after due consideration, whether (*a*) any reduction of the army is possible, and if so, how that reduction can best be made. But it is clearly impossible to make any such reduction before the closing of the forthcoming estimates.

8. As regards (*b*) a reduction of pay, we have only recently represented to the Secretary of State the hardships which the European officers of the army are suffering in consequence of the depreciated gold value of the rupee. The pay of the European troops is unalterable. We have recently found it necessary to make an addition to the pay of the Native cavalry; and an increase to the pay of the Native infantry was advocated by Sir George Chesney in his valedictory minute, and has been pressed upon my attention during the last two years by the Commander-in-Chief. I hold, therefore, that any reduction under (*b*) is impossible.

9. As regards (*c*) allowances, I will not say that it might not be possible, after most careful consideration, to make some reduction under this head, but it would be infinitesimally small. It would only affect future holders, and would probably cause an amount of discontent out of proportion to the financial relief it would afford. Reductions under this head have from time to time been made, but, on the other hand, this item has increased owing to the employment of troops in remote parts of our frontiers, such as Baluchistan and the Naga, Chin and Lushai Hills, where the expenses of living were found to be so great as to make it necessary to give some compensation for them.

10. As regards (*d*) depletion of the reserves of stores, a considerable reduction in sanctioned local reserves was made some time ago consequent upon increased facilities of communication. On the other hand, additional reserves were added as lately as 1891 to place us and keep us in a condition to be ready for rapid mobilisation. Unless we are to undo the good work done that year, and to go back to the condition of unreadiness for mobilisation, I do not see where any reduction can safely be made. It would of course be possible to say that, in consequence of financial difficulties, we would allow our existing reserves to be used up during the forthcoming year, and would not replace them. There is always a great temptation to Governments to take this course under financial pressure, but this is probably the very worst course which can be taken to meet a financial strain, even at home where such stores can be rapidly replaced; and here, where we are dependent on England, and upon the very limited outturn in this country for replacing stores, such a policy would, in my opinion, be suicidal.

11. As to (*e*) throwing the ordnance factories out of work by not purchasing the stores for manufacture in ordnance factories, any such course would be equally suicidal. It would simply mean that we should not replace the ammunition expended in practice, that we should reduce our stores of powder, projectiles, small arms, ammunition, clothing, harness, and saddlery, that we should destroy, by reducing the establishments of our factories, our manufacturing power, and that we should be absolutely unready to meet any emergency which might arise. We are endeavouring to make India as independent as possible of England for her military requirements; and experience has shown that there is considerable economy in doing so. Any tampering with the work of our ordnance factories would be fatal to the object we have in view.

12. I trust that from the above statement it will be clear that the only margin left upon which any possible reduction can be made in the estimates for 1893–94 is in the new items which, under the authority of the Governor-General in Council, have now been added to those estimates. Those items amount to 53 lakhs. Lists showing the items in detail were laid before Council, and all that it seems necessary for me to do in view of what I have above stated, is to show the necessity for the introduction of those items into the estimates.

13. The first item to which I would call attention is one of 24 lakhs, increased provision for the pay of British troops, due to the fall in the rate of exchange from 1*s.* 4$\frac{3}{4}$*d.* to 1*s.* 2$\frac{3}{4}$*d.* This item is unfortunately not under the control of the Government of India, and must be admitted. This leaves 29 lakhs of increased expenditure, which is apparently within our control, but a large portion of it is in reality not within our control.

14. The following items cannot be touched by us:—

	Lakhs.
Clothing due to British troops under new system of supply sanctioned by Secretary of State, and authorised in India Army Circular 165 of 1892	2$\frac{3}{4}$
Transfer from home estimates for purchase of tinned beef and mutton from the Colonies instead of home, ordered by Secretary of State	$\frac{3}{4}$
Increased pay to the Garrison Artillery given by Royal Warrant	1$\frac{1}{2}$
Pay for Inspectors of Ordnance Machinery on their way out from home	$\frac{1}{4}$
Increased expenditure on account of occupation of Gilgit	3$\frac{1}{4}$
Maintenance of field telegraph lines in Burma, Sikkim, &c.	1
Replacement of fort and reserve stocks and mobilisation reserve stock, not included in the estimates	$\frac{3}{4}$
Change in clothing due to new equipment, &c.	$\frac{1}{4}$
More horses to meet the estimated increase of casualties in 1893-94	$\frac{1}{2}$
These items amount to	11

leaving only 18 lakhs, to which it is reasonably in the power of the Government of India to refuse sanction.

15. Of this sum is for the reconstitution of the Hindustani regiments of the Bengal Army, sanctioned by the Secretary of State in 1891, and which, owing to the state of unrest amongst those regiments from whom it has been impossible to keep the proposed change secret, it is not considered desirable any longer to postpone.	1$\frac{1}{4}$
Maintenance and improvement of conservancy arrangements in cantonments account for about	2$\frac{1}{4}$
This question has been pressed upon us by the sanitary authorities; we commenced the work of improvements last year, and it is impossible to postpone extending it, in view of the serious amount of enteric fever, considered to be largely due to defects in the existing sanitary arrangements.	
Extension of the system of voluntary cantonment general hospitals in the three presidencies, introduced at some stations last year with great success, and in which we have every reason to hope will be found some mitigation of the terrible ravages of contagious diseases amongst our troops	1
Provision of lines for Native regiments, who are living at present under most grievously insanitary conditions which cannot be allowed to continue longer	2$\frac{1}{2}$
Annual grant for camps of exercise in the three presidencies	1
Increase in the number of volunteers, and the continued grant of additional concessions which were given to them last year with most beneficial effect, and which could not be again withdrawn without serious injury to the volunteer movement	1$\frac{1}{4}$
Provision of mountain guns to be attached to the troops in the Chin Hills; experience having shown that great loss of life occurs from stockades being attacked without artillery (nearly)	1
Conversion of a Madras infantry regiment into a local Burma battalion; exceptional opportunity being now afforded by the contemplated reduction of eight companies of Burma military police	$\frac{1}{2}$
Small increases found absolutely necessary in the ordnance establishments, in consequence chiefly of the increased manufacture in India; and the provision for the manufacture of blank ammunition in those factories instead of regimentally, as under the present system many accidents have occurred, and serious damage has been caused to the rifles	1$\frac{1}{2}$
Increased provision for grass-farming operations in Bengal, rendered necessary by the fact that owing to increased cultivation in the neighbourhood of cantonments, grass can no longer be procured by grass-cutters as formerly, and from which an ultimate saving is expected	1$\frac{1}{2}$
Improvements to be made in the system of artillery practice, and musketry training of the reserves	$\frac{1}{4}$
Improvements in the recruiting system of the Native Army	$\frac{1}{4}$
	14$\frac{1}{4}$

16. This accounts for 14¼ lakhs out of the 18 over which it is possible for the Government of India to exercise any control. The remaining 3¾ lakhs include Rs. 37,500 for the continued use of the Karachi route, which it is essential to keep up in view of its great importance in the event of mobilisation; Rs. 53,690 for the purchase of land for camping grounds and for rifle ranges, due to the increased range of the Magazine rifle; Rs. 40,000 for an increase to the establishment of veterinary officers, sanctioned by the Secretary of State; and Rs. 23,500 for victualling, godown, and cattle establishments in the Chin Hills. The balance of about 2¼ lakhs is made up of small items, all of which have been proved to my satisfaction to be necessary for the efficiency of the army.

17. In order to keep down increase in the estimates to the 54½ lakhs for which I asked,* and which has been sanctioned by the Governor-General in Council, it was necessary to exclude provision for the reserve of horses, which I am most anxious to establish whenever money is available, and the need of which has been shown by the fact that we could not mount a European cavalry regiment in October next, if it were sent out to replace the 7th Dragoon Guards ordered with their horses to Egypt, without depleting the establishments of other British cavalry regiments, and to postpone other items amounting to over 50 lakhs, which it would have been desirable to introduce into the estimates, had money been available.

18. No one can be more sensible than I am of the necessity for economy in military expenditure. I have resisted every proposal which I do not consider to be necessary for the health or efficiency of the army, and shall continue to do so. Every effort shall be made to find any causes of expenditure which can be reduced; but while I hope to see a sensible reduction shortly in the home estimates, when our expenditure on special defences has ceased, when the re-armament of our infantry and artillery is completed, and when our manufacture in India has more completely replaced manufacture at home, I cannot, as I said in a recent note, hold out any hope that the present increase to our Indian military estimates will be final. The maintenance of the special defences has involved additional establishments, and the cost of those establishments, of the maintenance of the works and the repair of the armaments, falls upon the Indian Budget estimate. Station practice from largely-increased number of guns using very costly ammunition is in itself a considerable item. All our weapons, both for artillery and infantry, are more costly than those which are being replaced by them, and the cost of maintenance and repair is correspondingly increased. The cost of ammunition will largely increase with the introduction of solid-drawn cartridges for cordite. Until we have supplied all the troops with cordite cartridges, and obtained a sufficient reserve of cordite both for infantry and artillery, we must maintain our stocks of powder. Prices of articles purchased by the commissariat, and compensation to Native troops for dearness of provisions, are evidently rising. In consequence of the rise in price of food it is difficult to obtain followers at the old rates, and I am pressed on all sides to grant them higher rates of pay. The volunteers in India continue to increase to a most satisfactory extent, and unless we are to stop that increase, there will be a corresponding growth in the estimates. The Commander-in-Chief has laid before me papers showing that the quality of the recruits for the Native Army is falling off, and can only be raised by granting higher pay to the sepoy. With the rupee at 1*s.* 2¾*d.* we cannot expect to continue to get the horses and mules we import from abroad for the same price at which we bought them when the rupee was 1*s.* 7*d.*, as it was when the present price was fixed. We must spend money on pure water-supply and sanitary improvements in our cantonments, and we must house those Native troops whose lines have fallen into a dangerously insanitary condition.

19. If any sensible reduction is to be made in our military estimates, or even if they are to be kept down to the figure of the estimates of 1893-94, one or two measures must, in my opinion, be adopted. Either the exchange value of the rupee must be raised, every farthing of exchange making a difference of 3 lakhs in our military estimates, or the army in India must be reduced. In neither case does the final word rest with the Military Department.

H. BRACKENBURY,
Lieut.-General.

* The actual increase, exclusive of field operations, is Rs. 54,26,000. The Home estimates show a decrease of 90,000*l.*, or about 14¼ lakhs, so that the total net increase on the Home and Indian estimates is under 40 lakhs, of which 24 lakhs is due to fall in exchange.

No. 35.

LETTER from the GOVERNMENT OF INDIA, April 5, 1893. No. 63 (Military).

With reference to paragraph 9 of your Lordship's Military Despatch, No. 143, of the 3rd November 1892, and in continuation of our Military Despatch No. 177 of the 2nd idem, we forward for your Lordship's information an "Analysis of the expenditure on the army in India from 1884-85 to 1892-93 inclusive, drawn up by the Accountant-General in our Military Department. The analysis includes figures regarding expenditure on "Military Works," "Special Defences," and "Strategic Railways." We also forward a "Brief "note on the causes of increase in gross military ex- "penditure in India since 1887-88" as appearing in the military accounts and estimates.

2. We would explain that we are prosecuting further inquiries into the causes of the increased expenditure, and a further communication on the subject will be made in due course.

Enclosure in No. 35.

ANALYSIS of the EXPENDITURE on the ARMY in INDIA since 1884-85.

The three statements attached (marked A., B., C.) show the strength of officers and British and Native troops from the year 1884-85 to 1892-93; the actual annual military expenditure *in India* in round numbers under each grant from 1884-85 to 1891-92, and the estimated expenditure in 1892-93 as taken in the Budget estimate for the year; the same information as regards expenditure *in England;* and the total actual and estimated expenditure *in India and England* taken together for the same period.

2. Comparison of past and present expenditure:—

Effective Services.

GRANT 1.

Army and Garrison Staff.

	Rx.	
In 1884-85	485,100	Actuals.
,, 1885-86	481,300	,,
,, 1886-87	503,900	,,
,, 1887-88	514,200	,,
,, 1888-89	488,100	,,
,, 1889-90	481,300	,,
,, 1890-91	484,700	,,
,, 1891-92	498,100	,,
,, 1892-93	517,900	Estimate.

3. In 1885-86 the expenditure fell owing to the abolition of the Deesa Brigade in the Bombay Circle; the transfer of two forts in the Peshawar District to the civil authorities; variations in the ranks of officers; and temporary vacancies; partly counterbalanced by the formation of musketry instruction classes.*

In 1886-7 the expenditure rose in consequence of the employment of additional staff in Upper Burma.

A further increase occurred in 1887-88, consequent on the augmentation of the Brigade and other staff, including establishments in Upper Burma; extra contingent and telegram charges on account of Burma;

	Rx.
* In 1892-93	517,900
,, 1884-85	485,100
Increase	32,800

the establishment of depôts in that country for European and Native troops; and the entertainment of establishments in connection with the conservancy arrangements for Native troops and followers in the Quetta District. The appointment of Inspector-General of Cavalry was created, but a Brigade Command of about equal emoluments was abolished at the same time, and the pay and allowances of Inspectors of Army Signalling were transferred from Grant 3 to this Grant.* On the other hand, the artillery staff at Army Head-quarters in India was reduced; the appointments of Superintendent, British Army Schools, Bengal, and Director of Garrison Instruction in India were amalgamated; bazaar sergeants were abolished, and the command allowance for the Fortress at Asirgarh and the staff pay of Inspector of Gymnasia in Bengal, were reduced.

In 1888–89 the expenditure fell owing to the following causes:—Reduction of certain command and staff appointments in India and Upper Burma; transfer to Grant 12 of the cost (Rx. 10,000) of the garrison instruction staff, and to Grant 14 of the cost of unprepaid telegrams despatched from Army Head-quarter offices, India; abolition of the Rawal Pindi Brigade Command, and of the appointment of Inspector of Army Signalling, Madras. Variations in the ranks of certain officers and the absence of others on furlough also contributed to the decrease. These savings were partly counterbalanced by increased expenditure on account of more extended tours of his Excellency the Commander-in-Chief in India, and by increased grants to cantonment funds, including the new cantonment at Mandalay.

In 1889–90 there was a further falling off in expenditure, consequent on the reorganisation of the army commands and staff, abolition of the station command at Baroda, and a further reduction of the staff pay of the Commandant, Asirgarh Fortress. On the other hand, the musketry instruction staff was increased.

In 1890–91 the expenditure rose owing to more extended tours of the Commanders-in-Chief in India and Bombay; the creation of the appointment of Secretary, Defence Committee, and his office establishment; heavy telegram charges on account of Upper Burma; the creation as a permanency for the whole year of the appointment of Brigade-Major to the Inspector-General of Artillery in India previously sanctioned for only six months in each year; the Sikkim Command; and additional temporary appointments in Burma. The pay and allowances of rank of certain station staff officers were compiled to this Grant instead of to Grant 3 as hitherto. *Per contra*, the appointment of Quartermaster-Sergeant, Poonamalee Depôt, was abolished, and certain cantonments which received grants-in-aid became self-supporting.

In 1891–92 the expenditure continued to rise owing to more charges on account of tours of the Commanders-in-Chief in India, Madras, and Bombay; heavy charges for telegrams, especially on account of Upper Burma; seconding of first class station staff officers; the creation of the following new appointments, Deputy Assistant Adjutant-General, Royal Engineers, Deputy Assistant Adjutant-General for Mobilisation, an additional paid attaché in the Intelligence Branch, Quartermaster-General's Department, Army Head-quarters in India, and an additional Assistant Inspector in Army Signalling, Bengal. Extra charges, amounting to Rx. 602, arose under "Miscellaneous Depôts" in connection with the experimental use of the Karachi route for troops proceeding between England and India. The appointment of Commandant Chunar Fort was abolished and the establishments discharged in this year.

In 1892–93 the following items account chiefly for the excess in the estimates:—House-rent for musketry instruction classes in Bengal; formation of corps of military staff clerks in Bengal (since abandoned); improvement of conservancy arrangements at certain stations; reorganisation of the Intelligence Branch, Quartermaster-General's Department in India; office allowance to station staff officers; local allowance to officers serving in the Southern Chin Hills; larger establishments in connection with the experimental use of the Karachi route for troops proceeding between England and India; and formation of a second musketry class at Deolali. The appointment of Staff Officer, Fort St. George, was abolished and replaced by a Garrison Quartermaster of lower rank.

GRANT 2.

Administrative Staff.

	Rx.	
In 1884–85 - -	185,900	Actuals.
,, 1885–86 - -	183,700	,,
,, 1886–87 - -	188,300	,,
,, 1887–88 - -	191,100	,,
,, 1888–89 - -	193,100	,,
,, 1889–90 - -	193,900	,,
,, 1890–91 - -	192,100	,,
,, 1891–92 - -	191,900	,,
,, 1892–93 - -	195,700	Estimate.

4. The fall in 1885–86 was caused by savings in the Military Accounts Department and to acting arrangements in the Military Department Accounts Branch.*

The increase in 1886–87 was due to the employment of an additional paid aide-de-camp to the Viceroy, as a temporary arrangement, and of additional clerical establishments in the Military Accounts Department in connection with the audit and adjustment of the Burma War accounts.

The increase in 1887–88 was due to the formation of a field pay office in Burma, and to the employment of additional permanent and temporary clerical establishments in the Military Accounts Department for the audit and adjustment of expenditure in Burma.

In 1888–89 the establishment of the field pay office in Burma was increased and a commissariat account audit office established there. On the other hand, the appointment of Examiner of Medical Accounts, Madras, was abolished, and the duties transferred to the corresponding officer at Bombay; and the staff allowances for fund accounts, Madras and Bombay, were discontinued, the work being transferred to the Pay Examiners.

In 1880–90, annual increments of pay to office establishments and variations in the ranks of military officers in the Military Accounts Department added to expenditure, but were partly counteracted by savings due to the revision of the office establishments of the Department, consequent on the abolition of Circle Pay Offices and the payment of native pensioners in certain districts being transferred to the Civil Department and the reorganisation of the establishment of officers and reductions in their salaries.

The fall in 1890–91 was chiefly due to the transfer to the civil estimates of the cost of the Governor's band, Madras; further reductions of certain circle pension offices, the payment of native pensioners in certain districts having been transferred to the Civil and Postal Departments; and the abolition of the appointments of Examiners, Medical Accounts, Bengal and Bombay, their work having been transferred to the Examiners of Commissariat Accounts. These savings were partly counterbalanced by the cost of moving the Bengal Western Circle Account offices to Rawal Pindi, and extra office establishments rendered necessary by the formation of this new set of circle audit offices.

In 1891–92 a small addition was made to the clerical establishment of the Accountant-General's Office. On the other hand, a small saving was caused by the Deputy and Assistant Accountants-General, Military Department, being replaced on the roster of the Military Accounts Department, and by changes in clerical establishments of that Department.

In 1892–93 the increase provided for is on account of the higher rank of military officers, additional clerical establishments and contingencies in the Military Accounts Department, due to the accounts of British troops being now submitted on the Home system, and the payment of bills of staff officers and departments having been retransferred from civil treasuries, and to a provision for test audit.

5. There have been many and important changes in this grant since 1884–85, and the expenditure has consequently increased considerably.* The chief causes of the increase are:—

In 1885–86 the expenditure rose in consequence of the pay of British troops being converted into Indian currency at 1*s.* 7½*d.* the rupee instead of 1*s.* 8*d.* as in the previous year, causing an excess of about Rx. 51,500; increased strength of the British and Native armies during a portion of the year; the recall of officers from furlough owing to special military preparations on the North-West Frontier commenced towards the close of 1884–85 and continued during a part of 1885–86; to troops having been sent to Upper Burma in November 1885; the revision of native establishments with horse and field batteries of Royal Artillery; the reorganisation of the Sappers and Miners throughout India. On the other hand, the grant of bounty-money to British soldiers for extension of their service in India was discontinued from 1st April 1865.

In 1886–87 a further increase occurred, caused by the fall of the rate of exchange for the payment of British troops to 1*s.* 7*d.* the rupee, which accounts for about Rx. 51,500. The strength of British troops was augmented, 11 batteries of Royal Artillery, a squadron of 148 non-commissioned officers and men to each of the nine cavalry regiments, three battalions of infantry and 100 privates to the establishment of each of the 50 regiments in India being added; but the whole of these troops did not arrive in this year. The Native army was also augmented by three regiments of Silahdar Cavalry, the revised establishment consisting of four squadrons each in Bengal, the Punjab, and Bombay regiments, and Central India Horse; the establishment of Madras cavalry regiments was increased; and a part of the expenditure in connection with the raising of five additional Gurkha battalions of infantry was incurred. Twenty supernumerary sepoys were added to each regiment of Native infantry, except Gurkha and Assam regiments. Mountain batteries of Native artillery were raised from four to six guns.

In 1887–88 the pay of British troops was converted into Indian currency at 1*s.* 5½*d.*, instead of at 1*s.* 7*d.* as in the previous year, causing an excess of about Rx. 180,000; drafts arrived from England to complete the augmented strength of the British Army sanctioned in 1885; the addition of a fifth battalion of Gurkhas, three Sikh infantry regiments, one pioneer battalion, two troops to the Corps of Guides Cavalry, two Native mountain batteries; initiation of the scheme of reserves for the Native Army; increased good conduct pay and half-mounting allowances to the Native Army; and revised establishment of collar makers and wheelers for the Royal Artillery. On the other hand, the pay and allowances of veterinary surgeons were transferred from this grant to Grant 5; the establishment of officers for British cavalry and infantry regiments was revised; interpreters to British regiments were abolished; and the establishment of followers for Bengal infantry regiments was reduced.

In 1888–89 the pay of the British soldier was issued at 1*s.* 4½*d.* the rupee in the second half of the year as against 1*s.* 5½*d.* in the previous year, resulting in increased expenditure of about Rx. 60,000. The number of men per battalion allowed to join the reserves of the Native Army was increased; prizes for skill at arms were granted to Native drivers of horse and field batteries, and a revised scale of prizes was sanctioned for British cavalry and infantry regiments; Gurkha and Assam regiments were allowed to enlist 20 sepoys per corps in excess of establishment; a second adjutant was appointed to the Corps of Guides, Punjab Frontier Force; a Burma company of sappers and miners was formed; the rates of working pay for the sappers and miners were revised; regimental establishments and their rates of pay were revised for British cavalry and infantry; a change in the establishment of Native mountain batteries was made; the scale of water and conservancy establishments for British troops in Bombay was amended; and prizes were granted to British soldiers qualifying as cooks. These additions were partly counterbalanced by the British and Native troops being short of strength, and a smaller number of unemployed officers drew their pay and allowances in India; the order allowing 200 extra men per Native infantry regiment in Burma was cancelled; the establishment of Native followers for Native regiments was reduced; and 11 instead of 13 batteries were ordered to be maintained on war footing.

In 1889–90 the pay of British troops was issued at 1*s.* 4½*d.*, thus causing an excess of about Rx. 60,000 on this account; the pay of riding masters of British regiments was increased; bounty was given to soldiers of garrison artillery for extending their service; prizes were given to British troops for proficiency in army signalling; the Native Army reserve was extended, and an active reserve of Native artillery formed. On the other hand, there were savings due to deficiencies in the strength of British and Native troops; fewer unemployed officers of the Staff Corps and General Lists; fewer officers in receipt of colonel's allowances; casualties in the invalid and veteran establishment; and more officers being absent on furlough in England. The establishment of followers for Bombay cavalry regiments was also reduced.

In 1890–91 there was a slight fall in the expenditure, as compared with that of the year before, owing to the adoption of a more favourable rate of exchange for the payment of British soldiers, namely, 1*s.* 5*d.* the rupee, as against 1*s.* 4½*d.* in the previous year. Diminished expenditure also occurred in consequence of the abolition of regimental paymasters of the Army Pay Department with British troops serving in India, other arrangements being made for carrying on the regimental pay duties; the European Artillery Veteran Company in Madras was abolished; the British cavalry and infantry were short of strength; there were fewer invalid and veteran officers; fewer unemployed general officers, and officers of the Staff Corps and General Lists; the strength of mounted infantry in Burma, of the Governor's Body Guard, Madras, of Native followers with regiments and of grass cutters with British mounted corps, was reduced. On the other hand, there was increase owing to the reorganisation of the artillery staff and commands.

In 1891–92 expenditure decreased by Rx. 128,300 as compared with the expenditure in 1890–91. This was chiefly due to a more favourable rate of exchange for paying the British soldier, namely, 1*s.* 6½*d.* instead of 1*s.* 5*d.* the rupee; officers and men were short of strength; grass cutters with the mounted branches of the British Army in Bombay, and partly in Madras, were discharged, the Commissariat Department undertaking the supply of forage; the Skeleton Company of Royal Engineers, the appointment of second in command in the Corps of Sappers and Miners, and the Arab Levy with the Aden troop were abolished; the gradual absorption of the garrison reserve, and discharges from the reconstituted regiments in Madras and Bombay, also resulted in diminished expenditure under certain heads. These savings were partly counterbalanced by the addition of a quartermaster-sergeant to the establishment of garrison companies of Royal Artillery, the number of sergeants being reduced by one; the raising of two battalions of Burma infantry and an additional Baluch regiment; higher rates of pay to the Silahdar Cavalry in Bengal and Bombay; an increase in the Afridi element in the Native Army; and extra expenditure on account of the improvement of lines for Bengal troops.

In 1892–93 Budget provision was made for an increase of Rx. 239,600 as compared with the expenditure in 1891–92. This was due to the fall in the rate of exchange for payment of British troops from 1*s.* 6½*d* to 1*s.* 4¾*d.* the rupee, which accounts for Rx. 210,000;

	Rx.
* In 1892–93 - -	7,324,000
,, 1884–85 - -	6,170,400
Increase -	1,153,600

the conversion of two Bombay regiments of infantry into Baluch battalions, and the reconstitution of two regiments of Madras infantry into two Burma battalions; the addition of 20 privates to each of the Burma battalions of infantry; the augmentation of the strength of garrison artillery by 25 gunners per company; special provision for hutting troops at certain stations; increased allowances to mahouts, assistant mahouts, and bullock drivers of heavy field batteries of Royal Artillery; revised establishment for the guns attached to Native infantry regiments in Assam; local allowances to certain officers serving in Manipur and the Southern Chin Hills; and increased pay to Native saddlers with the Native artillery. On the other hand, decreases occurred owing to the following measures:—The gradual extinction of the garrison reserve; reconstitution of the Madras cavalry by the reduction of one regiment, the remaining three regiments each receiving an additional squadron; the revision of the establishment of the Corps of Sappers and Miners in India. It is to be observed that since the estimates for 1892–93 were sanctioned, special bounties to British soldiers extending their service in India have been given; this will increase charges under this grant.

GRANT 4.

Commissariat Establishments, Supplies and Services.

	Rx.

„ 1890–91	3,068,500	„
„ 1891–92	3,681,000	„
„ 1892–93	3,279,000	Estimate.

6. In 1885–86 there was a decrease of about Rx. 20,000, which was due to more favourable rates paid for articles of food for men and animals; the utilisation of the special stock of provisions, &c., laid in previously for the Quetta Force; diminished railway and transport charges owing to reduced rates, and to the annual relief in Bengal having been a small one.* On the other hand, country brewed malt liquor was ordered to be supplied to British troops in lieu of imported liquor, thus causing increased expenditure in India to the relief of the Home estimates, and the Commissariat Department was reorganised and a Commissary-General-in-Chief appointed, the department in Bengal being divided into two circles—Eastern and Western—each under a Commissary-General.

In 1886–87 the large increase was due to the increased garrison in Burma and more extended operations in that province; increased charges for provisions, forage and other commissariat supplies, due to the augmentation of the army; the adjustment of arrear charges appertaining to the camp of exercise at Delhi and the Quetta Field Force; larger payments for compensation for dearness of provisions; and a larger number of transport animals having been purchased.

The large increase in 1887–88 was due to a larger garrison in Burma, which added greatly to the cost of supplies, transport and other commissariat services; arrear charges of previous years; the supply locally of malt liquor to British troops in Burma, correspondingly reducing home charges; compensation to Native troops in Madras and Bombay for dearness of provisions and forage were uniformly compiled to this Grant instead of as formerly to Grant 14 in some of the presidencies; a reserve stock of fodder was laid in at Quetta; the establishment of ambulance transport was revised, and also the rules for compensation to the Bombay cavalry for dearness of forage; the establishment of horses for British cavalry regiments was increased; prices of articles of food for men and horses rose; the reliefs of the forces in Upper Burma, and cold weather field operations there were extensive;

	Rx.

„ 1884–85	2,202,400
Increase	1,076,600

and additional transport animals were purchased. In this year the Supply and Transport Branches of the Commissariat Department were amalgamated.

In 1888–89 there was a fall in the expenditure owing to the garrison in Burma having been reduced, diminishing charges for food and establishments; more officers were absent on furlough; there were reductions of cattle transport, and other Native establishments in Bombay, and of allowances to the latter serving in the Quetta District; less expenditure for temporary khedda (elephant) and cattle farm establishments; smaller payments for malt liquor and rum; fewer reliefs of troops and movements of stores; economies were effected in the feed of elephants attached to the kheddas and of cattle at the Hissar Farm, and fewer transport animals were purchased to replace casualties. On the other hand, the establishments of officers for the Commissariat Department, and of horses with regiments, were increased; large payments were made as compensation for losses of Native Silahdar cavalry horses in Burma and on account of dearness of articles of food for men and horses owing to rise in prices.

In 1889–90 there was a further fall in the expenditure in consequence of more officers having proceeded to England on furlough; savings in ambulance, khedda and other subordinate establishments, and in charges for regimental transport; expenditure in Burma was reduced; the consumption of malt liquor and rum was less; troops were short in strength; lower prices of food supplies; fewer "sea and inland water charges" owing to the opening of the railway in Burma; and the transport was below the authorised complement.

In 1890–91 there was a still further decrease in expenditure due to the employment of fewer temporary ambulance bearers in Bengal, and the reduction of the numbers of permanent bearers and lower rates of pay given to this class in Burma, also reductions in subordinate regimental establishments generally, partly due to the closing of certain outposts in Burma; reductions in pay of cattle establishments and decreased numbers of cattle in Burma; less charges for compensation for dearness of forage and feed of transport mules; transfer to Grant 7 of the cost of canvas mattresses less consumption of rum and malt liquor, the voluntary regimental system of supply of the latter being introduced in Madras and Bombay; and Government carriage was largely employed for the conveyance of troops and stores. These savings were partly counterbalanced by increased expenditure in Madras and Bombay, due to higher rates for certain articles of food for British soldiers; the cost of dairy farms was compiled to this Grant, in place of payments for milk and butter for hospitals, which they supplanted, being compiled to Grant 9; troops in Bengal were moved more by route march than by rail; elephants were purchased in Burma for the Wuntho Expedition; additional horses with batteries of the 1st Army Corps had to be fed and also extra mules for grass duties with British mounted corps; increased charges for the troops in Sikkim; the rearrangement of commissariat ranges in India coterminous with military commands and the allotment of commissariat transport staff; and redistribution of regimental and depôt transport in India.

In 1891–92 a substantial increase occurred owing to heavy telegram charges in Upper Burma, and Manipur after 30th September 1891 (the expenditure prior to this date was compiled against a special grant in Grant 14); augmentation of transport, including siege train bullocks; large stocks of articles of food laid in at certain stations in the Western Circle, Bengal, and at the outlying posts in Upper Burma, and establishments connected therewith; expenditure to facilitate mobilisation;* cold weather operations in Upper Burma; an additional regiment located in Burma; rise in prices of articles of food for British and Native soldiers and followers, and for horses of the Native cavalry, especially in the Quetta District; rationing the Native troops at Manipur after 30th September 1891; dairy farms in Madras and Bombay; less Government carriage was utilised for the conveyance of stores owing to a large number of animals being on field service; stores were sent to Rawal Pindi, Fort Sandeman, and Quetta for stocking purposes; conveyance of stores, troops, and animals in connexion with Manipur and the Chin Hills (after 30th September 1891), Hazara (after 15th December 1891), Upper Burma and cold weather operations in that country:

* *See also* Grant 14A, page 18, for expenditure on mobilisation arrangements.

frequent movement of troops in the Eastern Frontier Districts by river steamers and boats; increased expenditure for "implements, godown furniture and contingencies," and for transport carts, mule gear and doolies, and the purchase of the buildings, plant, and machinery belonging to Goode's Compressed Forage Company at Amritsur. On the other hand, there was less expenditure on account of malt liquor, the troops in Lower Burma having been permitted to make their own arrangements for the supply; for feed of horses and battery mules, elephants and bullocks; and for the mounted infantry in Burma which was below strength.

The Budget estimate for 1892–93 provides for less expenditure under this grant as compared with that in 1891–92, which included a number of charges of a non-recurring nature. It, however, includes the extra cost of the continued experimental use of the Karachi route for British troops proceeding between England and India; rations for 25 additional gunners per company of garrison artillery; additional commissariat establishments; increased purchases of reserve stock; additional commissariat supplies and services in connexion with posts in the outlying districts in Burma; feed and keep of the greater number of transport animals now maintained; increased pay to transport establishments; expenditure in connexion with the Shwebo Canal fuel and fodder reserve scheme, but this will be borne by the Forest Department under orders subsequently issued; a grass farm at Mandalay and a dairy farm at Kamptee. Since the Budget estimate was sanctioned considerable additional expenditure has been incurred under this Grant on account of special transport and supply arrangements in Kashmir under Captain Yeilding; and prices of articles of food for soldiers, followers, and animals have risen, rendering the amount provided below (by about Rx. 150,000) what will be required.

GRANT 5.

Remount and Veterinary Establishments, Supplies and Services.

	Rx.	
In 1884–85	158,800	Actuals.
,, 1885–86	228,100	,,
,, 1886–87	248,600	,,
,, 1887–88	233,500	,,
,, 1888–89	224,100	,,
,, 1889–90	252,800	,,
,, 1890–91	213,500	,,
,, 1891–92	295–800	,,
,, 1892–93	260–700	Estimate.

7. In 1885–86 the increase was due to the reserve of horses maintained at Oossoor having been raised by 100, and to the purchase of additional horses consequent on the augmentation of the Royal Artillery and British and Madras Cavalry.*

In 1886–87 also more remounts were purchased than in the previous year.

The expenditure in 1887–88 was less than that in the previous year owing to fewer remounts having been purchased. Horses were, however, purchased in this year to complete the larger reserve required in consequence of the increased established strength of the mounted branches of the army.

The above remark also applies to the expenditure in 1888–89 to some extent, and the revised establishment and rates of pay of officers of the Army Remount Department caused an increase in this year.

In 1889–90, more remounts and young stock were purchased and establishments were increased at the rearing depôts at Kurnal and Ahmednagar, and farm lands were purchased at the former place. On the other hand, the grant was relieved of the pay and allowances of the Superintendent and Assistant Superintendent of the Horse-Breeding Department made a civil charge.

In 1890–91 fewer purchases of remounts, ponies for mounted infantry, ordnance mules, and young stock were made.

The large increase in 1891–92 was due to the purchase of additional Australian horses and ordnance mules, and the higher prices paid for the latter; the retention of 305 horses in the depôts for one year longer owing to the order forbidding issue until five years old, instead of four years old, as hitherto. Expenditure to facilitate mobilisation arrangements also contributed to the excess.

The expenditure provided for in 1892–93, though less than that incurred in the previous year, includes special purchases of horses and increased charges for feed and keep of animals purchased in previous years both for the depôts and with regiments. The recent revision of the establishment of officers of the Remount Department is also a cause of additional expenditure.

GRANT 6.

Clothing Establishments, Supplies, and Services.

	Rx.	
In 1884–85	139,300	Actuals.
,, 1885–86	94,000	,,
,, 1886–87	143,000	,,
,, 1887–88	179,800	,,
,, 1888–89	196,800	,,
,, 1889–90	193,600	,,
,, 1890–91	235,500	,,
,, 1891–92	247,100	,,
,, 1892–93	236,100	Estimate.

8. The decrease in 1885–86 was due to less purchases of local supplies; fewer payments of compensation in lieu of clothing; and the adjustment, by deduction from charges, of the value of certain clothing issued from stock to Her Majesty's Imperial Government.*

The increase in 1886–87 was chiefly caused by the purchase of supplies for the Burma Force.

The increase in 1887–88 was due to the augmentation of the army in 1885–86–87; the issue of clothing to reserves of the Native Army; increased purchases of locally-manufactured cloth; and the larger supply of locally made boots for the army at higher contract rates. On the other hand, the staff pay of Superintendents, Army Clothing, was reduced.

In 1888–89 the expenditure included the cost of a reserve of field service clothing; larger local purchases of materials were made, to the relief of the home estimates; compensation in lieu of clothing was sanctioned to certain Native troops, and the fall in the rate of exchange also increased charges for compensation to British troops. On the other hand, reduced expenditure occurred on account of clothing for the reserve forces consequent on the limited number of men transferred thereto, and the issue of revised regulations affecting that service.

The decrease in 1889–90 as compared with the previous year was due to the discontinuance of free clothing to Native soldiers transferred to the reserve; the abolition of the Clothing Factory at Bombay, the supply of clothing to the Bombay Army having been transferred to the Madras Clothing Department; and by the failure of certain contractors to fulfil their contracts.

The increase in 1890–91 was due to larger supplies of articles of local manufacture and to more payments for compensation in lieu of clothing.

The excess in 1891–92 was caused by expenditure to facilitate mobilisation arrangements; the transfer of a large number of Native soldiers to the reserves from regiments reconstituted during the year, who received the increased rate (Rs. 25 instead of Rs. 5) of bonus for articles of kit left with their regiments; and charges were incurred for changing the uniforms of transfers to reconstituted regiments.

The estimate for 1892–93 includes no mobilisation items, but provides for larger expenditure on account

,, 1892–93	217,500	Estimate.

9. The increase in 1885–86 was due to larger purchases of barrack furniture and bedding than in the previous year.*

In 1886–87 the expenditure rose considerably in consequence of supplies necessary for the increased force in Burma and the augmented strength of British troops in India.

In 1887–88 large expenditure was incurred on account of Upper Burma, and certain charges for lighting materials for hospitals were transferred from Grant 9 to this Grant, partly counterbalanced by savings in subordinate establishments for punkah and tattie-watering.

In 1888–89, the supply of barrack furniture and barrack establishments in Upper Burma was transferred to the Military Works Department. On the other hand, increased expenditure occurred on account of certain miscellaneous supplies provided by the Commissariat Department instead of as formerly by the Public Works Department. There was less expenditure for bedding and miscellaneous barrack supplies in this year, but more in 1890–91.

The increase in 1891–92 was caused by larger supplies of barrack furniture in Madras, and barrack bedding in Bombay, and larger establishments for water for plunge-baths and wash-houses. On the other hand, conservancy establishments were reduced at certain stations in the Madras Circle; oil was supplied in this circle at more favourable contract rates, and kerosine oil was used in Burma instead of vegetable oil, which is more expensive.

The estimate for 1892–93 provides for reduced expenditure for furniture, bedding, lighting, and miscellaneous articles.

GRANT 8.

Administration of Martial Law.

Increase	13,800

In 1887–88 an additional Deputy Judge Advocate-General was sanctioned for Burma, but a similar appointment was abolished in Madras.

In 1888–89 the increase was due to expenditure for garrison prisoners being compiled to this Grant, a reduction in Grant 3 counterbalancing it. The number of officers in the department was reduced.

In 1889–90 there was a decrease due to the absence of officers on furlough in England and reductions in office establishments.

The further decrease in 1890–91 was the result of an acting arrangement during the absence of the Judge Advocate-General, Eastern Circle, Bengal, on furlough, and after his retirement, and diminished charges for regimental, garrison, and station ptisoners.

In 1891–92 the small increase does not call for special remark.

The estimate for 1892–93 provides for increased rates of staff pay to officers of the Judge Advocate-General's Department, and for greater expenditure on account of prisoners.

GRANT 9.

Medical Establishments, Supplies and Services.

	Rx.	
In 1884–85	550,200	Actuals.
,, 1885–86	563,100	,,
,, 1886–87	624,000	,,
,, 1887–88	639,400	,,

,, 1889–90	618,300	,,
,, 1890–91	627,700	,,
,, 1891–92	682,800	,,
,, 1892–93	686,900	Estimate.

11. The increase in 1885–86 was caused by the grant to officers of the Indian Medical Service holding no specific appointment of the pay drawn by officers of the Army Medical Department in lieu of "Unemployed Pay," and by the reorganisation of the Subordinate Medical Department.*

The further increase in 1886–87 was due to the strength of the medical staff having been augmented, and to extra charges in connexion with operations in Burma.

In 1887–88 the establishments of Army Medical Staff officers and subordinates were increased, and extra medical charges and extra establishments were sanctioned for Burma. Under "Supplies" there was a large increase due to an increase in the number of sick, greater purchases of reserve stock, higher prices, transfer of certain charges from Grant 4, and extra expenditure on account of Burma; partly counterbalanced by larger demands for stores from the Civil Department, the value of which is deducted from charges under this Grant, and the abolition of Garrison Surgeons in Fort William, Chunar, and Attock.

In 1888–89 the decrease was due to a large number of vacancies in establishments of officers, absentees on furlough, junior rank of officers, reductions of establishments maintained in Burma owing to the closing of certain hospitals, and smaller grants-in-aid to cantonment hospitals. On the other hand, the Lady Nursing Service was instituted, and the Subordinate Medical Department was reorganised.

In 1889–90 the increase was in a great measure due to a change in the method of adjusting the value of European stores issued to other departments, which were credited as receipts instead of being deducted from charges as formerly. On the other hand, the establishment of the Hospital Assistant Branch, Subordinate Medical Department, was revised, the effective strength of officers of the Medical Staff was below the authorised complement, and there were fewer unemployed officers of the Indian Medical Service.

In 1890–91 the excess was caused by increased expenditure for medical and surgical stores supplied to hospitals, medical comforts, and diets for the sick owing to a larger number of patients. The Allahabad

Increase	136,700

Medical Store Depôt was abolished, and one Deputy Surgeon-General in Madras was placed in charge of two districts (Madras and Southern Districts).

In 1891–92, the large increase was due to the further revision of the Apothecary Branch of the Subordinate Medical Department, arrangements for facilitating mobilisation, the transfer of certain charges from other grants, charges incurred after the 30th September 1891 on account of Manipur having been compiled to this grant, instead of to the special head in Grant 14, larger stocks having been laid in, higher rates for European stores in consequence of the fall in the rate of exchange, and expenditure in connexion with cold weather field operations in Burma, and issues to troops in outlying posts in that country. The Cantonment General Hospital at Delhi was abolished.

The increased provision in the estimate of 1892–93 includes certain charges transferred from other Grants owing to change in classification, new cantonment hospitals at certain stations in India and Burma, a revised establishment of military hospital assistants for Bengal, and the augmented establishment of nursing sisters.

GRANT 10.

,, 1888–89	576,500	,,
,, 1889–90	631,700	,,
,, 1890–91	716,000	,,
,, 1891–92	724,300	,,
,, 1892–93	798,700	Estimate.

12. In 1885–86 the excess was due to increased manufacture of small-arm ammunition for completing reserves which had fallen below established quantities owing to the condemnation of ammunition made at Kirkee, large purchases of local supplies, including camp equipage, to replace issues from stock to Her Majesty's Imperial Government and the Quetta Force and the creation of the Office of Director-General of Ordnance.*

The fall in expenditure in 1886–87 was due to articles specially purchased in the previous year for the Quetta Force having been utilised in this year for ordinary requirements, large supplies were made to civil departments, including the Burma police, the value of which was deducted from military charges and debited to those departments.

The accounts of 1887–88 included some Rx. 25,000 for returned stores belonging to the Field Park at Suakin, Hyderabad Contingent, Police, and Royal Navy; large expenditure was incurred for stores in Burma and to replace stores destroyed by fire in the Arsenal at Rawal Pindi, increased issues of harness and saddlery from the factory, Cawnpore, a larger establishment of warrant and non-commissioned officers in Bengal was sanctioned, and the establishment of master-gunners and park-sergeants for the care of ordnance and stores in fortifications in India was reorganised. On the other hand, savings accrued owing to the absence of more officers on furlough, the entertainment of smaller extra establishments, the closing of the gunpowder factory at Madras, and diminished purchases of timber, camp equipage, and line gear.

In 1888–89 the staff pay of Assistant Superintendents of Ordnance Factories on first joining the department was increased, more Martini-Henry ammunition was manufactured in consequence of the arming of a portion of the Native Army with this weapon, larger purchases of Indian stores were made in lieu of importing articles to the relief of the home estimates, a considerable quantity of stores was returned by other departments, including the Burma Police, and heavy expenditure was incurred on account of camp equipage.

In 1889–90 the expenditure for temporary labour in arsenals and factories rose; the second-class depôt at Mandalay was converted into a first-class depôt, the establishment of the second-class depôt at Rangoon was augmented, and a third-class ordnance officer was added in Bombay. On the other hand, less camp equipage was purchased, and the Ordnance Depôt at Bhamo was abolished.

In 1890–91 three officers were added to the Ordnance Department, more expenditure was incurred for temporary labour in arsenals and factories, more local stores were purchased, and civilian mechanics in connection with the repairs of heavy ordnance and machine guns were instituted.

The increased expenditure in 1891–92 was also due to employment of a greater number of temporary artificers and labourers, the purchase of more local stores, the division of the Bengal Circle of the Ordnance Department into two circles, the addition of two Officer Instructors in Gunnery at Bombay and Aden, regimental instead of staff corps pay was granted to the Royal Artillery officers in the Ordnance Department, further supplies of signalling equipment were made to the Native Army, large expenditure was incurred to facilitate mobilisation arrangements, and large purchases of materials were made for the manufacture of 12-pr. breech-loading gun equipment.

The estimate for 1892–93 includes additional provision for stores, camp equipage, and extra temporary artificers owing to increased outturn to meet the wants of troops, 13 Civilian Ordnance artificers for coast defences, an Officer Instructor in Gunnery, Hooghly Defences, increased office establishments for certain arsenals, and for the recently sanctioned establishment of Coast Defence Lascars.

The expenditure under this head in recent years has greatly increased owing to the additional cost of manufacture of the new description of ammunition for field guns and small-arms and the arming of the Native Infantry with Martini-Henry rifles.

13. The variations in expenditure in 1884–85–86–87 do not call for special remark.*

The increase in 1887–88 was due to the employment of more Roman Catholic priests consequent on the augmentation of the strength of British forces.

The decrease in 1888–89 was the result of ordinary fluctuations in the number and allowances of priests.

In 1889–90 the increase was due to the transfer from the Civil Department of a senior Presbyterian chaplain in room of an Assistant Army Chaplain, and the addition of a Roman Catholic priest in Bombay owing to an increase in the number of Catholic soldiers.

In 1890–91 the senior chaplain referred to above was retransferred to the Civil Department, and was replaced by an assistant; the pay of the Roman Catholic bishop in Madras was taken as a civil charge, and the appointment of the Roman Catholic priest at Myingyan, in Upper Burma, was abolished.

The increase in 1891–92–93 does not call for special remark.

,, 1892–93	46,000	Estimate.

14. The fall in expenditure in 1885–86 was caused by savings in charges for the Lawrence Military Asylums, and smaller purchases of school books and materials.*

The further decrease in 1886–87 was due to the abolition of the appointment of Superintendent, British Army Schools in Bengal, and of the Normal School at Umballa; to further savings in charges for the Lawrence Military Asylums, and lower rank of the Assistant Superintendent of Army Schools in Madras.

The increase in 1887–88 was due to the construction of a combined gymnasium and drill shed at the Lawrence Military Asylum, Sanawar, partly counterbalanced by the abolition of the Native Army Training School at Umballa, and the amalgamation of the appointment of Superintendent, British Army Schools, Bengal, with that of Director, Garrison Instruction, and the transfer of the charge to Grant 1.

The large increase of 1888–89 was due to the transfer from Grant 1 of charges for the Director of Military Education, and expenditure in connexion with garrison instruction, partly counterbalanced by savings caused by the reduction of two Sub-Inspectors of Army Schools, and the abolition of the Normal Schools, Bangalore and Poona, and of the appointment of Assistant Superintendent, Army Schools, Madras.

The small decrease in 1889–90 does not call for special remark.

The increase in 1890–91 was due to additional expenditure in connexion with garrison instruction and the Lawrence Military Asylums.

An additional Sub-Inspector of Army Schools was sanctioned in 1891–92. On the other hand, the staff pay of the Superintendent of Army Schools, Bombay, was reduced, and there were savings under other heads due to ordinary fluctuations.

The Estimate for 1892–93 makes increased provision for the purchase of books and materials for Army Schools.

GRANT 13.

Sea Transport Charges.

GRANT 14.

Miscellaneous Services.

	Rx.	
In 1884–85	401,400	Actuals.
,, 1885–86	3,202,900	,,
,, 1886–87	620,700	,,
,, 1887–88	468,300	,,
,, 1888–89	554,000	,,
,, 1889–90	603,600	,,
,, 1890–91	525,300	,,
,, 1891–92	896,400	,,
,, 1892–93	225,200	Estimate.

16. The expenditure under this Grant is liable to considerable fluctuation, embracing, as it does, casual and extraordinary charges not strictly appertaining to other Grants. Briefly the principal causes of variation from year to year were as follow.†

The great increase in 1885–86 was due to:—

	Amount.
The Quetta Force (including expenditure on the Bolan Railway) Rx. 2,185,371, against Rx. 102,700 on this Account in the previous year. Difference	Rx. 2,082,671
Burma Expedition	630,679
Camps of Exercise, including the one at Delhi, Rx. 110,178, against Rx. 2,617 in the previous year. Difference	107,671
Concentration of troops, and camp at Rawal Pindi.	42,784
	Rx. 2,863,695

On the other hand, the expenditure on the Zhob Valley Expedition, which was Rs. 56,218 in the previous year, was only Rs. 4,753 in 1885–86.

The fall in this Grant in 1886–87 was due to expenditure on account of Upper Burma being compiled to the grants affected, instead of to this Grant.

In 1887–88 charges for compensation to Native troops in Madras and Bombay for dearness of provisions and forage were transferred from this Grant to Grant 4, and charges on account of the occupation of Upper Burma were considerably less. On the other hand, expenditure was incurred on account of increased purchases of land for military purposes, camps of exercise, the Sikkim Expedition, for committees for purchasing remounts for Native Silahdar cavalry regiments; and large payments were made to contractors for losses or cancellation of contracts.

The increase in 1888–89 was due to increased expenditure on account of camps of exercise and expeditions (Rx. 374,400) partly counterbalanced by a falling off in the charges on account of Upper Burma.

In 1889–90, expeditions and missions cost about Rx. 430,000. The remount premises at Garden Reach were purchased.

In 1890–91, expeditions and missions cost about Rx. 410,000 and more expenditure was incurred on account of camps of exercise. On the other hand, there were savings under ordinary heads, especially in connection with Burma, owing to the usual fluctuations.

In 1891–92, the cost of expeditions and missions amounted to Rx. 760,000. More expenditure was incurred on account of camps of exercise, and submarine mining establishments were increased.

	Rx.
† In 1892–93	225,200
,, 1884–85	401,400
Decrease	176,200

The estimates for 1892–93 exhibit a large decrease in this Grant, owing chiefly to no provisions for expeditions. They include, however, Rx. 61,200 on account of arrear charges in connection with the cold weather field operations in Burma, 1891–92, and for small expenditure in connection with the occupation of Hunza; also increased purchases of land for military purposes, for recruiting depôts, huts for rifle ranges where paper and canvas targets are used, and the maintenance of telegraph lines in the Chin-Lushai country. On the other hand, no provision has been made on account of remount agents for purchasing horses for Bengal Native Cavalry, the appointments having been abolished, nor for the Derajat Frontier militia, which became a civil charge from 1st April 1891. It is to be noted that since the estimates for 1892–93 were sanctioned, considerable expenditure has been incurred on account of the Isazai Field Force, the Gilgit Agency, Kajuri Kach Force, Kurran Escort, and suppression of disturbances in the Lushai, Chin and Kachin countries, which will be compiled to this Grant.

GRANT 14 A.

Mobilisation.

In 1889-90 - - - Rx. 209,700

17. This Grant was specially opened in 1889–90 in order to show separately the expenditure connected with preparations for facilitating the mobilisation of a 1st Army Corps. In 1891–92 similar expenditure, amounting to Rx. 196,100, was incurred, but it was directed to be compiled to the ordinary heads under the several Grants affected. The total expenditure in India compiled in military accounts to the end of 1891–92 for these arrangements has been in round numbers, Rx. 456,800.

GRANT 15.

Volunteer Corps.

	Rx.	
In 1884–85	68,100	Actuals.
„ 1885–86	84,700	„
„ 1886–87	98,300	„
„ 1887–88	107,300	„
„ 1888–89	115,100	„
„ 1889–90	131,200	„
„ 1890–91	135,500	„
„ 1891–92	145,600	„
„ 1892–93	166,600	Estimate.

18. The expenditure falling to be compiled under this Grant is chiefly on account of staff and other allowance to European commissioned and non-commissioned officers attached to volunteer corps, pay of native establishments, capitation grants, volunteer camps of exercise, and allowances for good shooting prizes, bands, clothing, and rifle ranges. The continued increase year after year since 1884–85 is due to the extension of the volunteer movement throughout India.* The estimate for 1892–93 provides Rx. 5,000 for raising a railway service frontier corps, but this money will not be expended as the project has been abandoned.

Non-Effective Services.

GRANT 16.

Rewards for Military Services.

	Rx.	
In 1884–85	7,800	Actuals.
„ 1885–86	7,400	„
„ 1886–87	6,800	„

„ 1888–89	8,200	„
„ 1889–90	8,500	„
„ 1890–91	15,200	„
„ 1891–92	13,700	„
„ 1892–93	11,600	Estimate.

	Rx.
* In 1892–93	166,600
„ 1884–85	68,100
Increase	98,500

19. The expenditure under this Grant fluctuates with reference to the number of good service pensions drawn in India, and the transfer to the pension establishments of native officers and men who are members of the "Order of British India," and "Order of Merit."* In 1888–89 annuities and gratuities to the Native Army were sanctioned, and there were increased admissions to the Order of British India. The large increase in 1890–91 and subsequent years was caused by the award of war medals, the expenditure on which account was previously compiled in Grant 14.

GRANT 17.

Military Pensions to Europeans.

	Rx.	
In 1884–85	20,800	Actuals.
„ 1885–86	35,500	„
„ 1886–87	112,500	„
„ 1887–88	126,600	„
„ 1888–89	119,200	„
„ 1889–90	147,900	„
„ 1890–91	140,600	„
„ 1891–92	113,700	„
„ 1892–93	135,700	Estimate.

20. The expenditure under this Grant comprises the pay of retired commissioned officers, and of warrant and non-commissioned officers in India, wound pensions and gratuities, and the capitalised value of pensions paid in this country.† It varies with the number of officers, &c., who elect to remain in India, the amount of capitalised pensions paid, and the rise or fall in the rate of exchange authorised for the conversion of sterling money into Indian currency. It is to be explained, however, that the large increase in 1886–87 was chiefly due to a re-classification of charges, and to the transfer from Grants 14 and 18 of certain charges for gratuities, and wound, and invalid pensions.

GRANT 18.

Military Pensions to Natives.

	Rx.	
In 1884–85	727,900	Actuals.
„ 1885–86	721,800	„
„ 1886–87	654,500	„
„ 1887–88	648,800	„
„ 1888–89	673,800	„
„ 1889–90	667,900	„
„ 1890–91	721,000	„
„ 1891–92	722,400	„
„ 1892–93	691,500	Estimate.

21. This Grant comprises expenditure on account of pensions, bonuses, and gratuities to Native commissioned officers, non-commissioned officers, hospital assistants, and regimental followers, and family pensions to the heirs of deceased native soldiers, and regimental followers.‡ The expenditure necessarily fluctuates according to casualties amongst pensioners, the annual rate of invaliding, reconstitution of regiments resulting in a large number of discharges,

Decrease	36,400

the authorised strength of the army, the employment of troops in the field, or on foreign service, &c. The cause of decrease in 1886–87 is explained at the close of the preceding paragraph. Military operations in Burma, Sikkim, and the Lushai and Hazara countries caused increased expenditure under this Grant in 1888–89-90. The increase in 1890–91 was due to a change in the system of paying native military pensioners in Bengal, whereby some are now paid monthly, and others quarterly, instead of half-yearly as formerly, resulting in more charges being thrown into the accounts of that year. The actuals of 1891–92 include charges for payments of pensions, bonuses, and gratuities to men discharged from reconstituted regiments. The estimate for 1892–93 also includes provision on this account, but not to the same extent. The new rules regulating pensions to the Native army were issued in 1886, and have increased the expenditure, and will continue to do so progressively for some time to come before normal conditions are reached.

GRANT 19.

Widows' Pensions and Compassionate Allowances.

	Rx.	
In 1884–85	20,400	Actuals.
„ 1885–86	20,500	„
„ 1886–87	21,300	„
„ 1887–88	23,100	„
„ 1888–89	23,100	„
„ 1889–90	25,600	„
„ 1890–91	26,900	„
„ 1891–92	30,700	„
„ 1892–93	26,400	Estimate.

22. The expenditure compiled in this Grant comprises payments of pensions to widows (late Lord Clive's Fund) and to those pensioned since the passing of the Indian Government Act of 1858, Artillery charitable fund pensions, Indian Service family pensions (corresponding to the old military funds), and compassionate allowances to widows and children of European commissioned officers who have been killed in action or died of their wounds. The expenditure fluctuates according to the number of recipients and their place of residence, whether in India or in England. The increase in 1887–88–89–90 was caused by the payment of arrears of difference of pension to those widows whose stipends were originally fixed in sterling, in consequence of the issue of orders that these pensions should be converted into Indian currency at the annual financial rate of exchange with effect from 1st April 1886. The increase in the following two years was due to the erroneous application of the orders just referred to, to the widows of warrant officers pensioned since 1868, which pensions are now paid at the rates fixed in Indian currency laid down in the Regulations.*

GRANT 20.

Departmental Pensions.

	Rx.	
In 1884–85	44,900	Actuals.
„ 1885–86	47,600	„
„ 1886–87	54,200	„
„ 1887–88	54,500	„
„ 1888–89	55,400	„
„ 1889–90	57,200	„
„ 1890–91	58,300	„
„ 1891–92	60,300	„
„ 1892–93	59,400	Estimate.

23. This Grant includes pensions and gratuities granted under civil rules to uncovenanted servants and under military rules to enlisted followers employed in departments.* The expenditure varies according to the number of recipients and their places of residence, India or Europe. There has been a steady increase owing to more admissions to the pension establishment.

HOME CHARGES.

Effective Services.

Home charges for British Forces serving in India.

	Rx.	
In 1884–85	611,300	Actuals.
„ 1885–86	614,800	„
„ 1886–87	785,000	„
„ 1887–88	734,800	„
„ 1888–89	781,600	„
„ 1889–90	948,600	„
„ 1890–91	873,500	„
„ 1891–92	796,800	„
„ 1892–93	860,000	Estimate.

24. The following explanations of the fluctuations in the military payments made in England on account of the Indian Government have been extracted almost entirely from the accounts and estimates received from England.

The increase in 1885–86 was due to increased payments of deferred pay.† In 1886–87 the payments to the War Office increased on account of the cost of augmenting the British Army in India, while in 1887–88 similar payments were less. The account for 1888–89 includes large payments on account of deferred pay awarded by Lord Northbrook's Commission, and still larger payments were made on this account in 1889–90–91, while in 1891–92 the charges were less. The estimate for 1892–93 makes additional provision owing to the increase of the establishment in India and the charge for deferred pay. The estimate for each year includes 100,000*l.* for the furlough allowances of officers of British regiments serving in India and for the pay of regiments during the voyage to and from India. The payments under this head in the years alluded to were increased considerably owing to the settlement of arrear charges of previous years investigated and awarded by Lord Northbrook's commission; these arrears were cleared off finally in 1892–93. The normal annual payments to the War Office are now estimated at 760,000*l.*

Furlough allowances of Officers of the Indian Service.

	Rx.

were granted furlough, owing to military preparations in connection with the North-West Frontier and Upper Burma. The decrease in 1890–91 was mainly due to a large number of officers having elected to draw their furlough allowances in India in consequence of the market rate of exchange having been higher than the official rate. In 1891–92 more officers went home on furlough. The payments under this head have increased in the period under review under the new Leave Rules for the Staff Corps instituted in 1886.

Indian Troop Service.

,, 1890–91	238,500	,,
,, 1891–92	254,900	,,
,, 1892–93	244,700	Estimate.

26. The expenditure in 1884–85 and 1885–86 included charges for the conveyance of troops on hired vessels in addition to those conveyed in the troopships. The charges for 1886–87 include new machinery for the "Malabar." Fewer voyages were made in 1887–88. The decrease in 1888–89 occurred in the payments for repairs of the troopships. The increase in 1890–91 was caused partly by the employment of the Indian Government steamer "Clive," and partly by the alterations and repairs to the troopships. The account for 1891–92 includes exceptional expenditure owing to the substitution of the transport "Avoca" for the troopship "Malabar."*

,, 1891–92	6,900	,,
,, 1892–93	9,600	Estimate.

27. The expenditure under this head fluctuates according to the number of officers provided with passages otherwise than in troopships. The increase in 1885–86 was consequent on the recall to duty at the expense of the State of a large number of officers on furlough.†

Miscellaneous.

	£	
In 1884–85	17,800	Actuals.
,, 1885–86	18,900	,,
,, 1886–87	39,100	,,
,, 1887–88	30,300	,,
,, 1888–89	27,000	,,
,, 1889–90	19,500	,,
,, 1890–91	18,000	,,
,, 1891–92	21,400	,,
,, 1892–93	18,000	Estimate.

28. There must necessarily be fluctuations in the expenditure under this head owing to the charges being of a miscellaneous nature. The increase in 1886–87 was due to a payment of 3,921*l.* for gratuities for service in the expedition to Egypt in 1882, and to additional payments of 16,148*l.* for the purchase of stallions. The account of 1887–88 includes the expenses of native officers who attended the Queen's Jubilee, and Burma field allowances to the Naval Brigade. The decrease in 1889–90 was due to the purchase cost of stallions having ceased to be a military charge. The expenditure includes, however, an exceptional payment of 2,512*l.* on account of the portion payable by India of the reward to Lieutenant-Colonel Scott, R.E., in lieu of Royalty on Ordnance Telescopic Sights. The increase in 1891–92 occurs mainly in the pay and allowances of military officers on special duty. Reduced provision has been made in 1892–93 owing to anticipated savings in the pay and expenses of military officers studying the Russian language.*

Stores for India.

	£	
In 1884–85	462,400	Actuals.
,, 1885–86	929,700	,,
,, 1886–87	487,300	,,
,, 1887–88	658,500	,,
,, 1888–89	523,700	,,
,, 1889–90	508,200	,,
,, 1890–91	1,019,000	,,
,, 1891–92	1,109,100	,,
,, 1892–93	1,050,100	Estimate.

29. The expenditure depends on the demands made by India which vary each year. The large increase in 1885–86 was due to unforeseen demands for ordnance, commissariat, and clothing stores to replace stock depleted. The large increase in 1890–91–92 occurred in ordnance stores, and was mainly due to expenditure on the new artillery guns, magazine rifles, and new equipments. The estimate for 1892–93, however, makes reduced provision for clothing and ordnance stores as compared with the actual expenditure in the previous year, and there is a further falling off in 1893–94. The payments under this head have also increased on account of new machinery for Ordnance Factories to enable them to manufacture cordite and the new ammunition; also in consequence of the necessity for increased stock of Martini-Henry ammunition required as a consequence of the Native Army being armed with this weapon and it not being possible at present to manufacture it all in India.†

Non-effective Services.

Retired Pay, &c., of British Forces on account of Service in India.

	£	
In 1884–85	831,000	Actuals.
,, 1885–86	125,800	,,
,, 1886–87	136,200	,,
,, 1887–88	194,900	,,
,, 1888–89	243,400	,,
,, 1889–90	296,900	,,
,, 1890–91	333,000	,,
,, 1891–92	360,200	,,
,, 1892–93	389,100	Estimate.

30. Up to 1884–85 the payments to the Imperial Government were based on the capitalized value, calculated at 4 per cent. interest, of the amount of pensions granted in each year. Thereafter, orders were

35. Speaking generally the increase in expenditure is due to—

(*a.*) Augmentation of the British and Native armies, and reorganisation of some units.

(*b.*) Fall in the rate of sterling exchange for the pay of British troops and payment of pensions, &c., from 1s. 8*d.* to 1*r.* 4¼*d.*, about Rx. 390,000.

(*c.*) Increased cost of Army and administrative staff, due to the occupation of Upper Burma and Beluchistan, and the augmentation of the Army.

(*d.*) Increased annual cost of requirements of troops, owing to augmentation of strength, and their being armed with improved weapons, resulting in—

(1.) Increased commissariat supplies.

(2.) Increased purchases of horses, and consequent depôt expenses.

(3.) Increased clothing supplies. The increase here is also due to getting more materials in India instead of England.

(4.) Increased barrack supplies.

(5.) Increased medical supplies. The increase here is also due to getting more materials in India instead of England.

(6.) Increased supervision at, and outturn from, ordnance factories, depôts and arsenals. The scale of annual practice ammunition had to be increased in 1891 on account of the Magazine rifles and the Native Army being armed with the Martini-Henry rifles, and additional ammunition issued on payment at less than actual cost price (1890). There has also been increased employment of skilled artizans for charge of ordnance in coast defences. Ammunition and equipments have been issued to troops of Native States at less than cost price, as to the Indian Army.

(*e.*) The maintenace of a much larger number of transport animals, carts and gear, and increased establishments for their care; to secure celerity in mobilisation of the army in an emergency.

(*f.*) The gradual and regular increase of the volunteer forces.

(*g.*) More rewards for military services, due to field operations.

(*h.*) The working of the new pension rules for the Native Army issued in 1886.

The increase in England is due to—

(*i.*) The payment to the War Office of an increased annual charge, and arrear charges, on account of the effective and non-effective services of British troops in India, determined by Lord Northbrook's Commission; the former due partly to increased numbers and partly to revised system of assessing payments.

(*j.*) Larger annual charge for furlough allowances of officers of the Indian service, due to the operation of the Staff Corps Leave Rules of 1886.

(*k.*) Increased number of passages to and from England of officers and troops otherwise than in Indian troopships.

(*l.*) Cost of the supply of new pattern field and other guns and small-arms, and demands for stocks of ammunition for the same, pending completion of arrangements for manufacture in India. Also cost of new machinery for ordnance factories to enable them to meet increased or improved outturn.

(*m.*) Increased cost of retired pay and pensions of officers of the Indian Army, under rules issued previous to 1884–85, the maximum charge for which will not be reached until 1895.

36. The expenditure on "Military Works," ordinary, as furnished by the Accountant-General, Public Works Department, is as follows:—

Year.	In India.	In England.	Exchange.	Totals.
	Rx.	£	Rx.	Rx.
1884–85	* 943,344	5,071	1,232	949,647
1885–86	960,415	6,469	2,036	968,920

NOTE.—The exchange on these figures is not shown.

Brief note on the increase in Military Expenditure in India since 1887–88.

The accompanying statement compares the gross figures in the military accounts and estimates, respectively, for the years 1887–88 and 1892–93. Deducting minuses from pluses, the net results are—

Increased expenditure in	India -	Rx. 417,300
	England -	£ 1,270,800
Total increase exclusive of exchange		Rx. 1,688,100

The increase in India is mainly due to—

(*a.*) Fall in the rate of sterling exchange for the pay of British troops and payment of pensions, &c., from 1*s.* 5½*d.* to 1*s.* 4⅛*d.*, about Rx. 110,000.

(*b.*) Increased annual cost of requirements of troops owing to augmentation of strength, and their being armed with improved weapons, orders for which issued before 1887–88, resulting in—

(1.) Increased purchases of horses and consequent depôt expenses.

(2.) Increased clothing supplies. The increase here is also due to getting more materials in India instead of England.

(3.) Increased medical supplies. The increase here is also due to getting more materials in India instead of England.

(4.) Increased supervision at, and outturn from, ordnance factories, depôts, and arsenals. The scale of annual practice ammunition had to be increased in 1891, and additional ammunition issued on payment at less than actual cost price (1890). There has also been increased employment of skilled artizans for charge of ordnance in coast defences. Ammunition and equipments have been issued to troops of Native States at less than cost price.

(5.) Improved musketry instruction.

(*c.*) The maintenance of a larger number of transport animals, carts and gear, and increased establishments for their care: to secure celerity in mobilisation of the army in an emergency.

(*d.*) The gradual and regular increase of the volunteer forces.

(*e.*) More rewards for military servies, due to field operations.

(*f.*) The working of the new pension rules for the Native Army issued in 1886.

The increase in England is due to—

(*g.*) The payment to the War Office of an increased annual charge and arrear charges on account of the effective and non-effective services of British troops in India, determined by Lord Northbrook's Commission.

(*h.*) Larger annual charge for furlough allowances of officers of the Indian service, due to the operation of the Staff Corps Leave Rules of 1886.

(*i.*) Additional cost of the Indian Troopship Service.

(*j.*) Cost of the supply of new pattern field and other guns and small arms demanded in years previous to 1887–88, but not then supplied or paid for, and demands for stocks of ammunition for the same, pending completion of arrangements for manufacture in India. Also cost of new machinery for ordnance factories to enable them to meet increased or improved outturn.

(*k.*) Increased cost of retired pay and pensions of officers of the Indian Army, under rules issued previous to 1887–88, the maximum charge for which will not be reached until 1895.

Comparison of figures of Military Expenditure, 1887–88 *and* 1892–93.

Calcutta, 8th March 1893.

HURLOCK PRITCHARD, Col.,
Accountant-General, Military Department.

No. 36.

EXTRACT from DESPATCH to INDIA, dated August 10, 1893, No. 158 (Financial).

Owing, therefore, to the high state of the cash balances on the 1st of April 1892, they have admitted of reduction to the extent of Rx. 6,794,000; and, with some little aid from the deposits, &c., you have been enabled (according to the Estimates) to meet a deficit of Rx. 2,677,000 in the Revenue, and also to provide funds for capital outlay to the extent of Rx. 4,647,100 beyond the debt incurred for such purposes. Bearing in mind the fact that the fall in exchange has added to your burden during the two years no less than Rx. 6,450,000, and that, at the time you were preparing the Budget, proposals of a most important nature in regard to that subject were under the consideration of Her Majesty's Government, I had no hesitation in instructing your Excellency to show the expected deficit of Rx. 1,595,100 in the Financial Statement, taking no measures for meeting it by the imposition of taxation.

It would, indeed, have been useless to attempt to decide in what manner an equilibrium of the revenue and expenditure should be established, while the important question of an alteration of the monetary standard was under consideration. The report of the Committee appointed to advise Her Majesty's Government on the proposals made by your Excellency was forwarded to your Government in my Despatch dated the 2nd of June, No. 106; and the telegraphic correspondence which ensued resulted in the passing of an Act for the immediate suspension of the free coinage of silver. It is to be hoped that this measure, combined with the readiness to receive gold at your mints and in your treasuries at a ratio of 15 rupees to the English sovereign, will have the effect of checking the excessive fluctuations in the value of the rupee, and of enabling you to forecast with a nearer approach to accuracy the financial prospects of the year. It is not, however, possible at present to say what the rate of exchange is likely to prove during the remainder of this year. The discontinuance of the coinage of silver for the public was adopted with the view of preventing a further fall in exchange, rather than of leading to any immediate rise to a material extent; and the notifications issued respecting the reception of gold were intended, not to prescribe or maintain a rate of exchange of 1*s.* 4*d.* per rupee, but to prevent a serious disorganisation of trade by a violent rise to a yet higher point. It is obvious that, until the present superabundance of rupees due to the recent imports of silver is absorbed, and until a *bonâ fide* demand arises for the use of more rupees on

account of trade, the bills of the Secretary of State in Council are not likely to be competed for at even so high a rate as 1*s.* 4*d.* the rupee.

It is now, however, practicable to examine the position of your officers, as represented in the numerous memorials received, and to consider whether it is necessary to afford them further relief, and, if so, in what manner it can best be granted. Your Excellency's telegram of the 5th of March recommended that furlough allowances should be paid at the exchange of 1*s.* 6*d.* the rupee, with a minimum amount in sterling, and that officers not domiciled in India should be allowed to make remittances at the same rate, up to a limit of half their salary, and not exceeding 1,000*l.* a year. I fully recognise the hardship to which the European officers of your Government have been exposed through the fall in exchange, and their reasonable claim for protection in the future against such a contingency. Any proposal for an increase of the payments by the Government in England is, however, open to objection; and it appears to me that a better plan will be to give in India an exchange allowance to be added to the salary when necessary, leaving the officers to effect their remittances by private means. In my telegram of the 1st instant, I requested you to consider whether it might not be possible to satisfy the reasonable claims of the officers, without adding to the Home charges. If the plan which I have indicated should meet with the concurrence of your Government, I request you to consider whether it may not be accompanied by a discontinuance of the existing system of family remittances by military officers, to which your attention was drawn by Lord Cross in his despatch of the 19th of May 1892, No. 86. Since this paragraph was written, I have received your telegram of the 27th July, which is now under my consideration.

Any such scheme, however, for supplementing the allowances of your officers is impracticable, until means can be devised for meeting the cost; and it, therefore, becomes essential to consider whether there are any measures by which the existing expenditure can be reduced. The Army charges are those which naturally attract attention; and in the first instance, I have caused an examination to be made of the payments in this country, which may be divided into the following branches:—(1) Payments to the War Office for recruiting and depôt charges, &c., in respect of Her Majesty's British Forces serving in India; (2) Furlough Pay, Troop Service, and other Effective charges; (3) Stores; (4) Non-effective charges.

Owing to the irregular dates at which the awards of Lord Northbrook's Commission were made, it is not practicable to compare the charges for the various years, without re-casting them, as shown below:—

Years.	Award.			Amount paid during the Year.	Sum due to (−) or by (+) the War Office, according to the final award.
	General Charges.	Deferred Pay.	Total.		
	£	£	£	£	£
1879-80	471,000*	29,000	500,000	550,000	+ 50,000

1886-87	512,587	114,950	627,537	700,000	−214,671
1887-88	527,818	138,118	665,936	650,000	−230,607
1888-89	539,448	180,500	719,948	686,804	−263,751
1889-90	521,009	213,192	734,201	847,867	−150,085
1890-91	543,217‡	203,999	747,216	770,000	−127,301
1891-92	543,720‡	241,437	785,157	700,000	−212,458
1892-93 Estimate.	544,860‡	208,000	752,860	965,458	+ 140
1893-94	548,140‡	257,000	805,140	805,000	—

* Including 50,000*l.* for pay of colonels of cavalry and infantry, subsequently treated as a non-effective charge.

† Including special charge on account of augmentation of the Force in India.

‡ Capitation rate of 7*l.* 10*s.* on the Establishment in India.

It will be seen that the arrears which had accumulated for many years have now been settled. The general charges are undoubtedly heavier since the augmentation of the British force in India in 1884; and the claims preferred by the War Office, to which reference is made in Sir Thomas Seccombe's memorandum forwarded with Lord Cross's despatch of the 18th of August 1892, No. 152, show that, in the view of that Department, India is not paying her full proportion of those charges. Your Excellency is aware that the advances to the War Office are now being made at a rate of 7*l.* 10*s.* per man on the establishment in India; but no agreement has been finally made since the 31st of March 1892, and I am now considering whether it is practicable to obtain a reduction of the charges. The amount of deferred pay must vary with the conditions of recruiting in the past; but, on an average, it is probable that it will not exceed that of the last few years.

As regards the other effective charges, it is unnecessary to refer to years before the increase of the establishment in India was effected; and the table below is, therefore, arranged for the period from 1885–86 to 1893–94. There is a very material increase in the furlough pay, which is probably the result of the increase of the European force, combined with the more liberal regulations introduced in 1886; but the additional charge is in some degree counterbalanced by the more economical working of the Troop Service.

Years.	Furlough Pay.	Troop and Transport Service.	Other Effective Charges.	Total Effective Charges, excluding Advances to War Office.
	£	£	£	£
1885-86	156,791	332,225	27,410	516,426
1886-87	248,958	301,666	48,699	599,323
1887-88	263,520	229,480	41,512	534,512
1888-89	285,847	220,999	39,619	546,465
1889-90	295,618	222,483	29,854	547,955
1890-91	275,901	245,130	34,432	555,463
1891-92	305,023	261,796	34,555	601,374
1892-93 Estimate.	350,470	245,351	28,996	624,817
1893-94	313,000	246,200	31,500	590,700

There has undoubtedly been a very heavy increase in the cost of military stores supplied from this country in recent years. It has, however, been almost entirely in the class of ordnance stores, which for the most part must be obtained according to specified patterns, and cannot be procured in India. Now that the supply of the new rifles and guns is completed, I trust that the demands of your Government will be materially reduced. It is obvious that in this respect it is in India, and not in England, that we must look for the means of restricting the Home charges.

Years.	Clothing.	Medical.	Commissariat.	Ordnance and Miscellaneous.	Malt Liquor.	Total.

1892-93 Estimate.	234,408	50,479	42,549	569,968	17	897,416
1893-94	236,100	34,800	34,500	543,000	—	848,400

Over the non-effective charges there are no means of exercising control, except in so far as care can be taken in granting additional privileges which may increase expense in the future. The addition to the charge for British officers is the natural result of the change of system made in 1884, which resulted in an immediate reduction of 705,000*l.* a year, with the consequent gradual increase for many subsequent years. The burden of Indian officers' pensions on the revenues was very fully examined in the 12th Report of the Committee on Home Charges, which was forwarded to you in Lord Cross's Despatch dated the 4th of July 1889, No. 144.

Years.	British.	Indian Officers.	Widows and Families.	Non-commissioned Officers and Soldiers, and Miscellaneous.	Total.
	£	£	£	£	£
1886-87	136,227	1,533,553	82,335	25,450	1,777,565
1887-88	194,961	1,597,171	83,103	22,733	1,897,968
1888-89	243,444	1,636,886	88,003	20,884	1,989,247
1889-90	296,875	1,652,012	85,242	19,571	2,053,700
1890-91	333,043	1,657,270	87,589	17,730	2,095,632
1891-92	360,231	1,681,889	90,369	16,581	2,149,070
1892-93 Estimate.	398,920	1,881,172	93,243	14,765	2,388,100
1893-94	428,900	1,715,000	93,500	16,000	2,253,400

Whilst I shall be prepared to use every means in my power to obtain a diminution of the Home payments, it is to your Government that I must look for any important reduction being made in the Army charges; and I now proceed, with the assistance of the statements forwarded by you, to examine the expenditure in India. Deducting from the total effective charges the receipts and also the estimated amount by which the British soldiers' pay has been increased through the fall in exchange, I arrive at the figures shown in the last column of the table below. The charge in 1885-86 was abnormally increased by the payments for the Quetta force, which, as shown in paragraph 16 of your Accountant-General's analysis, exceeded two crores of rupees. For the next five years, however, from 1886-87 to 1890-91, the expenditure was fairly uniform, averaging Rx. 12,634,027; whereas, during the three years to which your present Financial Statement relates, the average is Rx. 13,445,096, showing an increase of more than Rx. 800,000 a year.

Years.	Total Effective Charges in India.	Deductions.		Balance.
		Receipts.	Increased Payment to British Soldiers for Exchange.	
	Rx.	Rx.	Rx.	Rx.
1885-86	14,414,290	838,810	224,300	13,351,180
1886-87	13,771,197	864,240	275,800	12,631,157
1887-88	14,243,976	931,027	436,900	12,876,049
1888-89	13,982,872	940,998	501,900	12,489,974
1889-90	14,037,013	826,804	632,300	12,577,909
1890-91	13,836,963	675,117	566,800	12,595,046
1891-92	14,800,287	653,700	386,800	13,759,787
1892-93 Estimate.	14,573,000	673,100	591,800	13,308,100
1893-94	14,750,200	651,000	831,800	13,267,400

Comparing 1890-91 with 1891-92, the latest year for which the expenditure is shown in the analysis, I find an increase of the net charge in 1891-92 amounting to Rx. 984,741, to which must be added the saving of Rx. 180,000 in the pay of the British troops owing to the rise in the rate of exchange, so that the real increase is about Rx. 1,165,000. The increase in the gross charges, which, according to the analysis, amounts to Rx. 1,143,100, is thus divided among the several grants:—

	Rx.
Commissariat	*612,500*
Miscellaneous Services	*371,100*
Remount and Veterinary Establishments	*82,300*
Medical Establishments	*55,100*
Regimental Pay and Allowances	*48,800*
Other heads	26,700
	Rx. 1,145,100

The explanation of the increase under the first two heads is, in the main, that special expenditure had to be incurred in 1891-92 in connexion with the operations in Manipur and the arrangements for mobilization; but, nevertheless, I find in the Estimates for 1892-93 and 1893-94 an increase of Rx. 713,000 and Rx. 672,000, respectively, over the net charges of 1890-91, showing that a comparatively small part of the augmentation has proved to be of a temporary character, or that other expenditure has been incurred in the later years.

In the Minute of Lieutenant-General Brackenbury a full explanation was given of the causes of the increase in the Budget of 1893-94 over that for 1892-93; and I readily admit that he showed the serious difficulty of at the last moment reducing the estimate. But I must point out that the Military Department is only one branch of your Government; that the various propositions for incurring further expenditure are only sanctioned with the understanding, either expressed or implied, that money can be found to meet it; and that it is impossible for the administration to be properly conducted, if the large spending Departments are allowed to carry into effect continual changes involving expenditure for which your Government in the Financial Department is unable to make provision, both immediately and in the future; for, when once such points are decided, it is scarcely possible to re-consider them at the last moment, after the arrangements for the year have arrived at such a point that they cannot be altered without serious inconvenience.

I desire, therefore, that you will cause a searching examination to be made of the military expenditure, under the various heads, with the view of ascertaining what retrenchment is practicable; and that, as far as possible, you will discourage proposals for additional outlay.

The same remarks apply, of course, to the civil expenditure, in a minor degree; but, as this is to a great extent under the control of the Provincial Governments, they have a direct interest in confining it within due bounds. It must, however, be remembered that expenditure authorised during the currency of an agreement, on the ground that the funds of the Provincial Government are adequate to meet it, will make it more difficult for the Imperial Government, in framing a new agreement, to claim its full share of the improvement which may have taken place; and, therefore, additional payments should only be sanctioned when really necessary, and not merely because the balances of the particular Provincial Government may be able to meet the expenditure at the moment.

No. 37.

DESPATCH to the GOVERNMENT OF INDIA, 8th February 1894, No. 24 (Financial).

I have considered in Council the letter from your predecessor's Government, dated the 1st of November 1893, No. 357, submitting the programme of expenditure upon railways and irrigation works for the year 1894-95.

2. Under the existing rules, the following is the amount of money at the disposal of your Government annually for the construction of public works:—

(1.) 350 lakhs of rupees charged outside the expenditure debited to revenue, and provided from the available cash balances, strengthened, if necessary, by a public loan.

(2.) Any surplus revenue, up to 150 lakhs a year, which can be allotted, either under the head of Famine Insurance, or under that of Construction of Railways charged against Revenue

in addition to that under Famine Insurance, or under Irrigation and Navigation.

(3.) An additional sum of 50 lakhs, whenever it can be without inconvenience supplied, for the construction and extension of railways through the agency of companies. Hitherto, however, no advantage has been taken of the permission to make such a grant.

3. The following table shows the manner in which the grants provided in your estimates, and the actual expenditure in the year, have been divided between loan funds and surplus revenue in recent years:—

4. Various causes have led to an excess in the grant from loan funds in the Budgets for most of the years. In 1889–90 exceptional outlay was anticipated on the famine lines in Southern India. The Budget of 1890–91 was prepared under a misapprehension of the Secretary of State's instructions. In 1892–93 and 1893–94 special grants were made on account of the Rampur-Bareilly-Moradabad railway, for which the funds were being provided by the Rampur State, and the Jherria extension of the East Indian Railway.

5. The foregoing table shows that the Public Works Department is frequently unable to utilise a considerable portion of its grant. The amounts which have thus lapsed are as follows:—

	Rx.
In 1889-90 - - -	467,870
In 1890-91 - - - -	335,037
In 1891-92 - - -	749,860
In 1892-93 (estimate) -	3,700
Making in the four years a total lapse of- -	Rx. 1,556,467

Such lapses, in accordance with the general system of Budget grants and accounts, are not at the disposal of the Public Works Department unless again granted; and your Government is of opinion that this practice is unsuitable to works of the magnitude of those which you have to execute, that it hampers your efforts to fully utilise the funds which you are empowered to borrow annually, and that it leads to wasteful outlay. You, therefore, propose that, in addition to the fixed grant for public works not chargeable against revenue, you should be empowered to re-allot to the Public Works Department lapses of grants not chargeable against revenue which may occur at the close of the financial year.

6. This proposal appears to me to be based on a misconception of the orders which have been given on the subject of the re-allotment of lapsed grants. In my despatch dated the 7th of August 1884, No. 237, I said, in paragraph 39, that "there is no objection to the "expenditure on public works of the surplus balances "which have actually accrued, nor of the savings of "previous years, and, subject always to the general "exigencies of the Government, I should prefer seeing "the money so laid out; but . . . the provision "of funds for public works must be subject, as in the "case of any other branch of the administration, to "financial considerations, and the fact that certain "funds may, under the regulations, be supplied for "productive public works gives no claim to the Public "Works Department to have that sum allotted to it "within the year, if, in the opinion of your Govern-"ment in the Financial Department, the state of the "finances will not permit of the expenditure." Similarly, in my despatch in the Railway Department, dated the 27th of November, 1884, No. 148, paragraph 10, I said that "lapses in previous years should only be "subsequently made good from the balances, if that is "practicable, without unduly reducing them." And once more, in a despatch of the 30th of April 1885, No. 112, I found it necessary to write, in the 7th paragraph, that "the Government of India, as a whole, "must be the judge from time to time how the avail-"able funds at its disposal shall be applied, subject to "the control of the Secretary of State, and with careful "regard for the general stability of your finances, the "demands of no one Department being allowed to have "undue weight."

7. To the same effect were the observations of Lord Randolph Churchill* and of Viscount Cross,† and I must adhere to those instructions. Surplus revenue may always be appropriated for public works under the head of Famine Insurance, or Construction of Railways, or Irrigation and Navigation, and lapsed

* Despatch to India, 27th August 1895, No. 239, p. 48.

† 10th February 1887, No. 58.

grants not chargeable to revenue may be again allotted, when it can be done without undue inconvenience, from the cash balances. But I cannot admit that the Public Works or any other Department has a claim to an appropriation of funds which are not at the disposal of the Government, and which can only be obtained by borrowing to a greater extent than is deemed prudent.

8. I now come to the further proposal of your Government, "that the grant for public works not "chargeable against revenue be for the present fixed "at Rs. 500 lakhs, less such amounts as may be spent "on protective railways or protective irrigation works "from the grant for Famine Relief and Insurance." The proposal is, however, subject to the reservation that no further liability is imposed on the revenues by the concession of guarantees to railway companies, and that the sum of Rs. 500 lakhs is to be held to include all money for capital expenditure on railways and irrigation works classed as Productive Public Works to be found by the Government of India.

9. This proposal is open to objection on more grounds than one. You have apparently arrived at the sum of 500 lakhs, by adding to the 350 lakhs authorised as a maximum for works constructed from loan funds by the direct agency of State officers, first, the 50 lakhs which Lord Cross* authorised, if it could be supplied without inconvenience, "to enable companies "to undertake new lines of railway and extensions," and, secondly, a sum of 100 lakhs which has been provided during each of the last three years from the Famine Grant, and which it appears to be assumed will always be available from revenue.

10. In regard to the former sum, it appears to me that the proposal would defeat the object which Lord Cross had in view. He desired, without unduly increasing the debt, to provide from the balances, if possible, sums which would be available to meet the urgent demands of railways constructed and worked by the agency of companies; while, under your proposal, this amount might have to be obtained by borrowing, and would not be reserved for the specific uses for which it was intended.

11. With reference to the allotment from the Famine Insurance Grant, I must point out that this allotment is available for such works only as are calculated to protect the country from famine, and cannot be applied to Productive Public Works unless they have also been sanctioned as protective. Moreover, this grant, though it has been adopted as a convenient one for purposes of account, is merely an allotment of surplus revenue, and cannot be reckoned upon with certainty. The result of your suggestion, therefore, would be that, in a year of difficulty, when there was no surplus revenue, and the whole of the funds at your disposal were needed to meet the calls of famine or some other exigency, the Public Works Department would have a claim that an exceptionally large loan should be raised to meet its requirements.

12. While on general grounds I am thus opposed to any extension of the limits within which funds are allotted for public works, I cannot refrain from expressing the surprise with which I have received your recommendations, at a time when the finances are in a critical condition, and it is quite impossible to form an opinion as to the amount that it would be necessary to borrow in 1894–95 in order to carry your programme into effect. Your remark, in paragraph 12, that you are unable, in the present financial position, to contemplate so large an outlay as I had anticipated,—by which I understand you to mean that you cannot at present allot any extra funds for the construction of railways through the agency of companies; but it appears to me that, in absorbing for general works the amount so suggested, and raising the total grant to 500 lakhs during the year, whether there be surplus revenue and abundant cash balances, or whether the money can only be found by having recourse to additional loans, your proposals are far in excess of any scheme which I had contemplated.

13. Finding myself, therefore, unable to sanction the forecast of expenditure in 1894–95 which your Government had placed before me, I requested you by a telegram† of the 9th of December, to send a revised forecast based on the existing rules. The further telegraphic correspondence which has resulted is also entered below* of this despatch. With reference to your message of the 18th of January, it is premature to determine what may be the best use to make of the accumulated cash balances; but I cannot, as at present advised, consent to an outlay not chargeable to revenue in excess of the usual amount authorised under existing rules; and I, therefore, sent to your Government the following message on the 30th of January:—"Your telegram of 5th" (should have been 18th) "January. "Capital expenditure. I await a further communi- "cation, with reduced forecast to be prepared under "existing rules."

* Despatch to India, 16th June 1892, No. 103 F., para. 13.

† *From Secretary of State to Viceroy, 9th December* 1893.

"Your Financial Despatch, No. 357, 1st November. Capital expenditure. At the present time it is quite impossible to approve increase in expenditure. Please send at your earliest convenience forecast for next year under existing rules."

No. 38.

EXTRACT from LETTER from the GOVERNMENT OF INDIA, March 28, 1894, No. 81 (Finance).

Lord Kimberley was quite correct in understanding that we did not see our way out of a deficit in 1894–95; but in his directions to us as to proposed measures for reduction of expenditure, he was only directing our attention to matters that were already under our anxious consideration.

We may here recount these measures in the shape which they ultimately took.

We ordered a reduction of 13 lakhs to be made in the grant for Imperial Public Works. That grant had already in November been reduced considerably below the amount of the grant for 1893–94, as part of the policy of economy which the difficulties of the position have obliged us to adopt for the last year or two. The further reduction of 13 lakhs was effected by the very stringent measure of postponing the commencement of nearly all new works which it was proposed to begin in 1894–95.

The second measure adopted was the reduction of the Military Works grant to one crore of rupees, being less by over 19 lakhs than the amount of the grant in 1893–94. Our Honourable Colleague General Brackenbury, while not in the circumstances resisting this reduction, desires that the remarks on the subject in a minute by him, which forms one of the enclosures of this despatch, may be forwarded with this despatch for your consideration.

The third measure adopted by us to reduce the deficit was the levy of contributions from Provincial Governments. We enclose a copy of the Resolution in which the Local Governments were asked to agree to make these contributions, and we refer to paragraphs 27 and 28 of the Financial Statement for an expression of our views on this step, to which we had recourse with the greatest reluctance. The total amount of the contributions ultimately taken was 40½ lakhs of rupees; the amounts taken from each Government are stated in paragraph 96 of the Financial Statement.

The fourth measure adopted was the temporary suspension of the portion of the Famine Grant which it is within our power to suspend, giving a reduction of expenditare of over 107½ lakhs of rupees. The questions connected with the Famine Grant have been so often discussed that we do not think it necessary to defend this step at length: the circumstances in 1894–95 are clearly such as to justify the step. We wish only to place on record our opinion that it should be the endeavour of the Government of India to restore the Famine Grant at as early a date as can be arranged.

We gave careful attention to the question of reducing the Army expenditure, but we could not avoid the conclusion that no mere reduction in the estimates would have any actual effect in reducing the outlay during the year 1894–95. That the Army Estimates have been drawn up with due regard to economy will

* *From Viceroy to Secretary of State, 3rd January*, 1894.

"Your telegram of 9th December last. Government of India desire to adhere to forecasts for next year B. and C., referred to in paragraphs 13 and 15 of our Financial Despatch, No. 357, 1st November last."

From Secretary of State to Viceroy, 5th January 1894.

"Your telegram of 3rd January. Capital expenditure. Tables B. and C. based on assumption that probable surplus of 118 lakhs will be available under Famine Insurance Grant. Do you expect this?"

From Viceroy to Secretary of State, 18th January 1894.

"Your telegram, 5th January. Capital expenditure programme was based on assumption that Famine Insurance Grant maintained. If that is reduced, the state of balances may render it advisable to avoid reduction of expenditure, by transferring East Coast Railway to 48. It is too early yet to forecast the estimate of the financial position during next financial year; but programme may have to be reduced and we are preparing modified programme to be ready for adoption, if necessary."

be evident from the fact that in the effective portion of the charges (net) if we omit the Rx. 390,100 which has been added to the charges by the operation of the exchange (see Financial Statement, paragraph 121)—there is, as compared with last year's estimates, a saving of 164,000*l.* less Rx. 74,600; that is, not far short of Rx. 200,000.

The question of the possible reduction of Army charges, however, continues to have our close attention. Although we have admitted the estimates for 1894–95 upon the basis just described, we propose to continue, apart from the question of Budget Estimates, our examination of some of the questions involved; and we believe that we have adopted measures which will ensure, with greater strictness than heretofore, that the expenditure be kept within the limit of the estimates.

Enclosure 1 in No. 38.

RESOLUTION of the GOVERNMENT OF INDIA, No. 1126 A., 1st March 1894.

The Local Governments are no doubt aware that by reason of the serious fall in the exchange value of the rupee during the past two years, the Government of India find themselves face to face with a serious deficit in their Revenue Estimates. This deficit forces the Governor General in Council to consider all possible measures of economy and to raise the question of increasing the revenue by new taxation.

2. The Government of India are constrained under these circumstances to search for relief from present embarrassment in economies within the region of the Provincial accounts as well as in the Imperial section, and to raise again the question of contributions from Provincial resources. The Governor General in Council admits most fully that every administrative consideration makes it advisable that the expenditure of the existing Provincial balances should be left in the hands of the Provincial Governments, and that even from the financial point of view it may be urged that only two years have passed since the assignments were revised, and that during these two years a portion of the burden of exchange has, under the orders for exchange compensation allowance, been thrown upon Provincial balances. But the imperious necessity for imposing new taxation obliges the Government of India first to exhaust all available methods of increasing their resources; and this necessity is the only justification they can put forward for so soon making a practical revision of "contracts" made only two years ago, and calling in balances which the Local Governments might legitimately claim as pledged to them for the purpose of administrative improvements.

3. The Government of India have examined the estimates sent in by the various Local Governments, with a view of determining what amounts these Governments might spare either out of their surplus balances over and above the prescribed minimum, or by reducing to a minimum their proposals for expenditure on new public works, or similarly possible economies. Without raising any question of the advisability of the expenditure which the several Local Governments will by these retrenchments be obliged to abandon, the Government of India, so far as they can judge from the figures before them, impose an equal burden upon the several Local Governments by taking the contributions in the following list; namely,—

	Rs.
Central Provinces	4,30,000
Burma	19,50,000
Assam	2,60,000
Bengal	2,00,000
North-Western Provinces	5,00,000
Madras	3,00,000
Bombay	5,60,000
Total	42,00,000

From the Government of the Punjab it is not deemed advisable to take any contribution.

4. In the estimates which have already been received these contributions will be entered by reducing the final balances of 31st March 1895 to the provincial minimum, and by reducing the public works grants. The Local Governments, however, will understand that this distribution of the entry in the Estimates is provisional only.

5. The Governor General in Council, before making these orders final, invites the Local Governments to submit for consideration any points they wish to urge with reference to their ability to meet the demand without drawing upon their prescribed minimum balances. His Excellency in Council is confident that, under the circumstances explained, the several Local Governments will use their best endeavour to meet the requirements of the general financial position; and although he is conscious that the promise can, under present circumstances, be of little value, he will, if during the currency of the present contract circumstances sufficiently improve, restore to the Provincial Governments the balances which he now, by enforcing a limitation of their normal expenditure, withdraws from them. It is especially requested that all replies may be in the hands of the Government of India by Wednesday, March 14th, at the latest.

Enclosure 2 in No. 38.

MINUTE by the Honourable Lieutenant-General BRACKENBURY, C.B., R.A., on the reduction of the grant for Military Works for all India and Burma to one crore of rupees.

The grant of a fixed sum for military works was the outcome of certain correspondence with the Secretary of State on the general principle of fixed grants, and orders fixing the grant at one crore of rupees issued in Finance Department Resolution No. 671, dated the 22nd May 1880.

We have nothing to show why the sum of one crore was fixed upon. That sum was 27·3 per cent. below the average allotments for, and 21·4 per cent. below the average expenditure on, military works during the previous five years, but it may be assumed that the reduction was due to the financial situation caused by the Afghan war. Lapses were to be re-granted "so far as financial exigencies allow"; as a matter of fact, lapses have not always been re-granted.

Year.	Grant.	Outlay.
	Rs.	Rs.
1874–75	1,23,97,974	1,18,59,260
1875–76	1,33,59,966	1,33,77,380
1876–77	1,25,89,429	1,20,30,220
1877–78	1,24,39,859	1,15,39,290
1878–99	1,28,67,298	1,19,05,280
	6,36,54,526	6,07,11,430
	1,27,30,905	1,21,42,286

2. On the issue of the orders fixing the grant at one crore, the Commander-in-Chief at once protested against the reduction representing the inadequacy of that sum for meeting the cost of military works services, and from time to time representations have been made to the Government of India on the subject. The case for an increased grant was last stated by the Quartermaster-General in 1891* in great detail, and supported by independent memoranda prepared in his own department and by the Director-General of Military Works; a strong case was made out, but no action was taken.

3. Since the crore was fixed in 1880, the burdens upon the military works grant have increased very appreciably under certain heads, while several heavy new charges have been thrown upon it.

Under the first description the following may be mentioned:—

(*a.*) Increase of 10,000 men (British troops) in 1886 to be provided with accommodation.

(*b.*) Extension of territory in Baluchistan and the annexation of Upper Burma, involving the

* Quartermaster-General's No. 58 F.C., dated 20th January 1891.

construction of new accommodation, and the organisation of new cantonments.

(*c.*) Imperative demands for cantonment sanitary works throughout India, especially water-supply and drainage works.

(*d.*) Increase in the cost of maintaining defence works owing to the construction of new works costing about two crores of rupees. (Though the cost of original construction has been provided from the Special Defences grant, the cost of maintenance falls on ordinary military works funds.)

The new charges fall chiefly under the following heads:—

(*e.*) Maintenance of military roads on the North-western frontier which were constructed from civil works funds. It has been found impossible to give much money for this service, and it is reported that, for want of adequate allotments, these expensive roads are falling into a state of serious disrepair.

(*f.*) Construction of certain new frontier roads (*e.g.*, the Dera Ismail Khan—Tank—Murtaza road).

(*g.*) Provision of accommodation for Native troops in certain rigorous climates where it had not previously been the practice to employ such troops (*e.g.*, Baluchistan and Upper Burma).

(*h.*) Sanitary improvements to the lines occupied by Native troops in India proper.

(*i.*) Grant of exchange compensation allowance.

4. The separate grant for Upper Burma was proposed by Sir George Chesney early in 1887, because it was found impossible to allot the large sums required for that country from the crore. The grant for 1887-88 was 30 lakhs, and 15 lakhs in subsequent years. The actual expenditure has been as stated below—

	Rs.
1886-87	7,39,501
1887-88	31,48,423
1888-89	15,70,350
1889-90	14,25,094
1890-91	14,15,234
1891-92	15,21,818
1892-93	16,93,764
1893-94	15,00,000 (Revised Estimate.)

5. The extreme importance of pushing on cantonment water-supply projects was pressed upon the attention of Government in 1890, and it was ordered in Council that, upon the understanding that a certain sum for these works is provided annually out of the crore, the Finance Department should contribute an extra grant equal to half such sum, subject to a maximum of three lakhs of rupees. The Military Department have proved the urgency of the matter, in their opinion, by earning the full extra grant in 1891-92, and in every year since.

6. Under present circumstances it is very difficult to find money for carrying on any considerable works such as the water supplies and the extensive works required at the various ordnance establishments which are increasing largely owing to the manufacture in India of munitions of war formerly obtained from England, though the former indirectly, and the latter directly, lead to savings in military expenditure.

7. An examination of the figures of past years shows hat there are certain recurring charges which must be met from year to year. The military buildings throughout the country have to be maintained, and various payments for rent and compensation in lieu of quarters have to be made, all under the head of repairs. The 30 lakhs usually allotted for the services is quite inadequate, and leads to heavy expenditure on renewals and "Special repairs," which appears under "Original works."

The establishments have to be paid, and the cost of the Barrack Department is about a fixed quantity.

Making allowance for tools and plant these charges absorb 62 or 63 lakhs of the grant at once, leaving about 40 lakhs for everything else—ordinary military works, ordnance works, commissariat works, and marine works.

8. Of the 41½ lakhs entered under original works in 1893-94, about 36 lakhs are at the disposal of the Military Works Department, and 5½ lakhs are allotted to the Local Administrations (Public Works Department). In addition to the total of the revised estimate a small sum may possibly remain in reserve (less than half a lakh).

Of the 36 lakhs available for original works in the Military Works Department it has been more or less obligatory to allot over 24 lakhs for the services noted below, leaving a sum of less than 12 lakhs available for all other original military works, new and in progress, for the accommodation of the troops, hospitals, &c.

	Rs.
Ordnance Works	4,00,000
Commissariat Works	2,00,000
Marine Works	1,85,000
Minor Works	4,65,000
Renewals	2,35,000
Water Supplies	9,30,000
	24,15,000

Of the 5½ lakhs being spent by the Public Works Department, about 2¾ lakhs are for the Dera Ismail Khan—Tank—Murtaza road, ¼ lakh for waterworks, and ¾ lakh for minor works. There thus remains about 1¾ lakhs for original military works, new and in progress, at all the stations in charge of the Public Works Department.

9. Under the circumstances stated above it, is my duty to represent that, in consequence of the reduction of the amount granted for all military works in India and Burma to one crore (a reduction of 19½ lakhs from what was granted last year), it will be impossible to find any money for the most urgent new works, some of the existing works, both roads and buildings, cannot be kept in proper repair, and the sanitary demands of the medical authorities cannot be complied with.

H. BRACKENBURY.

28th March 1894.

No. 39.

EXTRACT from DESPATCH to the GOVERNMENT OF INDIA, June 21, 1894, No. 116 (Financial).

I have already referred to the reduction under Famine Relief and Insurance, which amounts to Rx. 1,083,407. I observe, in the proceedings of your Council, a disposition on the part of some of the members to consider this as inconsistent with the intentions of the Government at the time that the provision was first instituted; and the question is also discussed in some of the papers which accompanied your Excellency's Letter of the 21st of March, No. 71. The position of the Government in the matter was so fully explained by the Lieutenant-Governor of Bengal and Mr. Westland, that it is hardly necessary for me to add to their remarks. The object of the Famine Insurance was to provide annually a surplus of revenue, which, so far as it is not needed to meet the cost of relief during the year, may be from time to time expended in the manner best calculated, either by the prosecution of protective works or by the reduction or prevention of debt, to ward off the recurrence of famine, and, if a great emergency should arise through a severe scarcity, to enable the Government to supply the requisite funds without making a permanent addition to the public debt. It was estimated that it would be necessary in this manner to set apart Rx. 15,000,000 in the course of 10 years. Owing to the fortunate absence of a great famine, comparatively little has been required for absolute relief, and the bulk of the funds has been devoted to the construction of protective works, and, in a less degree, to the repayment of debt or the diminution of that which otherwise would have been incurred in the prosecution of railways. The following is a

summary of the sums thus laid out from 1881–82 to 1892–93 inclusive:—

	Rx.	Rx.
On Famine Relief		294,409
In the construction of Protective Irrigation Works		1,731,863
In the construction of Protective Railways:—		
Charged under Famine Insurance	5,482,943	
Charged under Railway Revenue Account	2,818,102	
		8,301,045
In reduction or avoidance of debt		5,327,299
		15,654,616

It is clear from these figures that the purposes for which the system was instituted have been attained; and there can be no doubt that, in consequence of the works on which some 10 crores of rupees have been spent, the country is much less likely to suffer from famine so extensive as in past years, while, if necessity should arise, a loan of five crores could be raised without the burden of debt having been increased. In view of the necessity for providing, if possible, such a surplus of revenue, it is desirable that it should be restored as soon as the financial condition permits it; but I should not have been prepared to sanction additional taxation for the sake of maintaining the system in the present year, while to enter the allotment for famine insurance in the estimate without making provision for it would have been a fiction that could not be permitted. In connexion with this subject, I desire to draw your Excellency's attention to the opinion expressed by Lord Randolph Churchill in the closing paragraphs of his Despatch of the 27th of August, 1885, No. 239, approving of the temporary diversion of the Famine Insurance grant in order to avoid fresh taxation; and also to the 12th paragraph of that written by Viscount Cross on the 12th of April, 1888, No. 98, suggesting that the provision for that purpose might be reduced to Rx. 1,000,000, the whole of which should be devoted to the reduction of debt or diminution of borrowing.

* * * *

Satisfactory as is the credit of the Government of India, both in India and in England, the financial position is certainly one which must for the present cause great anxiety. Comparing the accounts of 1892–93 with your Budget Estimate for the present year, I find the following changes in the last two years:—

Apart from charges of all kinds arising from Exchange—

	Rx.	Rx.
The net revenue from opium is worse by		2,248,268
Provincial Rates		175,390
Salt		86,037
		2,509,695
While Land is better by	632,960	
Stamps	93,751	
Customs	1,208,228	
Other heads	45,678	
		1,980,617
so that in the net revenue there is a deterioration of		529,078
Exchange is worse, on sterling payments	1,488,324	
Increase of the soldier's pay	164,300	
Compensation to officers	1,113,300	
	2,766,524	
but better on remittance accounts	130,314	
being, therefore, on all accounts, worse by		2,636,210
		3,165,288

	Rx.	Rx.
To meet this, the net Expenditure charged on the Revenue has been reduced as follows:—		
By the suspension of a portion of the Famine Insurance Grant		1,058,947
In Public Works:—		
Military	190,782	
Civil	194,530	
Construction of Railways	315,087	
Special Defence Works	246,955	
	947,354	
Railway Revenue Account	431,294	
Irrigation	95,129	
	526,423	
		1,473,777
In Army charges		460,468
In Interest		209,716
By increase of portion of expenditure defrayed from Provincial Balances		1,007,041
		4,209,949
from which must be deducted an increase of net charge under Mint	199,856	
and under all other heads	313,293	
		513,149
		3,696,800
Making a net improvement of		Rx. 531,512

Even this, however, has failed to provide an equilibrium between Revenue and Expenditure, while there is every prospect of the charges connected with exchange being much greater than was assumed in the Budget. There is, therefore, little chance of its being found possible soon to relax the strict limits which you have been obliged this year to enforce in regard to public works of various kinds; and it is with especial satisfaction that I have received the assurance given in the 13th paragraph of your Letter dated the 28th of March, No. 81, that the possible reduction of the Army charges is engaging your close attention.

No. 40.

DESPATCH to the GOVERNMENT OF INDIA, July 26, 1894, No. 144 (Financial).

At the close of the review of the Estimates of your Government for the current year, contained in my despatch, dated the 21st ultimo, No. 116, I referred to the fact that the deficiency of revenue therein shown was likely to be materially enhanced by the fall in exchange which had occurred since they were prepared, and to the consequent expectation that it would be impossible soon to relax the strict limits imposed on expenditure at present, especially in regard to Public Works.

2. At such a time it is essential to exercise the closest supervision over all proposals for an increase of establishments of any kind, since there is no income from which the charge can be met; and, even if the additional cost be defrayed from the accumulated balances in the current year, the difficulty of providing an equilibrium in the next Budget is enhanced.

3. While this observation refers primarily to the charges which directly affect the Imperial surplus or deficit, it must not be overlooked that it has also an important bearing on those which fall on the Provincial revenues; for, although the re-adjustment may be deferred till 1897, the growth of Provincial expenditure may seriously affect the power of your Government to

obtain an adequate share of the normal improvement in the revenues.

4. I have recently received from your Government several despatches proposing an increase of various establishments, for some of which, at any rate, so far as I am aware, no provision was made in the Budget, and for which there are, therefore, no funds at your Excellency's disposal.

5. I do not lose sight of the fact that strong arguments are brought forward for the proposals. But the financial condition of the country must be paramount; and, whatever the advantage of the reforms, they must be postponed if they can only be effected at the cost of adding sooner or later to the taxation of the country.

6. I am, therefore, obliged to inform your Excellency that, except in case of urgent necessity, I shall not feel myself justified in sanctioning any proposals for an increase of establishment, however desirable upon other grounds, until we arrive at a less unsatisfactory situation of the finances than that which exists at present.

No. 41.

DESPATCH to the GOVERNMENT OF INDIA, January 3, 1895, No. 4 (Financial).

The receipt of your Excellency's telegram, dated the 6th of December, enables me to reply to your letter of the 24th October, No. 271, regarding your forecast of capital expenditure on railways in the present and two following years.

2. I am dealing in the Public Works Department with the proposals relating to the several lines under construction or contemplated; and in the present despatch I confine myself to the financial aspect of the question.

3. The amount which your Excellency proposed to spend on railways (evidently including irrigation) is stated on page 7 of your letter (paragraph 9) as 520 lakhs in 1894–95, 540 lakhs in 1895–96, and 540 lakhs in 1896–97, making a total of 1,600 lakhs in the three years; but this you desire to increase by 35 lakhs in each of the coming years, that is, to 1,670 lakhs in all, if the amount spent this year from State funds on the Assam-Bengal Railway is recouped by the company. As was pointed out in the 11th paragraph of Lord Kimberley's despatch dated the 30th of April 1885, No. 112, the raising of the funds by the railway company implies a resort to a somewhat expensive form of borrowing. I proceed, however, to consider the proposal as dealing with 1,600 lakhs of outlay (excluding the 70 lakhs spent this year from State funds upon the Assam-Bengal line), of which it appears from Statement A. attached to your letter that you desire to allocate 1,095 lakhs to expenditure on railways by State Agency, 150 lakhs to open lines in the hands of companies, and 205 lakhs to irrigation works, while retaining 150 lakhs in reserve in case the whole of the Famine Grant should not be available in 1895–96 and 1896–97.

4. The amount of 1,600 lakhs is thus provided :—

	Lakhs.
(1.) In the current year's estimates -	400
(2.) Surplus cash balances - - -	800
(3.) Future accumulations outside the Revenue Account - - -	200
(4.) Famine Insurance Grant - -	200
	1,600

5. The whole of the 400 lakhs entered in the estimates for 1894–95 has to be met from sources outside the Revenue, as there was no surplus available for a grant under Famine Insurance. In the present state of the finances it appears to me very doubtful whether you can reasonably expect an available surplus of 100 lakhs under this head in 1895–96 or 1896–97; but the reservation of 150 lakhs as unallotted meets this contingency to a great extent. Your Excellency can form a better opinion than I am able to do, whether it is probable that the savings bank balances will sufficiently recover from the check they have recently received by the reduction of interest, to justify the expectation that 200 lakhs will be available from this source towards the completion of your forecast.

6. In regard to the estimate of 800 lakhs as available from the cash balances, I found, when I received your telegram of the 12th of October, that they amounted at the end of September to nearly 2,000 lakhs, or more by 800 than the amount usual at that time of year. I was not satisfied, however, that this amount could be properly considered as surplus, in view of the heavy drawings needed to defray the sterling disbursements in England. Owing to the exceptional state of the exchange when the Budget for 1894–95 was prepared, it was decided to draw bills on India for only 17,000,000*l*., although (excluding debt) the net disbursements were estimated at 18,548,500*l*. The exchange being calculated at 14 pence per rupee, this implied a drawing of only 2,914 instead of 3,178 lakhs of rupees.

It was evident that such a course could not be permitted in the future, unless borrowing in this country was to be allowed to defray the ordinary disbursements; and I accordingly found it necessary to inquire by telegram on what estimate of the payments for bills your Government founded its calculations. In my telegram of the 25th of October I mentioned a remittance of 19,000,000*l*., which allowed for some addition to the capital outlay on stores, and for the discharge of a small portion of the temporary debt. Excluding these, the net disbursements in the coming year are estimated at 18,075,000*l*., and the bills may be taken at 18,100,000*l*.; but it would hardly be safe now to calculate on an exchange above 13 pence per rupee, at which rate the bills would amount to 3,341 lakhs, or 427 lakhs in excess of the estimate for 1894–95.

8. Your Excellency's telegram of the 10th of November stated that the financial side of your proposals was in response to the inquiry put in the 24th paragraph of my despatch of the 21st of June last, No. 116, as to the use to which, after supplying funds for the prosecution of the Assam-Bengal Railway, the balances might be applied, in connection with which I referred to a proposed extension of the East Indian Railway. That passage, however, followed on the observation in the 23rd paragraph, that the primary object to which the accumulation of rupees in your treasuries should be devoted was the reduction of rent in this country; and, therefore, even while prepared, in the circumstances of the case, to waive any additional remittance for that purpose, I was not ready to give my approval to your policy, until assured that you were able to meet such drafts as would avoid any addition to the sterling debt.

9. Hence, in my telegram of the 4th of December, I inquired whether you could undertake to meet my drawings, so far as can now be foreseen, in 1895–96 and 1896-97, replenishing your balances, if needed, by the ordinary loans for public works; and, as your Excellency replied on the 6th of December that you agreed to this proposal, I accord my assent to the policy laid down in your letter as regards the State lines, subject to certain modifications regarding which I am communicating with your Government in the Public Works Department.

10. I am addressing you in a separate despatch regarding the provision of funds for the Assam-Bengal Railway.

No. 42.

EXTRACT from LETTER from the GOVERNMENT OF INDIA, February 20, 1895, No. 46 (Military).

In various financial despatches which we have received in the last two or three years, particular allusion has been made to the subject of military expenditure;

we also addressed your predecessor on this subject in the despatches quoted below,* and in paragraph 27 of your financial despatch No. 116 of the 21st June 1894, you stated that it was with especial satisfaction that you had received the assurance given in the 13th paragraph of our letter, No. 81, Financial, dated 28th March 1894, that the possible reduction of army charges was engaging our close attention.

Although the inquiries we have caused to be made on this subject are by no means complete, we think it desirable to lay before you certain conclusions at which we have arrived in respect to the more important causes which affect military expenditure; and in this connection we desire to invite your attention to the minute of our honourable colleague Lieutenant-General Brackenbury, which accompanied our despatch of 8th March 1893. In that minute (paragraph 6) our honourable colleague explained that reduction can only be made in the Military Budget Estimates by one of the following methods —

(*a.*)—Reducing the establishment of the Army.
(*b.*)—Reducing the pay of the Army.
(*c.*)—Reducing allowances.
(*d.*)—Reducing the authorised reserves of stores.
(*e.*)—Throwing the ordnance factories out of work.

and showed reasons against all these methods except the first, as to which he said it was for the Governor-General in Council and the Secretary of State to decide, after due consideration, whether any reduction of the Army is possible, and, if so, how that reduction can best be made.

Of the possible methods of effecting a reduction of military expenditure, we will first deal with the question of reducing the pay, or privileges in a monetary sense, of the troops. The pay of British troops serving in India is not fixed by the Government of this country; it is fixed in sterling by Her Majesty's Government, and India has to pay in its depreciated currency an increasing number of rupees according as the gold value of the rupee diminishes. Between 1884-85 and 1893-94 inclusive the additional number of rupees so paid has amounted to about Rs. 546,00,000, and while the pay of the British troops has thus increased under the influence of conditions beyond our control, everything connected with the equipment and material welfare of the British soldier has risen in cost. Moreover, nearly every alteration in organisation in the British Army, and changes connected with the interior economy of regiments and batteries have been productive of expenditure, and have necessarily been followed by corresponding charges in expenditure in India. Many of these changes, as detailed in the list annexed to our military Despatch, No. 70, dated 25th March 1890, have been made without the Government of India being consulted. A further list of such changes is under preparation, which shows that in the last 30 years the cost of these measures has amounted to 934,640*l.* and about Rs. 8,75,000.

As regards the pay and monetary privileges of the Native troops, we can hold out no hope of reducing military expenditure. We were obliged to increase the pay of the Native cavalry in 1890, and we have now been compelled to address Her Majesty's Government,† and propose a considerable increase to the pay of the dismounted branches of the Native Army, which has remained at the same figure for so many years. With respect to the privileges of Native troops, which may be assessed at a monetary value, there is no possibility of effecting any extraordinary reductions. Their clothing and equipment tend to increase, rather than to diminish in cost, in accordance with the tendency of the times; better material and arms must be paid for at a higher rate; while the special monetary privileges of the Native troops need to be handled with great discretion.

* * * *

Among these monetary privileges there is none which occupies a higher place on the list of military expenditure than that of the system known as compensation for dearness of provisions and forage. This system may be briefly described as paying the Native soldier a compensatory sum, varying at different times of the year and at different stations, when the aggregate cost of the rations which he purchases for himself exceeds Rs. 3-8-0 per mensem, calculated on a regular scale for such rations. A similar principle is carried out in the case of the daily food of the horse maintained by the sowar. The advantages and disadvantages of this system have been frequently discussed in our Military Department, and by the Commander-in-Chief and the heads of departments concerned. The rise in recent years has been very remarkable, and investigations have more than once been made to account for this rise more precisely than can be usually ascertained from ordinary reports. In September 1894 we gave orders for the assembly of a Committee at Rawal Pindi on the 1st October 1894, to consider the conditions at present attending the payment of compensation for dearness of provisions and forage, and the system of voucher and check in auditing claims to such compensation. The report of the Committee is forwarded herewith. It is now under consideration, but it will need to be very carefully gone into, although as at present advised we consider that if the recommendations of the Committee are carried out, they will make for economy. In connection with this subject we may mention that a separate investigation is being made in order to ascertain how far the rise in the cost of compensation is due to the increase in the strength of the Army, and how much is due to rise in the prices of the articles upon which compensation is calculated. We believe that these investigations will tend to reduce expenditure on this great item of compensation, but we cannot look for any large reduction in this direction.

It may be said that, granting it is impossible to reduce the pay of British and Native troops, it may be possible to reduce the pay of officers serving in India with those troops, or to reduce the pay and number of commands and staff appointments. With regard to the first point, we must state our conviction that no such reduction is possible. The purchasing value of the rupee has declined within recent years, wages have risen, and the officers both of the British and Native armies are, when they are without private means, pushed hard to make both ends meet; while there is reason to fear that in the Native Army this result is less frequently attained than formerly, at all events among the junior officers, and we have recently been obliged to add to our military expenditure by giving, with the sanction of Her Majesty's Government, an additional allowance as compensation for loss by exchange, which alleviates, but does not remove, the difficulties under which these classes of Her Majesty's servants now labour.

On the second point, whether it is possible to reduce the number of commands and staff appointments, or the pay of these, we have on the latter part of the question already addressed you in our Despatch, No. 28, dated 30th January 1895, and we have shown that we do not think it possible to reduce the pay of the commands and appointments under discussion. With regard to the possibility of a reduction in the number of commands and staff appointments, we have only to say that this subject has been dealt with from time to time within the last thirty years and so recently as 1886, that a large number of reductions has been made, and that looking to the strength of the army, and the vastness of the area over which it is spread, the number of commands and staff appointments is exceedingly small, and cannot be reduced, in any material degree, without seriously injuring the efficiency of the Army. We have maintained a consistent policy of reducing superfluous commands and staff appointments, but but although some slight economy may be effected here and there, no large saving can be looked for in this direction.

* * * *

The third point is whether it is possible to reduce the reserves of stores or to diminish their cost. This question is investigated periodically, and within recent years considerable economy has been effected by the limitation of reserves, by the disposal of obsolete stores, and by the reduction of the number of sources of supply. In the Ordnance Department, for example, which occupies a high place in military expenditure, no less than 30 arsenals, magazines, and depôts have been abolished or reduced to a lower *status* during the last thirty-four years. We have lately given orders to close altogether the Madras Gunpowder Factory, which will allow us to use the building for the purposes of the arsenal at Fort St. George, thus obviating considerable expenditure for buildings. Certain economies by con-

* No. 177, *Military*, dated 2nd November 1892. No. 39, *Military*, dated 8th March 1893. No. 63, *Military*, dated 5th April 1893.
† Despatch No. 23, dated 23rd January 1895.

centration of establishments are still possible, but only to a limited extent. Moreover, in such a vast area as India we cannot run the risk of too greatly restricting the sources of supply of the munitions of war. In the Medical Department the store depôts have been reduced from fifteen to four within the last thirty years; and generally speaking we have effected large savings by the reduction of redundant stores and the transference from one part of India to another, now that communications have so much improved, of stores which are surplus in one place but which may be deficient in another.

On the other hand, it must be recollected that the army of India is thousands of miles distant from its base in England, and that our policy, which has been completely supported by Her Majesty's Government, has been to enlarge our manufacturing resources in this country, thereby necessarily increasing Indian military expenditure, although a corresponding reduction should take place in the home expenditure. It may be said that if this policy is effective, there is no reason why the total charges for war matériel should so greatly increase, but the answer to this is obvious, and is given in our honourable colleague's minute which we have quoted. Everything connected with war matériel now costs more than it did, and, speaking in a general way, larger supplies have to be obtained. So long as military science progresses, so long will the cost of matériel increase, and add to our military expenditure. It must also be remembered that considerable military expenditure has been incurred within recent years, with the full sanction of Her Majesty's Government, for the preparation of the Army for mobilisation, and that for purposes of mobilisation we have had to incur expenditure on the provision and maintenance of large stocks or ordnance, commissariat, and medical supplies, which are held in readiness for the equipment of the body of troops detailed for the field army. The arrangements for the whole field army are not yet completed, and if we are to be in a state of readiness, whether for internal or external operations, a certain amount of further expenditure will be necessary, while the ordinary reserves of stores will probably have to be increased rather than diminished. Any reduction in expenditure made by not supplying our factories with the necessary material for their work would, as stated by our honourable colleague in paragraph 11 of his minute above quoted, be suicidal.

We are pushing our inquiries into the expenditure of the commissariat and medical departments, and will report the result hereafter. Before we pass to the question of the possibility of reducing the Army, we desire to point out that in addition to the items of increase we have specified, much more has now to be spent on the conservancy and sanitary arrangements of cantonments, and the native troops require to be better hutted. All these matters are constantly pressed upon us by the Army Sanitary Commission at home, whose reports are forwarded by the Secretary of State for our consideration. In miscellaneous expenditure it is appropriate to mention that grass for the mounted services, which was formerly obtained free, has now to be paid for, in some shape or other, the price of horses has had to be raised, while a very considerable increase in expenditure has been incurred by the development of the volunteer movement in India, resulting in the enrolment of a force whose strength approximates nearly 30,000. Under military works we have now to provide for the maintenance of the land and sea defences, and the time is approaching when many of the barracks built 30 years ago will need large renewals or even reconstruction.

We now come to the point whether it is possible to reduce the strength of the Army in this country. As to the reduction of the number of British troops, we do not imagine that it is necessary to discuss this question. The strength of the British Army in this country was increased with the full approval of Her Majesty's Government, conveyed in Lord Randolph Churchill's Despatch, No. 275, dated 29th October 1885, and we are unanimously of opinion that the question does not admit of being re-opened; on the other hand, if our finances permitted, we should be glad to see an increase of the number of British troops in this country. That, however, under present circumstances is out of the question. In regard to the possible reduction of native troops in any material degree, we must call to mind that the increase to the Army which took place in 1886–87 was carried out after full discussion between the Government of India and Her Majesty's Government, and that the latter approved the increase, together with the augmentation of the British troops, in order to place the Army in India on such a footing as would enable it to secure its position and its responsibilities; and stated that, however much it might be regretted that circumstances rendered so large an addition to our permanent expenditure an imperative necessity, it was, in the altered condition of affairs, inevitable.

Since that date we have from time to time considered our position in respect to the strength of the Native Army. In 1888, in the Marquess of Dufferin and Ava's farewell minute of the 8th December, he raised the question whether it was necessary to maintain the Native Army at its present strength, when the reserve shall have approached completion, and the proposals regarding the employment of a portion of the armies of Native states have taken practical effect. He understood that when these two measures were carried out there would be an additional force of native soldiers equivalent to about 50,000 or 60,000 men, and he considered that this question should receive thorough discussion and investigation before the above numbers had been added to the Army.

At the present time the reserve of the Native Army, which is limited to about 23,478 men, numbers only 13,329, its increase is slow, and it is questionable whether under present rules it can ever reach the maximum number, seeing that it has taken no root in the Madras Army, the number of reservists in that army being quite insignificant. The number of Imperial Service troops is about 18,000, and, as we have elsewhere stated, we do not contemplate any material addition to the strength of those troops, so that the strength of the two forces combined is not likely, at all events for some years to come, to reach more than 32,000 to 40,000 men.

In 1891 we forwarded with our Despatch, No. 80, dated 13th May 1891, a Minute on the Indian Army and Military Administration, by the Honourable Lieutenant-General Sir George Chesney, K.C.B., then Military Member of the Council of the Governor-General, and we specially invite attention to paragraphs 9 to 21 of that Minute (enclosure 3), which dealt with the peace establishment of the India Army, its reserve, and the mode of augmenting the peace army in case of war. As Sir George Chesney pointed out, the increase to the Army sanctioned in 1885 was discounted by the occupation and subsequent annexation of Upper Burma. This absorbed three battalions of British infantry and some artillery, while 15 regiments of Native infantry were at the date Sir George Chesney wrote, quartered in Burma, against four stationed there before the annexation; and it was consequently calculated that in India proper the total increase had only been 6,500 British troops and 7,000 native troops. Since the date of his Minute we have somewhat reduced the garrison of Burma, so that some additional troops are rendered available for Indian garrisons, but we do not contemplate that any material reduction of the garrison of Burma can be made for some time to come, or that in this way a very considerable increase can be made to the garrison of India proper. We specially commend to the consideration of Her Majesty's Government the remarks which Sir George Chesney made in paragraph 15 of that Minute, in which he draws attention to the great increase in our military responsibilities caused not only by that annexation but by other circumstances, such as the necessary strengthening of the garrison of Baluchistan and of the Zhob Valley.

Considering the great areas of the countries held by the British and native troops of India and the vast population which they are intended to control, we are convinced that it would not be possible under present conditions to reduce the strength of the Native Army. Lord Roberts, indeed, in his farewell minute of 1st April 1893,* maintained that we could not reduce a single battalion. But in consideration of our financial exigencies, and that by the withdrawal of a native infantry battalion from Burma, one might be spared from the garrison of Madras, we have recommended the reduction of the Madras Army by one battalion, in our Despatch, No. 193, dated 24th October, 1894, thus carrying out the policy which we laid before your predecessor in 1893, that opportunity might be taken to retrench the least efficient portion of the Native Army

* Enclosure of Despatch, No. 78, *Military*, dated 10th May 1893.

by replacing the regiments reduced by other troops, or not, just as the circumstances of the time may require. We have also recommended a reduction of some 416 men in the Bombay Army, to meet the cost of an improved organisation for messing by companies which will increase efficiency.

* * * *

Minor campaigns and expeditions have been frequent of late years, and have largely added to military expenditure. It is hardly necessary, we hope, to assure Her Majesty's Government that it is our earnest desire to restrict such sources of expenditure as much as possible; military expeditions cannot be undertaken without the full consent of the Secretary of State, and the argument that the increase to the Army sanctioned in 1885 has largely conduced to these operations being entered upon, would imply that the Government of India and Her Majesty's Government are unable to resist the temptation of using an efficient instrument. An examination of the facts of each expedition during the last 10 years will show that such an argument need not be treated seriously.

We have purposely abstained from dealing, in this despatch, with the increase of the home military charges; we have treated this subject in the despatches quoted below,* and do not desire at the present time to add to our remarks in this connection. A reference to the papers we enclose will show that we have declined to receive proposals involving increased military expenditure, unless it can be clearly demonstrated that the increases are of primary importance in improving the efficiency of the Army; and we have been compelled to reject or postpone many of these; we have not only investigated in our military department the causes leading to increased military expenditure, but have instructed heads of the great spending departments to examine their expenditure in the most searching way, with a view of ascertaining what retrenchment is practicable, and to discourage proposals for additional outlay. We cannot reduce the Army, and have no hope of effecting any material reduction of its expenditure; all that we can do is to endeavour to restrict the increase of the cost of the Army within the narrowest limits compatible with the maintenance of the peace and security of the Indian empire.

No. 43.

DESPATCH to the GOVERNMENT OF INDIA, 23rd May 1895, No. 57 (Military).

I have received and considered in Council your Excellency's Despatch, No. 46, of 20th February 1895, in which you state certain conclusions at which you have arrived in respect to the possible methods of reducing the Military Budget Estimates, and to the more important causes which affect military expenditure.

2. It is no doubt impossible to effect any important reduction in the estimates without resorting to one or more of the methods detailed in your despatch, that is, by reducing the strength of the Army or the connected establishments, or their pay and allowances, or by curtailing the authorised supply and reserves of stores. I see no reason to differ from your opinion, that no material relief can be expected, for the present at any rate, from any of these methods.

3. It is also true that, apart from the increase due to the additions made to the Army in 1885, and to the loss by exchange, a considerable increase of military expenditure in India has been unavoidable, owing to the necessity for improving the condition of the soldier, the progress of military science and consequent introduction of new and more costly armament and equipments, the arrangements for mobilisation, and a general rise in the price of food, labour, and material. It is, therefore, all the more necessary, if the military expenditure is to be kept within any reasonable limits, that some means should be found, not only of checking its growth, but also of effecting considerable reduction. The means by which this can be effected were indicated in paragraph 31 of my Financial Despatch, No. 158, of 10th August 1893, and are more fully detailed in paragraph 17 of your present despatch and its enclosures, that is, by a searching examination of military expenditure under the various heads, with the view of ascertaining what retrenchment is practicable. In this direction there is, I think, a wide field for economy, as the increase of expenditure under various heads appears to be larger than can be accounted for by the causes above mentioned.

4. Your Government have impressed on his Excellency the Commander-in-Chief, and on the heads of Departments, the absolute necessity for the utmost economy in the services under their control, and that they must recognise more fully their individual responsibility for economical administration and the need for that close acquaintance with the financial positions of their Departments, which can only be obtained by minute personal scrutiny. There is, I fear, good ground for your belief that heads of Departments are too apt to consider that such functions belong rather to the officers of the Accounts Department than to themselves. The instructions issued by your Government on this subject, and with a view to discourage proposals for additional outlay, are all that could be desired.

5. I would only suggest that your inquiries should be pushed still further. Not only the important items mentioned in those instructions, but every head of expenditure under every grant, in which reductions may appear to be feasible, should be closely scrutinised. There is a constant tendency to increase in trifling items, which, taken separately, escape much notice, but in the aggregate amount to a considerable sum, and it is only by a close study of details, and a constant re-examination of all sources of expenditure, that this tendency can be counteracted. No practicable saving, however small, should be rejected.

6. I should be glad to learn the result of the investigations which your Government have ordered.

No. 44.

EXTRACT from DESPATCH to the GOVERNMENT OF INDIA, July 18th 1895, No. 113 (Financial).

It was with much satisfaction that I perceived that, in spite of the great addition to the expenditure resulting from the fall in exchange, your Excellency had been able to provide a small surplus of revenue in the Budget. It is evident, however, that, apart from the cost of the military operations which it became necessary to undertake immediately after the Estimates had been framed, the utmost economy is needed to meet any further depreciation of the rupee * * *. In a further despatch, dated the 23rd of May, No. 57 (Military), the importance of a detailed examination of the Army charges was also impressed on your Government, in order to ascertain what savings can be effected in that branch of the expenditure. It is clear that the necessity which your Excellency recognised last year for strict vigilance in all directions involving a charge on the revenues remains in full force.

I have, &c.
(Signed) GEORGE HAMILTON.

* No. 70, *Military*, dated 25th March 1890. No. 243, *Financial*, dated 1st August 1893. No. 343, *Financial*, dated 25th October 1893. No. 144, *Financial*, dated 5th June 1894.

APPENDIX No. 14.

LAW and JUSTICE and POLICE CHARGES in INDIA in 1861-62, 1875-76, and 1893-94.

Handed in by Mr. Stephen Jacob, C.S.I.

(With reference to Questions 4027-8.)

In question 4207-8 I was asked to give the figures for law and justice and police charges for some earlier year, such as 1860, for comparison with the figures of the later years.

In 1860-61 the law and justice and police charges were not shown separately, but in 1861-62 they were separated. I have therefore taken out the figures for that year, and give them in the appended table, together with the figures for 1875-76 and 1893-94. I give the details by Provinces, no further subdivision is possible, as in that year the charges were given with very few details, and even such classification, as was attempted, was not uniform for all the Provinces.

I stated before that I could give no assurance that the figures for the earlier year covered the same ground as those for the later years, and I must repeat that statement here. I can say with certainty that some charges shown in the accounts in 1875-76 were excluded in 1861-62, as, for instance, cattle pound charges under the head of police; also the accounts of 1861-62 included charges for the Straits Settlements, which did not form a part of British India in 1875-76. But generally the details given in the earlier year are not such as admit of any fair comparison between its figures and those of later years. The Commission having, however, expressed a desire to have the figures, I give them for whatever they are worth.

(Signed) STEPHEN JACOB.

APPENDIX No. 16.

NUMBER OF JUDICIAL OFFICERS IN INDIA.

Handed in by Mr. Stephen Jacob, C.S.I.

(With reference to Question 4553.)

In question 4553 I was asked to give the number of munsifs, subordinate judges, civil and sessions judges, and high court judges, and of the various grades of magistrates, in all India, and in a later question I was asked to state how many of each class were Europeans and how many Natives.

I append a table which gives the above information for the whole of India; this table has been compiled from the Civil Lists of the various Provinces. As regards the number of Natives, the table may be taken as giving a minimum, for the only guide has been the name of the officer, and it is certain that some officers with European names are natives of India. Speaking generally, it may be said that all the subordinate judges and munsifs are natives of India.

(Signed) STEPHEN JACOB.

April 10th, 1896.

APPENDIX No. 17.

POLICE FORCE in 1875–76 and Present Time.

Handed in by Mr. Stephen Jacob, C.S.I.

(With reference to Questions 4724 and 4735.)

In question No. 4724 I was asked to prepare a table comparing the police force in 1875–76 with that now employed. The particulars of the police force in 1875–76, as given in the accounts, do not admit of any detailed comparison with the present police force, and I have accordingly made the comparison between the force in 1876–77 for which full particulars are available, and that provided for in the Estimates of 1895–96.

The appended table gives the figures for the various classes of officers in the district police forces of each province at these two periods, and the increase in the later period when compared with the earlier. It does not give details as regards the military police and other special police, because the classification in the various provinces differs, and no general comparison is possible.

I was also asked in a later question (4735) to give, if possible, details as to the nationality of the officers in the various grades of police. It may be assumed that all the members of the police force up to the grade of deputy-inspector, sub-inspector, or chief constable are natives of India, including in that term Eurasians and Europeans born and domiciled in India. In the higher grades the following is the distribution between Europeans and natives of India, but it must be borne in mind that some of the Europeans, especially in the inspector class, are domiciled in, and therefore technically natives of, India.

——	Europeans.	Natives of India.	Total.
District Superintendents -	227	3	230
Assistant District Superintendents.	192	19	211
Inspectors, 1st and 2nd grades.	152	380	460
Inspectors, lower grades -	Details not available.		565

It may be noted that in these grades of the Police Department, Europeans and natives receive the same rates of pay.

(Signed) STEPHEN JACOB.

APPENDIX No. 20.

I.

PRINCIPAL PROPOSALS of the ARMY ORGANISATION COMMISSION which have been carried out.
(Paper handed in by Sir Edwin Collen with reference to Q. 5171.)

Recommendations.	Result.	
I.—Defensible posts. Plans of places of refuge at out-stations to be drawn up and approved by the Defence Committee.	This is being gradually given effect to by the Government of India.	
II.—Limitation of tenure of appointment of Secretariat staff to five years.	Carried out - - - - -	To Secretary of State, No. 230, dated 24th June 1881. From Secretary of State, No. 382, dated 13th December 1883.
III.—All offices of Military Department and Army Head Quarters to be concentrated in one central building at Simla.	Given effect to, and most civil offices have been also so centralised.	
IV.—Reduction in establishment of horses in British Cavalry in India to 85 per cent. of rank and file. Assimilation of scale of syces in the three Presidencies.	Carried out - - - - -	To Secretary of State, No. 267, dated 30th October 1882, paragraph 4. From Secretary of State, No. 51, dated 31st January 1883, paragraph 4. From Secretary of State, No. 62, dated 8th February 1883. To Secretary of State, No. 128, dated 6th July 1883.
V.—Artillery. Number of horse batteries to be reduced from 15 to 10.	Ditto - - - - -	To Secretary of State, No. 141, dated 24th April 1881. From Secretary of State, No. 12, dated 5th January 1882.
VI.—Number of British mountain batteries to be raised from two to eight.	Proposal partially given effect to, there being now six mountain batteries, not eight.	To Secretary of State, No. 141, dated 24th April 1881. From Secretary of State, No. 12, dated 5th January 1881.
VII.—Strength of garrison batteries to be raised to 120 of all ranks.	Sanctioned.	
VIII.—Two mountain guns to be attached to the Assam regiment at Shillong.	Given effect to (Pro. A, May 1884, Nos. 108–11). Not referred to Secretary of State.	
IX.—Abolition of second line of artillery waggons, involving a reduction of 1,465 artillery bullocks; a certain proportion of these waggons being kept horsed instead, and the remainder in Ordnance charge.	Sanctioned (despatch from Secretary of State, No. 80, dated 2nd April 1885).	
X.—Arrangements in barracks. Cooking pots to be made in more convenient shape for transport.	Given effect to by Government of India. (Not referred to Secretary of State.)	
XI.—Mobilisation of the army for war	The steps recommended by the Commission have been recently all adopted by the Government of India, so far as they are applicable to the existing system (*see* clause 105, India Army Circulars, 1885, now undergoing revision).	
XII.—Number of regiments. Native Infantry and Cavalry for the Indian armies to be decreased in view of the increased strength proposed for each of such units.	Carried out (G. G. O. No. 210 of 1882).	To Secretary of State, No. 230, dated 24th June 1881. From Secretary of State, No. 49, dated 2nd February 1882.
XIII.—The number (two) of Pioneer regiments in India to be raised to eight, *i.e.*, six regiments to be reconstituted as pioneers.	Two sanctioned for Madras only (despatch from Secretary of State, No. 165, dated 3rd May 1885).	To Secretary of State, No. 39, dated 27th February 1883.
XIV.—Territorial recruiting Native armies to raise recruits within the limits assigned them.	Given effect to generally by the Government of India (*see* a Pro. A, September 1881, No. 1764).	
XV.—The Belgaum command to be transferred from the Bombay to the Madras Army.	Given effect to (despatch from Secretary of State, No. 99, dated 15th April 1885).	
XVI.—Madras Army. Proposals for improving its efficiency. Men to be better equipped and clothed. Battalions not to be left too long at isolated stations.	Is being carried out in Madras under the orders of that Government and the local Commander-in-Chief. (No despatch to Secretary of State).	
XVII.—Native Army Reserves -	A modification on the Commission's proposal was made by the Government of India to the Secretary of State, and has just been accepted.	To Secretary of State, No. 44, dated 17th March 1885. Telegram from Secretary of State, dated 7th July 1885.
XVIII.—Employment of military officers in civil service to cease. Officers choosing civil career to leave the army.	The promotion of such officers has been stopped beyond the rank of Lieutenant-Colonel (despatch No. 382 of 1883). No other action taken.	To Secretary of State, No. 230, dated 24th June 1881.
XIX.—Departments of the army—Commissariat. Amalgamation of three Commissariat Departments under one officer who was to have control of the whole unified system.	A Commissary General-in-Chief has been appointed with very limited powers in time of peace, but with increased authority in time of war. The Commissariat Department is in course of re-organisation on the lines sanctioned by the Secretary of State in despatch No. 75, dated 26th March 1885.	To Secretary of State, No. 292, dated 5th August 1881.

Recommendations.	Result.	
XX.—Transport Department. Its formation recommended, so as to be capable of placing a certain quota of troops in the field equipped with Government transport.	A Transport Department has been organised generally on the lines laid down (despatch from Secretary of State, No. 75, dated 26th March 1885).	To Secretary of State, No. 400, dated 29th October 1881.
XXI.—Ordnance Department. Amalgamation of the three presidential departments under one head. Local rank of Major-General to be given him, and several minor recommendations.	This Department has been generally reorganised on the lines suggested, so far as was possible, without the introduction of the army corps system.	To Secretary of State, No. 293, dated 5th August 1881. From Secretary of State, No. 337, dated 8th November 1883. To Secretary of State, No. 31, dated 26th February 1884. From Secretary of State, No. 130, dated 8th May 1885.
XXII.—Military Works and Barrack Departments. Design, construction, and maintenance of all military works to be entrusted to a separate Department of Military Works. Control of the Barrack Department to be under the Military Works Department.	The only portion of the scheme as yet carried out is that of transferring the administration of the Military Works Department from the Public Works to the Military Department. Orders are still awaited regarding the formation of a Military Works Department for the whole of India. A decision on this subject has been promised by the Secretary of State (despatch No. 39, dated 12th February 1885), when the question of the status of officers of Royal Engineers in India has been settled. This is being considered in connexion with Lord Penzance's Committee.	To Secretary of State, No. 282, dated 29th July 1881, paragraphs 28–32. To Secretary of State, No. 345, dated 24th September 1881.
XXIII.—Defence Committee, composition of—laid down. Officers of the Committee to deal with all questions connected with barracks and fortifications.	Has been accepted, except that, instead of Chief of the Staff, the Adjutant and Quarter Master General are on the Committee; also the Director of Submarine Mines for Coast Defence questions. (No despatch to Secretary of State.)	
XXIV.—Remount Department. One Director for all India. One reserve depôt to be at Saharunpur and one at Oosoor, with a total reserve of about 800 horses.	Given effect to (despatch from Secretary of State, No. 283, dated 25th August 1881).	To Secretary of State, No. 200, dated 27th May 1881. To Secretary of State, No. 360, dated 1st October 1881.
XXV.—Veterinary Department. Veterinary requirements to be considered by stations instead of by corps and batteries. Veterinary colleges to be established.	The system is now under introduction (*see* despatch from Secretary of State, No. 89, dated 9th April 1885).	To Secretary of State, No. 940, dated 16th September 1881.
XXVI.—Lines of communication in India. Railway to Quetta, to Landi Kotal, and Kohat, &c.	Of these, the following have been given effect to:— Railway to Quetta is being constructed viâ the Harnai Valley; a temporary railway is also being made through the Bolan, and will be made permanent if the Secretary of State sanctions it. Line to Peshawar is complete, but its extension to Landi Kotal has been negatived. Line to Kohat from Rawalpindi has been laid as far as the Indus at Kushalgarh, but is not to be continued beyond. Line has been sanctioned from Lala Musa to Mianwali opposite Bannu; thence to Shere Shah opposite Mooltan, with a branch to the Indus opposite Dera Ghazi Khan. The construction of a good road from Dera Ghazi Khan to Kohat and Kushalgarh has been sanctioned; also a good road from Dera Ghazi Khan to Peshawar. Road from railway to Buxa is now in fair order. In Assam and Cachar much is being done to improve railway communications. Railway to Tounghoo is made. Road from Prome to Tounghoo is not yet made.	Despatch to Secretary of State, No. 112, of 1885.

II.

PRINCIPAL PROPOSALS of the ARMY ORGANISATION COMMISSION on which no Action has yet been taken.

Recommendations.	Result.
I.—Armies of Native States. General recommendations regarding.	Question of employing them has been considered by the Government of India, but no action has yet been taken of a definite kind.
II.—Convalescent depôts. Their retention undesirable. Men sent up from the plains to be attached to regiments and detachments in the hills.	Ditto ditto - *Nil.*
III.—Better classification of army business, office systems, returns and clerks to be considered by a committee.	Ditto ditto - *Nil*
IV.—Barrack accommodation to be reduced, as the hot season scale is unnecessary at stations where troops are always reduced during summer. Unnecessary expenditure is at present incurred by providing double accommodation.	Not carried out. Not proposed to the Secretary of State.
V.—More use to be made of hill stations for European troops owing to the extension of the railway system.	Ditto ditto.
VI.—Troopship system to be revised -	Ditto ditto.
VII.—Arrangements in barracks. Commanding officers to be allowed to arrange for repairs. Soldiers to be made to cook their own rations in hill stations and to build their own huts, and to maintain garrison roads.	Not carried out.
VIII.—Uniform and equipment. Certain changes were proposed, such as Norfolk jacket, with serge trousers and and gaiters, for infantry. Ditto, with cord trousers, and gaiters and ankle boots, for cavalry. Brown leather equipments. Black trousers to be done away with for infantry, &c.	Not carried out. No despatch to or from the Secretary of State on the subject, except as regards brown leather equipments (from Secretary of State, No. 210, dated 21st July 1884).
IX.—A proportion of native officers to be direct cadets of good family, who should undergo a preliminary training at a military school before joining a regiment.	Not carried out. Not yet proposed to the Secretary of State.
X.—Modifications in pension rules for native officers and soldiers now in the service, as well as a new system for those who might enlist hereafter.	Not carried out. Not proposed Secretary of State.
XI.—Native contingents to be kept as distinct local forces, and to be utilised as reserves for the British forces in India.	Ditto ditto.
XII.—Clothing department. Certain changes proposed in regard to reduction of staff salaries.	Not given effect to.
XIII.—Fixed depots to be maintained for native regiments near their recruiting grounds.	Not carried out. Depots only allowed when regiments take the field. (Pro. A, December 1883, Nos. 182-84.)
XIV.—Defects in clothing. Cloth a mistake for native troops. Coats and trousers too tight. White and yellow facings down the front of jacket to be removed. Uniforms of each army to be revised by a committee of officers.	No action yet taken, except trial of serge instead of cloth for coats. No despatch to Secretary of State.

III.

PRINCIPAL PROPOSALS of the ARMY COMMISSION on which the GOVERNMENT of INDIA have either suggested MODIFICATIONS to the SECRETARY of STATE or urged compliance with the ORIGINAL RECOMMENDATIONS, but neither of which have been accepted by HER MAJESTY'S GOVERNMENT.

Recommendations.	Result.	
I.—Abolition of the presidential system of administration.	Not carried out - - -	To Secretary of State, No. 85, dated 28th February 1881. From Secretary of State, No. 203, dated 16th June 1881.
II.—The Punjab Frontier Force to be placed under the orders of the Commander-in-Chief.	Ditto - - - - -	To Secretary of State, No. 282, dated 29th July 1881. To Secretary of State, No. 401, dated 29th October 1881. From Secretary of State, No. 243, dated 26th July 1883. To Secretary of State, No. 200, dated 15th October 1883. From Secretary of State, No. 76, dated 13th March 1884.

Recommendations.	Result.	
III.—Distribution and allotment of garrisons involving the abolition of certain stations.	Ditto - - - -	To Secretary of State, No. 141, dated 24th April 1881. To Secretary of State, No. 230, dated 24th June 1881. From Secretary of State, No. 49, dated 2nd February 1882. From Secretary of State, No. 243, dated 26th July 1883.
IV.—Redistribution of the Army into more convenient district commands than they are at present.	Ditto - - - -	As shown opposite Nos. II. and III.
V.—Revised classification of commands throughout the Army generally, involving changes in staff allowances and a saving in expenditure.	Ditto - - - -	To Secretary of State, No. 274, dated 22nd July 1881. To Secretary of State, No. 282, dated 29th July 1881. From Secretary of State, No. 243, dated 26th July 1883. To Secretary of State, No. 200, dated 15th October 1883. From Secretary of State, No. 76, dated 13th March 1884.
VI.—Formation of the Army in time of war into Indian brigades and divisions, the composition of which was to be clearly defined, so that troops might be more readily available for service.	Ditto - - -	See Despatch from Secretary of State, No. 243, dated 26th July 1883, paragraph 48.
VII.—Alteration of the relative positions of the Government of India and the Commander-in-Chief, so as to coincide with those of the Secretary of State for War and Commander-in-Chief in England.	Ditto - - -	To Secretary of State, No. 85, dated 28th February 1881. From Secretary of State, No. 203, dated 16th June 1881. From Secretary of State, No. 243, dated 26th July 1883. To Secretary of State, No. 200, dated 15th October 1883. From Secretary of State, No. 76, dated 13th March 1884.
VIII.—Military Department to be reorganized as a War Department for the whole of the Indian Army. Secretary to have the rank of Major General.	Not carried out, except as regards rank of Major-General, which has just been sanctioned.	To Secretary of State, No. 336, dated 9th September 1881. From Secretary of State, No. 243, dated 26th July 1883.
IX.—Composition and staff pay of the Commander-in-Chief's staff, and that of the head-quarters staff generally, including that of the War Department, to be altered on lines laid down by the Commission.	Not carried - - - - -	To Secretary of State, No. 274, dated 22nd July 1881. To Secretary of State, No. 282, dated 29th July 1881.
X.—Proposals for the general and garrison staff of the Indian armies, showing how their present method of selection and composition could be much improved.	Ditto -	To Secretary of State, No. 283, dated 29th July 1881. From Secretary of State, No. 243, dated 26th July 1883.
XI.—Reductions suggested in the total number of officers in the head-quarters of the Army and the Indian Army staff generally from 209 to 136.	Ditto - -	To Secretary of State, No. 208, dated 27th October 1884. To Secretary of State, No. 108, dated 3rd July 1885.
XII.—Sappers and miners. Four instead of three corps recommended and several minor recommendations in regard to their better organization and equipment.	Proposals have been recently sent home to the Secretary of State, differing somewhat from the Army Commission's proposals. (Despatch No. 66, dated 4th May 1885.) The minor recommendations are being given effect to.	
XIII.—Proposals for the better organization of the British Army in India. Reciprocity of action between England and India in this matter strongly urged.	Not carried out - - -	To Secretary of State, No. 141, dated 24th April 1881. From Secretary of State, No. 12, dated 5th January 1882.
XIV.—Proposals to make British regiments serving in India cheaper without loss of efficiency.	Ditto - - - -	To Secretary of State, No. 60, dated 16th March 1882. From Secretary of State, No. 239, date 13th July 1882.
XV.—Proposal to increase the strength of the British cavalry in India by the addition of a fourth squadron.	Not carried out. (Recommended recently by the Government of India in telegrams of 9th and 31st April 1885.)	
XVI.—Infantry regiments to be raised to a total strength of 1,044 non-commissioned officers and men.	Not carried out. (A very analogous proposal made by the Government of India in telegrams of 9th and 21st April 1885.)	As opposite Nos. XV. and XVI.
XVII.—European garrison of India, exclusive of artillery, to consist of six cavalry regiments and 48 infantry battalions.	Not carried out - - - -	
XVIII.—Artillery drivers to be all natives, except those for the guns and limbers. European establishment to be thereby not reduced.	Not carried out. The proposal was not put to the Secretary of State (Pro. A., January 1885, Nos. 1574–75).	
XIX.—Injury done to the Army in India by the introduction of the short service system to be promptly remedied, in view to the increase of efficiency and the interests of the Indian taxpayer being considered.	Not carried out. Referred to in connexion with the grant of bounties to men extending their service in India. (Despatch to Secretary of State, Nos. 15, dated 5th February 1884, and 215, dated 3rd November 1884.)	

Recommendations.	Result.	
XX.—Re-organization of the Native Army. Increased establishment in officers for cavalry and infantry as proposed by the Commission.	Not carried out - - - -	To Secretary of State, No. 280, dated 24th June 1881. From Secretary of State, No. 49, dated 2nd February 1882. From Secretary of State, No. 243, dated 26th July 1883. From Secretary of State, No. 382, dated 13th December 1883.
XXI.—Native Army. Fourth squadron to be added to the native cavalry.	Recently again recommended to the Secretary of State (despatch No. 63, dated 4th May 1885). Not yet sanctioned.	
XXII.—Strength of native infantry regiments to be raised.	The Government of India recommended that the strength of native infantry regiments be raised from 712 to 832. This was agreed to, and again consequent on recent war preparations have recommended the strength to be 1,000 of all ranks provisionally (despatch No. 63, dated 4th May 1885).	To Secretary of State, No. 230, dated 24th June 1881. From Secretary of State, No. 49, dated 2nd February 1882. To Secretary of State, No. 63, dated 4th May 1885.
XXIII.—Good conduct pay. Commission's proposals regarding rates of—	Not carried out. See despatch to Secretary of State, No. 230, June 1881, paragraph 14, and from Secretary of State, No. 49, dated 2nd February 1882, paragraph 24.	
XXIV.—Corps of Guides. Proposals regarding the constitution of the present regiment, as well as recommendations that three similar corps should be raised for service on the frontier.	Not carried out. (As regards the augmentation of the Corps of Guides, see despatch to Secretary of State, No. 144, dated 23rd June 1882, and from Secretary of State, No. 268, dated 31st August 1882.)	To Secretary of State, No. 230, dated 24th June 1881. From Secretary of State, No. 49, dated 2nd February 1882. From Secretary of State, No. 243, dated 26th July 1883. To Secretary of State, No. 200, dated 15th October 1883. From Secretary of State, No. 76, dated 13th March 1884.
XXV.—Madras Army. Officers to be younger and better regulated as to standing and rank.	Proposals of the Government of India in regard to a scheme for retirement of these officers, which would have resulted in improving the status of the officers concerned, negatived by Secretary of State (see despatch No. 14 of 1885).	To Secretary of State, No. 80, dated 7th May 1883. From Secretary of State, No. 246, dated 8th November 1883.
XXVI. Staff Corps system. Proposals to remedy defects in the formation of general list for each army, and minor proposals for the regulation of promotion and for overcoming defects which have been acknowledged.	Certain modified proposals made by the Government of India (despatch No. 5 of 1882) not accepted by Secretary of State (despatch No. 157 of 1882).	To Secretary of State, No. 230, dated 24th June 1881. To Secretary of State, No. 282, dated 29th July 1881. To Secretary of State, No. 401, dated 29th October 1881. From Secretary of State, No. 243, dated 26th July 1883.
XXVII.—Re-organization of the medical service generally in India, involving a total reduction of about 31 lakhs of rupees.	Proposals not generally carried out, as they hinge on the adoption of the army corps system, which was not given effect to. Several changes were, however, made, which effected a saving of between seven and eight lakhs per annum (see despatch to Secretary of State, No. 152, dated 15th August 1884).	To Secretary of State, No. 315, dated 26th August 1881. From Secretary of State, No. 86, dated 28th February 1883.
XXVIII.—Mititary Accounts Department. Revised establishment proposed and new duties laid down for officers concerned.	No changes of importance have been made as yet, nor have the Commission's proposals been given effect to.	To Secretary of State, No. 399, dated 29th October 1881. From Secretary of State, No. 243, dated 26th July 1883. From Secretary of State, No. 258, dated 9th August 1883.

APPENDIX No. 21.

STATEMENT of the important SAVINGS effected in the MILITARY DEPARTMENT from 1879-80 to 1885-86 (apart from the SAVINGS effected in consequence of the RECOMMENDATIONS of the ARMY ORGANIZATION COMMISSION of 1879).

(*Paper handed in by Sir Edwin Collen, see Q.* 5,172.)

Authority.	Year.	Items.	Approximate Savings per Annum.	Remarks.
			Rs.	
Pro. A., September 1881, Nos. 962-80.	1879-80	Reductions in the establishment of bullocks and their attendants and dooly-bearers at Karachi, Hyderabad, and Ahmedabad.	5,900	
	1879-80	Abolition of the military treasure chest at Dapoli.	4,300	
	1879-80	Reductions in the Medical Departments at Agra, Dinapore, and Simla.	8,300	
	1879-80	Reductions in clerical establishments in the Ordnance Department.	1,600	
Pro A., November 1879, Nos. 1610-13.	1879-80	Abolition of the Timber Agency, Futtehghur, as a separate establishment.	2,804	
Pro A., June 1879, Nos. 567-75 and 576-8.	1879-80	Abolition of the appointment of military storekeeper at Calcutta, and transfer of the duties to the Army Clothing Agency.	19,200	
Pro A., May 1881, Nos. 1259-71	1880-81	Abolition of the Northern District Brigade command in the Madras Presidency.	14,000	
Budget Report, 1882-83, No. 4041, dated 13th February 1882, paragraph 10.	1881-82	Reduction of 7 batteries of British artillery, being the difference between the number (86) of batteries before the Kabul War and the reduced number (77) provided in the Estimates, 1882-83.	13,50,000	The reductions were *completed* in 1881-82. The estimated saving includes all charges for pay, rations, clothing, &c., but not savings in Home charges.
Pro. A., September 1880, Nos. 1712-21.	1881-82	Salaries of the Commanders-in-Chief, Madras and Bombay, reduced from Rs. 70,000 to Rs. 66,000 a year.	8,000	Took effect from 1881-82, —*vide* Budget of that year.
Pro. A., November 1881, Nos. 77-8. Pro. A., August 1881, Nos. 1989-94.	1881-82	Abolition of the separate command of the Sind Frontier Force.	21,700	Exclusive of Military (S. C.) pay of the commandant, who held the appointment of political superintendent, Upper Sind Frontier.
Military Department No. 844-A-S, dated 3rd January 1881, Bengal Controller's Budget, 1882-83.	1881-82	Reduction of one Deputy Assistant Quartermaster-General.	9,300	
Despatch to Secretary of State No. 364, dated 1st October 1881—Pro. B., October 1881, No. 1078.	1881 and subsequent years.	Introduction of the open canteen system for the sale of malt liquor to British troops in India, by which the selling price was raised from 3 to 4 annas a quart, thus obviating a loss to the State.	10,00,000	The saving was estimated at the time at about 10 lakhs per annum, but is really more owing to the increased strength of British troops in India.
India Army Circular 147 of 1881 (for Bengal). Madras G. G. O. No. 133, dated 8th March 1882, from 1st April 1882. Bombay G. R. No. 1192, dated 3rd March 1882. Pro. A., August 1884, Nos. 1977-86.	1881-82 and 1882-83.	Introduction of the station hospital system for British troops and reduced establishment of medical officers in consequence.	6,60,000	Exclusive of indirect savings for camp equipage, transport of medicines, records, and equipments, reduced stocks of medicines, surgical instruments, &c.
India Army Circular No. 147 of 1882. Pro. A., October 1882, Nos. 751-66,	1882-83	Revised composition and distribution of siege trains in India, the number of guns being reduced by 45 pieces, with a corresponding reduction of 179 bullocks maintained for their transport.	21,000	The saving represents the cost of maintaining the bullocks.
Military Department No. 1231-M-W, dated 19th December 1882, and No. 937-M-W, dated 3rd October 1882.	1882-83	Cost of certain establishments for sudder bazaars to be borne by cantonment funds.	28,000	As per Budget Report, 1883-84.
Budget Report, 1882-83 and 1883-84. Military Department No. 1004-S-C, dated 18th August 1882, and No. 347-D, dated 16th February 1883.	1882-83 1883-84	Abolition of ordnance depôts at Belgaum, Mooltan, Peshawar, Nagpore, and Bangalore; conversion of second class arsenal, Mhow, into a second class depôt; reductions in the Gunpowder factory, Madras, and in ordnance depôt at St. Thomas' Mount; abolition of the corps of tent lascars, Madras, and other ordnance reductions.	1,25,000	
India Army Circular, No. 185 of 1882.	1882-83 to 1887-88	Reduction in the married establishment of British troops serving in India.	1,41,000	

Authority.	Year.	Items.	Approximate Savings per Annum.	Remarks.
			Rs.	
*Military Department No. 306-S-E, dated 15th November 1882, No. 894-E, dated 22nd March 1883, No. 68-S-E, dated 18th June 1883.	1883–84	Reduction in the charges for the Lawrence Military Asylum, Sanawar.	30,000	
India Army Circular No. 61 of June 1883.	1883–84	Abolition of Regimental Instructors and Sergeant Instructors of Musketry.	1,70,000	Saving shown in K.-W Pro. A., August 1883 Nos. 1501–18.
Military Department No. 608-F, dated 11th December 1884.	1883–84	Amalgamation of the offices of Examiners of Medical and Fund Accounts, Bengal and Madras.	9,000	
Budget Report, 1884–85 - -	1883–84	Reduction in the Non-commissioned Staff and minor establishments of garrisons, Madras.	8,000	
Pro. A, November 1884, Nos. 1087–90. Budget Report, 1885–86.	1884–85	Commands of Forts Michnee and Shubkuddur abolished.	4,000	
Military Department No. 117-S-D, dated 18th April 1884.	1884–85	Revision of the transport arrangements in Assam and substitution of light carts for coolies, &c.	65,000	
Budget Report, 1884–85 - -	1884–85	Abolition of the appointment of assistant examiner, fund accounts, Bengal.	9,000

Chief Engineer, 2nd class -	32 6	36 7	—	(*b*)991 0 3		
Chief Engineer, 1st class -	32 9	33 7	—	(*b*)1,000 0 0		

(*a*) The figures in column 2 are the average periods of service in each grade of all the officers at present employed in the department.

(*b*) The rates of furlough pay under the 1868 Rules appearing against Lieutenant-Colonels apply only to the old Indian Engineers.

(*c*) No Lieutenant-Colonels save on the continuous service list and the late Indian Engineers, and therefore British leave rules do not apply to these officers.

(*d*) These figures in this column represent furlough allowances converted at the rate of exchange of 1*s.* 6*d.* the rupee.

OFFICE OF THE EXAMINER OF ACCOUNTS, MILITARY WORKS DEPARTMENT.

COMPARISON of PAY of ROYAL ENGINEER OFFICERS at HOME and in INDIA.

The method of arriving at the British rate may, perhaps, require some explanation. I assume that British pay may be fairly taken to include the money equivalents given in lieu of allowances, when the said allowances are not supplied in kind.

The references given are to the paragraphs of the Pay and Promotion Warrant of 1893, and, in the case of allowances, to the Allowance Regulations of 1893. In the case of certain allowances the money equivalent is not given in the latter volume, but it is stated that these allowances are issuable at contract rates of the various districts or thereabouts. I have, however, in these instances made use of the Allowance Regulations of 1891, which specify the allowances by districts, and for the purposes of comparison I have used those issuable in the south-eastern district, which is about a fair average between the highest and the lowest rates admissible in these cases.

The pay and allowances are as follow:—

1. Regimental pay of rank, and
2. Engineer pay. (*See* Pay and Promotion Warrant, paragraph 178.)
3. Servants' allowance for one servant, or if a mounted officer, for two. (*See* paragraphs 484, 495, Allowance Regulations.)
4. Lodging allowance according to rank if not provided with quarters. (Allowance Regulations, paragraph 252.)
5. *Fuel and Light.*—The money allowance in lieu of this is generally drawn instead of the allowance in kind. The year is divided into a winter and summer season of eight and four months respectively (*see* Allowances Regulation, paragraph 173), and the relative daily rates are given in paragraph 217, Regulations for 1893.
6. Messing allowance is admissible in the case of certain officers, *i.e.*, to all below the rank of major, and I am not quite sure whether it does not apply to this rank also (*see* paragraph 512, Allowance Regulations); but I have omitted the amount from the calculations of pay of majors.
7. When an officer who is required to be mounted is not provided with public stabling, he is entitled to a daily allowance in lieu thereof for each horse. (Allowance Regulations, paragraph 273–A.)
8. In such cases he is also entitled to an allowance for lighting the stable. (Allowance Regulations, paragraph 219.)
9. Forage allowance is also admissible to a mounted officer. The rate for the south-eastern district in 1891 has been taken, *i.e.*, 1*s.* 5*d.** per diem. (Paragraph 149 of Allowance Regulations, 1893.)
10. Although it is not a military allowance, I may note that a very large number of Royal Engineer officers of nearly all ranks (including sometimes senior lieutenants) are employed as inspectors under the Science and Art Department, South Kensington, to superintend examinations. For this work, which may be said to last about a month, they receive 1*l.* a day extra, so it may be held to add in many cases another 20*l.* or 30*l.* to their income.

It will be noted that very few 2nd Lieutenants are graded in Military Works Department. This is only what is to be expected, as they are promoted to the rank of lieutenant after three years' commissioned service, and rarely arrive in India until they have at least two and a half years' service. They are generally "attached" to Military Works until they reach the rank of lieutenant, drawing pay from Military Department until they are graded. The only emolument they receive from Military Works Department is sub-divisional allowance of Rs. 30 per mensem, when they are in actual and entire charge of a sub-division, *i.e.*, Rs. 360 per annum, or 22*l.* 2*s.* 6*d.*

H. CLARKE, Major, R.E.,
Examiner of Accounts, Military Works.
Simla, 7th February, 1896.

The rate of exchange adopted for these tables is that for the current official year, 1894–95, viz., 1*s.* 3$\frac{1}{4}$*d.* the rupee.

2. The average rate of exchange compensation for the year 1893–94 being 9·11 per cent., and the rate for the first quarter of 1894–95 12$\frac{14}{23}$ per cent., an all-round rate of 10 per cent. has been adopted in the preparation of these tables.

3. The rates of pay relating to the officers of the sappers and miners have been included.

J. A. MILEY, Lieut-Col.,
Accountant-General Military Department.
Simla, 9th April 1894.

* *Note by Accounts Branch.*—The rate for 1894 for the Western and Woolwich Districts, viz., 1*s.* 11*d.* per diem, has been taken and the Examiner's figures corrected accordingly.

APPENDIX No. 24.

Details of Charges for Military Pensions.

Paper handed in by Mr. Stephen Jacob.
